As a result the world to-day is drifting, if, indeed, its net actually rushing, to war. And the question arises, and calls for an answer, whether Britain's action in so largely disarming was, after all, the right way to encourage and induce disarmament by others? In fact, may it not be that to Britain's action in so sharply reducing her armaments, other nations owe no opportunity to secure unto themselves greater power; an opportunity to achieve certain national ambitions and, if necessary, defy others?

The failure of other nations to follow Britain's lead in disarmament only serves to prove what has been stated in this column on previous occasions, i.e., that physical disarmament by the nations is not good enough; it is not a sufficient guarantee of peace: in fact, if followed by some nations and not by all it may even prove provocative of war. What is necessary, what in fact must precede physical disarmament, is a mental and spiritual disarmament by the people themselves. They must free themselves of their narrow nationalistic ideas, their suspicions of other peoples, their racial prejudices, their religious passions and prejudices. These are the things that cause war, and as long as people entertain and cherish such thoughts and ideas, and as long as other peoples, whether politicians, or statesmen, or war profiteering classes, or self-seekers of any kind who play upon and pander to the passions of people, continue to use them to inflame the masses, just so long will there be war.

This mental and spiritual disarmament among the peoples of the world must come first: until it does come there will be little headway made in the matter of physical disarmament. Without the former, the latter form of disarmament would be worth in any event. By her action, Britain has demonstrated that her people are ready for this larger, better, more far-reaching disarmament for the betterment of mankind. She cannot do more than furnish the force of her example and provide leadership. The rest is up to the nations to follow Britain's example.

Thousands Of Sheep In Retro

Twenty-five thousand sheep were gathered recently in the biggest drive of the Welsh mountains. They came from the entire Rhigosfan mountain range of North Wales, combining three counties. The sheep were assembled for the second annual day of the season. During the day the entire range was alive with dogs, sheep and shepherds.

A Moving Mountain

An unruly mountain that shifts about over the landscape and occasionally spends great periods of time underground has been seen. The Dunragan Chamber of Commerce recently announced that 5,000 visitors had been entertained by the mountain in the three months by a desire to see Carbon Mountain, Dunragit's "moving peak."

Household Drudgery

Has Been of a Woman's Life

Women rundown, run to be strong and healthy instead of weak, nervous, irritable. Is there any more good health when she has to go through the household drudgery without any reliance. It is any wonder she becomes nervous and irritable, has bad dizziness, faint and dizzy spells, shortness of breath, clothing and constipation, sallow skin, and can't sleep at night.

Women who say yeah and run down will find in Dr. Miles' Nervine (N. S. D. N.) Tablets a stimulation that quickens and tones both the mind and the body.

Using Infra-Red Rays

Newly-Discovered Process Takes Photographs Up To 300 Miles

Infra-red photography and its use in the detection of crime, as well as in medicine and dyestuffs research, formed the subject of a lecture by Sir Robert Robertson, chief government chemist, before a joint meeting of the Society of Chemical Industry and three other Manchester societies.

Sir Robert began by explaining the position of infra-red rays relative to other rays. The white rays are between rays from wireless rays, which may be as much as a mile long, to cosmic rays which are less than one-millionth short, he said. The cosmic rays have much energy that they will pierce through the thickness of many feet of lead. This is due to the fact that the frequency of vibration of a ray increases as its wave-length becomes less. The infra-red rays are next in length above the familiar spectrum of visible light.

The lecturer referred to some of the better-known uses of infra-red rays. First in these was infra-red photography in which great distances in the Commission in their findings. He drew attention to the cost of operating an industrial plant and the possibility that the bank would always be under the control of a political party and therefore subject to political influences. The history of the

Boy Has Strange Talent

Can Play Tunes By Rubbing Palms Of Hands Together

A farmer boy with musical heads showed city folk in Chicago recently his strange talent when he entertained tunes by merely rubbing together his palms.

His discovered music in his hands years ago when he was going home through the woods from grade school, he said. He had his hands in his overcoat pockets, as it was cold and there was no mittens, he took his hands out and began rubbing them together in an effort to warm them. He found a squeaking sound. When he got home he kept experimenting and practicing until he could finally grind out "Yankee Doodle."

Ever since that time he has been trying to teach his friends in Traverse City, the town nearest his farm home, how to make music with their hands, but only a few notes can be got out of any of them.

"When the family got tired of hearing me, I would get up early every day, go to the barn, and do the chores, and then set in practice. I would go out in the woods and listen to the birds and try to imitate them with my hands."

He leaned over and said, "Bull-frogs" sing with a twist and the power of his hands out came the croak of the amphibian. Quickly he changed to the chirp of the chipmunk, the whir of the chuck, the call of the robin, the mournful note of the whip-poor-will, the happy cry of the lark and the cheep of a common sparrow—all by pressing his palms and fingers.

Money Cattle Shipments

Fifty Thousand Head Shipped From Canada To Britain In 1932

Canada has shipped over 50,000 head of live cattle to the markets of the United Kingdom during the present year. This compares with only 16,925 head last year up to the same date.

Exports from Dec. 2 to Dec. 6 this year, totalled 1,305 head and brought this year's total up to 50,182 head.

The S.S. Concordia sailed said to Glasgow. Useful steers made 1.8 cents, and bulls 3.5 cents, live weight. Shipment said the S.S. Manchester commerce cattle. Light easterns made 13.7 to 14.3 cents in sink, and other grades sold accordingly. Light western 11.6 to 12.1 cents.

Cast-Iron Blocks For Roads

A new industry has been started in Dukinfield, England. The company is making cast-iron blocks for road surfacing and an experimental length is being laid at Stockport. Already the quarter of an inch of bituminous mixture and bonding material is laid between each block. The blocks weigh 30 pounds each, and are 11½ inches square. They are irregularly shaped, providing a non-skid surface. The design has been registered.

Cast-Iron Roads

"You can't believe everything you hear."

"Yes, but you can repeat it."

Definite Improvement In Trade of Canada

BANK OF MONTREAL ANNUAL MEETING

Striking indications of the improvement in trade has occurred in world wide trade, as well as of the steady rise in many industries in Canada, were among the outstanding features of the addresses submitted at the annual meeting of th Bank of Montreal.

Sir Charles Gordon the president, in his address to shareholders stated that practically the world over trade was better than a year ago and that in Canada, for the first half of the year definite improvement in business had been going on. Canada's external commerce had also grown in volume.

Sir Charles also had a cheerful word regarding improved conditions in Great Britain. The country's faith in sample well proved methods had been justified with the result that Britain's credit stood as high as ever, and London had regained her position as the financial centre of the world.

Royal Commission On Banking

In regard to the question of establishing a central bank in Canada, Sir Charles pointed out that two members of the Royal Commission on Canadians thoroughly versed in the banking and economic conditions of this country These two members are in accord with the rest of the Commission in their findings. He drew attention to the cost of operating an institution and the possibility that the bank would always be under the control of a political party and therefore subject to political influences. The history of the Federal Reserve and the Reconstruction Finance Corporation in the United States shows how little the elimination of political influence can be relied upon, he said.

Bank In Strong Position

Mr. Jackson Dodds, Joint General Manager, reviewing the annual statement of the bank, pointed out that of the total assets of $768,500,000 the liquid assets aggregated $492,500,000, or 64 per cent. of the liabilities to the public.

The special interest was the announcement that the bank now has over one million deposit accounts in Canada.

In concluding up Mr Dodds said:

Natural currencies are working toward world recovery but many abnormal barriers still impede progress. Unbalanced and financial disruption have been brought about to no small extent by the operations of Central governments under political influence, by excessive tariffs and quotas by aggressive national aim bordering on national tribalism, the stoppage of free migrations of peoples, disrupted and destroyed foreign markets, a loss of individualism on the part of all man and economic confidence in many countries

In contrast, Canada is fortunately circumstanced in that it is a young country, with an abundance of nature's gifts, with a hardy people, with control of a good currency, untrammeled, and with an inspiring past and a boundless future."

Canada In Central Position

Cannot Ignore Problems Of United States Sir Robert Falconer

The importance of regional conferences as a means of solving difficulties of international commerce was emphasized by Sir Robert Falconer when he addressed the University Women's Club in Toronto Canada. It must be remembered was in the centre of the world, between the Atlantic and Pacific, and could not have problems of the Pacific Canadians were not nearly as severe as they were inclined to think. Therefore Canada could not ignore the United States. Canada was not brought into agreement American could not but suffer Sir Robert said. If Chinese riots in the south of China the world would rise socially, Sir Robert said. He emphasized the fact which the new world had played in bringing about discontentment in the Orient. Bloomers from the new world had brought their brilliant Japanese and Chinese students, and they had learned American customs and institutions and had gone back to their own land with a new idea of life. The trouble in Manchukuo was only an incident on a tremendous background. Sir Robert said. He expressed that Japan was not likely to go to war with the United States with the Philippines still in their custody. It was too important in her commercial life.

He urged everyone to stand behind the League of Nations. We never solved any problem, only conferences, regional or world conferences, could really settle difficulties.

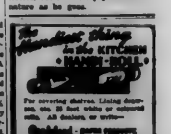
Luxury Flats in England

Block Will Contain Thirty Shops For Convenience Of Tenants

A block of luxury flats, which will occupy three acres of ground and contain 300 flats and 30 shops, is planned to be erected at Roundhay, Leeds, Yorkshire, England. It is expected to be the largest single block of flats in Europe.

There will be a private automobile roadway running under one side of the flats, according to the architect's design, and tenants will be able to shop in comfort without going outside the building. Over 1,000 men will be employed on the building, which will cost, it is estimated, £800,000.

A man may dodge the earthly collectors, but he must pay the debt of nature as he goes.



National Marketing Board Would Facilitate Carrying Out Of London Wheat Agreement

"To believe endorsement of a national marketing board would greatly facilitate the successful carrying out of the London wheat agreement," states a memorandum made public by the central board of the Canadian wheat pools.

Pointing out that all three prairie organizations had unanimously endorsed the principle of the agreement dealing with wheat a limitation by international co-operative effort, it expressed doubt that the hedging system "which has been kept from completely breaking down only by the stabilization policy of the federal government, could function at all under the rush of grain which would flood the market unless some policy of control over deliveries was established.

"With a quota system of deliveries from the farm established," the memorandum continues, "and a fixed export from Canada of certain period, there would not be any place for speculation in marketing the grain, except at the expense of the producer or the consumer and our pool boards question international co-operation and the future trading system can get on very well together."

"The wheat agreement was devised upon as in the interest of all people consumers as well as producers, in the countries represented at the conference if wheat producers are to assist in a regulated delivery of wheat to meet a quota of world consumption allocated to Canada, they must be assured of proper safeguards that will preclude the possibility of an increase in price of wheat being absorbed by interests situated between producer and consumer

"They must also be assured of a market based on a negotiated price, and not on a speculative one where the price fluctuates unduly from day to day and too often bears no relation to the value of wheat."

Principle of a domestic price for wheat at a remunerative level to producers has been accepted by governments of nearly all wheat importing countries, and was in favor to one of the principal exporting countries, the memorandum said, adding, "We believe that a domestic price on a parity with prices of other goods sold in Canada should be set, as far all wheat processed for domestic use in this country."

The wheat pool boards believed successful carrying out of the wheat agreement should not be regarded as a cure-all for Canadian agriculture; but that it should be linked up with a national production of marketing policy for the entire farming industry, including livestock, poultry and dairy products as well as grain.

Belief was expressed that framing of an intelligently planned national policy for Canadian agriculture, depicting proper attention to marketing as well as production, was a task for governments and producers with the aid of departments of agriculture and agricultural colleges to undertake immediately. The board was urgent need such a policy should deal with agriculture on a board basis, including measures for properly financing agricultural operations at reasonable interest rates, debt adjustment, and other steps to prevent deterioration of the farming plant.

"We consider that a definite fixed quota for the individual farmer, enforced by legislation, is the most equitable manner for adjusting wheat production in Canada to the quantity this country can deliver under the wheat agreement," it continues

If adjustment of production to fixed demand were left entirely to the producer, reduction of acreage by one farmer might be offset by increased acreage by his neighbor. The farmer himself would decide how much land to sow to wheat when he knew definitely how many bushels he would be permitted to market.

Salesman—"Yes, sir, of all our cars, this is the one we feel confident and justified in pushing."

Customer—"That's enough! I want one to ride in."

Ad Covers Child Labor

Egypt Follows Example Of Britain And Other Countries

The act which the Egyptian Parliament put upon the statute books to regulate the employment of children in industry follows the lines of acts with which the people of Great Britain and of other minately advanced countries are familiar, but being the first of its kind in Egypt it naturally lags behind in many respects In general children under 12 are not to work at all, though in a few specified exceptional cases they may do so after nine years of age The daily hours are not to exceed seven for those of from nine to twelve, while no young person under 15 is to work more than nine hours a day or to do any night work at all Provisions are made for local Canal boards, and weekly rest against danger and ill-health likely to arise in the various occupations The act runs into considerable detail on the first day after Christmas a happy augury perhaps for the introduction of a Children's Charter in Egypt.—Egyptian Gazette

CAPELET SHOULDERS ARE SO SMART! A LOVELY STYLE

Mother is wearing such adorable woollies this season. Wouldn't little daughter enjoy a daughter frock, too?

This cunning model achieves distinction in carried out in pastels red hairy wool-ten. Note how this has plaited the tiny shoulder capes. Brown accents the rickrack trim below the yoke in the back, button trim and leather belt are very effective

Plaided woollens, checked or monotone tweeds, failles, failles, crepe, and wool and synthetic novelties would look equally smart, too.

It's so easily made and at small outlay.

Style No. 354 is designed in sizes 16, 18, 14 and 16 years.

Size 12 requires 3½ yards of 39-inch material, ¾ yard of 4-inch ribbon for bow, Leather belt

Send 15 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Bird Not Forecaster

Bank Book Fund And Shelter Regardless Of Weather

Birds are no better weather prophets than humans, according to V. C. Wynne Edwards, ornithologist at McGill University They seek food and shelter just as human beings do and always go where these necessities are most abundant regardless of weather conditions

The pine grosbeak a native of Canada watch in a race-colored head and back Arctic regions In winter it comes south to the latitude of Montreal This year however it came south three weeks earlier than usual, but Prof Edwards does not seem to think this had any bearing on the approach of winter He attributes this early migration to a poor crop of seeds and berries in the northern districts

Another bird which makes its annual migration to the south from the Arctic regions is the common Canadian goose. Many thousands of these birds annually visit the Atlantic coast from the maritimes southward to the Gulf of Mexico. Prof Edwards finds the roots of a sea-grass commonly known as eel-grass Some time ago it was thought that this grass was being attacked and was gradually disappearing The rapid disappearance of the bird food is having a further effect on the migratory habits of the feathered folk and the government is carrying out an investigation as to the origin and nature of the bacteria which is causing so much disturbance

Facetious Clocks Popular

Large Railway Stations In London Style Time Type

Popularity of the new facetious clock in a railway station in London has caused the prediction that the type will shortly be used in all stations in England The time is given by figures three feet tall They are painted white on a moving disc changing each minute These numerals are on three bars, and each appears in full view for one minute, then the time, "12:59" or "1:00" for example, are easily read day or night. The clock is made by the firm that made the famous "Big Ben" clock.

Many Horses in Sweden

Numbers Are Increasing Despite Advance Of Motors

Advance of motors in Sweden has not depleted the horse population, for horses are actually gaining in numbers. In Sweden had 843,126 horses and twenty-five years later about 653,000, not including army horses and those in the city of Stock-holm. The ancient trade of saddle and harness making has suffered consequently from the depression, but brighter times are now discernible.

Shoe Boop Proprietor: "Here comes a couple of lady customers."

Assistant: "Shall I wait on them?"

Proprietor: "No, I'll wait on them. You get ready to stretch some shoes.

EARL OF ATHLONE CONFERS DEGREE ON HIS WIFE

The University of London Foundation Day Presentation of Degrees by the Chancellor, Earl of Athlone, this year saw the moment and happy event of the Chancellor presenting his own wife with a degree. Our picture shows the Earl conferring the Honorary Degree of Doctor of Literature on his wife, Princess Alice Tne Earl is a brother of Queen Mary.

Government Policy Adopted For Preservation Of Wild Life Is Meeting With Gratifying Success

Considering the policy of re-stocking depleted areas with indigenous species of wild life from surplus herds, the Department of the Interior recently shipped a consignment of wapiti or elk from Buffalo National Park, Wainwright, Alberta, to Kamloops, British Columbia. This shipment, consisting of six males and twenty females, was made at the request of the government of British Columbia The animals will be liberated in the country at the head of Adams Lake. An area eminently suited to the reception of this species

Canada's efforts to restore the elk to its former numbers throughout the Dominion form another important chapter in the history of wild life conservation. The outstanding success achieved in bringing back the Buffalo, and the consequent work performed in the production and propagation of the pronghorn antelope have attracted world wide attention, while the sanctuary given to other interesting species in Canada's great national parks has been the means of preserving for future generations much of the wild life resources of the country.

The wapiti or elk once ranged the North American continent in millions, covering approximately the same range as the buffalo The settlement of the prairies and the consequent slaughter, however, brought about a disastrous reduction in the numbers of this magnificent member of the deer family, so that today only a few scattered herds of elk are found outside the national parks and other preserves provided for their protection.

The first step taken by the government of Canada for the preservation of the elk was in 1909, when a number of these animals were purchased from a ranch in Montana and placed in Banff National Park Two years later a small additional number was introduced into Jasper National Park. As stated in the Banff Park enclosure, but so far as could be ascertained, this appears to be the only herd practically disappeared from the vicinity.

In 1917 and again in 1920 the United States Government generously offered numbers of surplus elk from Yellowstone Park in Wyoming These shipments totalling 287 head arrived in good condition at Banff and were released in suitable areas in the park. The 1923 elk appeared to be very numerous in Banff Park, and at the present time their numbers are estimated to be about 2,000.

During the spring of 1930 a herd of 36 animals was brought into Jasper National Park from Wyoming and in 1932 the Superintendent of that park estimated that there were at least 200 in the vicinity including a number drawn from indigenous herds which ranged the Brazeau and Southesk Valleys With the steady increase since recorded the park is now believed to contain several thousand head.

The success of the Buffalo Park elk herd consisted of a few animals which, together with several calves, dogs and deer, were found enclosed in the park in 1909, after the erection of the many miles of fence required for the reception of the herd of buffalo In 1910 and 1911 additional small herds were introduced into the park. In their new surroundings where they were aided by rigid protection, the elk increased in a gratifying manner. Buffalo National Park now contains more than 1,500 elk, in addition to some 5,500 buffalo, 2,500 smile deer and 100 moose.

One of the largest known herds of wild elk in Canada, numbering, it is believed, between two and three thousand, roams the Tuchodi and woodlands of Rocking Mountain Nat-onal Park in Mount-ies Riding Mountain Park originally formed a part of the Riding Mountain Forest Reserve, and the elk now in the park no doubt owe their existence to the protection afforded them in these sanctuaries during the past quarter of a century

A small outlet for the buffalo and elk surplus in the growing capacity of Buffalo National Park is provided by the lean or gift to governments and municipal parks of one or more of these species Recent shipments of elk from this park to Ontario included a herd of twenty-five animals which were placed in the Pembroke Crown Game Reserve in Renfrew County, and two carloads sent to the Burwash Industrial Farm lands in March, 1933. Latest reports indicate that these elk are thriving in their new surroundings.

Workmen Honored

Dr. Riddell Of Regina College Receives Recognition For Contribution To Science

W. A. Riddell, M.D., head of the chemistry department, Regina College, has received the honor of membership in the Fellows of the American Association for the Advancement of Science, Washington, D.C., in the association meeting.

Fellows of the association are chosen because of what they have accomplished in scientific research.

Dr Riddell, who was elected without having been first a member, had the honor given to him for splendid performance in connection with his study of chemical reactions in the dye industry.

Dr Riddell was born at Oakner, Man., and obtained his early education there, later securing his B.A. and B.Sc. degrees at the University of Manitoba.

Swearing In New Governor

Ceremony In Isle Of Man Is Very Impressive

In preparation for the swearing in of Sir Montague Butler as the new governor of the Isle of Man a new staff of hog oak has been prepared. It is five feet six inches long and richly carved by Manx craftsmen Sir Montague will hold the staff in his hand in Castle Rushen, and swear Lieutenant and speaking deal before our sovereign lord and king and his subjects within this isle, and as indifferently as between party and party. as this staff now standeth, so far as in me lyeth." The ceremony will be elaborate and impressive.

WORLD HAPPENINGS BRIEFLY TOLD

During the past season on account of 15 liners and 1,552 passengers was recorded in arrivals from Europe and Newfoundland, as compared with last year's figures, according to Montreal harbor officials.

Rear-Admiral Richard E. Byrd has sailed from New Zealand with his second expedition to the Antarctic, where a party of scientists and explorers will make a two-year study of the South Polar regions from their base at "Little America."

Discovery near Cumberland, Maryland, of a "Noah's Ark of the Ice Age," a cave with a representative collection of prehistoric animals that lived in North America over a period of 2,000,000 years, was announced by the Smithsonian Institution.

A short time before he was to have sailed with his wife for Canton, China, where he had sent funds for building his home Wong Cong 74-year-old Chinese merchant of Los Angeles, California, was found stabbed to death in his market.

Justice Robert Smith of the Supreme Court of Canada is retiring, having reached the age of 75, the statutory limit for judges. He was appointed to the Supreme Court in 1907 after four years on the Ontario Supreme Court bench.

Lucan, Ontario, is on the "bread standard." Finding the customary medium of interchange inconvenient, Harvey Hodgins, local baker, swapped 480 loaves o fbread for a horse owned by Charles Cowgill. Payment will be on the instalment plans.

Dr. Philip Rudolph Heine, LL.D., appointed South African Trade Commissioner to Ottawa only last April, will return to the union to succeed W Farrell as under-secretary for external affairs. It was announced, he will be succeeded at Ottawa by D. de Wael Heyer.

Suggestions for improving the environment of the civil lsined in Canada were laid before Prime Minister R. B. Bennett by a delegation representing the Canadian Federation for the Blind and the Canadian National Institute for the Blind. No definite decisions were made public.

For his contribution to the art of selling gold, James J Dunny, Schenectady, Cal., mining engineer and Queen's University graduate, was presented with a medal of pure platinum by the Canadian Institute of Mining and Metallurgy. The medal is set, with a diameter of three inches, has an intricate valve of mine transgue.

Advanced Surgery

Transplantation Of Parts Of Organs From One Person To Another

Successful transplantation of parts of organs from one person to another was described by Dr. Murry B. Stone, associate professor of surgery, at the John's Hopkins hospital.

The announcement was made by the Baltimore Sun as attendance at the meeting was restricted to the members of the clubs, composed of distinguished physicians.

Surgeons, it was explained have for years been able to transplant skin from one part of the body to another on the same persons but a transplantation of tissues from one person to another almost invariably resulted in death. The method described by Dr. Stone consisted of growing the tissue for a time outside; the body in a culture medium made from the blood serum of the prospective recipient of the transplant.

The tissue, by the method, becomes adapted to its future host, it was stated and when finally implanted in,him grows quite normally and survives for an indefinite time. Only a few cells from the healthy gland are used, it was said, and in the normal persons the missing tissue is readily replaced.

Three Shared Nobel

When Professor Theodor Svedberg and brand-on above Stockholm Aerodrome at Stockholm, South Africa, recently they became linked, but with great skill the two pilots manoeuvred their craft and brought them, still linked, to earth. One pilot was Captain Hinchey Daniel, an experienced flyer, and the other was a young cadet.

Campobello Being Explored

Old Pigeons On British Throne Of Parliament Used Under Tree

Several well-known figures of the British Houses of Parliament, who have heard Big Ben striking more than 30,000,000 "hoooms" during the long tenure of office, have lost their beaks.

They are the "gargoyles" which for more than 80 years have decorated the topmost part of parliament's great grant clock. With saws, rasps and pulleys they have been made to surrender their positions to newer figures. They had done their duty.

They were, the masons said, not as stable as they had been. Sterling, steamer and the homes of Big Ben had left their mark—they were to accompany her until the season a truck which takes her the rest of the way. Another matter goes to the vessel in the evening aboard which the gun is being kept. Miss daughter goes.

Tickets were also reported to be increasing in numbers.

A resolution was passed by the council in favor of the passage of $50 bounty on cougars.

Recent troops, according to archaeologists, were later color to a thing that made that worlds as the cougar skin but does not penetrate into the flesh.

SUNDAY SCHOOL LESSON

DECEMBER 25

A VISION OF WORLD PEACE

Golden Text: "The earth shall be full of the knowledge of Jehovah, as the waters cover the sea." Isaiah 11:9.

Lesson Isaiah 11:1-9.
Devotional Reading: Isaiah 2:1-5.

Explanations and Comments

The Messianic Age (Government Of The coming moral peace), verses 1-5.

At the close of the preceding chapter of Isaiah, the fall of Assyria is pictured as the felling of cedars of Lebanon by the axe swung by Jehovah Himself. A cedar once felled must needs be shapeless—but another power shall rise to run no more, in the prophet's thought. Into Israel must come a shoot out of the stock of Jesse, out of the house of David. Jesse was the father of David and a branch out of the roots shall bear fruit, declared Isaiah. Thus he likened the house of David to an oak with its trees cut down, puts out a new growth "the great punishment of Israel words was seen in the birth of our Lord Yet one of majestic stem of Jesse was reduced to a humble estate. Isaiah's hearer for which the sun had no room. The act of Rome had leveled all the proud growth of the forest of Israel, and the tree of this family had suffered with its root. But Lot root sent up a new shoot and branch Out of that cut-down tree sprang the Late which reminds the world, and has given such hope and joy to mankind as never never known before."—F. B. Meyer. Compare Luke 1:32.

And the Spirit of Jehovah shall rest upon Him, the spirit of wisdom and understanding, spirit of intellectual endowment", the spirit of counsel and might "full possession of a ruler's practical qualities", the spirit of knowledge and of the fear of Jehovah. These are the graces which in to crown and direct all other gifts. The delight shall be in the fear of Jehovah and He shall not judge after the sight of His eyes, neither decide after the hearing of His ears He shall judge neither by appearance nor by hearsay. Moreover, He shall combine mercy with just judgement.

He,3 to the Lord's Anointed,

Great David's greater Son! Micah, in the time appointed,

His reign on earth is gun!

He comes to break oppression,

To set the captive free,

To take away transgression,

And rule in equity."

He shall smite the earth with the rod of His mouth, and with the breath of His lips shall he slay the wicked. "Who is He whose have word has power to kill and make alive? Is it not time to dismiss purgative?" (Alexander Maclaren). And righteousness shall be the girdle of His loins, and faithfulness the girdle of His Loins. The long, flowing garment brought up by the girdle indicates readiness for action; the meaning of the verse is that He shall be ready for all deeds of righteousness and faithfulness.

The Effect Of His Rule, verses 6-9. —When the Deliverer shall come, wild and ravenous appears will be the wolf, the leopard, the lion and the bear, the asp and the adder—shall lose their ferocity and become as gentle that they shall dwell with the domestic animals, and a little child shall play with them and lead them. For the earth shall be full of the knowledge of Jehovah, as the waters cover the sea.

"The tide of Love was full that day, When Christ was born, in peace; Who now prevailed in a world-wide way,

A rule that must increase;
'If peace you'd find,
Serve me as King,
And peace I'll bring
To all mankind'."

—George Hartford.

School Children Honored

Congress On Vancouver Island Comes To An End

Stories of cougars menacing school children in the Alberni district of Vancouver Island were told at the meeting of the Vancouver and gulf branches of the British Columbia Provincial Institute.

In one instance, it was related, a daughter heard a scream and ran out to find her child faced by a large cougar. In another a mother whose children had left their work-bags near to accompany her until the season a truck which takes her the rest of the way. Another matter goes to the vessel in the evening aboard which the gun is being kept. Miss daughter goes.

Tickets were also reported to be increasing in numbers.

A resolution was passed by the council in favor of the passage of $50 bounty on cougars.

Recent troops, according to archaeologists, were later color to a thing that made that worlds as the cougar skin but does not penetrate into the flesh.

BIRKETT'S ADVERTISING PROGRAM

RICHARD G. BLACKETT

Vice-President, Birkenhead Limited, is in charge of Canadian Limited's recently organized subsidiaries in Canada and the United States. A new department, Merchandising and Advertising program has just been announced by Mr. Blomfield.

Newspapers Backbone Of New Beecham Advertising

This Famous Old Firm Launches New Merchandising Drive

Looking forward to steadily improving business conditions in Canada Beecham Pills (Canada) Limited, the Canadian subsidiary of the famous Beecham interests in the Old Country, and one of the prominent industries is undergoing an extensive re-organization of plans and policies, according to Mr. Richard G. Blomfield, Vice President and Advertising Manager of the Company's operations in Canada and the United States.

During a recent interview, Mr. Blomfield, who recently came to Niagara Falls from England, to take charge of sales and manufacturing activities here, stated that a new and energetic merchandising and advertising program would be launched at once. "Newspapers will be the backbone of the Beecham Advertising effort"—said Mr. Blomfield.

The new selling program will cover the Company's various products, including Beecham's Pills, Yeast-Vite Tonic Tablets, Carmolene Ointment, Veno's Cough Syrup, and Beechams, a new laxative in convenient pastille form, which has been just recently introduced in this country.

"I am tremendously impressed with the possibilities of trade development in Canada," said Mr Blomfield "The history of Beecham's progress during its over 90 years of business activity in many parts of the world, has indicated the soundness of buying product, package, and advertising in the buying and reading habits of the markets covered. It seems natural, therefore, that in our new plans for sales development in Canada, the Daily Newspaper should play a most important part, as it has in England and elsewhere. With manufacturing arrangements now well established in our new, larger plant, my Associates, Mr. Arthur M. Robertson, Mr. James Grayson, Mr. J. H. Cates and myself, are looking forward confidently to a splendid upturn in trade during 1934."

Nobel Hunter Dies

B.C. Pioneer Was Authority On Wild Life Of Canada

Pioneer of the British Columbia mining fields, "Grizzly" Dan McDonald, reputed killer of more than 100 grizzlies, is dead. He died at Cranbrook, B.C., after a career of prospecting and hunting which featured by brought him riches. He held an eighth interest in a $10,000,000 mining property recently disposed of at Hall's Roaring Creek, in the Hall-Hall's Roaring Creek, in the Kimberley district.

For 20 years "Grizzly" Dan had prospected and hunted in the Cranbrook district and previous to that he had searched for gold in California and the Yukon.

A noted authority on wild life, known both in Canada and the United States, McDonald was one of the last shots in western Canada.

Hotels Still Pay Trades

Every truck in France must carry a reflector call and electric bell beginning with 1934. The call is to be placed at the back of the truck, so that any motorist who wishes to pass it may signal to the driver. This he will do by turning on his headlights and the light flashing on the call will cause it to ring the electric bell placed near the truck driver's seat.

Idea Not Practical

British Government Not In Favor Of International Air Force

The British Government believes an international air force at the disposal of the League of Nations, as suggested by a certain school of disarmament thought, would be neither practical nor desirable.

Lord Londonderry Secretary of State for Air, made this announcement during the disarmament debate in the House of Lords and followed it up with the declaration Great Britain could not easily contemplate protection of the League of Nations as a superstate.

The League was an instrument for peace and it did not exist for abolition of war by war the minister said. Furthermore Sir Reginald added such a system would require the full paraphernalia of military equipment and war, land and air forces, with a general staff.

What chance he asked would such a heterogeneous force stand against united from England in case of the operations of the Council of the subsidiaries in Canada and the United States. A new department of Merchandising and Advertising program has just been announced by Mr. Blomfield.

Evolves New Fruit

Curroseberry Has Been Produced By Plant Breeder In England

A remarkable new fruit, which has been named the curroseberry, has been produced by an amateur gardener at Thirsk, England.

It is the outcome of five years experimenting by Elijah Green a retired grocer, aged 73.

The curroseberry is a cross between the black currant and the gooseberry and is said to have the flavor of the former and the juiciness of the latter at its best.

Housewives here who have made curroseberry jam say it is better than any other sort they have ever tasted.

The berries grow in bunches resembling medium sized grapes, and are navy blue in color. They ripen at the same month as the gooseberry.

The bushes are being propagated by means of cuttings.

Was Chinese Detective

Chong Aspana, Of Honolulu, Was Picturesque Character

Chong Aspana, 64, Honolulu Chinese detective, has followed in death the man who made him famous. Chang was the "Charli's Chan" in novels of the late Earl Derr Biggers.

His death removed one of Honolulu's most picturesque characters. When the city was incorporated years ago, Chong joined the police force and served until retired in May, last year.

His detective feats attracted the attention of Biggers before he visited the islands and the novelist incorporated some of them in his first story about Howard, "The Fly-ing Without A Key."

An Excellent Shot

An Irishman obtained a position at an observatory, and spent some time looking at the telescope.

A professor walked in, and started taking observations when a star fell.

"Bejorra, that was a fine shot! And you hardly had time to aim it!" exclaimed Pat.

At top speed, a running horse is completely off the ground one fourth of the time.

About 250 of the 1,000 clocks in the collection of King George are in Windsor Castle.

GRASSHOPPER CAMPAIGN FOR 1934

The pesky grasshopper, which caused a lot of trouble through the western states and Western Canada the past season, is going to be even more pestiferous next summer, according to indications given by investigations which have been going on this fall. In the north-western states drastic action is to be taken the next year to meet the hopper situation

It is from these states that the hoppers generally seem to start in their ravage across our wheat country. Following a conference recently held at Fargo, North Dakota, a deputation has been sent to Washington to ask for a vote of three million dollars to fight the grasshopper next year.

At Regina a few weeks ago Western Canadian officials discussed the situation as it exists in the three prairie provinces.

Last season Alberta was fortunate in being able to keep the loss of crop from hoppers down almost to a minimum, thanks to the thorough and efficient campaign carried on by the provincial and federal and university authorities. The area affected in Alberta last year was about 2,000,000 acres of crop land involving 10,000 farmers.

A Regular Loser

Mother: "Did I see you kissing that young Allen last night?"

Beryl: "Well, mother, he told me he had lost his uncle and I felt so sorry for him."

Fire Prevention In Saskatchewan

Hon. Jerome D. Hyndman Issues Statement About Fire Prevention in Saskatchewan

As minister in charge of the Fire Prevention Act and the Prairie and Forest Fires Act of the Province of Saskatchewan, I take this opportunity afforded by the Fire Prevention Week to bring to the attention of the people of Saskatchewan the necessity for greater caution and care on the part of the majority of the people of Saskatchewan in order to prevent loss of life and property by fire.

Reliable statistics show that over a period of ten years, 407 000 fires in Canada have destroyed property valued at over $402,980,192 or an average of over $40,000,000 per year and that during the same period 1,516 lives were lost in burning buildings or over 351 lives per year and in addition 9 067 persons were seriously injured by fire These figures do not take into consideration loss because of property used lives caused by forest fires.

In the year 1932, there were reported in Canada, 47,853 fires with a property loss of $42 198 815.00. This however was not the total cost of fire To it must be added the incidental cost of insurance protection, and the cost of maintaining municipal fire departments and water supplies. For fire extinguishing including these items Canada last year incurred an unproductive expenditure of over $180,000,000 through fire, or roughly $300 for every minute of the year. Capitalized at five per cent, this represents the gigantic sum of over $6,000,000,000 which is only a little less than our National Debt. If devoted to programmes of constructive effort instead of being wantonly destroyed, such a sum would go far to-wards the reconstruction of many of the social and economic ills from which we are suffering at this present time.

Reliable statistics show that over 50 per cent. of the fires which occur originate either directly or indirectly through human ignorance, thought-lessness, and are therefore preventable and that a large part of this unnecessary expense and care would reduce the losses by fire in Canada to the comparatively insignificant losses in other nations.

While we spend millions yearly to create and maintain fire fighting departments and the purpose of putting out fires after they start, and our fire departments are undoubtedly superior to those are admittedly superior to those of Europe, only a few thousands are spent to prevent fires from starting It would seem as if we were attacking the problem from the wrong end and a great deal more than the old adage that a fire danger is better a few starts, that is, by the adoption of such preventive measures as will make it almost impossible for a fire of any consequence to start. This is how the problem has been largely solved in Europe and is the reason for low insurance rates prevail in those countries.

It must be borne in mind, that fire insurance rates for a country or community are based on fire losses previously incurred in that country or community. The fire insurance company must cover the insurance company must collect from the people the necessary insurance premiums, and the higher the losses from fire, the higher the fire insurance premiums paid by the public.

It is gratifying to note the success which has attended the Fire Prevention Campaign of the Government in the last four years. In 1929 Saskatchewan had by fires, exclusive of forest fires, a loss of $4,580,670. In 1932, the Saskatchewan fire loss amounted to $1,673,181 or about 34 per cent. of the fire losses in 1929. In 1932 there were only three cities in Canada with less fire losses than Moose Jaw; Moose Jaw per capita then in 1929 had a loss of $3.00 Saskatchewan fire losses amounted to $3.50 for every man, woman and child in the Province. By 1932, the Saskatchewan fire losses were reduced to $1.62 per capita, as compared with $5.80 per capita in 1928, and Saskatchewan occupies the proud position of having the lowest per capita fire loss of any province in Canada. We believe that our Fire Prevention Schools, our Fire Prevention Campaign in the public schools and homes of the province, in which effective work Saskatchewan has led all the provinces of Canada, has contributed very materially to this marked reduction.

The results of our Fire Prevention Campaign and the lightening up of the fire inspection work has brought about a great deal of gratification and satisfaction to those engaged in fire prevention and to the Fire Commissioner Underwriters. I desire, as minister in charge of the Fire Prevention Act, to thank all those who have assisted in this campaign which has proved of such splendid results. I thank the Fire Commissioner and the officials of my department connected with this work, and thereby co-operated with the Underwriters in their campaign of education and also the Boards of Trade, Municipal Councils and other organizations who co-operated with the Underwriters in their campaign of education to prevent them.

In addition to the fire losses already referred to we have suffered loss through forest fires and fires again there has been a marked improvement in the Saskatchewan during the last few years. In the year 1929 the cost to us of forest fires was under the Dominion Government Protective Service was $1,045,000. The cost of forest fires in the forests during the last three years are as follows:—1931, $64,-

"THESE HARD TIMES"

The hard times and scarcity of money makes it more important than ever to economize One way I save on clothes is by reversing the color of faded or out-of-style dresses, coats, slackings, and underwear For dyeing, or tinting, I always use Diamond Dyes. They are the most economical soap by far because they never boil the grease results that make you proud Why, things look better than new when redyed with Diamond Dyes They never spot, streak, or run They go on smoothly and evenly in the hands of even a ten year old child Another thing Diamond Dyes are the best by tests out of limit or beam it limp as rag Canada Dye Co. They deserve to be called "the world's finest dyes" —

E.S.G., Quebec.

1924, 191, 1933, 121, 1933, 54 L- days' The total forest fires reported over to us follows: 1930, $24,645.00; 1931, $16,445.00; 1932, $5,922.00; 1929, estimated cost $1,000, as compared with $1,045,000 in 1929 in 1930 under control.

We attribute this reduction in the fire loss partly to the wet weather in the year 1932, and to the widespreading up of the fire regulations and the recommendations which we have made, providing for a closed season for fires on the north country.

A great many new fires during the early part of the season are due to settlers starting fires for the purpose of clearing up their land. With the Land Settlement Branch of this Department, the field officials of the Government have been trying to control to a considerable extent the fires occasioned from this cause. Settlers are requested, and have been assisted, in the work in burning their stubbings by fires do not get away and cause damage, and the assistance of the field officers of the Department of Natural Resources may be called upon when required for such operations as to the proper burning of fires.

The radio system operated by the Government of the province has been of great value to the settlers who have taken up land adjacent to and in the forest areas, and has undoubtedly saved and licensed timber berths. It is also of value to clear the information they too often carelessly report to forest officers of fires in the north and the dead and down timbers in the forest areas, the higher the fire loss is dry. To guard against this the fines fire regulations have been increased to $100 in the case of setting a settler to obtain a permit from the Forest Ranger in the Local District. The regulation will be vigorously enforced. We trust that by the publication sound of my voice are urged to be careful in setting camp fires, and warned that failure to do so will be followed by prosecution. The Royal Canadian Mounted Police have been appointed fire guardians in addition to the regular fire rangers.

As minister in charge of fire protection, I would like to remind the people of Saskatchewan that at such time as we may be visited by a conflagration:

1. All dwellings and their surroundings be carefully inspected by the fire inspectors for the purpose of satisfying to cause or promote the spread of fire hazard.

2. All public buildings, stores, manufacturing establishments, etc., and cleaned of rubbish in order to reduce fire hazards and maintain health and safety.

3. All fire escapes on public hospitals and institutions, buildings be inspected and provision made for the safe evacuation of the inmates in case of conflagration from danger in the event of fire.

4. Fire drills be held for the children in all schools in the province and all institutions and for the employees of large stores and factories in order that a proper degree of safety may be ensured by acquainting the occupants with the best and most expeditious mode of exit in time of danger

Special instruction on the subject of fire prevention be given by the teachers and by municipal officials in the schools and that such appropriate literature as may be made available be distributed to the pupils

6. Boy Scout leaders give instructions to the troops under their control as to the best means of escape during such time as the fire department is in the preventive and extinguishment of fires and especially as to the desirability of qualifying for the fire service badge

Ninety per cent of the fires are avoidable because they are caused by carelessness In 1932 the fire losses in Great Britain amounted to just over one dollar per capita as compared with a $4.65 per capita for loss in Canada Every Canadian should make an effort to cut down these losses and to think and work in terms of fire prevention, not this year only but fifty-two weeks in every year

SUNDAY SCHOOL LESSON

OCTOBER 22

PAUL IN ASIA MINOR

Golden Text "And he said unto them, Go ye into all the world, and preach the gospel to every creature" Mark 16 15

Lesson Acts 13 and 14

Devotional Reading: Ephesians 2 13-22

Explanations and Comments

The First Foreign Missionaries Under the direction of the Holy Spirit the Christian Church at Antioch were prophets and teachers, men of special ability and inspiration. Among them were Barnabas and Simeon known Barnabas. Others were Symeon the Black doubtless an African, and Lucius of Cyrene, probably also an African. Manaen, a friend of Herod Antipas, (Luke 13 31) Saul, who was a foster-brother of Herod the tetrarch (Herod Antipas) son of Herod the Great), and seemingly a person of some special prominence, and, finally Paul Apparently the Christian intended Paul a prince at the end of the list to be emphatic, just as was Barnabas at the beginning of the list to give leaders were evidently Grecian Jews

We know nothing of Symeon and Lucius, and Manaen, and yet it is good to have their names, for they remind us of the fact that all the witnesses of the truth who stood back of the Christian movement, and encouraged its leaders to carry on. Behind Jesus, in one of her fine hymns, speaks of the faithful who are not known. "What should we do without them? All great causes demand great and small. Behind Paul, who did the work of Barnabas the early Church would have been as an unrecognized army without officers. Behind Moses was Nut Higer and Lacnas and Manaen who needed as surely as Barnabas and Paul" The New Outlook

Work in the Church at Antioch under the leadership of these five men, was carrying on its service of worship, prayer and fasting, an advance movement was initiated under the direction of God. It is probable that the prayer of the Church was "waiting upon God for special guidance in a matter already occupying their thoughts, this matter was the Christianizing of the Roman Empire"

"The method of God is not different today from that which prevailed in the world. In our time a church convention, after due consideration of conditions and opportunities, decides to send missionaries to some foreign field, and on the basis of the action of the body three men are set apart by the laying on of hands and its consecrated wisdom in the transaction. If the writers of the apostolic age had been chronicling the event, they would have mentioned that the Spirit said to the Church. Separate me these men for the work to which I have called them. Both records would be true, but the second would be in popular harmony with all the facts. We have not yet learned to write the story of the Church, or the proceedings of Christian bodies in such vivid and vital terms." The Christian Century

Gives Large Sum To Hospital

Widow Shows Gratitude To Surgeon Who Saved His Life

A patient's gratitude to a distinguished English doctor was performed three major operations on him in 10 days and saved his life, has resulted in a gift of $125,000 to the Middlesex hospital, enabling it to establish what is called the first X-ray diagnostic department in the world.

The patient is W. H. Collins, of Woodson Park, Buckinghamshire, and the doctor is Dr. Alfred Edward Webb-Johnson, surgeon to the hospital.

New Coal For Fireplace

Saskatchewan Consumed About [illegible] Gallons of Ice Cream in 1932

Saskatchewan palates have a vote for ice cream

During the year 1932 residents of this province consumed more than 500 000 gallons of this confection at a cost of almost $400,000

The total value of all dairy products in the province in 1932 is estimated at $13 053,100, and residents consumed 35,000,000 gallons of milk with a value of $2,250 000

This information was released by the Department of Agriculture

Statistics show that for the year, the amount of milk fed to calves was estimated at 7,530,000 gallons

During the same period, 17,500,000 pounds of creamery butter and 21,-500,000 pounds of dairy butter, were produced Fifty-six creameries were in operation.

New Firm Incorporated

Treasure Seeking Company Officially Listed In Canada Gazette

Incorporation of a company to seek for hidden treasure is given official notice in the Canada Gazette The Canadian Oak Island Treasury Company, Ltd., with capital stock of $150,000 and head office at Victoria, B.C., has been incorporated.

Its purposes, as defined in the official notice, as follows:

"To locate, seek for and extricate from or under or in the vicinity of Oak Island in the province of Nova Scotia, in the Dominion of Canada, buried or hidden treasure, money (gold, silver, copper), minerals, metals, coins, precious stones, jewels, trinkets, bullion, ornaments, or any other useful or valuable objects

Three Nationals Anthems

The Austrian political tangle has given the people three national anthems. The Monarchists sing, "God Preserve Franz the Kaiser;" the Republicans sing "Austria, My Austria," and the Nazis are now singing "Deutschland uber Alles." All are sung to the tune of "Glorious things of Thee are spoken," by Haydn

REFORMS TO RELIEVE PLIGHT OF FARMERS

Toronto, Ont United Farmers of Ontario in convention here adopted a program in line with the policies of the Co-Operative Commonwealth Federation offering immediate reforms to relieve the financial plight of farmers including current legislation

Consideration of a proposal to apply for a political charter in order the U.F.O might take an active part in politics which the executive planned to present to the convention ended, was postponed because of the bitterness of the hour

Hanging of the general press held to that which prevailed in 1926-29, refinancing of farm mortgages at a low rate of interest, public control of finance through a government central bank and a national investment trust to prevent the creation of trade barriers, regulation by import and export boards of trade in the interest of the general public, steeply graduated income and inheritance taxes and confiscation of large estates on the death of owners after making suitable provision for heirs, were high points of the program approved

There was much discussion but little disagreement as the principles of the platform were endorsed, one by one and almost unanimously Sharp differences of opinion arose only in connection with the clause recommending the "setting up of import and export boards to organize and regulate the flow of trade."

Several maiden men was recognized protective tariffs, and marked a cleavage from the former U.F.O. policy of free trade The clause passed however, with only a couple of dissenting votes

British Empire League Concerned Over Navy

Is vital That Canada Highways Should Be Effectually Protected

London, Eng.—A call for a bigger and better British navy was founded at a meeting of the British Empire league in the House of Lords A resolution adopted expressed concern over the decline of the British navy in relation to those of other powers.

L. S. Amery in a speech decried the view that the air fleet had superceded the navy as the main line of defence and declared that it was essential that Britain's ocean highways should be effectively protected. Otherwise, he said, the British Isles could not but six months."

Another resolution urged that government take over the condition of the whole "merchant navy."

Hid Ya Farm

Edmonton, Alberta. First prosecution in Edmonton under the amended section of the criminal code which provides a maximum penalty of five years, was made in district criminal court when Edward A. Forman, 21, was sentenced to 60 days in jail for conveying on his person a revolver for which he had no permit.

Commands Reserve Fleet

London, Eng. Vice-Admiral Edward Astley-Rushton, who quietly performed outstanding naval service throughout the Great War, was appointed commander-in-chief of the Reserve Fleet in succession to Vice-Admiral William Munro Kerr, the appointment to date from April 26 next.

No Cases For Court

Brandon, Man.— For the first time in years the non-jury session of the king's bench was not held here on schedule. The chief justice in Winnipeg was advised there was not a single case on the dockets and so no judge attended.

Robbery, Reversed

Shanghai, China.— An overlooked military bunch carrying 150 soldiers was rammed by a river steamer on the Yangtze, drowning 50 of the soldiers. The accident occurred near Hsinkiang. Kiangsi province.

Getting Trip To South Pole

Three Newsmen Discovered On Admiral Byrd's Vessel

Aboard Admiral Byrd's Flagship Three New Zealand youths stowaways for the South Pole were discovered hiding in one of the lifeboats in the bay of Wellington as the expedition of Admiral Richard E. Byrd steamed on her last lap to the Antarctic

The youths were discovered by Sub-[illegible] Whitt all hands mustered at their respective stations and the lifeboats were being removed from the davits, a yell came from behind. "Here's [illegible]"

The crew was hard off and two were squeezed curled up in the rear and making in the sudden light For 10 hours they had been cramped [illegible]

To return them to port would cost the expedition 18 hours' steaming and [illegible] Admiral Byrd has agreed to deck duty on the already overcrowded vessel

For Christmas Cheer

Men In Relief Camps To Receive Part Of Pay Before Holiday

Ottawa, Ont. Hon. Robert Weir, Minister of National Defence Department responsible for the administration of the relief camps for single men announced Thursday that all the men in the camps throughout the Dominion will receive part of their pay before Christmas and the balance on December 30.

Opportunity will be given to the men to take a Christmas holiday but transportation will be at their own expense Almost 180 days camps are now operating in the relief system, taking care of approximately 14,600 men.

World Police Plan

Motion In British House Is Dropped As Impracticable

London, Eng. A number of three parties united in the House of Commons in support of a motion by C. Lo Nathan Eccles, Liberal, for an international police force under the League of Nations.

He was supported by J Spear, Conservative, and Major C. R. Attlee, Labor, but the motion was dropped after Capt. Anthony Eden, undersecretary for foreign affairs, had replied contending the suggestion was impracticable.

He accepted the idea of an international air force being allowed to use bombs and asserted personally he would not fear the condition of "an anstheroots" as the result of an international bomb then a national [illegible]

Free State Loan Short

Poll Fee Below Amount Required To Get Seat

London, Eng. The striking contrast to the success of loan issues by Canada and virtually all other parts of the Empire was revealed by the Irish State's loan of $20,000,000 was not fully subscribed when the lists were closed on Monday. Last-minute subscript.ons included $600,000 in funds controlled by the Free State courts of justice, $250,000 from Galway, $75,000 from Cardinal McRoy, and huge sums from other subscribers.

The total received fell very far short of the President Cosgrave and Valera hoped to get, but by just how much is not known.

Former Court Official Dead

Treasurer To Queen Mary Retired Only Last Year

London, Eng.—A court official at Buckingham Palace for 30 years, and treasurer to Queen Mary from 1919 to last year, Sir Edward William Wall again is dead at the age of 70 years.

For 18 years Sir Edward handled the Queen's many charitable benefactions and probably was the recipient of as many royal condolences as any servant of the court in the past half century. Sir Edward was a bachelor.

Fair Directors To Meet

Exhibition Association Convenes In Winnipeg January 16th

Canadian Sask The Western Canada Association [illegible] Exhibitions will meet at Winnipeg on Monday January 16 for a [illegible] session when arrangements will be made for the 1934 exhibition. Committees [illegible] will be appointed for [illegible] and [illegible] and candidates will also be declared for the 1934 fair circuit P. W Abbott, Edmonton, president of the Association, is visiting in Saskatchewan conferring with A. M McIntyre vice-president of the organization and R. W. Johns, secretary.

Canada Cattle Healthy

More Free From Disease Than Any Offered On The Market

Ottawa, Ont. Records over the past quarter century showed Canadian cattle to be the healthiest of any offered on the market.

This declaration by Hon. Robert Weir, Minister of Agriculture, was stated by a statement credited to J. W. Dulaney, commissioner for the Irish Free State in London Mr. Dulaney's statement was that the Irish Free State could offer cattle which were probably more free from disease than any cattle in Canada.

Plane Transports Prisoner

Quebec Provincial Police Force Adopt New Method

Ville Marie, Que.—Quebec's provincial police force wrote north country history when they transporting 66 arrested persons, most of them striking bush workers, by aeroplane from Rouyn Que., to Ville Marie's new jail.

Over the snow-covered country that stretched 90 miles between the two towns, four planes roared back and forth through a light snowstorm with complete as unique a feat as the north has ever seen. The prisoners were taken into custody at Rouyn following a clash between strikers and police, during which the riot act was read.

Jail facilities at Rouyn were inadequate to house the crowds. Four General Airways pilots were sworn in as special constables and each was accompanied by a heavily armed officer.

Police said the movement was carried out without a hitch. Herman Bushman, many of whom had never been in a plane before, made no protest as the flights started from Rouyn. Shortly after noon the new jail was packed with excited prisoners happy to be out of the air even though it meant they were behind bars

Bandits Make Haul

Equipped With Radio, They Rob Chicago Savings Bank

Chicago.—A wireless equipped gang of seven armed men invaded the Lincoln Trust and Savings Bank, herding with A. M McIntyre vice-president of the organization and R. W. Johns, secretary.

Several maiden men was recognized protective tariffs, and marked a cleavage from the former U.F.O. policy of free trade The clause passed however, with only a couple of dissenting votes

British Empire League Concerned Over Navy

Is vital That Canada Highways Should Be Effectually Protected

London, Eng.—A call for a bigger and better British navy was founded at a meeting of the British Empire league in the House of Lords A resolution adopted expressed concern over the decline of the British navy in relation to those of other powers.

L. S. Amery in a speech decried the view that the air fleet had superceded the navy as the main line of defence and declared that it was essential that Britain's ocean highways should be effectively protected. Otherwise, he said, the British Isles could not but six months."

Another resolution urged that government take over the condition of the whole "merchant navy."

Hid Ya Farm

Edmonton, Alberta. First prosecution in Edmonton under the amended section of the criminal code which provides a maximum penalty of five years, was made in district criminal court when Edward A. Forman, 21, was sentenced to 60 days in jail for conveying on his person a revolver for which he had no permit.

Commands Reserve Fleet

London, Eng. Vice-Admiral Edward Astley-Rushton, who quietly performed outstanding naval service throughout the Great War, was appointed commander-in-chief of the Reserve Fleet in succession to Vice-Admiral William Munro Kerr, the appointment to date from April 26 next.

No Cases For Court

Brandon, Man.— For the first time in years the non-jury session of the king's bench was not held here on schedule. The chief justice in Winnipeg was advised there was not a single case on the dockets and so no judge attended.

Robbery, Reversed

Shanghai, China.— An overlooked military bunch carrying 150 soldiers was rammed by a river steamer on the Yangtze, drowning 50 of the soldiers. The accident occurred near Hsinkiang. Kiangsi province.

PROPOSAL FOR A WORLD WIDE WHEAT PRICE

London, Eng.—The international wheat marketing committee has been in a France-German proposal for a world-wide fixed price on wheat.

It was learned authoritatively that the representatives of Germany and France, however, had not greeted the proposal with enthusiasm. The exporters are fighting shy of any artificial price fixing, foreseeing difficulties in getting their governments to accept or enforce such agreements

They much prefer that importing nations should take steps to increase their consumption and when the margins in order to gain the desired increase to a level of 62 gold cents a bushel in the price of the grain

Economics, Authorities point out, of proven quality wheat stands at not favored by Herman Trade, therefore a fixed price would mean a premium for the finest grades gained possibly equivalent to number three northern or better This would confuse the average expert and farmer who grow low grade wheat would be kicked out of commercial tproduction into a more suitable form of mixed farming.

Spanish Revolt

Troops Quelled In Revolting Up Simultaneously

Madrid Spain.—Embers of the revolt which burned over the week-end in many parts of Spain were being extinguished by the government. So far over 100 have been killed.

Calls were filled throughout the nation as troops continued to round up suspected revolutionists and investigatory quarters were brought into use

The general strike called by anarchists and communists continued in some provinces.

Guards found the first woman revolutionist arrested in a Madrid Street stronghold. Four women were arrested along with a band of rebels, who were armed with pistols under their cloaks and a quantity of ammunition was seized.

Scattered firing continued along streets as police broke up gatherings of persons in small groups.

At Gijon, extraordinary precautions were taken as the strike continued with Extremist threaten ng

Premier Diego Martin's announced the cabinet probably would rig after meeting to wind up details of its work

Former premier Alejandro Lerroux whose cabinet resigned October 10, was expected to form another in short order

Northern Sea Route

Claim Saving On Livestock Shipped Through Churchill

Saskatoon, Sask.—Stating that there was an estimated saving of $4.37 on each head of livestock shipped to England through Port Churchill, over the cost of shipping by way of Montreal J. C. Hackney, general manager of the Saskatchewan Co-Operative Livestock Producers, has sent a letter to the board of trade urging the construction of stock pens at Churchill. The secretary of the board of trade endorsed the project and will take steps to urge upon the government the needed construction.

Conspirators Sentenced

Lahore, India.—The trial of 21 men accused of an attempt to blow up a vice-regal train four years a go, and of organizing bomb explosions in the Punjab in 1930 with other conspiratorial activities, concluded when two brothers were sentenced to death, three of the accused are to be transported for life, and 11 others were given long terms of imprisonment. Five were acquitted.

WAR THREAT INTENSIFIED BY MUSSOLINI'S WARNING

With Italy threatening to follow the example of Germany and Japan in quitting the League of Nations, European statesmen are working hard to stave off a situation that observers say is more grave than any known on the horizon. Maxim Litvinoff, Soviet Foreign Minister, who recently conferred with Premier Mussolini at Rome, believes Europe "is in a veritable danger of war." Chancellor Hitler's insistence on a Reich army of 300,000 and a strong military air force has resulted in united opposition by other strong European powers. Lord Tyrrell, British Ambassador to France, considered the situation grave enough to warrant a conference with his superiors in London. M. Francois-Poncet, French Ambassador to Germany, also hurried back to Paris for a parley with the powers that be. It is understood Hitler's recent revival of the Rosy and Almee demands caused M. Francois-Poncet's quick return.

Would Use Churchill Route

Wheat Pool Wants Only Standard 300,000,000 Bushels If Costs Were Lowered

The Saskatchewan Wheat Pool has 300,000,000 bushels of wheat in prepared areas available annually in normal years for shipment via Churchill if shipping costs were reduced to a point where competition with the lakehead route is possible, W. A. Urton, Dash Lake, director of the pool, told a special meeting of the board of trade at Prince Albert.

The pool, Mr Urton said, is doing everything possible to encourage the development of the Churchill route. He, the board, discussed. Like all the good food money, he included. The freight rate from Churchill to Liverpool was said and those questions were an important line rates at present and one-third cents from Port Churchill. The terms of the rate war in the Lakes. The effect on the Churchill route of the creation of the pool system are situated in these areas.

The pool has now 2,000,000 bushels of wheat in storage at Churchill, and there are many millions more bushels in elevators on that part of the province ready for movement via Churchill next year, if favorable rates can be secured, Mr. Urton said.

Mr. Urton agreed the problem was to secure for the farmer a share of the economic saving when the Churchill route shipping costs are reduced to a point where savings are possible. He said that then, theoretically, farmers, and shareholders in the pool enterprise, will be able to share in the saving. Seemingly, Churchill must be bettered, which will be traded in on the basis of shipment through Churchill, and when this day arrives the route will be put effectively into the pockets of the producers.

B.C. Boy Wins Prize

Mrs. Largent Maple Leaf Entered In Recent Competition

While New Brunswick captured the honor of producing the most beautiful autumn tinted maple leaf, British Columbia proudly outstripped all the others in producing the largest leaf in the recent competition in which awards have been published. The winners in this phase of the competition and prize of $5 went to 10-year-old Bobby Stone, Revelstoke, B.C. The leaf measured 9½ square inches.

The judges, C. W. Simpson, R.C.A., R. W. Field, R.C.A., and Fred Crockett, in the most beautiful leaf competition, and J. M. R. Fairbairn, chief engineer, Canadian Pacific Railway, in the largest leaf competition, and their assistants who received, classified and mounted the leaves, freely admitted they entered upon their duty under the impression that a maple leaf was, in brief, a maple leaf. They debated their task in the knowledge that there are more than 13 varieties.

Lots Of Business

Two regrets met, and in the ordinary course of conversation one said "How's de business?"

"Business am very good," answered the other "Ah've bought a chicken for two dollahs, swopped it for a bicycle, swopped that for a trumpet, swopped de trumpet for a bobsleigh, and Ah sold de bobsleigh to 'em dis mawnin."

"Ha, nah! But look at de business ahm doin'!"

Roumania Taxes Bread

In Roumania even the "staff of life" is being taxed. Loaves of bread taken on board ships with all other supplies bore a special tax stamp according to Captain A. W. Cullen, of the S.S. Pennsylvania, which brought to Montreal a cargo of Roumanian oil. Duties abound at Sulina.

Under the N.R.A. code a married man who earns $20 a week can now live on $40 according to the Bruning, Neb., Courier.

RE-BUILDING OF ROME BRINGS TO LIGHT WEALTH OF HISTORY

Only since Mussolini ordered extensive excavations and the construction of new roads through Rome has it been possible to view with such apparent ease some of the historical landmarks in the city of the Caesars. One picture, taken from one of the new roads, shows the Coliseum, the Capitol, the Arch of Titus, the Arch of Constantine.

Would Pause Most Gaining

Dr. Ben Bakwin Brings Depression Message From Europe

Dr. Ben Bakwin, assistant administrative director of the Canadian Red Cross, of Montreal, who has returned to New York from Europe, believes permanent peace is "nearer today than it was before the war." He says the relations of Germany and Poland are being improved, because Chancellor Adolf Hitler primarily is interested in domestic affairs. Success in the attempts to federate the Balkan, Danubian and Baltic states, he said, would be a major aid in maintaining the peace of Europe.

Germany is afraid of occupying Austria, Hitler has been obliged to insist on equality of armaments and that the German nation must have ultimately, just as soon as mutual security is organized. Mr. Bakwin's visit to Europe, he said, was not in any sense connected with the Red Cross, but was undertaken on the basis of observation through Churchill, and when the day arrives the route will be put effectively into the pockets of the producers.

Ten Veteran Horses Left

Chanak Gold $50,000 Grosvenor Racing Stable Dispersed

With the exception of two horses at Calgary, the eight war veteran horses, which were shown at the Royal Winter Fair in Toronto, are the only horses remaining alive from 100,000 which left Canada for overseas during the Great War. The fund inaugurated by Col. Hendrie and directors of the Royal Winter Fair, to purchase horses for the war, for horses, has passed $7,500 Col. Hendrie said. It is proposed that if any contributions are received, similar memorial monuments will be placed in other cities which sent horses to the war.

Boat Not Hard Dog

Man Saves Own Bacon Realizing When He Goes Boating

Clarence Michael, a school teacher of Toronto, B.C., told some friends recently that any time he finished a month he started to bark, and the poor, foolish bird, thinking a dog was on the job, promptly flew into a rage.

The last time Clarence remarked that the following month Clarence took some of them along. He finished a bird, barked, and the bird seemed into nearby tree. Later he had another chance, and had the same result.

One Day's Guess

The first schoolboy "bourbon" of the season are making their appearance. A nine-year-old boy has taken the lead with a characteristic definition of a "green widow." "A green widow," he wrote, "is the wife of a dead vegetarian."

Steam-Lined Rail Car

Revolutionary Design Used In Re-Equipping Of Railroad

Great Britain's first stream-lined rail car has entered experimental service between Southall and Didcot on the Great Western Railway.

So far no British rail designs are concerned the car is revolutionary. It resembles a huge aeroplane fuel, surmounted by glass-fitting observation windows. Wind resistance is reduced to a fifth of that encountered by a similar flat-sided car.

The car has a seating capacity of 60 third-class passengers, and is driven by a 130 horse-power heavy oil engine using non-inflammable oil. On a trial run between London and Reading, 54 miles, the car reached a speed of 61 miles an hour and travelled at an average of 54 miles an hour.

Tribe Has Young Chief

Ten-Year-Old Boy Chosen By Indian Women

Squaws and maidens of the Wolf Clan, one of seven Iroquois tribes living peacefully side by side on the Government Reservation at Caughnawaga, near Montreal, have chosen a 10-year-old boy as their new chief. The braves had nothing to say in the matter of the choice. The new chief, little Joe Two Axe, the son of Grand Chief Dominick Tehs-rit-he-ton, was chosen because he is a pure-blooded Indian, one of the main requisites for clan chieftainship. Henceforth, he be known as Sheks-enakes-ronach.

Caracas, Venezuela, has a new electrically lighted fountain, featuring color effects in the national colors, blue, red, and yellow.

FANCIFUL FABLES

The Guards Of London

Represents All That Is Glorious In Traditions Of British Army

Hunt J Bushett of New London, Connecticut, writing in the New York Herald Tribune says

"The guards of London who stand on sentry duty in all the resplendence of their crimson uniforms are, with us that duty merely sensational representatives of all that is glorious in the traditions of the British army. Clear by these majestic figures are their equally efficient fellow guardsmen ready for any serious emergency with complete up-to-date equipment and service uniforms to be donned in an instant. It is quite a fact, yet seeing thousands of guardsmen in their full dress uniforms, some guards, acting in some kinds with modern weapons of battle.

There are two regiments of mounted guards, the Life Guards and the Royal Horse Guards, and five of the regular guards, all famous fighting units in their battalions. The two guard regiments are known as the Grenadier Guards, Coldstream, Scots, Irish and Welsh Guards.

Guarding gates of general from a distance, consist of three of the London regiments with their men of excellent physique, machine-like drill movements and gorgeous dress points conferred by Regulation today. The latter feature represents practically all that is left of the scarlet and blue which made so colorful the drab barrack squares and the streets of many an English town early in the century. Full dress uniform is worn on these pieces now, and since the war a movement to replace the khaki uniforms with the regimental by the picturesque per-war coat for dress purposes was hailed by the taxpayers with talk of "scarlet folly" and the like. No doubt significant, however, ever was raised against the expensive full dress of the London guardsmen.

London would be to many by no means such an attractive place without the guards. Even the colored soldiers (the Royal Horse Guards are blue), and ceremonies such as trooping of the colors and changing of the guard are the attraction of hundreds of thousands annually.

If the close proximity of such a modern and generally unpicturesque necessity as automobile traffic is to jeopardize the continuance of these lingering reminders of all that is glorious in British military history and forfeit such popularity as changing of the guard on London's streets then it might be as well to divert such traffic to other paths while such ceremonies are being carried out."

Insurance Business Good

Figures Show Upswing During Year Also Been Remarkable

With the best comparatively monthly increase in new business since September, 1931, over four years ago Life insurance in Canada continues its encouraging swing upward. Figures issued by the Life Insurance Sales Research Bureau show a 9 per cent. increase in new paid for ordinary life insurance sales in the Dominion in October, 1933 as compared with October, 1932, Quebec with total sales of over $11,000,000 was up over 23 per cent.; Ontario, with $23,000,000, up about 1 per cent.; British Columbia was up over 10 per cent.; and Prairie Provinces, which showed a remarkable increase, or over 50 per cent.

Bringing High Prices

The price of the dime novel has gone up because consumers have gone in for collecting the old paper back thrillers. Charles Bragin of Brooklyn who has a collection of dime novels along the style of Horatio Alger, Antigua and Confederate Exposition in Chicago, said that nowadays they sell for as high as $25 and one rare omnibus $1,000—to collectors.

War Against Butterfly.

White butterflies have caused such heavy damage in New Zealand that a bounty of 1d. per pupa has been started. Not only have farmers complained of destruction of crops, but sheep growers declare the pest is smashing the fat stock industry by ravaging crops for stock feed. An insect parasite is being imported to keep down the butterfly.

CHILDREN'S COLDS

OCCASIONAL WIFE

By
EMMA ROSS WEBSTER

Author of "Jeretta," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt, young and beautiful art student, and Peter Anson, a struggling sculptor fall in love and marry secretly deciding to live apart until the time Peter can establish himself Camilla, the adopted daughter of wealthy parents, is cut off without money when she comes of age. She is preparing herself for life with a course in commercial art, hoping to get a job to enable her to support herself. She has been making the rounds of the agencies. Peter working in his studio on an idea for a figure with which he hopes to win a scholarship to Paris abroad. receives a call from a beautiful model, Sylvia Todd, who offers to work for almost nothing if he will sculpt her. He cannot afford a model but promises to think it over. Peter discusses the matter of a model with Camilla and decides to employ Miss Todd. Together Camilla and Peter decide on the name. They are at the height of love happiness. At home Sylvia Todd receives a mysterious telephone call. Peter begins work on his piece for the exhibit and Camilla, at her family's summer home, is a bit discomfited without him. Avis Werth, one of Camilla's friends who is in love with Peter herself, suggests that she spend the week with Camilla. Peter invites them to get Peter for a party.

(Now Go On With The Story.)

CHAPTER XXII.

In spite of the banal cleverness of the remark, Peter and Sylvia had worked on through the Saturday afternoon. "Do you mind?" he asked her solicitously. "Feeling as it is, I feel like work. Just getting into the spirit of the thing, I guess."

"I'm with you, big boy, to the last hurdle," his model encouraged. "You haven't too much time to finish, have you?"

"Think I can make it," he replied curtly, already absorbed.

Sylvia found her strained muscles and resumed her position. An hour of intense silence ensued, broken only at intervals by the creaking sound of the revolving platform that supported the clay figure.

Finally, he smiled wearily and nodded. "Thanks a lot, Miss Todd. That's all," and left the room to afford her privacy for dressing. He paced the hall, smoking and thinking. His right hand sank into his pocket and encountered a slim roll of banknotes. It reminded him that this was payday for Sylvia. Presently, she up and the door and stood on the threshold, waiting expectantly.

I had just remembered what day it is," he smiled. "I know you hadn't forgotten and don't you ever let me forget, either." He walked toward her, drawing the b ls from his pocket and counting them.

"Just enough," he said, holding them out to her.

Sylvia looked up and met his eyes inquiringly. "Is that all you have, Mr. Anson?"

Peter hesitated briefly then managed a short laugh "Why what does it matter?" I owe it to you, and you need it just as much as I do. Perhaps more."

"No, I don't I didn't tell you, but I have another job, now. I'm posing for another National entry when I'm not working for you I guess you know him Gus Matson."

"Mr. Matson!" Peter was startled. He had him back at fine-arts commencement. "Yeah, I know him. He he's trying for the scholarship, too?" he asked thoughtfully Never thought he was an ambitious Well, good luck to him."

He says that your entering just cuts everyone else's chance to win, in half."

Peter emitted a deprecating snort. "Oh, any, I guess not! He rather flatters me, doesn't he?"

"Well, maybe you are clever, but he hates you, I can see that I've wondered why."

Peter shrugged. "Oh, a little personal matter. But I settled that, and have nothing against Gus "

"You wouldn't hold a grudge or be jealous of anyone, I guess. You're simply wonderful, Peter." she said softly, and raised her lips eyes to his. Peter, forgetting the money, drew her back into the room when they began to talk.

"That'll do for you," he told her presently. "Here, take your money and run along. It's late."

"I don't want it. I'd much rather have you stay. I'll dinner for both of us. You're dead tired, you need diversion, and you're lonesome. So am I lonesome. Why don't we make some whoopie together for a change?" her hand on his arm urged him closer.

"Sorry," he turned away. "I don't feel like whoopie All I want is a shower and something cool to drink, then sleep."

"In like hot room? Don't be silly. You won't be able to sleep in that heat. Stay morning, if then. Come on," she pleaded.

"Don't you want me for company?"

"That might be pleasant but I can't accept it."

"Another date?"

"No."

"Well then—" impatiently.

"Please don't insist," he said kindly. "and here is your money."

"Wait, if you're not the first licking I ever saw in July! Don't you ever thaw out and get away from your stenographic and study?"

"It's very busy. Not much time for play," he apologized.

She thought, "if he knew what he had coming to him, he might be a little decent to me. But I'll give him another chance. He's worth it." She relented with a smile and took the proffered money. "All right, new weather. I hope you get caught in a blizzard. If you do, let me know. I'd like to get cooled off, too."

He grinned with friendly response and Sylvia flashed out of the door.

Peter dropped into a chair and surveyed his work of the day. A frown puckered his brood, smooth forehead, brave which his bright hair was disordered and damp with perspiration. His great arms hung limply in repose along the chair arms. They had been held at a rigid tension for hours.

There was a sudden flurry at the open doorway and laughing voices pattered up the stairs and tumbled into the room. Camilla, cool and refreshing in white, led the way. "Hello, Peter," she greeted him cheerily. "We all came in for you, to join us at the club. It's stifling here, but it's lovely out on the beach. The whole crowd is there, and we want you with us." Her eyes combed their ti was she who wanted him.

"Why—I—" he hesitated. He had risen and was covering his work with a white cloth.

"Don't say you won't." Avis had entered the room and added her inducement. "We'll indemnify you if you don't come with us willingly." She made a coquettish gesture tugging at his arm as if she had more persuasive powers than Camilla

"All right," he agreed "But you'll have to wait ten minutes I just quit work and I feel like I'd been in a Turkish bath You'd better wait outside where it's cooler Down in ten or less," he promised

It was the first time he had consented to join Camilla s crowd since they were married, but he went reluctantly As he bathed with dreaming, panic seized him He was joining a group of pleasure seekers whose money flowed into their pockets as it flowed out in a continuous stream and he had less than a dollar in his pocket. Sylvia actually had taken the last dollar he had

On Monday, he would be paid for some lettering and later in the week would pay day for the summer class instructors at the museum, which were his two principal sources of income Added together, they were little enough, but he managed frugally.

However, money next week was not now. His never could face the chagrin of going out to the club without a little money His thoughts battled with the anxiety of his position. He might suddenly feign illness and escape going along with them But, that would frighten Camilla, they would insist upon calling a doctor. He might just change his mind, and suddenly recall another engagement.

He was dressing with rapid movements, when Camilla came into the room. It over his head—had an idea, and dropped it into his pocket, instead. Then he took it out again and looked at it thoughtfully. He might just make it. He dashed out, locked the door and ran down the stairs. Terry Lane, a fellow-student, was on the green rounder swanted him in the paved court, with Camilla in the front seat beside Terry Lane, who nonchalantly smoking in the rumble seat.

Their voices rose and chattered when Peter appeared. He hesitated a moment, glanced at Camilla and then swung his long legs into the rumble seat. Terry touched the starter and the powerful motor roared with his impatient flooding of the carburetor.

Peter leaned forward, excitedly "Would you mind stopping a minute at the circle intersection. I have an errand I must attend to and will do when you blow it. Minute obliged if you will."

"Okay," said Terry. With three more guttural roars of the motor and a strident blast of horns, he had turned around and shot out into court into the traffic of the avenue.

Cars rattled and purred all around them. Roadster tops were down, closed car windows, open. The breeze of motion through space tossed the short uncovered hair of women and wrenched at the open collars of men's sport shirts. When traffic lights commanded a halt, their faces grew impatient with the delay and the hot, humid temperature of still air; heat shimmered in visible waves from the pavements upon which the sun had poured relentlessly all day.

"Just where shall I stop?" Terry threw the words back to Peter.

"Oh, anywhere you can park. Keep here is all right." He made rapid calculations.

Terry swung into a vacant space beside the curb and stopped the motor.

"I won't be long," he promised them, but his words involuntarily formed upon Camilla.

There was a scarlet somewhere near, he reflected as he strode down it, ran through the next street. He searched the entrances and found it, dodged inside. He walked through the floor as the milling crowds of Saturday shoppers permitted him, between stalls of heaped vegetables, brilliant displays of fruit, colorful cheeses. He swung through the back entrance and hesitated, then turned to the right north for half a block, headed through an alley, turned right and was out on the street again. Each succeeding half block and alley was on the reverse, a block away from the parlied car in which Camilla and her friends awaited him.

(To Be Continued)

Uncle Sam will do well to keep an eye on his new-found friend, the Russian "bear that walks like a man," says the Toronto Globe.

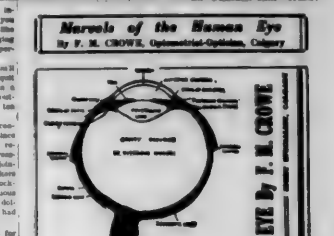
Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary



This is the first of a series of instructive articles written by F. M. Crowe, well-known Optometrist of Calgary. No doubt many readers will find these articles not only extremely interesting but of exceptional educational value. The first three articles deal with the anatomy of the eye described as various parts and their uses. Other articles will follow each week describing in a general way in language easily understood. Further illustrations will be used.

NO. 1—SOME OF THE PARTS AND THEIR USES.

The Sclerotic is the first coat and is also known as "The white of the eye." It is hard and almost opaque forming a protection to the rest of the eye. It is composed of fibrous tissue. It is posterior of the globe.

The Cornea contains the remaining two coats of the first coat and is fitted into the Sclerotic somewhat like the crystal of a watch fits into its case. The Cornea is highly polished and transparent permitting the rays of light to pass through it. It is also highly sensitive to pain. It is filled with the arteries and veins running all directions. Around the inner margin of the iris is a muscle which contracts in strong light thereby making the pupil smaller and preventing an excessive amount of light from entering and causing pain. When we enter a darkened room which requires more light to see, the muscle relaxes making the pupil larger.

The Iris or colored "curtain of the eye" corresponds to the diaphragm in the camera. Automatically adjusting these parts to admit the right amount of light is necessary for good and comfortable vision, why practise is the chief cause of headaches and nervousness and general information regarding the care and protection of the eyes will be given next week.

It would be advisable for readers to preserve the above splendid diagram of the Eye for reference when will be of much assistance in understanding this important subject.

The Aqueous Chamber is situated behind the Cornea and is divided by the Iris into two chambers, the anterior and posterior portions. The Aqueous is a watery fluid which keeps the Cornea slightly bathed.

The Iris or colored "curtain of the eye" corresponds to the diaphragm

I Have Written These Twelve Articles

that you may better understand various eye conditions—the DANGERS of neglect or wearing glasses NOT expressly made for YOUR eyes.

Can a physician express sympathy in a note? Your physician will write to me, stating your case, and I will correspond with him with modern knowledge to aid in either arranging FREE TREATMENT or in securing the most satisfactory pair of EXPERT glasses at a REASONABLE COST. All this you are entirely relieved of in a CHARITY case.

No charge for consultation. You are under no obligation and no one will solicit you in your home.

Take no chances with your eyesight—it DOES COST YOU.

Little Helps For This Week

Timothy Crop Light

Report Shows Carry-Over From Last Year Was Small

Very little old carryover of timothy from last year is reported. In Alberta there was almost a total failure of timothy and alsike seed in the northern part of the province and the Peace River area. The estimates from British Columbia are 200,000 pounds of timothy, and 3,500 pounds of timothy and alsike mixed.

Denmark fears agricultural strikes.

"There shall no evil befall thee."—Psalm 91.10.

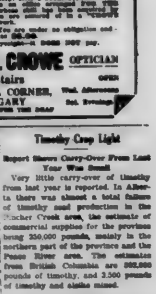
"Whom henchmenth unto Me shall dwell safely, and shall be quiet from fear of evil."—Proverbs 1:33.

I ask not "take away this weight of fear,"
But "give me faith that whatsoever befall
Must needs be good, and for my profit all prove,
Since from my Father's hand most rich in love,
And from His bounteous hands it fell."

Be like the promotory against which the waves continually break, which resists and tames the fury of the water around it. Unhappy am I because this thing has happened to me? Not so, but happy am I though this has happened to me because I continue free from pain, neither crushed by the past or fearing the future. What that can which has happened prevent thee from being just, courageous temperate, prudent, secure against incomplete opinions and falsehood? Remember too on every occasion that leads thee to vexation to apply this principle, that this is not misfortune, but that to bear it nobly is good fortune.

The Phillippines' locust plague has been stopped.

PRESTO PACK



One Pail... One Sheet of Waxed Paper.

Always ready—Inexpensive
Quickly

White pine seeds are generally sown in the fall; seeds of all other plants in the spring.

HAVE YOU PURCHASED the piece de resistance for your Christmas dinner? The finest ovens-ready of centerpiece to a turkey that ever gobbled a holiday upstairs is awaiting your call. One of these fowls will make the coming feast day a memorable one. Let us serve you.

WEDNESDAY, DEC. 20th, 1933

Christmas 1933

Another year has just about passed into history and with it trials and tribulations - to many of us, but we in Fort Saskatchewan will face the future in the same optimistic mood as in the past, hoping that the New Year will bring about many new changes that will be beneficial to all in the near future.

"A Merry Christmas" should mean a great deal more to us this year than it ever has before, and although unusual conditions exist this Christmastide, Santa Claus is sure to come as usual to the great majority of people, but let's not forget the less fortunate than ourselves. There is no fault of their own in many instances, city of cases will celebrate a very meager Christmas this year although living in a land of plenty.

According to leading columnist's, we have turned the corner of depression. We sincerely hope this to be true.

We therefore in closing our little message beg to take this opportunity to wish our Readers, Correspondents and Advertisers who have so generously patronized the Record during the past year a Merry Christmas

the past year always realizing that

Subscribers!

Our subscribers who are in arrears to the Record could help make this Christmas a merry one if they would send in or call and pay up their subscription before Christmas. Lately we have had a few drop in and pay up, but there are still a number to hear from. Our better plan is still to have them, wherein we take butter, eggs, wood, dressed chickens or turkeys for subscriptions.

At this time when presents are being bought and exchanged, what would be better than to make a present to The Record by paying up your past subscription arrears. We would appreciate this very much

VOL. 18 No. 39 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, DEC 27th, 1933 $1.50 PER YEAR IN ADVANCE

Municipal District of Elk Point Meeting

The Council of the Municipal District of Clover Bar, No. 617 held a regular meeting on Thursday, the 21st December, 1933, with all members in attendance.

With the adoption of the minutes of the previous meeting business commenced at 10.30 o'clock.

The Reeve submitted the auditors' report covering an interim audit of the books for the ten month period ending the 31st October.

Recommendations were made to the Relief Supervisor in connection with five applications for relief. All cases had been investigated by a Committee, comprising the entire personnel of the Council, immediately after the last meeting.

By-Law No. 69, a by-law to provide for the extension of the payments of the Clover Bar Secondary Highway from five years to ten years was read a first, second and third time and finally passed.

The delegates to the municipal convention gave their report covering the business transacted at the convention.

A communication from the Council of the Municipal District of Strathcona suggesting a meeting of representatives from Districts adjoining the City to discuss problems of the day was read. Mr. Keith was officially appointed to represent this district at the proposed meeting.

The Secretary advised that the Deputy Minister had notified the offices by circular letter that an order-in-council had been passed extending the time of paying taxes with the proper discounts to the 31st December. The letter intimated that this decision had been arrived at after numerous requests had come from individuals and corporations for this extension, claiming that the condition of the roads had been such as to prevent the hauling of grain and live stock to market.

With the passing of paycheits and accounts and the reading of correspondence the meeting adjourned at 6.30 o'clock.

Coming Events

The Ladies' Aid of the United Church will meet at the home of Mrs. Floyd Baker on Thursday, January 4th, at 2.30 p.m.

A COMFORTING ASSURANCE

The International Institute of Agriculture at Rome, forecasts old stocks of wheat will be drawn on to the extent of 110,000,000 bushels this coming year. It also estimates world requirements of wheat for the year of 625,000,000 bushels.

******

Mr. Clarence Armstrong had the misfortune to get a touch of Carbon Monoxide gas while on a trip to Edmonton last Thursday.

******

Mr. and Mrs. W. E. Penrose were Edmonton visitors Christmas day.

******

North and South roads are badly drifted here.

LESSES FROM REJECTED WOOL

Rejected wool causes serious losses to sheep raisers throughout the country. It has been estimated that eight to ten per cent of the wool marketed each year has to be rejected because of being sandy, burry, and full of objectionable material.

Properly constructed feeding racks help solve this problem, by keeping chaff and other foreign material out of the wool. Feed racks for sheep should be built with the sides perpendicular, so that hay and chaff will not fall on the backs of the sheep. In addition to this, sheep should be kept away from straw stacks or any material which is likely to become imbedded in their fleeces.

"Easy Money"

It was revealed recently at the Senate Committee investigation held in Washington, that Arthur W. Cotton, noted grain operator of Chicago, along with a small group of big money men, made $12,000,000 in one deal in theair oil in 1925-26 without the investment of a cent from any of them.

ALBERTA SEED FAIRS

Local seed fairs are the order of the day at present in Alberta. Over 30 of these are being held this year, and are very well attended. The quality of the exhibits, it is reported, is somewhat higher than has been the case in the past, due largely to the accumulated experience of those taking part over a period of years.

Mineral Mixture for Swine

At all times in the year, but especially during the winter months when they do not have access to the soil, pigs should be supplied with a mineral mixture to make up for the deficiency of minerals in the usual rations.

A simple mineral mixture which is used with very satisfactory results at the Lacombe Experimental Station, is made up as follows:-

- 70 lbs. slaked coal
- 20 lbs. common salt
- 5 lbs. air-slaked lime or ground limestone
- 1 lb. sulphur.

This mixture is placed in a box or a separate compartment of the self-feeder, where the pigs have free access to it at all times.

LOCAL NEWS

Mr. W. Lumsden of The Bank of Commerce staff Edmonton, is helping with the preparations of moving bank material to Edmonton. After Jan. 1st, the local branch of The Bank of Commerce will discontinue service in Fort Saskatchewan.

Mr. R. Ardley, teller of the Bank of Commerce here, has been transferred to Bowell, Alberta, and will take up his new duties as soon as final arrangements are made here.

******

Mrs. R. F. Pease and son Glen of Chipman, Alberta is spending the holidays with her parents Mr. and Mrs. E. A. Wilmoreth.

******

The Misses Elsie and Lydia Mohr of Brosh, Alberta, are spending the Christmas vacation at their home here.

******

Mr. and Mrs. H. Savage of Clyde, Alberta and Mr. and Mrs. J. A. Savage of Dubasseil, Alberta, were the guests of Mr. and Mrs. F. W. Smith over the past week-end.

******

Mr. and Mrs. Floyd Baker and family spent Christmas at Spruce Grove.

******

Miss Phyllis Sherwin of Spruce Grove, is spending a week with Mr. and Mrs. Floyd Baker.

******

Miss Dora Lemieux, who has been teaching school in the Spirit River district is spending the Christmas holidays with her parents here.

******

Fort Curlers are making preparations for a New Years' Bonspiel, which will be held on Monday, Jan. 1st. A large number of curlers have entered their names with the committee in charge.

******

Invitations are out for the Masonic Dance to be held in the Memorial Hall on New Years' evening.

This should be one of the outstanding affairs of the season.

******

In keeping with the festive season, the main entrance of the Provincial Gaol is gayly decorated with trees and hundreds of colored lights.

******

The proper temperature at which potatoes should be stored is 37 deg F., for at this temperature the life processes of the tuber are at their minimum.

Sweltering Sensations Faint and Dizzy Spells

These feelings of faintness, these dizzy spells, these all-gone sensations, making sensations, which cause your people, from time to time, are warnings that should not go unheeded. They indicate an extremely weakened condition of the nerves and blood, and should be given immediate attention.

These sufferers in this way will find in Milburn's R and N Pills a remedy with which to reorganize their health, build up their run down system, and bring back their bodily vigor.

Ask your druggist for Milburn's R. & N. Pills.

Christianity And The Crisis

Much has been said and written about the economic crisis against which the peoples of the world have been battling for four years or more awaiting much. Many speeches have been made; world statesmen have had their say. Many books, many editorials, many articles, many letters, and in which the economists have set forth the views but speeches, books, editorials and articles have but served to illustrate the complexity and variety of the problems which clamor for solution. Many remedies have been suggested for the economic ills from which mankind is suffering, but the doctors have been far from unanimous in their proposed treatments and, consequently, the patients can scarcely be blamed for their hesitancy to apply the cures prescribed. Despite the clash of expert opinion, however, the patients themselves have given abundant evidence of vitality which is, perhaps, the surest sign of their ultimate recovery. They have experienced a keen disappointment in their hopes for a speedy recovery, but in spite of present difficulties and a way back to a prosperity which they are determined to make permanent.

One of the best contributions to the "non-expert" thought upon the crisis and the various problems contributing to, and arising from, post-war economic difficulties, is the series of articles recently published in a single volume under the title, "Christianity and the Crisis". The contributors are not churchmen, clerical or lay, but their method of approach to the various phases of their subject is not made from the purely theological angle. When they discuss the confusions of the present situation, they write with a knowledge of their subject, and this is true whether they write of intellectual and moral confusion (which might, of course, be expected) or of economic and international confusions (which, on the other hand, might not have been expected). One is forced early in the discussion to feel that these churchmen are no more visionaries actuated by high moral purpose but divorced from practical affairs. One would for example have to travel far to equal the masterly simplicity of the Archbishop of Canterbury's analysis of problems contributed by Dr. Hewlett Johnson, Dean of Canterbury. One is not surprised to learn that besides being a Doctor of Divinity, the Dean has also degrees in Science and Engineering.

The preface furnishes the general theme upon which the volume is based, and the thought which should be an inspiration to all who, having given serious thought to the problems of the hour, are beginning to doubt whether any real solution is possible. Drawing a parallel between the years following the battle of Waterloo and the present time, the preface states:

"A period of post-war exhaustion had begun in 1815, as in 1918, with its social entanglement and moral confusion, and civil commotion. Nothing is wiser than anything we have known this time in England or America. Yet the religious accumulation of moral power had been so ample that the foundation of civil and religious liberty had been already laid, the establishment of democratic government had begun, slavery had been abolished.

"It is the belief of those who are contributing to 'Christianity and the Crisis' that the same moral power is with us today, because the same religious spirit is at work in us, indeed, as most clear observers believe, energized now with greater strength from the confusions and disloyalties of the past war decade.

"The issue, indeed, is simple. The motives and methods of human life are not sufficiently moralized: it was to moralize the machinery of production, to limit the power of aristocrats, that Wilberforce and Shaftesbury were exerting a century ago, but in many ways industry and business, and family life, and civic and political activity, need further moralization. Money has been overlooked in its moral aspect and treated as machinery and, because the nations and their representatives have put less emphasis on the moral elements of international behavior, we stand at the moment on the brink of irretrievable disaster."

The way out then is for application of the moral teachings of Christianity in international, national, civic, business and family life according to the churchmen who, having examined the problems of the hour, discern the need and point the method.

Public Money

Prime Minister Bennett Speaks On Stable Medium Of Exchange

During the years of world depression Canada established her reputation of "delivering the goods according to the sample," Prime Minister R. B. Bennett told the members of the Dominion Commercial Travellers' Association at their annual banquet at Montreal.

Mr. Bennett spoke briefly, taking as his subject the development of money as legal tender from the days of barter and tokens. The address was non-political.

No one appreciated more keenly than commercial travellers the necessity of having a stable medium of exchange for trade purposes Mr. Bennett said, after outlining the history of money from the beginning of civilization. The world was honored in this fashion in the Logan. Mr Bennett received his credentials on Armistice Day, 1932, following the March past of the veterans in Parliament Hill.

Presenting Mr King with the badge and certificate, Major Roper recalled that the ceremony was chronized with the Liberal leader's 58th birthday, and in a way took of the character of a birthday gift. He tendered his congratulations to Mr King today the wish that he might have many years before him wherein to render service to his country.

Laurier House, in which the ceremony took place was redolent of memories, chief among which was that of service to Canada of the called vividly a great statesman whom all Canadians had honored and whose memory was revered throughout the length and breadth of the land.

Mr King assured Major Roper that outside of and perhaps side by side with the honors which the Canadian people had conferred on him first by appointing him Minister of a great party and then by electing him prime minister of Canada, he could claim as of none more worthy to be cherished than that of having admitted to that fraternity of ex-service men who, in the hour of their country's need had offered their lives for Canada. He named the Dominion officers and through them the war veterans of this country as a whole, that he would continue to keep their welfare and their interests close at heart.

Saskatchewan Wheat Pool

Mr. L. C. Brouillette To Head Pool For Another Year

L. C. Brouillette will head the Saskatchewan Wheat Pool another year, it was decided at a meeting of the newly elected board of directors at Regina.

All the old officers, executive and representatives to the Central Board were re-elected as follows:

Vice-President: J. H. Wesson, Maidstone; executive: Brooks Catchpole, Stanley; A. F. Sproule, La Fleche; and Leonard Widdup, Kipling; representatives to the Central Board; L. C. Brouillette, J. H. Wesson and Brooks Catton.

Fifteen of the 34 returning directors were re-elected, the only new member of the board being A. D. Young, Cymric, representing district No. 9.

Hoppers In Alberta

Insects Damaged About 11 per cent. Of Crop Last Year

Grasshoppers did about 11 per cent damage to the crops in Alberta last summer, but measures taken to fight them saved 44 per cent. according to information based on reports and estimates by the department of agriculture. An area of 3,638,000 acres owned by 18,000 farmers was affected.

It is expected that there will be another visitation by hoppers next year, with possibly 5,000,000 acres of land involved. While the territory affected will be larger, the infestation will not be so heavy, it is believed, and a campaign of about the same proportion as this year is anticipated. The insects will probably advance northward as far as Athens and Bluffton.

Lake Isabel, in Illinois is said to be the deepest fresh water lake in the whole world.

Made Legion Member

Hon. Mackenzie King Is Honored By Canadian Legion

The ex-service men of Canada contributed to the enjoyment of the 58th birthday of Rt. Hon. W. L. Mackenzie King, leader of the Liberal party, when in the presence of high executives of the Canadian Legion Major John S. Roper M.C. Dominion president, presented Mr. King with the gold badge and certificate of honorary life membership in the association in so doing the Legion consummated the formalities of admission to the restricted group of honorary life members which were instituted on July 23 1930.

On that date Mr. King as prime minister of Canada, became the first of that number and at the same time, Rt. Hon. R. B. Bennett then leader of the opposition was also honored in this fashion by the Legion. Mr Bennett received his credentials on Armistice Day, 1932, following the March past of the veterans in Parliament Hill.

Presenting Mr King with the badge and certificate, Major Roper recalled that the ceremony was chronized with the Liberal leader's 58th birthday, and in a way took of the character of a birthday gift. He tendered his congratulations to Mr King today the wish that he might have many years before him wherein to render service to his country.

Laurier House, in which the ceremony took place was redolent of memories, chief among which was that of service to Canada of the called vividly a great statesman whom all Canadians had honored and whose memory was revered throughout the length and breadth of the land.

Mr King assured Major Roper that outside of and perhaps side by side with the honors which the Canadian people had conferred on him first by appointing him Minister of a great party and then by electing him prime minister of Canada, he could claim as of none more worthy to be cherished than that of having admitted to that fraternity of ex-service men who, in the hour of their country's need had offered their lives for Canada. He named the Dominion officers and through them the war veterans of this country as a whole, that he would continue to keep their welfare and their interests close at heart.

New Tax Regulations

Saskatchewan Minister In Given the Power to Set rates Income Tax Payable

Providing that where it is impossible to obtain the information required to assess a the income with the minister of Saskatchewan the minister may through the provincial government, has the power to determine the tax to be paid, new regulations governing the collection of income taxes under the provincial act have been announced by the provincial treasurer.

The provision is stated in accompanying copy of the act that some organizations of part time companies operating in Saskatchewan in addition to other business a result of that number and at the same time, Rt. Hon. R. B. Bennett then leader of the opposition was also honored in this fashion by the Legion. Mr Bennett received his credentials on Armistice Day, 1932, following the March past of the veterans in Parliament Hill.

Presenting Mr King with the badge and certificate, Major Roper recalled that the ceremony was chronized with the Liberal leader's 58th birthday, and in a way took of the character of a birthday gift. He tendered his congratulations to Mr King today the wish that he might have many years before him wherein to render service to his country.

Laurier House, in which the ceremony took place was redolent of memories, chief among which was that of service to Canada of the called vividly a great statesman whom all Canadians had honored and whose memory was revered throughout the length and breadth of the land.

He named the Dominion officers and through them the war veterans of this country as a whole, that he would continue to keep their welfare and their interests close at heart.

Soviets Take Quarter Crop

But Proposals Allowed to Sell Surplus in Private Market

The Soviet government had been authorized that collection of the 1933 grain crop from the peasantry had been completed.

Some 22,000,000 to 25,000,000 metric tons were obtained, foreign observers understood, by forced purchase at fixed prices set by the administration. (The metric ton is 2,205 pounds).

The grain, amounting to about 25 per cent of the total production, will be devoted to feeding the urban population and the army, export and reserve.

In his report, addressed to Joseph Stalin, leader of the Communist party, Comrade Chernov of the agricultural section of the council of people's commissaries, pointed out that 1933 deliveries were computed from a month to two months ahead of last year when collections were limited by a poor crop. The full quotas had been reached.

Another innovation was to allow the peasants to sell their surplus production to private markets, as contrasted with the former procedure of taking a fixed proportion of whatever was produced.

The price of bread, which still is the principal item of the Russian diet, has decreased considerably recently as a result of the sale of the excess grain.

Chernov called special attention to the importance of the system of collections which this year assumed administrative control of every administrative unit.

Crime Against Youth

Hon. R. J. Manion Denounces War In Emphatic Terms

War was denounced in emphatic terms by Hon. R. J. Manion, Minister of Railways and Canals, and Canada's representative at the recent disarmament conference at Geneva in an address before the Women's Canadian Club at Ottawa.

"One hundred years from today, or possibly sooner, we will be looked upon as barbarians for permitting war to exist," the minister declared. "War is a crime against youth—the elders make the blunders and youth pays the prices."

On this continent the nations were always having, "War is an unthinkable between Canada and the United States as between Canada and the United Kingdom, or indeed between the United States and the United Kingdom," Dr. Manion observed.

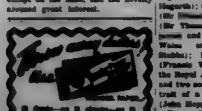
Urges Precautionary Measures

Superintendent Favors Establishment of Special Bureau to Investigate Sleeper Disease

South Saskatchewan and parts of Alberta face the possibility of a "25 per cent crop" unless precautions are taken against the grasshopper menace, Roy E. Smith, superintendent of the Gull Lake Experimental Farm, told members of the board of trade at Calgary.

Guiding Star For Dane

When the Gordon Highlanders with their swinging kilts and bagpipes and drums, arrived in Copenhagen, Denmark, the guiding star of the British regiment, they attracted nearly as much attention as the Prince of Wales who opened the show. The Danes had never seen men in kilts except on the films, and the novelty aroused great interest.



Great Masterpieces

To Be Shown At British Art Exhibition

Great masterpieces from Buckingham Palace and Windsor Castle's art gallery will be shown to the public for the first time at the Royal Academy Exhibition of British art, and covers the period from primitives to the present day.

The King's generous contributions to the exhibition include the following:

From Buckingham Palace: Dinan and Antwerp (Thomas Gainsborough); Head of a Man (Rembrandt); Penny Wedding (Sir David Wilkie).

From Windsor Castle: The Duke and Duchess of Cumberland, Mrs. Robinson, sketch (Thomas Gainsborough); Garrick and his wife (William Hogarth); Queen Victoria Riding Out (Sir Thomas Grant); Windsor, Scott (Sir Thomas Lawrence); Two Children in a Landscape, by Private Van (Prince of Wales as Rembrandt (George Stubbs); Lord Spencer Stanhope, (Francis Wheatley); Life Class at the Royal Academy, Queen Charlotte and two sons (Johann Zoffany); Portrait of a Princess, Princess Mary, (John Hoppner).

From Hampton Court Palace: Princess Mary in Dress (Sir Peter Lely).

Advice to a Canadian about to visit the Sinless: Don't take any Canadian money.

Work Of Charting Positions Of Planets To Aid Navigators Is Planned Five Years Ahead

Ephemeral Sheets

Aids Regarding Time Gone Back Nearly 200 Years

The belief that a violent storm is to be expected when the sun crosses the equator about September 22 goes back at least to 1746, and is held both in England and the United States. Its origin is not known, but it may have been caused by sailors from experience of the West Indian hurricanes which are especially frequent about this date. Statistics of gale frequency show that in England there is no especial tendency for storms to occur near the autumnal equinox; on the contrary, they increase steadily in frequency from summer until equinox, the autumnal equinox may, however, be regarded as the conventional beginning of the winter or stormy season. The belief in an equinoctial gale is sometimes attributed to the spring equinox, March 21, but for this there is no basis at all.

CHESS-LOVERS HOLD ATTENTION—MAYBOOM: DESIGNED TO A DESIGN FOR TOOTHPICK HOLDING SMART

Carried out in shiny and dull black crepe with touches of red or white, this is it daintily smart.

Its soft tailor-like lines will have instant appeal.

It can also be developed in any of the new exquisitely soft new woolens widowed. The fairy weaves are especially smart.

Pattern crepe silk is another designer's choice for this design in colorful with the tiny color of coral-pink.

Style No. 548 is designed in sizes 34, 36, 38, 40, 42, 44 and 46 inches bust. Size 36 requires 3¾ yards 54-inch with ¼ yard 35-inch contrasting.

Price of Pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Egg Production Tests

Mixed Protein Ration Best For Both Over Two Years

Tests to determine the most economical ration for the production of eggs at the Harper Adams Agricultural College, England, revealed in no mediocre advantage in using fish meal instead of meat-and-bone meal, dried buttermilk or pasture, and method of carrying meal during the pullet year. In this year, the best egg production and margin over feed cost was obtained through the use of a combination of meat-and-bone meal, dried skim-milk, and cod-liver meal. The results in the second year were essentially the same as in the pullet year. Satisfactory was not statistically affected by the various rations. For birds over two years, it was found that a mixed protein ration gave better results than a single protein ration in production, economic returns, fertility and hatchability. The birds were single-comb White Leghorns.

Our National Credit

Britain Has Own Confidence In Security Of Pound

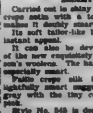
The Jerusalem would no doubt attribute our favorable position to good luck rather than to good guidance. But luck plays no part in such matters. The improvement that is taking place in British trade and in the trade of those other countries which have had the hardihood to link themselves to our currency is due to one circumstance, namely, the restoration of complete confidence in the security of the British pound. Confidence does not arrive in a day or a year. By pursuing a quiet, but consistent monetary policy the Chancellor of the Exchequer, in co-operation with the financial authorities has restored the whole of our prestige, and in its train has come trade improvement. Glasgow Herald.

Relief Work

Plans Being Laid For Program Of Works In Saskatchewan Next Spring

Comment by Premier Anderson of Saskatchewan, that should the Kenaston Chalet, recently destroyed by fire be rebuilt, he would insist it was completely rotted and had Lost nearly a third of its weight The experts hope that it will not be necessary. Two weeks ago by Premier Bennett will commence next spring.

The work, he explained, undertaken, Dr. Anderson said, would also include for Saskatchewan the further development of roads and erection of bridges.



You can guess at a man's income. The higher it is, the less he wife does for him.

London's new power station at Battersea will require 2,000 tons of coal a day.

MONUMENT TO ASSASSINATED PRESIDENT

Above is a picture of the monument which is to be erected in memory of President Doumer of France, who was assassinated in May 1932. A competition was held recently among the best known artists and sculptors with a view to executing a monument symbolizing Paul Doumer's character. M. Armand Martial, sculptor, and M. Ladeu, architect, designed the winning model which is to be erected in Doumer's native town of Aurillac.

Some Realities About The Wheat Situation And Necessity For Curtailment Of Production

Queer Ripple in London Zoo

Snake Fascination Victims By Mating Dance At Them

The belief in the hypnotic power of the snake was confirmed by experiments conducted but the London Zoo has just received from Matabane in the Malay Peninsula, a two snake which fascination its victims into a state of helplessness by making them at them. The keeper carries the snakes' matings as the long polished head, and when thrust in and out rapidly, the whole head looks like a disbelievably animated telescope. A small bird or lizard suddenly confronted with this display is an object that it remains as though bound to stare, and only "comes-to" when the snake has it safe in its coils. The reptile also has a habit of swaying itself in a to branch by the tip of its tail, and suddenly flashing its yard-long body, like a living whiplash, at its victim. It is extremely rough, but its poison fangs cannot inflict a wound much more severe than a wasp sting The natives call the snake "Eye Poker," from its habit of always striking at the eyes of any human being approaching it.

An Interesting Discovery

Canadian Red Cedar Contains Component Found To Plough

Wood which destroys some of the most deadly pests to which timber is subject has been discovered at the Forest Product Research Laboratory in Princes Risborough, England, where a series of tests upon various timbers imbued to test its properties. Experts placed small blocks of Canadian red cedar in contact with spreading germs—and eight months later the fungus was dead and the timber as healthy as ever. Similar tests were carried out with blocks of deal, and in the week following, it was completely rotted and had Lost nearly a third of its weight The experts hope that it will not be necessary. Two weeks ago by Premier Bennett will commence next spring.

The work, he explained, undertaken, Dr. Anderson said, would also include for Saskatchewan the further development of roads and erection of bridges.

Above is a picture of the monument which is to be erected in memory of President Doumer of France, who was assassinated in May 1932. A competition was held recently among the best known artists and sculptors with a view to executing a monument symbolizing Paul Doumer's character. M. Armand Martial, sculptor, and M. Ladeu, architect, designed the winning model which is to be erected in Doumer's native town of Aurillac.

Ascertained to think of Canada as the "granary of the world," many of us would have been shocked by a recent radio address that this year Italy will produce 287,000,000 bushels of wheat! For that is exactly 90,000,000 bushels more than Canada produced in 1928. Our total 1928 yield, according to the estimate of the Dominion Bureau of Statistics, was 371,825,000 bushels.

Then, with more allied facts, puts a different complexion upon the plea insisting on wheat acreage to 28,000,000 bushels a year, this necessitating acreage curtailment.

For Italy is not alone among European countries in increasing her wheat production. Rumania is growing wheat, and France and Germany, and all of the Danubian countries. As they grow more wheat Canada loses.

In the case of Italy, Mussolini's "battle of wheat" has increased Italy's average production of 187,000,000 bushels three years ago to 287,000,000 bushels, with an average yield over the past eight years of 222,000,000 bushels. Importation of Italy has prohibited all wheat imports. A market which took 12,000,000 bushels in the years 1931 and 1932, and 4,000,000 bushels in 1933 became a total loss.

In the circumstance and seeing that other European countries have been following the lead of Italy, little sense would seem to be in Canada's continuing to increase her wheat acreage and thereby go on sowing and producing wheat so that through nothing new had developed in the matter, through an act of God, our wheat yield was curtailed without the need of government aid. Last year's crop was 566,000,000 bushels. Two years our wheat production was:

1932	398,000,000 bush.
1931	344,000,000 bush.
1930	276,000,000 bush.
1929	321,000,000 bush.
1928	566,000,000 bush.

If, this year, there had been no crop failure, but a yield of, say, 450,000,000 bushels, how and to whom would we sell it? Or, in the event of a crop failure, how bound by a quota where or how would we be able to sell 600,000,000 bushels next year" The export answers?

This is a reality which Canada has got to face. Restricting our wheat acreage is a policy that has been said about the West, and all that has been hoped for it may be said in retreat. It is a solution. It can't be much more of a disaster than the growing of hundreds of millions of bushels of wheat, only to sell them below cost of production, or to let them rot on the prairies

Therefore, while no one has yet come forward to explain just how wheat acreage is to be curtailed—how the curtailment is to work out in the case of the average farmer and what to be substituted—the thing has got to be acted on in some manner to do otherwise, to refuse to give the quota system a trial, going on producing wheat regardless of changed world conditions, and without a care as to where or how it may be sold, or at what price, is right out to be a costly folly.—Ottawa Journal.

Proved His Point

"Patience and perseverance will accomplish all things," said a passenger in a railway compartment.

"Nonsense, sir!" said a fellow-passenger. "Will patience and perseverance enable you to carry twelve in a taxi?"

"Certainly!"

"I would like to know how!"

"Simply by waiting patiently for the water to freeze."

Ranch Adjoins Horse Breeders

Great Britain's large aeroplane and the fastest flying boat in the world weighs 22 tons.

WORLD HAPPENINGS BRIEFLY TOLD

The Soviet government was informed that collection of the 1933 grain crop from the peasantry had been completed.

General Victor Vuillemin's "death squadron" of 35 army biplanes has triumphantly completed a 16,000 mile tour of France's African possessions.

Construction of a lumber mill near the mouth of the Somass river at Port Alberni, B.C., involving an expenditure of approximately $250,000 is planned for early next year.

Creation of a national system of forest and forage under the jurisdiction of the Dominion parliament will be proposed at the coming session by William T. Lucas, U.F.A. member for Camrose, Alta.

The war clouds of France, in a secret session attended by Gen Maxime Weygand and former premier Edouard Daladier decided Ley were fatly opposed to a rearmament of Germany.

War was denounced in emphatic terms by Hon R J Manion, minister of railways and canals, and Canada's representative at the recent disarmament conference at Geneva, in an address before the Womens' Canadian club in Ottawa.

South Saskatchewan and parts of Alberta face the possibility of a "25 per cent crop" unless precautions are taken against the grasshopper menace, Roy E. Smith, superintendent of the Gull Lake experimental farm, told members of the Calgary board of trade.

A prediction that Great Britain, with a deep water route through the St. Lawrence, would "revolutionize if she does not destroy, the transportation facilities" of the United States, was made by Judge W H. Woolard, president of the New York State Waterways association.

A new industry, of value to Prince Rupert district and the country in honor of British Columbia, is bel ieved to be opening with the receipt by R. H Cassidy of Fraser Lake, of an order for 1,000,000 feet of poplar logs The logs are destined for China where they will be used in the manufacture of matches.

Warm Water For Hens

Stock Will Consume More Than When It Is Cold

Water in cup of the essentials for egg and production. Layers should therefore be encouraged to drink water by corners seeing that drinking pans and fountains are never allowed to become empty, and that the water is never allowed to freeze. Warm water runs when the temperature of the water supply being cut off by freezing. Even though the water does not freeze, cold water is not as readily consumed as water that has had the chill taken off; birds will consume from 20 to 60 per cent more water in the winter when the water is warmed. There are various kinds of devices on the market that may be obtained for warming the drinking water; some are electrical and others are oil as fuel.

Purchased From Alberta

Province Supplied Potatoes to Stock Per Now Zealand Turkey Farm

In far away New Zealand, the largest turkey farm in that country has been built up from foundation stock secured from turkey breeders in Alberta, according to information from the provincial poultry department. The New Zealand farm is owned and operated by a woman, Mrs Katherine Hall, who purchased her breeding stock farm Alberta some years ago.

Ontario Widows Aid

That the Mothers' Allowance Act of Ontario might be adjusted for a widow with one child, was suggested by Hon. W. G. Martin in the course of an address before the Women's Liberal-Conservative Association at Toronto. He declared that Ontario's child welfare acts served as "an object lesson and model for the rest of the world."

SUNDAY SCHOOL LESSON

DECEMBER 31

THE LIFE OF PAUL

Golden Text: "I have fought the good fight, I have finished the course, I have kept the faith." II Timothy 4:7.

Lesson Philippians 3:1-14
Devotional Reading Psalm 1

Explanations and Comments

Certain Concerning. verses 1-3 Paul is aware that he is repeating, but he asks his readers that he does not mind doing this and he knows it is for their good. He proves his counsel with the words, "Receive in the Lord," words he uses with a striking note to his letter so far (1:6, 10, 26, 2:2, 17, 18). Then he bids them be on their guard ages not the unbelieving Jews, whom he calls dogs, evil workers, the concision. They receive the hat epithet by way of reversing the glory the boasted name of the circumcision. The Abrahamic covenant-seal has become void and void for rejecters of Christ and no better than any other cutting of the body as the pagans practiced in name to the Church, upon whom the Old Testament rites have descended. These same men are dogs, raging against God and worthy of contempt. Apostle of the Gentiles, evil workers, became of false ministrations and concision, activity Dummelow

Just Section By Faith, verse 3. To "gain Christ," to "be found in Him," means to be found in Him, not having a righteousness of our own even that which is of the law, but that which is from God by faith in Christ" means "in union with Christ"; it is that "intimate, personal relation to Christ which alone was the very center and substance of Paul's religious life."

Take in the doctrine which has always been proclaimed in connection with Jesus in a few words it is simply this: Justification by faith entails very relationship with God by discharging the duties invested in ourselves and fellow-men, and the commandments, we obtain this by receiving Jesus Christ as the object of love trust and ob-dience Then God is assured of our purposes, for we must be actuated by the motives Lost embodied Jesus habitually We become righteous as Jesus did, not by striving to do certain prescribed acts, but by living, living, living as Jesus did There is no magic about this, no formula to state or confession upon us. We reach it by allegiance and moral and spiritual growth in Jesus' ideals; this is true ownership in faith."—Owen E. Davis.

Sign Of The Times

Life Insurance Figures Good Index of Economic Conditions

Certain aspects of life insurance provide a fairly good index of economic conditions, it is claimed. These are: (1) the production of new business, (2) the borrowing of money on policies, and (3) the repayment of loans on policies.

According to a statement published by the Toronto Mail and Empire, there has been a decided increase in the volume of new business written during the past four or five months. There has been in the main a gradual decrease in the number and amount of new loans applied for on policies and there has been a fair increase in the repayment of sums borrowed on insurance during the past two or three years.

This, we may take it, is a fairly good sign of the times. Nor is it the only convincing sign of returning better times.—Ottawa Journal.

The Policy Of Inflation

Reducing Stated Value of Paper Does Not Remedy Matters

Those who do not already realize it should be told emphatically that there is no more vicious illusion in the world than the illusion that a shortage of money can be remedied by placing an official stamp on paper and declaring that paper shall have a stated value. During every paper-money inflation of which the world has ever taken the case of the French assignats, the German marks, or our own greenbacks, the result has always been the same; the faster the paper was printed, the greater and the more rapid became the cry of a "shortage of currency." The reason is simple, of course, that cash paper depreciates in value much faster than the printing press can turn out new supplies.—New York Herald Tribune.

Construction of a lumber mill near the mouth of the Somass River at Port Alberni, B.C., involving an expenditure of approximately $250,000 is planned for early next year.

Italy is pushing land reclamation.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 9—SOME OF THE PARTS AND THEIR USES

The Choroid is the second or posterior coat and is composed of a dense supply of blood vessels for the nourishment of the eye, the pigment color acting as a protection against excessive light which might otherwise affect the sensitive Retina. People who lack sufficient pigment are much troubled by glare." As Albino is a person devoid of pigment The Choroid layer lies between the Sclerotic and the Retina. All three being closely stitched

The Crystaline Lens (hereafter referred to as the Lens) hanging suspiciously behind the pupil is brought into focus and even when in a state of rest every part is in shape ready for a review of anything that may come very This characteristic is known as "Accommodation" which is most important because it is the property which enables us to see at different distances. Accommodative power is at its height at the age of eight and steadily diminishes as we grow older. At the age of about forty the average person has lost so much of the Accommodative power that he needs glasses to focus at the reading distance although via can may be perfect further off at any age. This is the necessity for wearing glasses for close work after middle age to due to a natural change occurring in them. The Lens is made up of many layers as in an onion which may have as its distinguishing characteristic the fact that the outside layers are softer than the inside ones, the latter being harder and more solid. Cataracts are usually found in the nucleus or hardest part of the Lens. Nerve which connects the eye with the brain where seeing is actually accomplished. Although as thin as tissue paper, the Retina is composed of many layers each having a very special function. The mysterious operation of the Retina is, generally speaking, a sealed book. It is very sensitive to light impressions and may be likened to the plate of a camera. All objects are focussed on the Retina upside down, and how we learn to do because our brains have so interpreted them from infancy.

(To Be Continued Next Week.)

Recipes For This Week

(By Betty Barclay)

ORANGE NUT BISCUITS
Make 24 medium sized biscuits)

2 cups sifted flour
2 tsp. baking [illegible]
1 tsp. salt
¼ cup sugar
¼ cup shortening
½ cup finely chopped nuts
½ cup
Orange juice

1 tbsp. orange marmalade
1 tbsp lightly packed orange rind

Sift flour, salt and sugar together. Cut in shortening. Add nuts. Beat egg; pour into measuring cup; add enough orange juice to make ½ cup. Combine with dry ingredients and mix to a soft dough. Knead a few seconds on a lightly floured board. Cut and bake in a hot oven (425 degrees F.) for 20 to 15 minutes.

Note: A little more orange juice will be needed with some flours to make the dough soft.

PRUNE STUFFED BAKED APPLES

6 cooking apples
1 cup cooked prunes
2 tablespoons peanut butter
½ cup brown sugar
2 tablespoons butter
Cloves
Water

Pit prunes and cut into small pieces; combine with peanut butter, mixing thoroughly. Remove cores from apples, removing enough of the apple to allow for stuffing. Fill the cavities with prune and peanut butter mixture. Place apples in a baking pan and stick 3 or 4 whole cloves into each. Sprinkle with sugar, dot with butter, add about 1 cup of water, and bake in a hot oven (425 to 450 deg. F.) for about 45 minutes or until apples are tender. Serve while hot, plain or with cream.

Lower Military Budget

An increase of $50,000,000 in the military budget of Switzerland has been approved at a conference at Berne, in which 75 commanders of the army divisions took part. The new appropriations will be used to strengthen the Swiss army air service and to provide new rifles.

Seeks Tomb Of Alexander

Howard Carter Trying To Raise Necessary Funds For Venture

Enthusiastic over his proposed expedition to find the body of Alexander the Great, Howard Carter, discoverer of the tomb of Tut-Ankh-Amen has arrived in Alexandria, Egypt, to raise the necessary $360,000 for the venture. Should Alexander's tomb be discovered, he said, it would be the most important archaeological find ever made in Egypt, even more important than the Tut-Ankh-Amen discovery. The contents of Alexander the Great's tomb, he believes, would consist chiefly of metal, whose intrinsic value would not be as great as the Tut-Ankh-Amen relics. There is the possibility, he added, that Alexander's body has been covered by the sea. The system he would use in searching for the tomb is described as "sounding," or sinking of pipes.

Tunnel Safe From Fire

Tube Under River At Liverpool Is Well Protected

The new eight-million pound Mersey Tunnel, under the river from Liverpool to Birkenhead, is now safe from fire. It has presented a serious problem to the engineers for several years, for it is expected that more than a thousand petrol-using vehicles will be running through it at the same time. Strong purifying draughts will be used to drive the poisonous exhaust fumes from the tunnel. There are two special emergency exits with concrete fireproof staircases and fire-fighting stations at short intervals with chemicals sand, hydrants and telephone control.

Keeping Cream Sweet

Experiments have shown that cream, cooled to 55 degrees F. when after skimming, remained sweet to the taste for 36 hours, or long enough for delivery to the creamery in that condition. A temperature of 55 degrees F. can be secured at most farms with ordinary well water if an insulated tank is used. If this temperature can not be secured with water alone ice should be used.—Dominion Dairy and Cold Storage Branch.

ALLEGED SPIES ARE HELD BY PARIS POLICE

Paris, France. A naturalized Canadian, Benjamin Horowitz and his wife Clara, also a naturalized subject of the Dominion, stand accused by police of serving a great spy ring. Email items of spies with Soviet Russian connections.

Along with the Canadians, who formerly resided at Winnipeg and Vanguard Sask., the police arrested a young American couple and a other men and women of various nationalities in a series of swift raids.

On Herzovitz, was described himself as a merchant and native of Iasi, Roumania, police found three secret maps containing 33,000 francs (about $2,000). This, police declared was intended as payments to accomplices His wife according to police, had 12,000 francs sewn into her shirt

The authorities said the Canadian seemed to be the principal chief in Paris of the spy organization. Berzowith, the police said, was apparently the "payoff" man. Subordinates did not know each other, but served through a single contact man accruing to official statem nts. The latter said further that all minutes were by that the band worked for the benefit of Soviet Russia They were held incommunicado.

Two allened accomplices, Mme Stahl and Marie, were said by officials to have made frequent and mysterious visits to Poland. Two Russian Two fugitive Russians were pressed by suspected of spying

The recent round-up of suspects came a few days after a two-year search for spies, particularly about the frontiers Three men were convicted recently of receiving or giving information about the forts in the Metz and Lanter regions.

Police revealed that the case was brought to a head by discovery of a secret espionage affair in Finland, in connection with which Arvid Jacobson and his wife, formerly of Michigan, were arrested with 16 others last October.

French police commissionary said to Hohenfurst entered with information" which permitted the arrests in Paris, police said.

West Bend Work Speeded

Highway Situation Is Vital Concern In Northern Manitoba

The Pas, Man.—In a further effort to see work speeded on the highway between The Pas, Man., with the outside world, George A. Children, president of the Board of Trade, will visit Ottawa January 16, and will represent this town at the meeting of the Associated Board of Trade, Manitoba.

The decision was made at a recent meeting of the members, when it was the unanimous opinion that the highway situation is one of vital concern in the north at present.

While in Winnipeg, Mr. Children will also interview executives of department stores and factories with a view to shipping of merchandise for retail sales as well as for manufacturing into food and lutter, as soon as the season opens next year.

Shipping Horses North

Sixteen Teams To Work On Elk Island Mine Property

The Pas, Man. Arrangements are being made to ship 16 teams of horses from the prairies to Flin Flon, Mile 396, Hudson Bay Railway for work on the prop rty of the God's Lake Gold Mines, Limited, Elk Island, God's Lake.

At Mile 396 the horses will be unloaded and will work over the new winter road into the gold fields. The distance is about 130 miles. The teams will be used for hauling cordwood to the camp

Further attention was called to mining in the north recently when the Board of Trade of The Pas decided to take steps to place mining values of the north before the public.

Co-Operative Conference

Hudson Bay Ports and Other Matters To Be Discussed at Saskatoon

Saskatoon Recommendations regarding development of the Hudson Bay route will be prominently featured on the agenda of a co-operative conference to be held in Saskatoon beginning Wednesday January 18, Frank Elanoe, secretary of the United Farmers of Canada, announced. The conference, which is expected to last two days will be attended by representatives of the various co-operative organizations in the province, the Association of Rural Municipalities, the Municipal Hail association, a mutual fire insurance association and the United Farmers of Canada

Other questions and the Hudson Bay route proposal, the food, feeding and relief situation and representation for provincial and federal legislation in preparation for the coming session of parliament.

George H Smith former provincial trade expert, recently returned from Ottawa where he presented to the Dominion recommendations with regard to the Hudson Bay route were received at. It is expected that he will be present at the conference.

Pacific Dirigible Line

Plan Freight and Mail Line As Well As Passenger

Los Angeles.—Paul W. Litchfield, president of the Goodyear Tire and Rubber company states that a transcontinental dirigible line to carry passengers, freight and mail between California and Maxwell will be established as soon as testimony before the Alberta government's $8,000,000 guarantee is reported as $8,146,000 The current bonded position of the pool elevators was impressed from $3,361,111 to $3,823,451, an increase of $462,789.

Finish Long Air Trip

Lindbergha Arrive Home After 33,000 Mile Journey

New York.—Col. and Mrs. Charles A. Lindbergh, finishing a dramatic 33,000-mile journey over much of the globe, came home to hang the baby's stocking up for Christmas. They alighted in the East River near College Point, near Queens, at 2:36 p.m. on December 23.

The big red monoplane circled low over the East river, while dozens of craft set up a terrific din, and moored near the ramp of an aircraft company.

The Lindberghs covered the last lap of their historic journey. the 640-mile hop from Charleston, S.C., in just three minutes less than one hours.

Break Up Big Spy System

Paris.—A widespread spy syndicate, the newspaper Petit Parisien said, was broken up by the arrest of 18 men and women in the last 48 hours. The exact charge was kept secret, but the newspaper said the arrests were made in Paris and French provinces and involved a number of French persons.

Grant to Universities

Four Western Provinces Share In $250,000 Carnegie Gift

Vancouver. A grant of $250,000 by the Carnegie Corporation of New York has been made to the universities of British Columbia, Alberta, Saskatchewan and Manitoba, to be divided equally and used for such purposes as each individual institution decides, it has been announced here.

Dr. L. S. Klinck, president of the University of British Columbia, made the announcement at a meeting of the board of governors.

A meeting of the four presidents of the universities affected will be held in Vancouver within the next month to discuss the grant, it was stated

University Grant

Edmonton. Several plans are under consideration for utilizing the $50,000 grant to the University of Alberta by the Carnegie Corporation of New York, said Dr. H. C. Wallace, president of the university.

U. S. DAIRY

Of Colville, Ontario, who has been chosen by the Hudson County Conservative association as their candidate to contest their riding in the next Ontario Provincial election.

Alberta Pool Elevators

System Had Earnings of $997,048 For Last Fiscal Year

Calgary For the fiscal year ended July 15, Alberta wheat pool's elevator system had net operat ng earnings of $997,048.66 pool officials announced recently. During the year 42,320,000 bushels of grain were handled compared with 41,881,781 bushels in the previous year, through 450 country elevators. The final year ended the terminal elevators.

Property and liquid assets of the wheat pool were reported to be $15,220,817 against liabilities of $9,250,-722. Assets of the pool in excess of the Alberta government's $8,000,000 guarantee are reported as $6,146,094

The current bonded position of the pool elevators was impressed from $3,361,111 to $3,823,451, an increase of $462,789.

Finish Long Air Trip

Lindbergha Arrive Home After 33,000 Mile Journey

New York.—Col. and Mrs. Charles A. Lindbergh, finishing a dramatic 33,000-mile journey over much of the globe, came home to hang the baby's stocking up for Christmas. They alighted in the East River near College Point, near Queens, at 2:36 p.m. on December 23.

The big red monoplane circled low over the East river, while dozens of craft set up a terrific din, and moored near the ramp of an aircraft company.

The Lindberghs covered the last lap of their historic journey. the 640-mile hop from Charleston, S.C., in just three minutes less than one hours.

Break Up Spy System

Paris.—A widespread spy syndicate, the newspaper Petit Parisien said, was broken up by the arrest of 18 men and women in the last 48 hours. The exact charge was kept secret, but the newspaper said the arrests were made in Paris and French provinces and involved a number of French persons.

Grant to Universities

Four Western Provinces Share In $250,000 Carnegie Gift

Vancouver. A grant of $250,000 by the Carnegie Corporation of New York has been made to the universities of British Columbia, Alberta, Saskatchewan and Manitoba, to be divided equally and used for such purposes as each individual institution decides, it has been announced here.

Dr. L. S. Klinck, president of the University of British Columbia, made the announcement at a meeting of the board of governors.

A meeting of the four presidents of the universities affected will be held in Vancouver within the next month to discuss the grant, it was stated

University Grant

Edmonton. Several plans are under consideration for utilizing the $50,000 grant to the University of Alberta by the Carnegie Corporation of New York, said Dr. H. C. Wallace, president of the university.

Ontario House to Meet

Premier George Henry Announced Opening Date Jan. 31

Toronto.—The fifth and last session of the 18th legislature of Ontario will open Jan. 31, Premier George S. Henry announced following decision of the cabinet.

The date is set for one week earlier than the usual opening of the house, but is called at this time in view of Good Friday falling on March 30. This date will give the house eight weeks in which to conclude its business.

Whether the session will be temperate—or or mild is "more or less in the lap of the gods," Premier Henry said

Ontario Civil Service Salaries

Gov. Bennett Demands Second Salary Cut Made in Apr'l Last

Toronto.—Premier George S. Henry announced that the second salary reduction for Ontario civil servants, the first of which was made in 1932 has been cancelled, but that the original cut made in January 1932, would stand. The premier announced situation justified partial restoration of the salaries formerly paid, he said

On Jan. 1, 1932, salaries were reduced from two to 25 per cent. Last April a reduction was made of five to 25 per cent

Cut In Bank Interest

Reduction on Large Current Accounts Effective January First

Montreal.—Interest on current accounts will be decreased by all Canadian banks by one-half of one per cent. according to an official announcement here. The new rate of one per cent. will be applied on all accounts of $2,000 or more.

The banks have been paying 1½ per cent. On January 1 they will be changed to from one to 1½ per cent.

A Chance For Italy

Might Be Able to Reform League Through Readmission of Argentina

Geneva. Italy may get her second chance to reform the League of Nations through the medium of a South American state, if Argentina might have an opportunity to dovetail her reform suggestions into an Argentine request that the Rio Pact of Nations settlement be submitted by Carlos Saavedra Lamas, Argentine minister of foreign affairs, it was learned by a League of Nations' commission.

Discover Wreckage of Plane

St. Catherine's.—Wreckage of the plane which carried Bertram Ashley and Jack Nicholls, Toronto flyers to their death was located on the lake shore a mile west of Port Dalhousie The wreckage was a punctured aluminum pontoon belonging to the plane in which the two men left Toronto for Port Erie Dec. 18.

A SHORT HALT ON THE WAY TO MOSCOW

William C. Bullitt, U.S. Ambassador to Russia with his daughter, Anne, as they were interviewed by English reporters during their stay at Plymouth while en route to Moscow, where he inspected several sites for the American Embassy and presented his credentials to President Kalinin.

COOL WELCOME FOR GERMANY'S ARMAMENT PLAN

Paris, France.—Chancellor Adolf Hitler's disarmament proposals on receiving a cool welcome They are, it is observed, the antithesis of the French position France stands for disarmament with security The German proposals mean re-armament without security

Whether the nonsense will be tempered—or or mild is "more or less in the lap of the gods," Premier Henry said

Masons' New Years' Dance A Gay Affair

Local Masons and their friends enjoyed a very successful dance on New Years' night in the Memorial Hall.

A grand march started the dance off shortly before ten o'clock and by midnight a very large crowd had assembled on the dance floor.

At midnight tasty refreshments were served in the Buffet room, after which dancing was resumed until 2 p.m.

The dance program consisted of old-time and modern numbers, those were highly enjoyed by both young and old.

The "Arundian Orchestra" of Edmonton supplied the music for dancing.

Among those present were:

Mrs. and Mrs. V. Block, Mr. and Mrs. J. Walls, Mr. and Mrs. F. Walton, Mr. and Mrs. C. McKenzie, Mr. and Mrs. F. W. Smith, Mr. and Mrs. A. H. Rogers, Mr. and Mrs. D. Ayles, Mr. and Mrs. Wm. McAdie, Mr. and Mrs. N. Dennis, Mr. and Mrs. S. Thorne and Mrs. A. Gibson, Mr. and Mrs. J. Westover, Mr. and Mrs. S. Dennis, Mr. and Mrs. R. N. Sherwin of Stony Plain, Mr. and Mrs. G. Cranston, Mr. and Mrs. J. D. McLeod, Mr. and Mrs. H. Thorne, Mr. and Mrs. J. H. Rodgers, Mr. and Mrs. R. Pollard, Dr. and Mrs. Calhoun, Mr. and Mrs. Curtis, Mrs. Fennett, Mr. and Mrs. F. Baker, Mr. and Mrs. F. Murray, Mr. and Mrs. J. Wiebe, Mr. and Mrs C. Ashton, Mr. and Mrs. H. Ardley, Mr. and Mrs. W. A. Graham, Mrs. L. M. Taylor, Mr. and Mrs. H. Cranstone, Mr. and Mrs. Roy Shackleton, Mrs. Bill Graham, Mr. and Mrs. C. Shaver, Mr. and Mrs. L. Frost, Mr. and Mrs. A. S. O'Brien, Mr. and Mrs. A. Wanston, Mrs. Breckenridge, Mr. and Mrs. T. Holt, Mrs. Ed. LeRiche, Mrs. A. Mohr, Dr. and Mrs. Hamilton, Dr. and Mrs. Grunert, Mrs. Jackson, Mr. and Mrs. G. Neale, Mr. and Mrs. H. Truby, Mr. and Mrs. C. Glover.

Town Council Hold Special Meeting

A special meeting of the Council of the Town of Fort Saskatchewan was held in the Secretary's Office at 1:30 p.m. on December the 28th, 1905.

Present Mayor G. T. Montgomery, Councillors Fillmore, Magee, Watt, Graham and Neale.

The minutes of the last regular meeting held were read and adopted.

Several applications for relief were authorized. 14 families are now receiving assistance.

The resolution passed on the 6th of December last setting $300.00 as the price for the vacant warehouse and lots was rescinded, and a motion passed by the Council accepting the offer of Mr. V. A. Porter of $200.00 for the Warehouse and two lots (5 & 6, Block 9).

Local Masons Elect Officers

At a meeting held last Wednesday evening in the Masonic Hall, the following officers of Victoria Lodge No. 13, A.F.&A.M. were installed:

W. Bro. F. H. Walters, WM; W Bro W. A Graham, I.P.M.; Bro. R. M. Roy, S.W.; Bro. W. R. McAdie, J.W.; Wr. Bro. G. T. Montgomery, treasurer; Bro. H. M. Carscadden, secretary; Bro. J. T. Carscadden, chaplain; Bro. W. E. Roberts, organist; W. Bro. J. D. McLeod, D. of C.; Bro. J. R. S. Hambly, S.D.; Bro. N. F. Walker, J.D.; Bro. J. Walls, S.S.; Bro. H. Byers, J.S.; Bro. H. Thomas, I.G.; W. Bro. D. Roberts, Tyler. R. W. Bro. E. D. Cyrenne was the installing officers, assisted by W. Bro. F. E. Murray and W. Bro. J. Ritchie.

A well attended banquet in the Fort Hotel preceded the installation ceremonies.

ANOTHER VIEW ON "WHO PAYS FOR ADVERTISING"

There have been expressed and printed many views on "Who Pays for Advertising." Here is a view from a member of the Minnesota State Press Association, which is worth reprinting:

"If the advertiser had to foot the bill, then the incentive to advertise would not exist, as the more a firm advertised, the poorer it would become, and it would not continue the program. Well, then, does the consumer pay for the cost of advertising? Obviously, no, for if the consumer thought he was paying more for advertised goods than the others then he would immediately patronize non-advertised goods, bought from wide-awake firms. Advertising creates volume production, standardized quality, and lower prices. All right, then, there is only one answer left.—THE FIRMS WHO DO NOT ADVERTISE PAY THE COST FOR THOSE WHO DO! Believe it or not, the man in business justifying the use of advertising pays for it whether he uses it or not!"

The coastal regions of British Columbia have a climate so mild and so different from other parts of Canada that roses, which are not hardy elsewhere, do well there without winter protection.

A new package for apples consisting of a corrugated paper carton holding a dozen apples has been devised by the Dominion Experimental Station at Fredericton, N.B. The top is covered with cellophane, exposing every apple to view.

YPRES VALLEY NEWS

The annual meeting of the ladies' aid was held at the home of Mrs S Attwell, the following officers were elected:

1934

Another year in this old world's history has been ushered in, bringing with it the usual longings and hopes that it will prove a better, happy er year than its predecessor, but also failing here to the problems remaining unsolved on the old year closed.

The new year opened with conditions prevailing which give rise to mixed feelings of hope and despair, of confidence and a lack of it, of encouragement and discouragement, but a study and weighing of these conflicting reveal that the more hopeful aspect of things over-shadows and outweighs the less encouraging.

Despite all the rumors and threats of war, coupled with the failure, temporary let us hope, of the disarmament conference, peace among the great nations of the world was maintained throughout the past year. This in itself is encouraging and must be so thankful for when we recall the cunning in of a new year just less than two decades ago with millions of men engaged in conflict.

Equally encouraging is the fact that the foremost statesmen of the world are striving as never before to maintain peace among the nations, and to create and develop relationships which will operate to make such peace a permanent condition, rather than something very precarious and liable to destruction upon the slightest provocation.

The new year fell heir to the depression which began to sweep the world in the late months of 1929 and continued for four years with steadily increasing severity. Notwithstanding the fact that the depression continues, signs were not lacking as the old year closed that definite improvements were taking place, and that many factors were and a state of affairs which would have a decided effect in promoting and greatly extending such improvements. Business in many countries, Great Britain, United States and Canada included, is better off as the upgrade movement is under way, and a feeling of greater confidence is evident. The improvement may be small and slow in developing, but it has started, and there are grounds for believing that it will continue and achieve greater momentum during the new year.

One of the strongest reasons for such faith and confidence is that men and women of good will everywhere are devoting their talents and bending their energies to the task of finding solutions for the problems which distress the world. Many weaknesses and evils in our economic and social systems have been revealed as a result of the depression, and people have learned a good deal which they did not know before. They are known, men and women of all classes and conditions are determined to remove them. People have been brought closer to one another in this time of adversity than could have been possible in the height of general prosperity. The further development of this greater unselfishness is one of the opportunities which the new year presents to all.

The real premium of this new year rests with each of us as individuals. Notwithstanding what is said to the contrary, it is still as true as it ever was that man is largely the master of his own destiny. It is still within our power to make or mar our own lives, although it is also true that we influence and affect for good or ill the lives of others about us, and that they, in turn, affect us. Granted that this is so, man can nevertheless counteract these influences and order his own way of life to a very large extent.

There was a time when people looked upon the Great War as a war to end war, but they now realize that fighting is not the way to end fighting; rather that the way to end fighting is to stop fighting; that the way to world betterment is not through some universal upheaval and general overthrow of the existing order of things, but that the way is along paths of progress of evolution, of progressive reform, of strengthening and adding to the structure which has been erected and improved through all the ages since the past. And so the realization is growing that it must be through the unselfishness and intelligent merit and effort of the people themselves that each new year can and will be made better and happier than the one that went before.

The year 1934 has been given to us. What are we as individuals going to make of it? It is within our power, regardless of what world conditions may be, to make this new year a better, happier one so far as we as individ uals are concerned than last year proved to be. Equally, we can, if we so choose and act, make it a far less happy and a decidedly worse year for ourselves. It is, therefore, up to us as individuals to make the most we can for happiness in this new year some true, because happiness is a thing of the spirit and not merely of worldly possessions.

Felt Better Anyway

The slightly dazed old sportsman, feeling a little run down, consulted his doctor who, after examination, prescribed carrot and plenty of it.—"How shall I take it?"—"Any way you like and as much as you like." A closing hour the patient returned in boiling health. "Capital," said the doctor, "carry on with the carrot."—"The what, doctor?"—"The carrot."—"Carrot? Good Lord, I thought you said carrot. I've been drinking three bottles a day for the last four years."

Busy Days—Sleepless Nights Wreak the Nervous System

Men and women lose night after night on slumberless beds. Their eyes do not close in the refreshing repose that comes to those whose nerves are right. They are irritable and nervous, weak and worn out, and everything looks dark and gloomy.

Milburn's R. & N. Pills is the remedy that is supposed to restore them the blessings of good health. They bring back the sound refreshing sleep, tone up the nerves, and impart that sense of buoyancy to the spirits that is the result of renewed mental and physical vigor.

Task Sweat With Him

Inventor Of Compass Adjustment Dies Suddenly In Vancouver

Ambrose Fetherstonhaugh, 58, master mariner, died recently possibly carrying to the grave secrets which might have revolutionized compass adjustment on board ships.

If no person ego bearing the results of his studies having become his well known in London, England he came to Vancouver to conclude his work. He stepped on a ship based on the Union Steamship Company's steamer "Venture," so that he might pursue his investigations, and collapsed and died while washing paint on deck just as he was believed to have resolved success.

Friends say his invention had been tried out with success on several vessels on the Pacific Coast. He is said to have been able to adjust a compass so that it was true magnetically without further adjustment in any part of the world.

RHEUMATISM GOES WITH EXCESS FAT

Rub Banished by Kruschen

When one realizes that the cause of overweight is usually associated with the cause of rheumatism, it is not difficult to appreciate how it is that the two troubles can so easily be overcome by the same remedy.

The experiences told in the following letter are typical of those of other sufferers: "I first started taking Kruschen Salts for rheumatism in my ankle joints. Being rather stout, I thought perhaps they were troubled by my weight, but I cannot realize how surprised I was with the effect. I don't feel anything of my rheumatism now. And not only that — my weight has reduced 19 lbs. in just three months. I am still reducing, and yet I eat what I like, and I find a different woman in every way."—(Mrs.) B.

Gently, but surely Kruschen rids the system of the fat-forming food refuse, of all poisons and harmful waste matter, and gives to the glandular digestive disturbance and many other ills.

Prohibition Realistic

Many Revenue From Fines And Confiscation Than Cost Of Enforcement In U.S.

Prohibition statistics made public by the United States Department of Justice indicate that the government spent less on enforcement than it derived from duty and law violations.

During the dry era from Jan. 16, 1920, until Oct. 31, 1933, the department collected penalties and confiscations $139,810,397. Fines collected from convicted violators were placed at $60,287,912. The value of property confiscated was estimated at $218,202,084.

In contests between officers and violators the department said 173 investigators were killed, while the number of persons slain by agents aggregated 176.

Ruling On Debts

Acceptance by a creditor of cheques signed by the debtor does not constitute payment of a debt, although they are returned by the bank because of insufficient funds. Magistrate F. J. Montgomery of Toronto so ruled. Questions this ruling in dismissing a charge against Reeves Brothers, Inc. The latter was charged with failing to settle a debt.

Ancient Village Burned

One of the biggest landslides in history was reported from Graz, Austria. The despatch said that an entire village, covering an area of nine square miles, had begun to slip towards the village of Wenau, also in Lower Austria. Residents feared the village was doomed as soon as the thaw or rain began.

Should Be Popular

Commenting on a new novel, the New York Sun's book reviewer says: "I cannot think of a book which I recommend it and I can think of a dozen reasons to repudiate it. It is dull. It is poorly written. It is without any sort of realism, literary or intelligence." In which case it is certain to be read by a great many persons says the Border Cities Star.

Bankruptcies in Egypt

Bankruptcies in Egypt are the highest in several years.

Where Law Is Elastic

Plenty Of Sense In Duke Of Atholl's Argument About Lotteries

The Duke of Atholl, in the magnificent disregard of British courts for fame or place, fined £25 recently for conducting a one penalty held the House of Lords that the "legendary" of anti-lottery boom was making Britain "the laughing stock of the civilized world."

The Duke of Atholl used arguments familiar to Canadians who have considered the subject. A man with a bank account, he said, could lock a horse and settle with the bookmaker in due course, but if his account banded in a shilling to back his favourite he was breaking the law. The Duke of Montrose contributed the thought that if the law were enforced strictly "more than half the visitors in the country" would go to jail for conducting raffles.

If Britain for these reasons is the laughing stock of the world a statement which indicates that exaggeration is a weapon not disregarded even in the highest precincts of the House of Lords what shall we say of Canada? We permit raffles in church charities, gambling games in the fall fairs, but hold up our hands in horror at the thought of lotteries for hospitals or education of funds. We have by the statute that if an individual having secured a ticket in a sweepstake, should win a prize through the unlawful enterprise, the first individual who takes action against him in the courts may recover the prize money! It does not happen to be his wife or a close friend we close our eyes to the obvious conclusion and say the intent of the law has been met.

It is not a subject to get excited about. There is a degree of hypocrisy in all human affairs, in governments, and we all do our bit of hand-burying on occasions. It is too much to expect logic in our common approach to problems which have, or seem to present, an issue in morals. We fear a little shopkeeper or fur selling a candy bar on Sunday while the gasoline station next door like a succession of cars for their Sunday spin, and if we want to look for hypocrisy we do not need to go abroad. Ottawa Journal.

Will Benefit Cattle Trade

Extension Now Yards Opened At Tilbury Docks, London

Of decided advantage to the revived cattle trade between Canada and Great Britain, extensive new cattle docks and yards for the handling of live cattle shipments were opened at Tilbury Docks, London, by Lord Ashfield, chairman of the Port of London Authority.

W. A. Wilson, of Canada House, representing the Canadian Department of Trade and Commerce, spoking at the luncheon which followed, declared a steamer was then en route with between 500 and 600 head of cattle. The new facilities would benefit the Canadian cattle industry, the shipping industry and the Port Authority, he added, and he hoped the Canadian shipments would continue to be such as would prove of benefit to the meat trade.

Lord Ashfield declared the Port of London had been without a live cattle market for 20 years, all the more surprising as 70 per cent. of the chilled and refrigerated meat annually imported had been handled by the Port of London. He declared the new facilities would encourage handling of Canadian and Irish cattle.

J. W. Dalrady, Commissioner for the Free State, which ships a considerable quantity of cattle, said the Free State could offer cattle that was probably more free of disease than any other cattle in the world.

Shows Its Magnificence

There are occasions when London shows the magnificence that one associates with Empire. Such occasions were when Queen Victoria and Edward VII. reigned. And one of these occasions is the reception which takes place at Londonderry House on the eve of a new session of Parliament, says the Overseas Mail. These are occasions, too, when all the precious gems of Arabian Nights splendor seem to appear, as if by magic.

Every ton of coal produced in England now costs, on an average, 22.37 for labor and 21.26 for royalties.

Get Rid of That Cough or Cold

For Only a Few Cents

In these days when even pennies count, it's good to know a remedy like BUCKLEY'S MIXTURE that banishes coughs and colds so quickly that the cost is only a few cents.

One dose of BUCKLEY'S MIXTURE often relieves a cough or cold. Two doses usually banish them. A cough or cold has gone. No matter how long your cough or cold has lasted, Buckley's will stop it—or it will cost you the people say. It acts like a flash—a single dose proves it. Even on all substances. Buckley's is sold everywhere.

Buy Northern Pest

Ahbuth Described As "Clearing Germ Of The Atlantic"

Ahbuth is just a dot on the map to most Canadians, but to Rt. Rev. A. L. Fleming, consecrated bishop of the new Anglican missionary diocese of the Arctic, it is the "Clearing Germ of the Atlantic."

The tiny settlement near the mouth of the Mackenzie River, whose resident population numbers scarcely 50 souls, is already the leading centre of the western Arctic" said the former archdeacon in an interview on the occasion of his elevation to the episcopate.

Women of the Arctic Coast have attained a capacity far beyond the requirements of their domestic markets. The populations of the home market, numbering approximately ten and one-half million, requires only about 41,720,000 bushels of wheat.

The quality of the hard spring wheat flour is widely known and has been awarded Three gold medals. Other wheat grown in Canada has considerable reputation in British markets. The abundance of the commercially important milling capacity may be shown by provinces as follows:

"Prince Edward Island, 12 mills with a capacity of 700 barrels per day.

"Nova Scotia, 16 with 1600.

"New Brunswick, 32 with 3200.

"Quebec, 352 with 13,614.

"Ontario, 679 with 50,437.

"Manitoba, 36 with 12,000.

"Saskatchewan, 94 with 13,807.

"Alberta, 75 with 14,150.

"British Columbia, 6 with 1,284.

"Canada has 1,356 mills with a capacity of 112,048 barrels per day.

The more important milling centres, with capacities in barrels per day, are as follows: Montreal, 2,500; Keewat-n-Kenora, 14,000; Port Colborn, 14,000; Winnipeg-St. Boniface, 12,000; Hamilton Mkl. 4,000; Peterborough, 5,500; Calgary, 5,200; Edmonton, 4,500; Moose Jaw, 4,000; Toronto, 3,150; Fort William, 3,000; Goderich, 2,800; Portage la Prairie, 1,500; Brantford, 1,300; Medicine Hat, 1,300; Vancouver, 1,100; London, 1,050; Preston, 950; Midland, 900; Stratford, 850; Chatham, Ont., 800, St. Marys, Ont., 700; Sanforth, Ont., 700, Stratford, Ont., 700; Edmonton, 640, Lethbridge, 600; New Hamburg, Ont., 500, Souris, Man. 500, Renfrew, 400; Woodstock, Ont. 350; Preston, Ont. 325; Taylor-Lock, Ont., 325.

And one great problem is to find and maintain markets for the flour.

First Farmers Of Canada

Indians Settled 300 Unfortunates Lived Way Very Primitive

Long before the coming of the white man, agricultural people, organized into more or less settled communities, occupied the fertile uplands of Ontario between the Trent Lakes and its continuation along the St. Lawrence Valley, a site of the Laurentian Shield The Iroquoian tribes, who had learned in the south how to grow maize, beans, squashes and cucumbers, introduced their cultivation into south-eastern Ontario and the St. Lawrence Valley, whence they spread into New Brunswick.

But the Indian methods of cultivation, says Diamond Jenness, in "Indians in Canada," were exceedingly primitive They stone axes barely bit into hard maple or birch trees that were not first charred with fire so that they depended mainly on burning for the clearing of their land. Long digging sticks or bone blades with blades of shells supplied the place of ploughs; the ripened ears of corn were gathered by hand and transported in baskets by the women to the hunting shed. No tribe understood the rotation of crops, or indeed possessed the means to rotate them, and one or two fields may altogether fertilize the soil. Consequently, when their plots became exhausted with a few or twelve years, the community moved away to new but unbroken ground. The examination of the fu l supply in the near vicin ty was also a common cause for abandonment of otherwise favorable sit s

Now Sweet With Him

Sweeter Of Compass Adjustment Dies Suddenly In Vancouver

Ambrose Fetherstonhaugh, 58, master mariner, died recently possibly carrying to the grave secrets which might have revolutionized compass adjustment on board ships.

If no person ego bearing the results of his studies having become his well known in London, England he came to Vancouver to conclude his work. He stepped on a ship based on the Union Steamship Company's steamer "Venture," so that he might pursue his investigations, and collapsed and died while washing paint on deck just as he was believed to have resolved success.

Friends say his invention had been tried out with success on several vessels on the Pacific Coast. He is said to have been able to adjust a compass so that it was true magnetically without further adjustment in any part of the world.

Prohibition Realistic

Many Revenue From Fines And Confiscation Than Cost Of Enforcement In U.S.

Prohibition statistics made public by the United States Department of Justice indicate that the government spent less on enforcement than it derived from duty and law violations.

During the dry era from Jan. 16, 1920, until Oct. 31, 1933, the department collected penalties and confiscations $139,810,397. Fines collected from convicted violators were placed at $60,287,912. The value of property confiscated was estimated at $218,202,084.

In contests between officers and violators the department said 173 investigators were killed, while the number of persons slain by agents aggregated 176.

It will give you just the calm energy you need. Let us tell you about living again.

Britain Grows More Wheat

Increase in Acreage And Production In England And Wales

A big increase in wheat acreage and production in England and Wales during 1933 is shown in the preliminary estimate of agricultural returns just issued.

Wheat acreage is shown at 1,560,000, an increase of 39 per cent. compared with 1932 and 1931. Total production was estimated at 51,476,000 hundredweight, an increase of 9,365,000 hundredweight or 43 per cent. On the other hand barley acreage decreased by 203,000 acres and the estimated production of 13,624,000 is 2,719,000 hundredweights below 1932.

An M.P. says he likes London fogs. I would like to know what he can see in them?

How are Your Nerves?

Mrs. E. Walker, of 90 No. Ferguson St., Hamilton, Ont., said: "I am glad to say a few words in favor of Nuga-Tone. Because of my condition, when I had finished my housework I was all in. I felt I had helped me wonderfully when I had taken two bottles of Nuga-Tone. I am now feeling fine and have no more trouble with my nerves. I am strengthened so greatly, I am sure Dr. Pierce's Nuga-Tone, is a fine medicine indeed.

Flour Mills Of Canada Attain Capacity Far Beyond Needs Of Domestic Market

Canada has 1,356 flour mills with a daily capacity of 112,048 barrels. The flour milling industry in Canada goes back to 1605 when the French settled Port Royal, now Annapolis, N.S. In that year the first wheat raised in America was grown there And in the same year the first water wheel was erected to provide power for a mill.

Of the milling business today, the report of Canadian Pacific Railway agricultural bulletin says:

"The flour mills of Canada have attained a capacity far beyond the requirements of their domestic markets The populations of the home market, numbering approximately ten and one-half million, requires only about 41,720,000 bushels of wheat.

"The quality of the hard spring wheat flour is widely known and has been awarded Three gold medals. Other wheat grown in Canada has considerable reputation in British markets. The abundance of the commercially important milling capacity may be shown by provinces as follows:

"Prince Edward Island, 12 mills with a capacity of 700 barrels per day.

"Nova Scotia, 16 with 1600.

"New Brunswick, 32 with 3200.

"Quebec, 352 with 13,614.

"Ontario, 679 with 50,437.

"Manitoba, 36 with 12,000.

"Saskatchewan, 94 with 13,807.

"Alberta, 75 with 14,150.

"British Columbia, 6 with 1,284.

"Canada has 1,356 mills with a capacity of 112,048 barrels per day.

The more important milling centres, with capacities in barrels per day, are as follows: Montreal, 2,500; Keewat-n-Kenora, 14,000; Port Colborn, 14,000; Winnipeg-St. Boniface, 12,000; Hamilton Mkl. 4,000; Peterborough, 5,500; Calgary, 5,200; Edmonton, 4,500; Moose Jaw, 4,000; Toronto, 3,150; Fort William, 3,000; Goderich, 2,800; Portage la Prairie, 1,500; Brantford, 1,300; Medicine Hat, 1,300; Vancouver, 1,100; London, 1,050; Preston, 950; Midland, 900; Stratford, 850; Chatham, Ont., 800, St. Marys, Ont., 700; Sanforth, Ont., 700, Stratford, Ont., 700; Edmonton, 640, Lethbridge, 600; New Hamburg, Ont., 500, Souris, Man. 500, Renfrew, 400; Woodstock, Ont. 350; Preston, Ont. 325; Taylor-Lock, Ont., 325.

And one great problem is to find and maintain markets for the flour.

U.S. Paper Has Ideas About Canada's Criminal Law

Canadians seem to have an old-fashioned notion that law is law and should be enforced in the United States we are more up-to-date

For example, a dope peddler was tried in Montreal recently and they sent him to

(A) Fourteen years in prison

(B) Fines amounting to $300

(C) Ten lashes with his bare back

Any doubt of that gentleman would care to sell dope again in Canada even if he had not been given a single day in prison or a single cent of fine.

The whipping idea would probably convince him that he should seek fresh fields and pastures new

We don't know that whipping is the best penology, or that we should adopt it But we do know that something of the Canadian attitude toward law enforcement would discourage a lot of criminals here

When you can't "get the judge" or when your lawyer can't delay a trial for a year or two and then appeal it for another year or two or when you run imminent risk of contact with the "cost or nine hats" you have a powerful inducement to be good

But we admit that we are too old-fashioned for this up-to-date country Washington D.C. Times

Flies Over Frozen Wastes

Athaies Point 250 Miles South Of Pole In Record Flight

Rear Admiral Richard E Byrd drove another great aerial wedge of explorations back to the uncharted spaces of the Antarctic continent

Hailing the southerly progress of his flagship along the 164th meridian where no such threat can be blank all passage he ordered the ship into open water put his great seaplane over the side and hoped away

Before he turned back, the flight carried him to a latitude of 70 degrees, exactly 250 miles the record southward point attained by Captain Cook on his meridian in 1773.

Talked Himself Out Of Job

Frank Reed of Cincinnati, Ohio, had talked himself out of a job It was he who persuaded the county commissioner to conduct a civil service examination for the job of purchasing agent when his own term of office expired He took the examination along with the rest and failed to pass

Purely Domestic

The Christian Monitor says if Lee plan is carried to its logical conclusion, the United States Army, which has eliminated from its menu olives bananas, cane sugar, and other articles of food, soon will have practically nothing to horse shoes.

Adoption Of Idea Unlikely

U.S. Journalist Would Have Space Ship Abbreviating English

A Los Angeles journalist offers through the agency of the American Society of Newspaper Editors a suggestion terrifying in its implications. He has discovered that the word "the," being the most used in the English language, puts an economic burden on the press which is hard to bear A saving in one university found after exhaustive study that it appeared over 500,000 times in 5,000,000 words of newspaper print. Now if instead of "the," newspapers used only the symbol "t"—lower case—50 per cent of the space and more than 350 per cent. of the typesetting required for the full word would be saved Moreover if the whole paper were condensed, 1 per cent of the white paper bill would be saved by the use of the symbol, while more than 1 per cent additional news or editorial matter would find space by the normal-sized paper St Thomas Times-Journal

Squadron Of British Flyers Will Make Long Flight To Show Flag In Remote Lands

Glory Folk Songs

Western College Of Agriculture Has Good Collection

When Dane E. A. Rasmus, of the College of Agriculture, University of Alberta, hooked around for folksongs, he stepped into a dialogue.

Now the dane has 3,000 of them as his collection But there is one that the modern girl has completely debunked It's the harrowing tale of "Young Charlotte," a bedtime story for children of a bygone day when petticoats were numerous

Once thrilled by the song of Charlotte freezing to death on a 20-mile ride in a sleigh with her boy friend, forged to a dance, the dozen no longer believes it happened.

The song says they spoke only a couple of times and when George went to help her out of the sleigh, he took her hand in his. It was cold and hard as stone" She was buried and George's evening was spoiled

Debunking of the song came through modern girls dashing around town only a fraction of the clothes Charlotte wore in weather just as severe without suffering any ill effects

There are a score of other songs of similar strain in the collection Such as that of the Lord Lovell's bride disappearing at a Christmas ball party when she was "it" in a game of hide and seek. She hid in a chest which locked with a spring and her bridey bloom lay withering there in a lonely tomb" They found her skeleton many years later

Hard Sledding

Mail Carrier Has Difficulty Negotiating Drifts

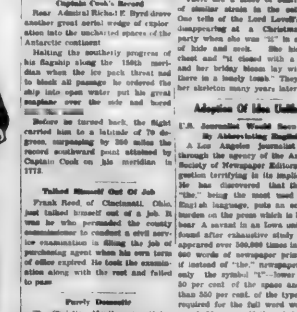
THIS IS EASY—TRY IT SOMETIME



Bob of Carmel, shown above balancing a glass of water on his head, was one of the most interesting exhibits at the National Dog Show in London, England Apart from acquiescence as a juggler, "Bob of Carmel" is a life saver. He has been awarded the animals' "V.C." twice for saving his master's life. On the first occasion Bob pulled the brass from a blazing motor car, and in the second case saved his master from falling over a cliff by holding on to his coat tails

Squadron Of British Flyers Will Make Long Flight To Show Flag In Remote Lands

Next year, for the first time, the Royal Air Force formations cruise from Cairo to South and East Africa and back will be entrusted to a "mixed" squadron. Five single-engined Fairey day bombers and four Victoria troop-bombers are scheduled to leave Mariguana aerodrome, near Cairo about Feb. 20 and return there May 1 after a flight of some 12,000 miles

Their provisional itinerary goes as far south as Pretoria, and takes them back to Cairo by way of Bulawayo, Livingstone, Salisbury, Aberavon, Mombasa, Nairobi Malakal (Sudan), and Khartum.

On the homeward flight, which will occupy the bulk of the time, the commanders will make calls at these or four days at each of the chief centres. Flights of two or three machines will be detached during these periods to "show the flag" in outlying regions of Rhodesia and Nyasaland and in the mandated territory ports on the northern frontier of Kenya. The opportunity will probably be seized to engage in bakeo exercises with ground forces and with the South African Air Force

Fairey IIF biplanes have been assigned for the job but as the years in large numbers with the Royal Air Force. They are "general purpose" planes, capable of all work of the kind from which it is expected the machine duties are called upon to perform any and every kind of task. The type of aeroplane which was developed in Great Britain to a higher pitch than in any other country, simply because the responsibilities of the Royal Air Force placed on it charged nowadays with the policing of approximately 1,000,000 square miles of the world's surface. demands many machines.

Ambulance work, aerial survey, transport spotting for artillery, defensive and defensive fighting these are but a few of the duties of the British "general purpose" aeroplane Adaptability and absolute trustworthiness are essential: in the air crash, each of which is pursued with a "Hunter" Lafayette. Hence these qualities are combined sufficiently with speed and general flying efficiency.

The "Victoria" biplane has been the standard troop-carrier of the Royal Air Force for several years passing it has been developed The result is notable: increase of performance and the revival of a type of aircraft which three years ago was considered obsolete and out of date. The new "Victoria," like its predecessor has accommodation for 22 fully-armed infantrymen in the cabin, but it can carry a much larger load than the older machine, has a longer practical cruising range is faster and climbs more rapidly to a higher "ceiling."

A considerable number of the new model has ordered for the Royal Air Ministry in the normal course of replacement of older machines. Two of the new machines arrived Feg if the beginning of this month Five more recently arrived at Bagdad

Had Special Meaning

The custom of hanging evergreens in the house during the Yuletide originally had a purpose beyond that of decoration In olden days such kind of evergreen was believed to confer special blessings on those who passed beneath its boughs To pass under holly branches, it was believed, brought the year any mount victory while laurel was supposed to impart a spirit of beauty and poetry Missouri Farmer

The padre who had not been feeling well called in his friend the doctor Tae latter vetted him thoroughly and then said "Well old chap your lungs are not in good shape You'll have to spend six months in Switzerland" "But I can't afford the time, my dear man." "Well that's up to you It's either Switzerland or heaven" The padre thought for a long time and then growled "Oh all right then, I'll try Switz."

WORLD HAPPENINGS BRIEFLY TOLD

There will be no banquets, balls or official receptions in the royal palace this winter because of the hard times in Holland. Queen Wilhelmina has decided.

Parliament will be summoned on Jan. 25, it was learned officially at Ottawa. It will be the fifth session of the 17th Parliament since Confederation.

Bathing permits issued in Sydney, N.S.W. in the first eight months of 1933 were more than double those for the corresponding period of the preceding year.

Although usually regarded as a hot-time tipple, jet drums of almond essences were included in the stores of the Byrd Antarctic Expedition because of their high calorific content.

The American museum of natural history announced recently that Mr. and Mrs. Charles A. Lindbergh had presented to the museum the mammals in which they completed a 20-month aerial survey.

Dominion government approval of eight unemployment relief works in Manitoba requiring a total expenditure of slightly more than $33,000, was announced at Winnipeg by Lieut.-Col. C. C. MacLeod, federal director of unemployment relief.

In response to the recent invitation of the British Home Secretary Rt. John Gilmour, 17,000 firearms in the United Kingdom were handed in. 13,621 revolvers and pistols, 11,000 rifles and 73 antique fire-arms have been given to the government by individuals.

The Earl of Willingdon, viceroy of India and former governor-general of Canada has been granted free transfer leave of absence from India until startled in May he will travel back to Ireland with Lady Willingdon to spend the holiday at home

Rains of Peace and beer in British Columbia during the final year ending March 31, 1933, decreased approximately 27 per cent according to figures released Sales totalled $9,097,316, lower by $3,106,635 than those of the previous year. Profit to the provincial government last year was $2,324,873.

Where Radio Fails

Common Views For Progress Vs Ideals Off In Middle

A newspaper which ended a story in the middle of a sentence or the middle of a word would hear all about it from readers; yet that is a common claim on the radio. Two recent incidents have aroused considerable comment. During the broadcast of the fun-fest services for Sir Arthur Currie, station CRCT, Toronto, owned by the Canadian Radio Commission broke off in the middle to broadcast a commercial programme. Similarly the speech of Premier Bennett was cut off to be replaced by Paul Whiteman's Jam band. One listener says he disliked CKLW, Windsor, and heard the remainder of the speech, but it was interspersed with a string talk for an American cigarette. And yet there are some folk who suggest that the radio may displace the newspapers. — Niagara Falls Review

A Miniature Zoo

Animals Sent From Toronto To Park In Edinburgh

Miniature zoo arrived in Glasgow from Montreal. The specimens were:

Four young American black bears, four Canadian beavers, two porcupines, and six turtles. They were consigned from the Toronto Zoo to the Scottish Zoological Park, Corstorphine, Edinburgh. The beavers were sent as the gift of Captain Stewart, of the Department of Colonization for the Province of Ontario to Glasgow

Hard Apple Proof

"The last speaker," said the chairman of the Ninth Congress "is a striking example of the efficacy of the doctrines he so eloquently advocates. Hale and hearty at 80 years of age, he could live out many a man younger than himself."

A voice from the audience: "He did."

PATTERN 2-B EASY ON THE YOU SIDE DESIGN A CHARMING ENSEMBLE TO CREATE DRESS.—NEED NOT BE COSTLY.

Many a new dress plays tricks with its shoulders, and you'll agree, that today's model is admirably smart.

Here's an opportunity to have a Chinese red crepe silk dress for real holiday engagements.

A cute bow finishes the neck, and the partial belt, narrows the waistline. It slips through a huge gold metal buckle at the back.

Peacock blue, copper and emerald green are other bright choices in crepe silk for this model and simplicity they are all very modish.

Style No. 359 is designed in sizes 11, 13, 15 and 17 years.

Velvet is also lovely.

Size 16 requires 3¾ yards of 36-inch material.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

New Post Office For Arctic

To Be Served By Air Mail Twice Every Year

Opening of a new post office, at Coppermine, N.W.T., on the Arctic shores, is announced by the post office department.

The office will be served by air mail from Cameron Bay, N.W.T., twice each year, in January and July.

Postage rates for this service is: First class, second class and third class matter by ordinary first-class rates; second class matter, from offices of publication and news dealers, four cents a pound; parcel post, $1.50 a pound.

Shortage Of Schools

For the 1,000 state teachers who qualified recently at Lisbon, Portugal, there are no schools. They have caps, gowns, canes, copy books and everything necessary for their profession but they have nobody to teach. Although education is compulsory in Portugal thousands of children are going without instruction because of lack of school buildings.

SUNDAY SCHOOL LESSON

JANUARY 7

BIRTH AND INFANCY OF JESUS

Golden Text: "Thou shalt call His name Jesus: for it is He that shall save His people from their sins." Matthew 1 21.

Lesson Matthew 1 1 - 2 23.

Devotional Reading: Isaiah 9 2-7.

Explanations and Comments

The Book of the Generation of Jesus Christ, the son of David, the son of Abraham. Matthew begins his gospel with a genealogy of Jesus, tracing his descent from Abraham through David. Luke also traces the genealogy of Jesus, but he goes back to Adam, the first man. Matthew's purpose was to show that Jesus was the promised Messiah, the King of the Jews, and he therefore traces the descent through David, the royal ancestor of the Jewish people. Luke's purpose was to show that Jesus was the Saviour of all men, and he therefore traces the descent through Adam, the father of the whole human race.

Now the birth of Jesus Christ was on this wise: When as His mother Mary was espoused to Joseph, before they came together she was found with child of the Holy Ghost. Matthew tells briefly the story of the birth of Jesus, but Luke gives a much more detailed account. Mary was betrothed to Joseph, but they had not yet come together as husband and wife. Joseph was a just man, and was minded to put her away privily, but the angel of the Lord appeared to him in a dream and told him that Mary's child was conceived by the Holy Ghost, and that he should call His name Jesus, for He should save His people from their sins. Joseph then took Mary to be his wife, but they did not live together as husband and wife until after the birth of Jesus.

Now when Jesus was born in Bethlehem of Judea in the days of Herod the king, behold, there came wise men from the east to Jerusalem, saying, Where is He that is born King of the Jews? for we have seen His star in the east, and are come to worship Him. When Herod the king had heard this, he was troubled, and all Jerusalem with him. And when he had gathered all the chief priests and scribes of the people together, he demanded of them where Christ should be born. And they said unto him, In Bethlehem of Judea: for thus it is written by the prophet, And thou Bethlehem, in the land of Juda, art not the least among the princes of Juda: for out of thee shall come a Governor, that shall rule My people Israel. Then Herod, when he had privily called the wise men, inquired of them diligently what time the star appeared. And he sent them to Bethlehem, and said, Go and search diligently for the young child; and when ye have found Him, bring me word again, that I may come and worship Him also. When they had heard the king, they departed; and, lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was. When they saw the star, they rejoiced with exceeding great joy. And when they were come into the house, they saw the young child with Mary His mother, and fell down, and worshipped Him: and when they had opened their treasures, they presented unto Him gifts; gold, and frankincense, and myrrh. And being warned of God in a dream that they should not return to Herod, they departed into their own country another way.

Explanations and Comments

The wise men from the east. Vss. 1 1 12. It was in the days of Herod the King, whose reign in Judea lasted from 37 B.C. that Jesus was born in Bethlehem. The Wise Men, or Magi, who came from the East to seek Jesus, belonged to the priestly or learned class (among among the ancient Persians, and particularly in astronomers, astrologers, interpreters of dreams, and interpreters of omens, the tradition had there were three Wise Men (kings of Jasper, Saracen and Emperor) may have had the reign in fact that the gifts were of a type which were of a they had prized in the past, a remarkable star, the star of him who was born King of the Jews, they declared, and they had come to worship him. "The appearance of a star had little resemblance to modern astronomy, but it led to the study of the Lord Kepler who found after many centuries, was led by a number astronomer of the time, to higher knowledge tion."

"Whatsoever We Men they were before, now they began to be wise men indeed when they set themselves to inquire after Christ," as Matthew Henry's comment.

"Star of the East! Show us the way
In wisdom unbridled
To seek the manger and say
Our gifts before the child
To bring our hearts and offer them
Unto our King in Bethlehem."

Eugene Field.

Will Not Produce Energy

Power Not Likely From Atom Split-ting, Says Boys Lecturer

Fondly-held beliefs that a revolutionary source of energy for all mankind's needs will be found in the split atom have been dispelled recently into the scientific realm by Lord Rutherford

The energy produced by the bombardment of the atom is a very poor kind of thing," said the Cambridge University physicist, who has repeatedly successfully shattered atoms.

"Anyone who expects a source of power from the transformation of these atoms is talking in vacuum."

The atom, he said, has been split into 50 constituents by bombardment with gases containing only a fraction of a density of five million volts. During this bombardment, three subatomic explosions were heard, he said, energy. "But," he added, "such enormous numbers of particles have to be fired that the energy expended is much greater than that given out. A million or a hundred million particles might have to be fired to hit one atom.

"The experiments are not made with any practical end in view, but to add to our knowledge.

"We hope that within the next few years we shall get some idea of what these atoms are, how they are made, and the way they are worked."

Treatment For Pneumonia

Air Injected Through Chest Wall In Acute Cases

Dr. Alfred Stengel, professor of medicine and vice-president of the University of Pennsylvania in charge of medical affairs, confirmed a report that artificial pneumothorax recently was used in the treatment of acute lobar pneumonia at the university hospital, for the first time in the United States.

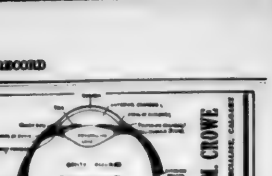
The treatment is similar to that used for many years in cases of pulmonary tuberculosis and consists of injecting air through the chest wall of a patient to compress a diseased lung.

Might Have Changed Things

Lloyd George tells in his war memoirs that the British Expeditionary Force did not land at Antwerp because advised by the British War Office that the Germans could not move rapidly through the Belgian mud. Would the course of the war have been changed, and to what extent, had the war office known what it was talking about? asks the Lethbridge Herald.

SUNDAY SCHOOL LESSON

NO. 2.—SOME OF THE FACTS AND THEIR USES.



THE EYE By F. M. CROWE

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

The Vitreous Humor is the transparent fluid filling about two thirds of the globe, or eyeball, which is thus enabled to retain its shape. It transmits the white of the light it surrounded by a thin membrane lying close to the Retina. The Lens hangs vertically in the eye, and is convex from masses for direct in the front part of the Vitreous.

The length of the eyeball from front to back is only a inch or two one inch and the side to side about seven a trifle more. Since there are no converging rays of light in nature how are the rays from any object brought to a focus on the point upon the rear which alone can see if we are to distinguish it? This is accomplished by the two very convex bodies described, the Cornea and the Lens. But how does the Lens automatically accommodate itself near objects or distant objects? By the distance between the eye and what we look at. At the age of twelve the accommodation is so active that a reader can read just as easily three inches from the eye as at arms length. At 20 in reading years the accommodation declines inches and in the average person of forty, focusing for the usual reading distance of about fourteen inches has become such an effort and after 5 that for prolonged hours on books, severe eyestrain irritability and other unpleasant symptoms due to using up so much nervous energy that keep in your house the only solution for this condition is properly fitted glasses. All the recommendations that must be observed in all about the age of sixty, as the strength of the reading glasses has to be changed periodically. Although the vision for distant objects may remain as good as it ever was

Besides the muscles inside the eyeball there are six pairs attached to the outside of the eyeball which supply power for their fine coming just how fine having, we do not know, or otherwise, takes place will be the subject of another a talk.

What a marvelous organ is the Eye and what an account it work it has to perform every normal, but the darkness through living one long, too short, imperfectly curved lenses, muscular weakness and many other causes—we must expect poor and uncomfortable vision. Glasses often afford more serious disturbances affecting our health.

Recipes For This Week

(By Betty Barclay)

LEMON JUNKET WITH BAKED APPLES

1 tablet for junket.
1 tablespoon cold water.
1 pint milk.
1 tablespoons sugar.
6 apples.
Maraschino cherries.
1 teaspoon lemon flavoring.
1 cup sugar.
½ cup water.
1 teaspoon red food color.
Cinnamon, if desired.

Make a syrup of 1 cup sugar, ½ cup water, cinnamon, and red food color by boiling 5 minutes. Put the apples which have been peeled and cored in a pan and pour the syrup over them. Bake until tender. Another Preparation Place apples in individual dishes, fill centre of each apple with syrup. Garnish with cherries. Dissolve tablet in refrigerator Dissolve tablet for junket in 1 tablespoon cold water. Add 2 tablespoons sugar and lemon flavoring to milk, and heat to lukewarm not hot. Add dissolved tablet for junket, stir a few seconds, and pour over sugar. Let stand until firm, then chill in refrigerator. Place cherry on top of apple when ready to serve.

CRANBERRY MOLD

1¼ cups boiling water
Juice ½ lemon.
½ cup celery, finely cut.
½ cup canned shredded pineapple.
1 cup thick cranberry sauce, sweetened.

Dissolve gelatin in boiling water. Chill. When slightly thickened, add lemon juice, celery, pineapple, and cranberry sauce. Turn into mold. Chill until firm. Unmold. Garnish with mayonnaise. Serves 6.

Advice To Bluster

Stocks only when you are sure the ice is four inches thick; one inch thick, keep off; two inches, you may skate; three inches, in small groups only; four inches, o.k. That's the rigors and reasons with which you can avoid having a going-to-grey stats over deep water

Defined University's Role

"Creator Of Sane Enlightened Thinking" Said Lots Sir Arthur Currie

The role of the modern university "in the desperate battle of modern life" is not that of a "merry purveyor of knowledge, a storehouse of equipment, a base of supplies, but rather it must be the creator of forces for the moulding of human destinies by promotion of sane, enlightened th'nking," says the late General Sir Arthur Currie, Principal and Vice-Chancellor of McGill University, in his last report to the Board of Governors.

Completed by Sir Arthur a few days before he was overtaken by illness, which resulted in his death on Nov. 30, the report was published after general had been received from the Governor-General of Canada in the capacity as visitor to the university.

"Education merely as a direction is done cable" Sir Arthur continues. "Education for utilitarian purposes has many justification. But education that kindles the imagination, quickens the power of vision, teaches men to create, to evolve new ideas, to blaze fresh trails—this is the very loftiest aim of a university and the most splendid support it can perform for the State."

League Stands Firm

Common Interests And Dangers Draw Nations Nations Closer

The League still stands. No 9-g has been handed down at Geneva, but the German and Japanese. Other members of the League have been drawn closer by common difficulties and common dangers. The United States and Soviet Russia are working harmoniously with them, and the direct discussions between the 50 two great countries are of the best omen for the world. So far from recent events proving that the Geneva system is a failure, they have demonstrated unanswerably that in the German system alone is salvation to be found. If not disarmament, then rearmament, and if rearmament, then war. And disarmament is possible under condition alone, that the nations are ready to disarm in accordance with their pledges stand inseparably together.—London Spectator.

BRITAIN FACES THE NEW YEAR WITH CONFIDENCE

London, Eng.—Great Britain faces the New Year in the quiet confidence of notable achievement.

Scarcely more than two years ago she stood perilously near the edge of a financial abyss. Ready money was moving rapidly to foreign fields. British credit was failing. The dole fund was running into debt to the tune of a million pounds a week. There were those, even, who predicted London had forever lost her prominence in finance, that war and the aftermath of war had dealt such a blow that recovery was well-nigh impossible.

How those tragic days have fled. Britain has quietly set the world an example which foreign nations are now breathlessly endeavoring to emulate. Always slow to act she acted with startling thoroughness. With Parliament behind him, Ramsay MacDonald set his finances. Her bankrupt dole fund is now operating with a balance in hand. Favorable balance have also been struck during the three full years of her new life. The unemployment problem is far from solved, but the number of Britishers without work is considerably less than it was in November, 1931. The number of workers who have been removed from the live register of 21 claimants.

Anticipates Better Times

The British people have begun the twentieth beginning of April with an increase of 1,250,000 in the number of 12½ pounds or nearly 21 per cent.

The improvement in the economic situation of December continued into January and February. Trade is definitely better. Unemployment is declining. The number of workers who have left the dole already exceeds that figure. Mr. Baldwin is right.

Man-Made Thunderbolt

Scientists Thrilled By Electrical Display From Giant Generator

A steady direct current lightning bolt of 7,000,000 volts the most powerful man-made thunderbolt of its kind produced so far, was hurled at Round Hill, Mass. from a man-made cyclopean

The occasion was the first tryout of the giant electrostatic generator designed at Massachusetts Institute of Technology by Dr Robert J Van de Graaff

The first tests, witnessed by a handful of distinguished scientists, more than fulfilled it was stated the hopes of the creators of the mammoth of eldrich Maxwell who support that the new Ambition Lamp of Science will throw new light on many hard secrets of science.

The spectacle of a 7,000,000 volt of lightning controlled with the relatively limited comfort of the laugar was tremendously impressive in its brilliance and the savage fury of its unleashed power as, for a brief hour Dr Van de Graaff directed two em-stants at the switches which exam-ined or decreased the electric display

The giant aluminum terminals inside magic knobs which spat out flaming streaks of blue, lapsed five sometimes between each other, in jagged lines, often to the steel beams of iron walls of the laugar itself

To each sphere or terminal was fed an electric charge of about 2,500,000 volts, by means of an endless belt which carried it from the ground and deposited it upon the polished surface of the globe. As the voltage increased within the magnetic of orbit, pink and lavender flames leaped out to the base of the columns with thunderous reports and played about the heads of obstreperous scientists who closely watched their switches and meters

Several t imes a second blue butt crashed into the encrusted walls of the building or played about the apparatus some forms Generators with an ear-splitting report, they would score a direct hit from terminal to terminal

The demonstration was wholly gratifying to the scientists and engineer from the standpoint of lab-man, who felt their hair stand on end, and a tingling in their elbows and knees, and also saw their finger tips glow with the bluish light of diffused, static electrical charges

Had weather conditions been favorable, the demonstration would have been made out of doors, where dry absence of the conductivity of the moist hangar would have made possible 10,000,000 volts or at least 10,000,000 Dr Van de Graaff predicted.

Trade Fund For Fishers

South Sea Natives Like To Get The Latest Styles

The value of new fashion designs and new tribal songs is measured in terms of pigs and other foodstuffs by the natives of the South Seas, according to Margaret Mead who recently returned from a 20 months' research among primitive tribes.

With her husband, Dr R F Fortune of Columbia University, Dr Mead travelled extensively among the primitive mountain dwellers in New Guinea, a mandate of Australia, and formerly known as Kaiser Wilhelm's Landt.

The latter tribes, Dr Mead said, surrender their food supplies in return for latest fashion ideas and songs. Communication between the tribes, however is irregular, she said, and so scanty does a fashion design travel that it may take as long as five years for it to cover the 30-mile distance from the sea to the mountains. Dr Mead is assistant curator of ethnology of the American Museum of Natural History

Modern Steamship Wheel

Russia continues to dump wheat in Great Britain and every European country which has not a prohibitive tariff the London Daily Mail agricultural correspondent declares. Imports of Russian wheat to Great Britain in November were 1 600,000 hundredweight compared with only 35 526 hundredweight in November, 1932 with the exception of declared wheat will have at one-quarter of its cost.

W. N. U. 3827

CANADIAN STEAMER HAS CRASH CALL OFF PACIFIC COAST

The S.S. Prince George struck a jagged reef in Observatory Inlet, on the northern British Columbia coast, and for several hours it was thought she might sink However, tugs managed to pull her off and she proceeded to Aignet Harbor Inlet. One crew of 69 and 17 passengers were reported safe. This same vessel almost came to grief twenty years ago when she shivered against the beach outside Vancouver harbor in a dense fog

Undesirable Features Of Examination System

Full As Undesirable Of Student's Worth Stolen Professor

Some of the weaknesses and undesirable features of our examination system are basically of Dr Edmund Rossman, Ph.D., in an article in the Canadian Magazine He points out that, while the departmental examination gauge intellectual capacity they fail as a real yardstick of a student's worth. Dr Rossman is not the only educationist who has taken this view and many persons will agree with him when he states that examination to be effective must base their account not only the intellectual but the emotional life of the pupil as well

Dr. Rossman would abolish depriv. mental examinations except for Grade one, and a tingling in their elbows and knees, and also saw their finger tips glow with the bluish light of diffused, static electrical charges

Had weather conditions been favorable, the demonstration would have been made out of doors, where dry absence of the conductivity of the moist hangar would have made possible 10,000,000 volts or at least 10,000,000 Dr Van de Graaff predicted.

Added Strength Needed

Thin Metal Underwear For Large Airships Is Suggested

Skills of thin metal underwear to fit tightly over the fabric skins of large airships like the new Zeppelins was proposed by Commander Garland Fulton, of the Bureau of Aeronautics United States Navy.

The airship underwear would be designed not to protect against temperature, but from the smashing forces which will be encountered in the air when the great ships are speeded up to 85 mph.

"If the attempt is made," Commander Fulton said to the American Society of Mechanical Engineers, "to increase the speed of a large airship from the present maximum of 80-85 statute miles per hours to say, 100 miles, additional weight will be required not only in the power plant, but in the general structure as well.

This brings up anew the possibility of obtaining added strength reserved for higher speeds and ground handling under unfavorable conditions by supercimposing some of the principles of a pressure airship upon the conventional type of rigid airship

The result would be a composite type of construction which might have a thin metal covering. This covering if placed under tension by interior pr ssure would be made to function in a definite manner as a strength member "

Trade Agreement Denounced

Premier Of Welsh Town Finds It Very Unsatisfactory

A tribute to newspaper advertising is paid by T. Sindell, secretary of the Abergavenny and Pontypool Town Advertising Association, of Wales, in his annual report

Mr Sindell states the association carried out a program of press advertising on a much larger scale than in previous years, and this resulted in a large demand for guide books. "From reports I have received from the local apartment, and boarding-house proprietors, and tradespeople," he says, "I am pleased to say that this season has been the best for many years. From the results of our press advertising this season, I have no hesitation in recommending that we again adopt this mode of advertising during the 1934 season."

Mid-West Mining Centre

Winnipeg Area May Rival Financial Centers Of East

Long regarded as the throne room of King Wheat Winnipeg, on the basis of 1933 midwest industries mining returns looms as a potential mining centre of Canada which in the opinion of mining men will rival the great financial centres of eastern Canada.

In the act a tributary to Winnipeg from the Lakeshead to Lake Winnipeg and north metal production in 1933 ran about $11 000 000 an increase of 30 per cent over 1932 and expenditurures for services and supplies reached somewhat over $9 000 000

Employment in the midwest mining territory increased during the past year by 30 par cent Thousands of men were engaged in the northland combing the country for persons as tials They range from prospective gold-bearing beauty to farmers on the waterways to highly specialized mining engineers Prospecting activity was double that of 1932 and a number of Provincial building finds were reported

Midwest Canada's metallic mining industry has spent $56 4 for hydrogen equipment and supplies in the past four years doing much to offset the decline in other lines of trade Wholesalers in all lines have been affected Fort William and Port Arthur, due to development in the Lakehead area also expected a share in this great new industry, now beginning to assume an air of permanence

This territory which as recently as 1927 produced only one metal -gold

During the past year, had production of gold, silver, copper, zinc selenium, cobalt and aluminum In 1927, metallic output for the area totalled only $4,000. In 1928, it reached $500,000 and in 1932, the banner year, totalled $11,000,000.

Beyond outstanding prospects in the pre-Cambrian area, which sh ld ex over 2,000,000 acres, responded favorably to development during the past season. The Lakehead proper, as Gods Lake, Little Long Lac, Island Lake. The Pas, Kenora and Crow River, no longer 100 properties are overdeckly against him. He felt a squeeze breathlessness within him. On the third deal, he doubled his opponent's bid and snored for the first time; and on the last deal he had a hundred aces, bid no trump and made it by a clean sweep. His task then to his opponents was only two dollars and seventy cents, but it might not have been that time if the amount against him. Pure luck, that was all.

For that matter, he would have preferred not to win, but he had to let him win a gay indifference. The evening was young, yet. Plenty of time for emergencies, later Claudia is a cottage in Rosshire, a village in the bleak countryside of Northern Scotland. Claudia Ogilvie Mary and her secretary, Polly Thompson Miss Keller will not come back to the United States this winter to continue her work for the Lighthouse Foundation for the Blind because her teacher and nurse Mrs. Macy, is to spend the winter with herself and has become pupil and patient.

With the same equipment Mrs. Macy gave her and using the same language, Mrs. Macy taught her, Helen Keller is paying a debt and teaching her blind teacher the Braille-alphabet she has forgotten

Mrs. Macy taught Helen Keller to speak and now Miss Keller reads to the teacher who can no longer see

Nor will Miss Keller attempt to return to America until Mrs. Macy's health is better.

Soils in New Zealand

Water-Logged Land Of Less Fertility Is Called Fickle

In New Zealand the term pahiki is applied to water-logged soils comprised of close-textured silt or clay, underlain for the most part by a dark brown peat, once thought to have resulted mainly from the deposition of iron compounds, but now shown to contain, in certain cases, a high percentage of organic matter with relatively little iron. These soils are of exceptionally low fertility and carry a sparse growth of rush, manuka fern, cassock, sedges and lichen The physical properties of the soil are those of a spongy, and being very retentive of water, remain in a constantly boggy condition throughout the areas in which they are located

Helen Keller Repaying Debt

Instructed Her Former Teacher Who Is Going Blind Herself

Helen Keller, who was taught to speak and read the lips of others by Miss Sullivan, now Mrs. John Macy, is repaying a part of her debt to her teacher.

Mrs. Keith Hussey, of Garden City, L.I., biographer of Miss Keller, said that the woman called "the blind leader of the blind," is living in a cottage in Rossshire, a village in the bleak countryside of Northern Scotland. Miss Ogilvie Mary and her secretary, Polly Thompson

Miss Keller will not come back to the United States this winter to continue her work for the Lighthouse Foundation for the Blind because her teacher and nurse Mrs. Macy, is to spend the winter with herself and has become pupil and patient.

With the same equipment Mrs. Macy gave her and using the same language, Mrs. Macy taught her, Helen Keller is paying a debt and teaching her blind teacher the Braille-alphabet she has forgotten

Mrs. Macy taught Helen Keller to speak and now Miss Keller reads to the teacher who can no longer see

Nor will Miss Keller attempt to return to America until Mrs. Macy's health is better.

Honor For Canadian Author

Queen May Ask For Autograph-d Copy Of Novel

Miss Mazo de la Roche was the recipient of a new honor recently when Queen Mary sent a request for a autographed copy of "The Master of Jalna," saying she had read "Jalna" series with great interest

The publishers the Macmillan Co. of Canada, engaged James Wood to decorate the specially bound luxurious book which will be sent Beautiful hand-lettering was done on the olive-blue ground, with the royal rose of Lancaster and its green leaves as decoration.

FANCIFUL FABLES

Occasional Wife

by IRMA ROSE VERSTEER
Author of "LAWYER'S WIFE"

SYNOPSIS

Camilla, Hoyt, young and beautiful orphan girl, and Peter Adams, a struggling composer, fall in love and secretly, unchaing to live apart until the local relief rule establishment Camilla, the adopted daughter of wealthy parents, is not to inherit money when she comes of age She is preparing herself for life as a composer, meanwhile, by studying and doing social service work. Peter is getting a job to enable her to support herself when she has given up the course of the agreement. Peter, working on his theme on an open bar a figure with whom he hopes to win a scholarship to study abroad, receives a call from a municipal model, Byron Long, who offers to work for almost nothing if he will compose her. He cannot succeed a decision, but promises to think it over Peter discusses the matter of a model with Camilla and decides to employ Sam Loud Together Camilla and Peter decide on the figure, they are at the height of their happiness At home Pylvia Todd receives a mysterious proposal. Peter begins work on his piece for the exhibit and Camilla, at her family s summer home, as a bit decomposite without him. Ayla Wertz, one of Camilla's friends, who is in love with Peter hesitantly suggests that she and Camilla marry Troy Wayne drive into town to get Peter for a party Wayne tells Miss Todd that Peter discovers she is also employed by Con Manion, his former roommate who once tried to take Camilla from him and with whom Peter and quarrelled. Camilla and Ayla arrive to tame Peter off to the party He grows, but being without money, slipped away to a nearby town shop for a few minutes to pawn his watch The pawnbroker, Peter joins the others and they all attend a gay party at a fraternity house Peter in a big panicky wean bridge at ten cents a point is suggested.

(Now Go On With The Story)

CHAPTER XXIV.

But Peter was neither a whiner when he found himself in a tight place nor a quitter when he started a thing. A good sport saw a thing through without reserving to excuse, nor a bad loser when defeat overtook him. He even managed a debonair nonchalance when Avis manoeuvred to be his partner, and, later, his opponent, but the strain of pretending to be unconcerned was getting to be too much for him.

Claudia was just urging another game when Helen reached his hand for Peter by announcing that dinner was served His impassive confidence which he worked hard to have tamed for no one except Camilla, and the nonring t cord of his misery was remembered at the supper addition to his duties and limitations proval of youth in general

He had been a fixture of the Hoyt household when Camilla had passed ten years ago, and new servants might come and old ones go, unperturbed by Camilla's summons maternal and tolerant for wages rule. Helen remained immovably loyal He above, of the present manage knew that Camilla was not a daughter of the Hoyts, which secret he never disclosed to some servants would have delighted in doing but it was dictated by fatherly interest in every thing which concerned her

Was she not one of his as a stranger in a far country when problems and hostilities buffeted him all sides? That Camilla had mastered what appeared to be a fractional exchange but that was to be expected when it meant constant submission to a benefactor like Mrs Hoyt He quarrelled with from the first long before Camilla was old enough to analyze the advantages pro and con of her attitude.

The bond of friendship between this bland submission who was listener in disguise and the pitiful little orphan girl who had lost two parents and yet no paternal sympathy had developed when the bewildered child in her strange new environment had begun explaining some of her new mother's discipinary measures and had discriminated between the two conflicting types of life, interpreted the one for her in the language of the other so that Mrs Hoyt's human efficiency and prescience as much as anything which had been responsible for Camilla's satisfactory development from the otherwise little fish to fatherfly. More to do with it, in fact than Mrs. Hoyt's dutiful mastery of psychology and child psychology.

Helen also was one of those few who knew about Camilla's imminent rejection into that world which she had been born, and, like a wild bird confined in a gilded cage until it had forgotten all the instincts which had been conferred for preservation, then released again to conquer a hostile world of which it had no knowledge, and to soar in the clouds with a new-awakened vigor.

His first rebellion had been replaced by a secret hope and exultation that Camilla's struggle in the effort to meet the situation. After all, it might prove to be the best thing that Camilla had ever had in her environment. He knew that she only tolerated these guests, who professed to be her friends, and it was for her sake that he performed his duties meticulously.

Preceding the dinner, he moved scurrying about the verandah with trays of tomato juice cocktails and canapes that were like minute formal gardens in their colorful designs. The chef had devoted much to their daily perfection and these irresponsible boys and girls consumed the delectable morsels at their leisure and scribbled them with elaborate lack of appreciation.

Bailey's pay had favored Peter, since that first night when the latter had humorously ridiculed his rigid addition to formality. One thing he did not know was Peter's relation to Camilla, for which his protege felt some compunction But she knew that the only way to keep a secret was to confide in no one There was no sharing that particular secret with anyone except Peter. However if the time should arrive when she needed a champion, she might count on Helen, Camilla knew.

Hilarity increased with the further progress of the meal in the dining room which also was half exposed to a sweeping view of the lake, lighted now with translucent moonlight that trailed a silver path across the black water like a bridal veil trailing down a carpeted aisle But these revelers who followed a mad pace in their search for youth's pas-

Well I'm not so glad that it would be worth all that effort Lets all announce stuff " He thought of his own announcement Neither does Camilla know I am an impersonator We have been much too busy for her to discover that But she has to know it now, and use me I've committed myself to the presentation "

Camilla was no less surprised than Avis to discover an entertainer in her party but she was great fun for the diversion

"I've let myself in for it dear to escape that mermaid who wants to have me out on the moonlit beach " he confided "I told her I came out to put on a vaudeville act for the crowd Want me to try " I know a few stunts "

"That would be wonderful" Camilla agreed " I was just wondering what to do with them "

So with a few improvised articles to supplement his imitative features and gestures Peter became shuffling artless Anna and pathetic Topsy Andy disclaimed George Arliss facetious Will Rogers guileless Gracie Allen voluble Walter Winchell His efforts were alternately applauded and audibly condemned He was amazed that he found that does everything spontaneously and he has nothing to do with work

Not Looking For Sympathy

English Doctor Says Pad More Glory Than Wounds

Somebody once said, "Nobody Loves a Fat Man," and the phrase has stuck but a greater man named Samuel Johnson-more famous for fat man and disliked the Cheshire type with a lean and hungry look " Doctor tell us it is a crime against physical fitness and help to carry more than about ten per cent excess flesh Therefore, it is pleasing to find the English doctor, Dr. Christopher Howard who is himself fat putting in a fecund plea for the fat man in a stout professional journal on the Lancet.

"We glory in our fat," he writes. "our laughter, good temper, nerves and our appreciation of food and drink, and company. We would rather die in full possession of our faculties than live on meagre fare and be taciturn about in scrawny-legged misery for a few extra years. lean and lovely lepers, suspicious and suspected."

Admitting that he is not even a small fat man. Dr. Howard protests against pseudo-scientific pontifical pronouncements and letters "We will not be pitied for we glory in our curves We are the salt of the earth We are the damn fat men" cries and stick to our naivety Attenuated beings who gurge to the full and yet continue to look tasteful more than famous have the impertinence to accuse us of greed because we eat when we are hungry "

Laughter, good temper and sociability these are common virtues in a fat man and of these the world needs a great deal more

The world would be a miserable place without our jolly fat man — St Thomas Times-Journal

Immigration Falls Off

Dwindles Into A Mere Trickle For First Ten Months Of 1933

Immigration into Canada which swelled into a mighty flood a few years ago dwindled to a mere trickle for the first 10 months of 1933 According to figures released by the Department of Immigration 12,585 men, women and children, representing 41 races entered Canada between January and October This was a decrease of 32 per cent from 1932 total Immigration into Canada reached a peak of 402,432 in 1913

In the 10-month period 7,540 Americans entered Canada, 2,024 British subjects and 171 northern European

Japan Plans Trade Reprisals

The Government expressing fear that Japanese products are to be excluded from European and British Empire markets is preparing to ask the Diet for power to make tariff retaliation by executive decree A Foreign Office spokesman said Tokio is alarmed over numerous reports from Europe indicating plans to bar Japanese manufactures some of the reports having already received action in this purpose by several powers

Wen Ho Lee

Chinese Cities On Move

A monthly wave is sweeping several Chinese cities. In Canton, for example, women may not ride bicycles. Chinamen are altogether banned in one district and fines condemning "close ups" of embraces are forbidden. In Shanghai, even engaged couples may not link arms in the street A first offence of this nature costs $2, on a charge of "bad behavior in public places."

Why Alter Conditions

Among many points canvassed for consideration in a New York meeting too on one of leisure time is that on work hours grow shorter more parks will be needed in the city both for playgrounds and other recreational purposes. There is in this the suggestion that shortening of workdays may in time alter the character of cities It will likely lead also to a vastly increased suburban and country life.

Underwater Sound

Can Be Used To Measure Depth Of Ocean

A method of measuring the depth of the ocean by means of sound waves has been developed by Dr. Harvey C. Hayes, of the U. S. Navy Hydrographic Office.

Sound waves are sent down from a ship and the time required for the echo to return is measured. Knowing the speed of sound in water, the depth can be calculated.

Dr. Hayes has developed a device which measures the time automatically and records the depth on a chart.

Sea Water Fuel

Experiments Are Being Made With Oil Extracted From Ocean

Experiments are being made with oil extracted from sea water, which may be used as fuel for ships, according to Dr. Harvey C. Hayes, of the U. S. Navy Hydrographic Office.

Dr. Hayes has developed a device which measures the time automatically and records the depth on a chart.

Wireless Telephone

Used To Call Ship From Automobile On Land

Wireless telephone conversations between automobiles on land and ships at sea are now possible

Here and There

Miss Muriel Scott famous fancy ski flyer, will soon again be in Montreal prior to her dismantling and shipping from that city to Great Britain. The great train has been travelling through the West of Canada subsequent to being one of the major exhibits at the Chicago World Fair.

The vehicle of the future will be an automobile that can also take off into the air, or an airplane that can land and travel along the highways, a speaker addressing the Society of Automobile Engineers told his audience at the Royal York, Toronto recently

Canadian scenery dwarfs that of Scotland, a lake in the Gatineau Valley was more magnificent than Loch Lomond while Lake Louise in Dr Rockies was to him almost a celestial vision, according to Lord Tweedsmuir, chairman of the Empo commission on Canadian unemployed just prior to sailing on the Empress of Britain for England

Informal discussion on closer working relations between the Canadian railways and aviation companies of the Dominion are in progress. With Canada lying on the most direct route between Europe and the Orient, this country is in a unique position to take care of a large proportion of the traffic now moving between Europe and the East.

Constituting what is regarded as the finest collection of mounted square-tailed speckled trout ever assembled from the same locality in a single season, seventeen fine specimens of this variety and one rainbow trout were entered in the Nipigon River Camp Guide mounted trout contest recently judged and prizes awarded by the Tourist Department of the Canadian Pacific Railway.

A Christmas and New Year's cruise to the Caribbean and a round the world cruise later by the same ship, the Empress of Britain; a Mediterranean cruise by the Empress of Australia; the Duchess of Bedford cruises to the West Indies and twenty trans-Atlantic sailings from Canadian ports are scheduled for Canadian Pacific liners for this summer season.

The second reunion of all pilots and observers who had commissions and wings before November 11, 1918, will be held at the Royal York Hotel, Toronto, on Armistice Day. First reunion was held April, 1932, when 240 wartime flyers from a number of countries attended. The second reunion is expected to be one of the most brilliant functions ever held at the palatial Canadian Pacific hotel.

Wide-eyed interest in John Murray Gibbon's book, "The Magic of Melody," in again illustrated by the crums-poors contest conducted by the "Crumpsner" and "Everyman". Ledson publications. Empire-wide response to the contest resulted in 68 Overseas prize being awarded to Miss Gladys Rippon of Toronto, for a poem, written in the music of the Sonata Pathetique.

Fort School Board Hold Business Session

Minutes of a regular meeting of the Fort Saskatchewan School Board held in the Council Chambers on Monday, January 8th, at 7:30 p.m.

Present: Mr. F. Atkinson, Chairman, and Trustees Dr. Grunert and Dr. Turner.

The minutes of the last meeting held were read and adopted on the motion of Dr. Turner.

Communication from Mrs. A. H. Rogers, Sec.-Treas. of the Alberta School Trustees Association to be held at Calgary on February 7th, 8th, and 9th., and also requesting the annual membership fees. It was moved by Dr. Turner and adopted That the Secretary be instructed to issue cheque for $11.00, 10.00 for membership fee and 1.00 for magazine.

It was moved by Dr. Grunert and adopted that the Sec.-Treas. is hereby authorized for and on behalf of this School District to negotiate with, deposit with, or transfer to the Royal Bank of Canada, for credit of the School Dist. all or any cheques and other orders for the payment of money, and for the said purpose to endorse the same or any of them on behalf of the School District, either in writing or by rubber stamp. That all cheques drawn in the name of the School District and signed by F. Atkinson, Chairman and countersigned by J. Ritchie, Sec.-Treas. That the usual receipts for cheques returned and certificates of balance to be signed by the Sec.-Treas.

Cheque for $10.00 received from the Secretary, Local Committee, Strathcona Trust, through Military District No. 13, being grant for the cadet corps.

Mr. Anderson the Principal was present and submitted Attendance and other reports for December.

The following accounts were passed for payment on motion of Dr. Grunert:— Alberta Pacific Grain Co., Coal $118.93; E. Buchanan $6.00 for wood; Fort Hardware $1.80; Electric Light $3.00.

NEWS FROM PENTICTON, B.C.

Following a dinner party given on Christmas day at the home of Mr. and Mrs. Geo. Broderick, a number of Fort Saskatchewan old-timers gathered and were entertained with music and dancing as well as by old songs by George Broderick, Mrs. J. Baptist and Mrs. Robt. Reid.

Later a buffet supper was served, after which all joined hands and sang "Auld Long Syne," then with cheers for the old home in Alberta the guests departed.

FOR THE NEW YEAR

"This I would like to be—braver and bolder,
Just a bit wiser because I am older,
Just a bit kinder to those I may meet,
Just a bit smaller taking defeat;
This for the New Year my wish and my plea:
Lord, make a regular man out of me.
This I would like to be—just a bit finer,
Slave of a smiler and less of a whiner,
Just a bit quicker to stretch out my hand
Helping another who's struggling to stand;
This is my prayer for the New Year to be:
Lord, make a regular man out of me.
This I would like to be—just a bit truer,
Less of the wisher and more of the doer,
Broader and bigger, more willing to give,
Living and helping my neighbor to live;
This for the New Year my prayer and my plea:
Lord, make a regular man out of me."

—Contributed.

Good Hope NEWS

The Good Hope Senior U. F. A. held their annual meeting at Mr. and Mrs. Gordon Meyer's on January 3rd. The new officers for the coming year are

President, Mr. Carl Dittrich
Vice-Pres., Miss Eva Meyer
Sec.-Treas., Mr. Gordon Meyer
Entertainment Committee, Mrs. Marshall, Miss Janet Webber, Messrs Harry Brunton and Ernest Johnston

Mr. Carl Dittrich was chosen as a delegate to the annual convention to be held in Edmonton, January 16 19

The next meeting will be held at the home of Mr. and Mrs. A. E. Meyer, on January 31st

After the business was concluded, a very dainty lunch was served

* * * * *

Mr. Dave Cranston was an Edmonton visitor last week.

Misses Laura Johnston and Edith Cresswell left for Newbrook last Wednesday

* * * * *

Mr. Paul Howbs is spending his holiday at Flatbush, Alberta.

* * * * *

Mr. William Barnett, Sr. was re-elected trustee, at the annual school meeting which was held in the school on Saturday, January 6th.

ALBERTA WOMEN HONOURED

Two Alberta women were among those honoured by King George on New Year's Day, with membership in the Order of the British Empire. Those were Miss A. Tilley, for many years head of the nursing mission in Lethbridge, and Miss H. Pearson, Superintendent of the Municipal Hospital at Grande Prairie.

PROVINCIAL SEED FAIR

Preparations are now being made for the annual provincial seed fair, which will be held this year in Calgary, from February 14 to 17 inclusive, under the direction of the provincial field crops branch.

Approximately $9000 will be given in prizes and some 900 exhibits of seed grains and grasses are expected.

The class for new exhibitors, which was inaugurated two years ago will be continued. The classes for junior club members will again be a big feature, more than 800 samples being already entered for these classes.

Special attention is being given to the minor crops division, particularly to the growing of peas for canning and canning peas. Eight classes are provided in corn, in which the prizes total about $200.

A championship prize of $25 in cats is being offered by the Peace River Co-operative Association, and a championship prize in malting barley is being offered by the Canada Malting Co.

DOUGLAS CREDIT PLAN TO BE PLACED BEFORE ALBERTA GOVERNMENT

We have received the first of a series of articles on the Social Credit plan of Major Douglas and expect to publish the first article next week. If our readers, after reading the first article would like us to continue this series we would be pleased to hear from them.

During the coming session of the Alberta Legislature an opportunity will be given for advocates of the "Douglas Plan" of social credit to place their views before the members.

The series would not only cover the plan itself but deal with objections raised against it.

This literature will provide authentic information on the subject and our readers will be able to follow the discussion more closely during the time this is being placed before the provincial government at the next session.

Advertise—Buying Sellers Into the Open.

Fort Band Organized By Enthusiastic Players

At a meeting held in the Town Hall Monday evening an enthusiastic number of band players attempted to revive the Fort Band which passed out of existance some years ago.

The meeting was called to order and election of officers took place with the following in office:

Band-Manager Mr. A. H. Weil.
Leader of the Band Mr. R. Hopper.
Secretary, Gordon Neale

After inspecting several instruments on hand from the previous band which were in bad shape, it was decided that Mr Hopper and Mr. Baker inquire at what cost those instruments could be put in good working order. Also they were to obtain prices on different instruments required to complete a small band so as to get started.

Anyone wishing to play in this band having an instrument, are requested to get in touch with either the Band-Manager or Secretary.

There seems to be a number of band instruments belonging to the previous Fort Band scattered around town, now if the present band had these it would be a great help.

The next meeting of the Band will be held in the Town Hall next Monday at 8 o'clock.

The Elk Island park staff started feeding buffalo on Monday. About 600 are coming up to get their ration of hay at present. Some 40 elk are coming in to be hand fed. The number will no doubt increase as it becomes noised about by the four footed denizens of the sanctuary.

—Lamont Tribune

FURTHER EXTENSION TAX PAYMENTS

Owing to the continued heavy snow conditions in country districts and consequent difficult travel on roads, the provincial government has announced a further extension on payment of dues under the consolidation agreements until January 31st. This gives six weeks' extension from original date of December 15th.

GREENHOUSES IN ALBERTA

Alberta is considerably in the lead of other prairie provinces in the extent to which horticulture is carried on in the operation of greenhouses, according to statistics which have recently been issued from Ottawa.

The census taken in 1931 revealed that this province had at that time, some 642,000 square feet under glass in greenhouses not on farms and in addition some 539,000 square feet under glass in greenhouses found on farms. The value of the business done from these greenhouses, in sale of flowers, flowering plants, vegetables and vegetable plants, was placed at approximately $693,000. These figures indicate that the greenhouse business in this province is a fairly substantial one.

THE NEW TRANSMITTER

The new equipment for the transmitter of CKUA was installed in November and is now putting out more power by reason of increased modulation than was possible with the old plant.

LEGISLATURE OPENS FEBRUARY 9th

The fourth session of the seventh legislature of Alberta will open on Thursday, February 9th, it is announced.

IMPROVING HOG PRODUCTION

Those engaged in the promotion of the campaign to improve the quality of hogs produced in the province, are receiving a most encouraging response from the farmers in the central and northern parts where the campaign has been in progress.

During the past few months no less than 500 grbs and sows of approved type have been ordered by farmers under both the federal and provincial brand new policies, of which number some 350 have already been filled.

The sows now being put out to farmers under these policies are all bred before hand to high class boars. This production work cannot fail to result in a definite swing upwards of the percentage of select bacon hogs produced in the province next season.

THE WEATHER

The mild weather of the past week is about ten out if present forecasts are correct. Starting early Tuesday evening and continuing throughout a decided change was noticed. The temperature for Thursday was slightly colder and a possibility of light snow.

It was visiting day at the jail and the cellblock was quite dark. "My good man," said one kindly lady, "I hope that since you have come here you have had time for meditation and have decided to correct your faults." "That I have, mum," replied the prisoner in heartfelt tones. "Believe me, the next job I pulls, this baby wears gloves."

Mangels, sugar beets and carrots to storage will stand considerable frosting provided they are not handled when frozen and that the frost is allowed to come out gradually.

Responsibility

It has become an almost universal habit to enter a new calendar year light-heartedly, in a spirit of gaiety, with nothing but words of hope now and good cheer upon our lips. And it is well that our greetings to one another on this annual occasion should take the form of good wishes for health happiness and prosperity. But after the jollity attendant upon the passing of the old year and entry into the new be ended, there should come to most of us an intelligent man and woman some serious thoughts and a deeper realization of the significance of a new year.

The tearing off from the calendar of the last monthly sheet of the old year, the opening of the diary of the new year, or perhaps both, the changing of the figure of the year from 1935 to 1936 — these should bring home to us a new and greater sense of our individual responsibility in relation to the year upon which we have entered.

Because many of the big problems of the year are beyond our control, become many of the happenings of the year and its trends in this direction or that will develop irrespective of our views or actions, the fact should not be overlooked that the responsibility to care for the determination and direction of numerous small matters which actually count a far greater influence to the making or marring of our lives than these other so-called greater things which are beyond our control.

In the event of a great plague or epidemic of disease most of us would at once become alive to our responsibility to safeguard ourselves, our families, and our community from it. But how many of us give the same thought and assume the same responsibility for the daily-to-day trials of our health? Yet the state of our health, our vigor of mind and body, is a matter that most of us can determine to a large extent for ourselves. Health is the result of our habits and ways of living. It influences our lives possibly more than any other one thing. The responsibility is mainly our own to promote good health or bring on poor health; it is a responsibility that others cannot accept for us.

Again responsibility for our words and actions rests with ourselves. It is our duty to control our tongues, to weigh our words, to direct our actions. What misunderstandings, heart-burnings, pain and sorrow have been caused by a few thoughtless words; how many friendships have been broken and communities thrown into bitter strife because someone failed to recognize their responsibility before they spoke. It is such a simple thing to light a match, but the results of that simple act depend upon the use to which the lighted match is put; whether it is in the hands of a responsible or irresponsible person. It may provide a guide to a lonely wanderer and warmth and comfort and suitably prepared food for him, or it may start a conflagration resulting in the loss of many lives and destruction of much property. Our words, and our individual actions throughout the year, may have like beneficial or disastrous results. The responsibility rests with us.

In these unusual times possibly to a greater extent than in more normal times and under less trying conditions, the responsibility of individuals is increased even in face of the fact that the State is likewise compelled to assume new and heavier responsibilities. At a time of world-wide unemployment, when thousands of individuals find it impossible to procure a livelihood for themselves as they were formerly quite capable of doing, Governments perforce must make provision for them. But one of the present developments in our individual, community and country life is a result of this enforced but temporary shifting of responsibility for the provision of the necessities of life for many, in the dissemination of Lee idea that such a condition should be made more or less permanent; that in the future the individual should assume and exert for less responsibility for his own welfare, and that the State should assume far more responsibility.

Whatever merit, or demerit, there may be in such view which, however, has finding acceptance in various countries under varying names, and under which the individual is losing much of his individuality and being more and more kept by, but at the same time moved about at the will of, the State, one thing does remain true so far as the people of Canada are concerned. The responsibility still rests with them as individuals to study in a fairly thorough way and to reach their own conclusions as to whether it is to their very best interests and in the interests of their country; that is, whether such a shifting of responsibility will make for a better, fuller, more complete manhood and womanhood, which, in the final analysis, is the object and end of life.

The memory of a man is how he faces and accepts responsibility. All our education has but one main object,—the preparation of people for the acceptance and discharge of such responsibility as life may impose upon them. Placing responsibility upon them has been the salvation of many a person. It has led many away from lazy, slothful, worthless lives to the realities of life, widening their vision, and developing powers they little realized they possessed.

Let us throughout 1936 measure up to our responsibilities, wherever they may be, facing them fearlessly and championing them courageously and ultimately to the best of our ability.

Saves Old Mail Bag

Charles Swindler, rural mail carrier of Paulding, Ohio, loves the mail bag he has "toted for 20 years" and would be loth to see Postmaster-General Dr. James A. Farley permanently him to the keep it when he retired in December, more than half a million lbs. greater in requesting the bag, Swindler said than the record year of 1931, when no one yet went to bed, and is dumbfounded and disconcerted.

Creamery Butter Estimate

The latest estimate of what Alberta's production of creamery butter will be is 32,000,000 lbs. according to Dr. Marker, dairy commissioner for the province. This, if fulfilled, will be more than half a million lbs. greater than the record year of 1931, when the total production was 32,000,000 pounds since entering the service.

A Tired, Worn Out Woman Can't Make a Happy Home

There is no happiness in the home when the mother is sick and worried by the never ending household duties. She gets run down and becomes nervous and irritable, has shortness of breath, faint and dizzy spells, can't sleep, and gets up in the morning feeling as tired as she went to bed, and is downhearted and discouraged.

Milburn's H. & N. Pills will soon convince women it is not necessary to suffer, as they build up the nervous system and bring back the famous rich red vigor.

Export Of Farm Products

Meat, Bacon, Poultry And Eggs Show Increases

Canada doubled its exports of bacon and hams this year as compared with 1932. The exports of live cattle were over twice as great The exports of eggs in the shell increased seven-fold. Cheese exports were down.

When the final figures are in, the exports of ham and bacon will total about 75,000,000 pounds of which approximately 70,000,000 went to the United Kingdom. Last year 30,093,400 pounds went to the United Kingdom out of a total of 34,500,000 pounds.

Approximately 32,850 live cattle went from Canada to the United Kingdom this year About 9,300 head went to other countries or a total of over 42,000 head Last year 16,926 head went to United Kingdom and 11,200 to other countries, or 28,821 altogether.

The new exports this year include 1,000,000 pounds of beef. Last year the total was only 172,000 pounds. On the other hand practically no eggs were exported in the shell last year. Canada used to export over 6,000,000 dozen but at that time about as many eggs were imported. About 1,000,000 pounds of dressed poultry, mostly turkeys, to the United market for the holiday trade. There was about 100,000 pounds more than last year when the movement was started.

The export of butter this year amounted last year's, but there was a marked falling off in cheese

Here's Quickest, Simplest Way to Stop a Cold

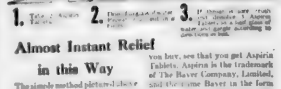
1. Take 2 tablets of Aspirin. 2. Drink a glass of water. 3. Repeat if cold persists.

Almost Instant Relief in this Way

The simple method pictured above is the way doctors throughout the world now treat colds

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check a developing cold almost as fast as you can say it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, distinctive name Bayer in the form of a cross on each tablet. They dissolve almost instantly. And then work almost instantly when you take them. And for a gargle, Aspirin Tablets dissolve as completely as sugar, yet gargle according to directions or both.



DOES NOT HARM THE HEART

Employment In Logging Operations

Encouraging Signs Of Industrial Recovery In Canada

Among the encouraging signs of industrial recovery the increase in employment in logging operations is of special significance from the standpoint of winter work. The monthly reports received by the Department of Labor indicate that on November 1 there were approximately 100,000 men employed in logging operations as compared with 35,000 at the same time last year This is practically back to the average of the five-year period, 1926-30, when 105,000 were on the pay rolls in November

During those five years, which may be taken as normal, the average number engaged in logging throughout the year is estimated to be 91,000, but the monthly averages varied from 54 000 in August to 120,000 in February. If this trend is followed in 1934, there should be 150,000 men at work during the next four months The advantage of having an industry which is capable of absorbing from 60,000 to 70,000 additional men during the winter months when work in many other occupations is curtailed is apparent

The Forest Service of the Department of the Interior attributes this increase in the activity of the logging camps to the increased expectation of lumber, especially in the United Kingdom and other parts of the Empire, and to improved conditions in the pulp and paper industry, together with the depletion of stocks of logs and pulpwood during the past two years.

Canada's Non-Metallic Minerals

Dominion Is The Leading Producer Of Asbestos

Canada is the leading producer of asbestos, has the largest talc output in the British Empire, and is one of the three mica-producing nations according to the Department of Mines, Ottawa The Dominion is an exporter of feldspar, gypsum, salt, arsenic, dolomite, and grindstones, and a producer of sodium sulphate, natural and artificial abrasives, magnesite, silica, moulding sands, soapstone, phosphate and many others. Minerals known to occur rather extensively include barite, chromite, sulphur (pyrites), volcanic dust, and garnet. Development of these minerals is largely in the initial stages. To the forecasting should be added structural materials which are generally classed as non-metallics and which include clay, sand and gravel, limestone, granite, and marble. Occurrences of these are abundant in Canada and in the main are of excellent quality.

Lesson For The Future

Germany's Rise At International Conference Something To Think About

Herr Hitler still speaks of his nation as down-trodden slaves All that has been done to mitigate the consequences of defeat and humiliation for Germany has counted, it seems, as nothing The evacuation of the Rhineland was hastened. Foreign military control was abandoned when it might have been continued. Reparations have been wiped out. Germany has been welcomed to the league and raised to the rank of highest honor and influence in its councils. But the cry still is that Germany is unequality for herself have been promised for a few years hence, not at this moment, this damaging blow at international confidence has been delivered. It is a situation to be dealt with calmly now; but its lesson for the future is written on the face of it — London Daily Telegraph.

He Thrive In Ontario

Hired Boat From West Doing Well At Pembroke And Sudbury

That the herds of elk sent by the Dominion Department of the Interior from Buffalo National Park in Alberta to Ontario and placed in the Provincial Crown Preserve near Pembroke and on the farmlands of the Burwash Industrial Farm for 20 miles east of Sudbury have settled down and are thriving in their new surroundings is reported by the Ontario Department of Game and Fisheries. The twenty-five head established near Pembroke have had an increase of five young in 1933, while a similar increase has been reported from the herd of fifty at Burwash. Three adult elk died at the Burwash farm but the remainder of the herd as well as all those at Pembroke are in splendid condition states the report.

But then if the farmer oiled his machinery and sholtered it during the winter, what would our manufacturers do for a living?

PATENTS

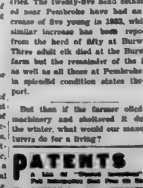
The RIDOUT & MAYBEE Co. TORONTO



A New Social Problem Projected Into The Far North Changing Eskimos To Ranchers

A new social problem has been projected into the far north with the government's decision to embark on the experiment of influencing the Eskimo to abandon to some extent his nomadic life and settle down to money or kind on a commercial existence The agency that is being employed to achieve this is the reindeer On the success of the venture which will shortly culminate in the arrival of between 2,000 and 3,000 of these domesticated animals at Kittigazuit, east of Mackenzie River delta, depends the development of the government's social scheme

At the moment this huge herd is in Yukon territory preparing for the last leg of the long trek which brought the animals from Motherlode Peninsula, in Alaska, over the roof of the world. By the time the herd reaches Kittigazuit four years and a half will have passed from November, 1929, when the Laplander, Andrew Bisky, and his Sitlo group of herders undertook to transfer the reindeer to Canadian territory. For this they have been four years of hardship and privation, of disappointment and hope.

Beginning with 2,500 animals the herd has at times dwindled to around 1,500, blizzards and other hazards of the Arctic making inroads on the numbers Each spring, however, the fawns have brought the herd back, and almost ours has been taken to preserve the young. How many of the "originals" are left is impossible to say.

At Kittigazuit the government has blocked off an area of approximately 3,000 square miles for the herd. A number of Laplander families, brought to Canada by the Dominion Government, are already in charge of reindeer and are all set to furnish the Eskimo instructions how to operate.

Careful handling of the herd by the aborigine reaps?

The Eskimo's natural instinct is that of a hunter. He prefers to roam the great wastes of the northland seeking his food where he can get it, but entirely free from the restrictions of settlement life

When the fur business is good, he is prosperous and satisfied; when it is bad, the Eskimo weighs heavily on him Whether he will abandon the untrammelled life he has and settle down to the assured but less free material existence of raising reindeer is a problem, however.

The government proposes first to "catch the young" In the mission schools of the northland are numerous Eskimo boys and girls into whom are now being instilled the rudiments of education and before whom are presented attractively the satisfactions of the settled life. It is intended to "apprentice" these youths to the herders, and so attempt to develop with the Eskimo a generation equipped to handle less numerously the wanderlust.

A Puzzle To Chemists

Can Only Advance Theory As To Rise In Egg Price

Even chemists have been puzzled to know precisely how soap acts in removing dirt. It is generally considered that the efficacy of soap depends mainly upon its decomposition, when it is mixed with water, into an alkali and fatty acid. The alkali then set free emulsifies the grease by which the dirt is attached to the surfaces to be cleaned, and the water then carries off the dirt. But this is not all; the fatty acid from the soap sometimes may free alkali remaining after the loosening of the dirt and thus prevent the alkali from attaching the cleansed surface itself.

Invention Of Air Brakes

Herbert Thacher Herr, 57, vice-president of the Westinghouse Electric and Manufacturing Company, Pittsburgh, is dead. Herr was the inventor of locomotive air brake equipment; improvements in turb'nes, oil and gas engines, and remote control for steam turb nes such as are used in electrically propelled battleships

The Heating Value Of Wood Fuel

Forest Products Laboratories Of The Department Of The Interior Has Test d On Various Tools

Wood has always been an important domestic fuel in Canada, and its use in recent years has increased On account of the many requests for information concerning the heating value of wood fuel, the Forest Products Laboratories of Forest Service, Department of the Interior, Ottawa, has prepared a table which indicates the relative fuel value of the various Canadian woods

Equal weights of different woods give off at the same moment practically equal amounts of heat in burning, state the fundamental substance composing wood is the same in all species Slight exceptions to this rule are sometimes noted in those woods that contain resin, oils, etc., which may give out a little more heat weight for weight, than other woods. With these slight exceptions, however, the fuel value of wood depends generally on the weight per cubic foot, the heaviest woods naturally giving the most heat.

A standard cord of well-seasoned sugar maple, beech, or yellow birch split firewood weighs upwards of 4,000 pounds whereas a similar cord of softwood may weigh less than two-thirds as much The solid contents of a cord of wood from any species, therefore, is approximately compared on the basis of their weights at the same moisture contents.

Two pounds of seasoned firewood are generally required to furnish the amount of heat obtainable from a pound of anthracite coal of good grade. Coal, however is generally burned somewhat more efficiently, especially since firewood is used in heating installations designed for coal. In order to deliver the same amount of heat to a boiler as a pound of coal, a little more than two pounds of wood is required.

More specific information regarding the fuel value of different woods is obtainable from the Forest Products Laboratories, of the Department of the Interior, at Ottawa, Canada.

Explained The Error

An editor of a comic paper, finding himself in reduced circumstances, sent a letter to a friend asking if he could borrow a ten dollar bill. The friend sent a letter to a friend asking if he could borrow a ten dollar bill. The friend sent a bank note, "I just found a needle in this soup." The cut-humorist rushed off the bill of fare and after scanning it for a few moments, said in a tone of extreme gravity, "Sorry, sir; it is listed here as needle soup."

A THREE-IN-ONE COMBINATION SLIP SO EASY TO SLIP INTO AND SO COMFY TO WEAR

This smart combination is especially designed to give contentment in the heavier figure.

It is cut on the popular bias lines, so slimming. It is fitted through the bust line to take the place of a brassiere and has attached panties

It is very easily fashioned, and at a big saving in cost.

Style No. 535 is designed for sizes 14, 16, 18, 20 years, 36, 38, 40, 42 and 44 inches bust.

Crepe de chine, flat washable crepe silk and crepe satin are favourite materials.

Size 36 requires 3¼ yards 39-inch material

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Evidence Shows Napoleon Once Planned To Invade Canada By Way Of Pacific Ocean

Wheat Situation Improves

Estimated From Canada May Be Purchased To Extend The Quota

As supplies in United States are hardly more than ample for their own needs, there is at least a reasonable probability shipments of wheat from Canada this season will be permitted to exceed the 200,000,000 bushels, allowed under the wheat agreement, says a review of the wheat situation published by the Royal Bank of Canada accompanying its monthly letter

If the Canadians exports can come up to the quota the carryover at the end of next July would be reduced to 168,000,000 bushels from the 232,000,000 bushels carryover from last year's crop.

"In spite of the small wheat crop in 1933," says the review, "international wheat prices have remained moderately below the average of 32 cents gold per bushel fixed by the wheat pact on the minimum which must be attained before tariff reductions will be initiated.

"Yet wheat supplies are so insufficient that some experts are beginning to anticipate world wheat shortcomings in excess of the basis used in fixing the quotas."

Although early in the season crop prospects were excellent and a large acreage had been sown to wheat, the crop was severely injured by drouth and the yield amounted to only 252,000,000 bushels the review declares in quoting recent official estimates. The total crop for the whole Dominion in 1931, MacKenzie was the first white man to cross North America north of Mexico.

Napoleon, Emperor of Napoleon and Bonaparte conceived him of the fertility of the Pacific entrance to the continent. For some we he hoped on hand that the fate of the Louisiana he his lose Eventually he dropped the whole scheme as impractical and that was the beginning of the end for Napoleon.

The three books were placed in Napoleon's library and when he was exiled to St Helena in 1815 they were taken along. After his death in 1821 they passed their way into the possession of Mrs Elizabeth Heald, of Methurst, England, the last direct descendant of MacKenzie. Upon her death several months ago, the books were given to the Canadian archives

Curse Of King Tut

Authority On Antiquities Of Egypt Dies After Long Illness

Arthur Edward Pearse Brome Weigall a leading authority on the antiquities of Egypt, died in London recently after a long illness. He was 54 years old

He retired from a position in the Egyptian government's inspector-general of antiquities in 1914, and devoted himself to writing

The legend of Tutankhamen's curse under which mankind nature was first reported to be visited at the ancient Egyptian king's tomb was recalled with the death of Mr Weigall for h was present when Miss Tut's tomb was opened

Friends said there was nothing mysterious about the illness the cause of which could not be traced and that it was coincidental that his should have died so young

In connection with several previous deaths there was talk of the curse.

The Earl of Carnarvon died after the archeological expedition which discovered the tomb died in April 1923, shortly after his exploit

Would Lord son of a British race horse owner died in London in November, 1923, a few months after he visited the valley of kings His fa e en route to the Egyptian tombs at the time of his death

Last September Mr Gould F. Carter a well-known American archeologist, wondered when he lost the use of his left eye as a result of the tut-ankh-amen curse as a small statue from an ancient Egyptian funeral chamber

AT THE BRILLIANT OPENING OF THE METROPOLITAN OPERA

A section of the famous "Diamond Horseshoe" in the Metropolitan Opera House, New York, on the opening night of the new season. For the first time in half a century, the season opened with an American opera, "Porgy and Bess," by Deems Taylor. At the left is Mrs. Cornelius Vanderbilt, uncrowned queen of American opera goers, as she arrived; right, John Jacob Astor, and his fiancee, Miss Ellen Gilleaple, who were the cynosure of all eyes at the brilliant premiere. They are to be married early in Spring.

Reads Practically Alone

Prime Ministers Always Have Wo Make Final Decisions

Most people seem to think that a premiership works a man's health because of the long hours, the hard thinking and the innumerable duties. That's not it. What wears a man down, what breaks a weak man, is the fierce burden of decision and the loneliness of final responsibilities. That is what tells. For most of us there is always someone higher up who must take the final responsibility. So, under the last decision that a prime minister must go it alone knowing that what he does is irrevocable and that it probably will differ from many of his friends. Making those decisions several times a day is what takes the steam out of you.

WORLD HAPPENINGS BRIEFLY TOLD

After serving 44 years on the bench, Frederick Mead, famous Metropolitan police magistrate, has retired.

A new five-year plan, intended to make Russia self-reliant for all the necessities of life, has been made public by the people of the Soviet.

With returns figured up to Dec. 31, the Dominion revenue for the nine months of the fiscal year was $230,138,266, $662,494 higher than the corresponding period last year.

Joseph Finley, 76, pioneer of the west is dead. A pioneer railroad man, he was the conductor on the train that carried the Winnipeg Métis Riles to Qu'Appelle to quell the Northwest Rebellion in 1885.

During the past twelve months Lethbridge collected 1,000,434 pounds of butter compared with 1,043,036 compared with 365,741, at $40,981, in the previous 12 months, says a report by the Dominion Bureau of Statistics.

Canadian companies will pay a total of $14,414,000 in dividends during the month of January, 1934, compared with $13,856,000 in January, 1933, according to an estimate made at Montreal.

The Soviet government has agreed for the loan for a time to the British museum for the historic codex sanaiticus, most valuable manuscript in the world, to be kept entirely in England for machinery and other goods.

The first Dominion-wide reunion of the Canadian Corps since the war will be held in Toronto from August 6 to August 7, as the third phase of the ceremonial commemoration ceremonies which the city is planning for next year.

Beaten in his legal fight to avoid deportation, Tom Clark, of Toronto, sailed for England on the way to his native Yuro-Slavia before being taken to Halifax, Clark signed two years in Kingston penitentiary as a convicted Communist. He was one of eight men convicted at Toronto in 1931.

Reading At A Distance

Most Legible Print Is Black On Yellow Background

From experiments made regarding the most favorable color combinations for reading at a distance, it was found that the most legible print was black upon pullow background. The best order of merit obtained for different combinations is somewhat surprising, and is as follows: (1) black on yellow; (2) green on white; (3) red on white; (4) blue on white; (5) yellow on blue; (6) black on white; (7) yellow on black; (8) white on red; (9) white on green. The white on black; (11) green on red; (12) red on green. It will be noticed, among other things that the customary combination of black upon white comes sixth in the list, about half way down.

STOMACH COMPLAINT ?
Mrs. R. Beaton of 60 Manor Rd., London, Eng., says: "Some years ago, I used Dr. Pierce's Golden Medical Discovery, and after taking two bottles I was perfectly well again, helped me to get married and am now the proud mother of a lovely baby girl, aged 10, and strongly recommend my system to all who suffer as I did." Write to Dr. Pierce's Clinic, Buffalo, N. Y., for free medical advice.

Royal Bank of Canada in Strong Liquid Position

Gratifying Increase of Over $16,000,000 in Canadian Savings and Demand Deposits—Total Assets Amount to $779,260,476—Of This Amount Liquid Assets Are $362,471,645, Equal to 55.76 Per Cent. of Liabilities to the Public—Cash and Bank Balances Total $157,096,715, Equal to 24.26 Per Cent of Public Liabilities

An unusually strong and particularly satisfactory statement is being forwarded to the shareholders of The Royal Bank of Canada.

The report, which covers the fiscal year to 30th November, shows that with the increased demand for banking accommodation due to the trade revival during the year the bank has added materially to its strong liquid position. Cash on hand in the highest grade investments, etc., naturally had its effects on the profit and loss account, but the bank's earning power has been sustained by the satisfactory volume of business and favorable conditions.

The report, which covers the fiscal year to 30th November, shows that with the increased demand for banking accommodation due to the trade revival during the year the bank has added materially to its strong liquid position. Cash on hand in the highest grade investments, etc., naturally had its effects on the profit and loss account, but the bank's earning power has been sustained by the satisfactory volume of business and favorable conditions.

Strong Liquid Position

Total assets now amount to $779,260,476, an increase over last year of $16,000,000, and net profits for the year before making provision for bad debts and depreciation in securities were $2,142,984 as against $2,172,984 last year. After certain items of insurance are taken into account, other adjustments have been made and provision has been made for bad debts and depreciation in securities, leaving a net profit for the year of $1,500,000, which has been added to Rest Account, bringing the latter to $16,000,000. Dividends paid and declared during the year amounted to $1,500,000, leaving undivided profits brought forward of $2,971,000.

Current loans and discounts in Canada and elsewhere (less provision for bad debts) total $362,471,645, as against $346,471,645 a year ago. Cash on hand and balances with other banks amount to $157,096,715, equal to 24.26 per cent. of liabilities to the public, as against 23.76 per cent. a year ago.

Strong Liquid Position

Total assets now amount to $779,260,476—Of This Amount Liquid Assets Are $362,471,645, Equal to 55.76 Per Cent. of Liabilities to the Public—Cash and Bank Balances Total $157,096,715, Equal to 24.26 Per Cent of Public Liabilities

The bank of $166,536,615 invested in Government and Provincial bonds, most securities represents an increase of $1,891,615 compared with a year ago. A similar increase is shown in Canadian municipal securities and British, foreign and colonial securities.

Notes held outside Canada by branches in Canada, Newfoundland, the Commercial loans now stand at $316,119,302 against $300,362,286. Cheques and deposits bearing interest total $362,471,645, as against $346,471,645 a year ago. Deposits bearing no interest total $157,096,715, as against $146,096,715 a year ago.

Shareholders will be interested to learn that despite the lower level of interest rates, which particularly affected the return from liquid investments, the bank added to reserve against bad debts the sum of $1,500,000. This amount fully covered dividends and increased the amount carried forward to $2,971,000. Premises fund $300,000 appropriation for Bank Premises at $2,971,000; reserve for Dominion Government taxes, $216,000, and left $214,650 to be added to Profit and Loss Account making a total of $1,500,000 to be carried forward to the next fiscal year.

SUNDAY SCHOOL LESSON

JANUARY 14

BAPTISM AND TEMPTATION OF JESUS

Golden Text: It behooved Him to fulfil all things to be made like unto His brethren.—Hebrews 2:17.

Lesson: Matthew 3:1—4:11.

Devotional Reading: Hebrews 4:14-16.

Explanations and Comments

The Consecration Of Jesus For His Mission, 3:13-17.—6-8. Lord Jesus, from Egypt, Mary and Joseph and the Babe went back to Nazareth and there they lived till he was thirty years old. Then their town was Bethlehem, Jesus' second home. He had struck for Him to Love His home and go forth as Lee Lamb and Saviour of men. John's preaching at the Jordan was the signal for Jesus appearing and His baptism at the former's hands was not only a public endorsement of John as a messenger of God but was also for Jesus. It a formal setting apart of Jesus to His Messianic mission. The open sky as He left the water was the revelation to Him of spiritual forces with which He was to deal. Dr. F. B. Meyer reminds us that Jesus was to be born and grow and set as Newton did when he also carried the law of gravitation: "Always a clear heaven to the disobedient, always deeper depths opening into the heart of heaven for those who obey."—F. B. Meyer.

A New Drug Material

Artificial Silk Combined With Wool Gives Different Effect

Many women are already wearing the very newest dress material, a woollen cloth plentifully covered with white hairs.

At first glance one is reminded of the appearance of an armchair after being occupied by a "moulting" terrier.

These hairs are usually made from the waste products of artificial silk. Jute, too, is used successfully, but the same effect is also produced by the use of wool.

Wool from Angora rabbits also serves a purpose in the manufacture of an attractive tweed, while the down from goose feathers plays a useful and decorative part in yet another dress cloth.

We already have artificial silk from grass; perhaps even leaves and rushes, in new guises, may one day serve modern women.—London Daily Mirror.

Improvement in Italy

Good Country Being Convinced Of Britain's Good Faith

Italy is more tranquil, more free from serious crime, and more loyal than it with good will towards Britain than for years past. Sir Samuel Hoare has recently claimed that there is great support for Italy's continuing the Abyssinian policy. If by evidence of that is not outstanding, there are the latest tangible proofs that the dual policy of preserving law and order while reconciling with constitutional reform is convincing India of our good faith and understanding the extremist element in her politics.—London Daily Telegraph.

It's for Children's Coughs and Colds as well as your Own

Mothers don't worry when the children have a cough or cold. They know that Baby's Own Tablets will soon relieve it and drive it away. Thousands of other mothers say the same. Your children are safe when they take Baby's Own Tablets. Sold by druggists or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Baby's Own Tablets are the medicine for the children of all ages. Mothers find that they quickly relieve colds, simple fevers, stomach troubles, constipation and indigestion. They are guaranteed to contain no opiate or harmful drug. Mothers who have used them highly recommend them.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 5—STEREOPSIS OR "EAR-SIGHTEDNESS"

The normal or standard eyeball is nearly spherical, measuring about one inch in depth such an eye with properly curved Cornea and Lens will focus the light rays emerging from objects located at, on the Retina and the brain will interpret the image clearly and with comfort.

Should however an eyeball be too short or too long, and Lens and Cornea the natural power of focus would be located behind the Retina, which has an unpleasant, dim or imperfectly focused image on the result. Such is the Hyperopic eye.

Nature has provided that such an eye may be used with comfort to a limited extent by forcing the Lens to become more convex (Accommodation), but this, being a forced focus using up a greater amount of nervous energy than the rest of the body can well spare, sooner or later unpleasant symptoms develop in the form of headaches, nervousness, insomnia, intolerable irritability, aches and stiffness in the back of the neck habitual constipation, indigestion, in fact the far-reaching effects of this condition cannot be estimated and yet it is the most common form of eye trouble. Ninety per cent. of children are born thus and many of them never obtain to a normally developed eye. It should not be thought that this is a disease. It is merely a structural defect and science has again come to the rescue and Lenses are now available which is followed by relief of the symptoms.

The term "Far-sightedness," often used for this condition, is very misleading because a person can be "Farsighted" or "Hyperopic" as to be unable to distinguish features across the street. It is more difficult for a "Hyperope" to see at close range than for distance hence the term "Far-sight-ness." Hyperopia is almost always the cause of a child's eye being "crossed" or turned in.

To Be Continued.

DISTINCT SIGNS OF BUSINESS RECOVERY NOTED

Montreal While business conditions were far better at the end of 1933 there have been distinct and positive evidences of improvement, writes Paul Bilkey, editor-in-chief, in the Canadian commercial and financial review for the year 1933.

Writing under the title "looking back on 1933 and its business conditions," Mr. Bilkey said, in part:

Canada in common with the rest of the world, has passed through a period marked by events so momentous that it is not yet possible to estimate the full extent of their influence. The depression, which as many people hoped was coming to an end in 1932, not only continued through the 12 months that have just closed, but developed increased severity at least in the early part of the year, and the recorded statistics never silenced from time to time by individual nations, or by the nations collectively, were frustrated in large measure by the general political uncertainties, the ineptitude of governments, and a general condition of international distrust.

"The failure of disarmamental negotiations and the breakdown of the League of Nations produced a situation on the continent of Europe and extended into the Far East which rendered the composition of world monetary problems practically impossible. The vexed question of international indebtedness remained, and is still, a factor of major importance in preventing the restoration or purchasing power throughout the world and the reconstruction of world trade.

"Nevertheless, while business conditions were far below normal to the end of 1933, there have been distinct and positive evidences of improvement."

A marked recovery had been witnessed in Great Britain and even on the continent of Europe. The trend had been upward, Mr. Bilkey said. "The gains have been relative, but at the same time substantial, and in Canada there has been a very noteworthy industrial expansion, a basic easing of prices and a general revival of confidence. There can be very little doubt that a really strong upward movement along the road to economic recovery in Canada is being delayed only by the influence of external conditions."

"The year opened badly in the Dominion and conditions were at their worst in February, but from that time on there was an almost continuous increase in manufacturing activity and in other important branches of trade.

"A more general upward movement would, no doubt, have occurred but for the very unsatisfactory condition of the wheat market and the resulting lack of new wealth in the prairie provinces." Reviewing the small gains in 1933, Mr. Bilkey continues: "Hitherto the sale of Canada's surplus wheat at satisfactory prices has been one of the main contributors to the national prosperity and the principal factor in western progress. The deterioration in the wheat-consuming countries in Europe to make themselves as largely as possible self-sustaining has been a blow to this phase of Canadian economic life, and it seems doubtful now whether the wheat growing industry and the various market interests will ever again upon it can count upon anything but a slow and partial recovery of its old markets."

There has been a general gain in business during the year of more than 25 per cent. and in manufacturing of something over 60 per cent. The building trade had a decidedly unfavorable year, but there was prospect of better things in 1934, including a large-scale construction programme sponsored and financed by the Dominion government.

Alberta Legislature

Edmonton Opening day for the 1934 session of the Alberta legislature will be Thursday, February 8, it is announced by Premier Brownlee.

A Bright Future

Home Sales Show Huge Rise During Quarter—With Small Population

London Very Rev. Ralph Inge the "gloomy dean" of St. Paul's foresees a bright future for large-scale ation of little population at present such as Canada.

The dean who retires this year from the ancient cathedral to live in the new edition of his book "England," that the position of Great Britain as one of the great powers is bound to decline relatively though not absolutely.

The future, as regards effective forces and wealth, belongs to large countries not yet full of people" he said.

Declaring that the dominions may not always be willing to support the Mother Country, the dean stated: "Further that "it seems to me to be almost certain that we shall be unable to find food and work for our present population."

"For this reason I favor emigration or better state-directed colonization."

Discussing arms and armies, Dean Inge made the prediction

"If in the future we are attacked by a European power in the way it is not probable that the United States will leave us to our fate unless indeed, we are invaded by a black army."

Other quotations from the volume: "Consumers of comfort in unprecedented quantities are the characteristic disease where it was almost unknown.

"Knowledge of methods of birth control has had unfortunate results on the morale of many persons of both sexes."

Valuable Painting Destroyed

Loss of Canvas Said To Have Aroused International Interest

Ottawa The beheaded Canvas, "Angel's Choir," by Van Dyck, destroyed in the fire at the Glenoon residence, was purchased from C. B. Powell, one time deputy minister of King Edward VII, and master of the robes at the coronation of King George

Threat Of War

Speaker in Winnipeg Sees Many Signs

Winnipeg. - Proposed amalgamation of the Canadian National and Canadian Pacific railways is evidence Canada is preparing for war, declared Peter Hunter, Hamilton, Ont., in an address here.

Mr. Hunter, Canada's sole representative at the world youth Anti-war conference in Paris last September, spoke to the Winnipeg Youth Anti-war conference. He said amalgamation of the two railways would permit quicker mobilization of troops.

Among other evidence war was near, said Mr. Hunter, was the heavy manufacture of armament needed for troops and the existence in Montreal of "50,000 Fascist Green Shirts."

Burn Tons Of Coffee

Brazilian Coffee Growers Use Method to Reduce Surplus

Rio De Janeiro, Brazil.—Outdoing their previous efforts, Brazilian coffee growers burned 918,686 tons of inferior coffee in 1933 and brought the 1,716,686 tons the amount destroyed since July, 1931.

The federal coffee department, announcing the figures, estimated that 1934 would see 15,000,000 bags of normal exports can be shipped when the new crop is ready in July.

Honors for Saskatoon Professor

Saskatoon.—W. G. Worcester, professor of ceramics, University of Saskatchewan, has been honoured with a fellowship in the American Association for the Advancement of Science. He was already a fellow of the American Ceramics society and member of the Canadian Ceramics society.

Cold Weather Delays Train

Edmonton. - Transcontinental train of the Canadian National Railways was delayed 45 minutes during recent cold weather when the wheels and bell of the giant "4-100" class locomotive from up, it is related by railwaymen. The case in the first of its kind in Edmonton as new heavy

Vincent Churchill Dead

Was Prominent In English Business And Political Life

London — Vicar Albert Spencer, 69, first Viscount Churchill of Wychwood, died of pneumonia and is succeeded by his son, Victor Alexander Spencer, whose wife is a Victoria girl. The new Viscountess Churchill is Kathleen, daughter of the late Robert Reford, pioneer of British Columbia from 1862 to 1883 She was the widow of Captain Venn Ell when she married Spencer in 1916.

Chairman of the Great Western Railway, the dead viscount was prominent in numerous fields of activity — business political and social. He was one of the Conservative whips in the house of lords. He was the godson of Queen Victoria, lord chamberlain at the coronation of King Edward VII, and master of the robes at the coronation of King George

Situation Desperate

New York Mayor Favors Municipal Dictatorship

New York.—The establishment of a municipal dictatorship, unique in the operation of American cities, was the answer proposed by Mayor Fiorello H. LaGuardia for solving the financial crisis facing the city of New York.

Confided with a staggering operating budget of more than $500,000,000 and a minimum deficit of $35,000,000, the new mayor seeks a two-year period in which to operate with a free hand.

Under terms of his unparalleled proposal he would delegate to himself sweeping powers in the determination of economies.

KING GEORGE AND QUEEN MARY

King George, looking out of one of the windows at Buckingham Palace recently was startled to see a Royal Air Force 'plane gliding down straight for the Royal residence. Fortunately the pilot was able to guide his 'plane safely across the grounds and make a forced landing in Hyde Park, a few yards from Marble Arch. Here we see the 'plane surrounded by a crowd of curious spectators. Engine trouble caused the 'plane to descend to the heart of London

ROYAL AIR FORCE 'PLANE NARROWLY MISSES PALACE

MESSAGE OF ROOSEVELT IS WELL RECEIVED

Washington. — In a vigorously worded, personally delivered message President Roosevelt pointed an enthusiastic United States congress toward an assumption of a permanent recovery on a new basis.

The president threw the spotlight toward some of the recently discussed practices of big business in its banking and speculative fields.

He told the joint session of congress that the United States is "definitely in the process of recovery," and proposed a permanency of the principles of his monetary, agriculture and industrial policies.

For new fields or immediate effort he asked "stringent preventative or regulatory measures" in business affairs and a governmental and public war against organized crime.

If the warm welcome given by Roosevelt by the legislators when entering the hall to read his annual message was any criterion, he will have no little trouble with this measure to with the emergency powers he called last spring. In fact, Democratic leaders were confidently predicting that congress would do what the president wanted it to do and go ostenly home in May.

Addressing a joint session of the senate and house of representatives, he called co-operation "to continue the restoration of our national well being and, equally important to establish a permanent basis for a structure designed better to meet the present problems of modern civilization."

"We have ploughed the furrow and planted the good seed", he said. "The hard beginning is over. A second reap the full harvest we must cultivate the soil beside that good seed in sprouting and the plant in reaching up to mature growth.

"We have been shocked by many notorious examples of injuries done our citizens by persons of groups who have been living off their neighbors by the use of methods either unethical or criminal.

"In the first category—a field which does not involve violations of the letter of our laws—positive steps have been brought to light which have shocked those who believe that we were in the best generation minded to the ethical standards of conduct. They call for stringent preventive or regulatory measures. I am speaking of those individuals who have evaded the spirit and purpose of our laws here, of those high officials of banks or corporations who have grown rich at the expense of their stockholders or the public, of those reckless speculators with their own or other people's money whose operations have injured the welfare of the farmers' crops and the savings of the poor."

May Have Fewer Members

Alberta Considering Reduction Of Seats In Legislature

Edmonton.—Reduction of the number of members of the Alberta legislature, possibly to 65 or 50, contrasted with 63 at present is expected to be one of the subjects coming up for discussion at the session expected to commence February 8.

This has been under consideration for some time, a redistribution committee having been named at the last session to deal with the problem and submit a report.

Figures Are Satisfactory

Drop in Alberta Motor Licence Slight Considering Conditions

Edmonton — Automobile licences issued in Alberta during 1933 were only 200 fewer than the year before numbering 85,380 as against 85,580 in 1932. Of these 71,076 were for passenger cars and 14.17 for trucks.

The year's figures are considered by government officials highly satisfactory, in view of economic conditions that prevailed through the year.

Butter Supply Down

Overproduction Brought Above Set Market Prices Into Ruling

Drawn out of proportion to the outcome months by low prices, Saskatchewan butter producers have given us the rest of the industry the welcome new year's gift of a rapidly rising market.

Last autumn consumers butter prices at Montreal, one of the key markets of Canada, went as low as 19 cents per pound. For many weeks last fall and the period of less than 25 cents. This season's opening has proven a Prairie Classic.

The many branch of Ottawa, reports that the Canadian price for butter has increased but August and September word as low as 19 cents per pound delivered to the creameries, or about 10 cents net to the farmers.

The cause of the slump was an unexpected overproduction. On August 1, the amount of butter in store amounted to approximately 30,000,000 pounds, over the corresponding date of 1932. The total passed the balance carry-over in report from with all that Ont embarked in the way of low prices. Since August 1 some 4,000,000 pounds have been exported, the remainder of the surplus has been passed between the market prices. Canada's total production, which has been consistently declined, which enabled the consumers to catch up with the available supply.

The country enters the new year without a better surplus and with every prospect of better prices.

Last August, Saskatchewan farmers saw total production over the corresponding month of 1932 by 30.3 per cent. In December, owing to the discontinuance of low prices, a shortage of feed and extreme weather conditions, Saskatchewan's production was 13 per cent. lower than in the corresponding month last year.

This coupled with the export of better northern pounds, combine to shed a chance in conditions and the supply rising prices.

Recipes For This Week

(By Betty Barclay)

WINTER GARDENS SALAD
(Serves 10)

1 cup broken nut meats
3 cups diced oranges.
1½ cups diced grapefruit.
2 cups diced apples.
1½ cups sliced bananas.
Lettuce.
French dressing or mayonnaise.

Cut the fruit in pieces of about the same size bits well, adding nuts just before serving. Arrange in lettuce cups and serve with either French dressing or mayonnaise as preferred.

CHOCOLATE BREAD PUDDING

1½ squares unsweetened chocolate.
2 cups milk.
2 eggs slightly beaten.
½ cup sugar
1 teaspoon salt.
1 teaspoon vanilla.
2 cups stale bread, cut in ½-inch cubes.

Add chocolate to milk and heat in double boiler. When chocolate is melted, stir until blended. Combine eggs, sugar and salt; add chocolate mixture gradually, stirring vigorously. Add vanilla. Place bread in greased baking dish, pour mixture over it and let stand 10 minutes; then mix well before baking. Place dish in pan of hot water and bake in moderate oven (350 degrees Fahrenheit) 60 minutes, or until pudding is firm. Serve hot with hard sauce or cold with cream. Serves 6.

A "Home Of Soldier"

Called the "Home of Soldier," a building is being displayed in England. It has rubber floors, roof and door mat panels. The frames of windows and doors are made of the same material, and chemical fittings are used in the bath rooms and kitchen.

Simple But Adequate

"Our Empire—her power, her power and her security" this is the best Stanley Baldwin offered in response to an appeal by the Overseas League to write a simple toast to the League to be drunk at Christmas or any other time.

I HOPE SAM MAY GET STOCK MARKET CONTROL

The labors of the Senate Banking and Currency Committee, which spent the last year investigating Wall Street stock and banking practices, may bear fruit during the coming session of the Congress, according to Senator Duncan Fletcher (top left), the committee's chairman, who revealed that recommendations will be made seeking Federal regulation of the Stock Exchange. Following the disclosures, which came to light under the searching inquiry of Ferdinand Pecora (top centre), counsel for the committee, who quizzed such big money men as J. P. Morgan (lower left), C. E. Mitchell (lower right), former head of the National City Bank, and Alfred P. Sloan, Jr. (top right), former head of the Chase National Bank, legislation will also be proposed to stop loopholes in the income tax laws. Admonished by Federal Court Judge Ewing Mack (lower right), that Congress may deny use of mails to any business conducted under conditions deemed injurious to public welfare.

The Editor's Ink

People Forget Cost Of Running A Newspaper When Supporting Free Publicity

A case of right-over indignation by an editor and publisher is not exactly news; it is pretty much commonplace. But the editor of the Hamilton (N.H.) Tribune has declared to his constituents that in the matter of free publicity, he is willing to be the goat sometimes, but not all the time, and reports:

"Did you ever try to steal groceries," I said to a man the other day.

He came near blowing up. He spluttered, turned black in the face and finally when he could find words, he said—

"What do you mean by asking me such a question? I have a good mind to—"

"Calm yourself," I said. "I did not say that you ever stole groceries. I asked you if you ever had tried to do so."

"What in the world are you driving at?" he said.

"I will tell you," I said. Thousands of people, who would not think of stepping deliberately into the newspaper office and attempt—successfully—to get away with it—to secure publicity for nothing. The indomitable optimism of women and men in all stations, to keep down expenses by stealing space in newspapers are many and varied. Many people have the position "that a newspaper must have something to fill up, then why not give free publicity to boost your money-making stunt." It would not occur to some people that it costs a lot of money to run even a small newspaper; and that money does not grow on trees, especially in these days of depression.

Certain it is that in the last decade, whether the idea has been sifted from the old-time P. T. Barnum Circus, we know not, but there have developed publicity departments, publicity departments, by the hundred all over the United States and Canada, the product of which is passed on into the regular newspaper offices and for which publication is virtually demanded. That is one phase of the development, the national press. On the other plane the editor has always had with him, local requests for free publicity for the kind that worship aligned, weak in and work out, and a variable feature is required to deter an opposition line and still maintain a going concern.

The publisher of a leading Western Ontario newspaper whenever approached by a committee of church women to provide plentiful space had a stock answer for such deputations. He would say: "Space is the only commodity I have to sell. You would not think of going down street and asking Mr.-and-Mr. for so many hundred pounds of sugar, nor would you call on Mr.-and-Mr. and ask him for so many loaf of coal. If you want publicity for your event, advertise at the regular rates. I will hold up my end of good citizenship whenever I can by making a subscription or buying a couple of tickets for the cause."

—St. Catharines Standard.

Why Sailors Wear Bibs

Custom Originated With Ancient People Near Coast Of Biscay

The bibs color so prominent in the uniforms of almost all marines is of ancient origin. Vegetius, in his fifth book on the military art of the Romans, traces the origin of this color to the Veneti, an ancient people dwelling near the coast of Biscay, and well versed in seamanship. It was customary among them to paint their outgoing ships, as well as the canvas and nails, with a blue color; also their collars and sailors wore blue uniforms. According to the author, the Gallic word "Venetian," which was both the name of the color and that of the people, points to its origin. Hence the Veneti the custom was adopted by the Romans.

Chinese Gods Fashioned From Manitoba Quartz

Veteran Winnipeg Prospector Makes Money From Mining Stone

Mining rose quartz, from which miniature Chinese Buddhas are made, has proven a harvester side-line for Ken Miller, veteran Winnipeg prospector. This lenticular stone abounds in the Bird River territory, 80 miles northeast of Point Du Bois, Manitoba. This is believed to be the only Canadian deposit of rose quartz of sufficient quality for commercial use.

Miller, while far from gaining a fortune from rose quartz mining, has more than made his summer's grubstake. He took out enough for fair-sized shipments which he freighted down the Winnipeg River and north to Cherniak and Lac, Germany. From here, according to Miller, this Manitoba-found stone has found its way to the most potential quarry market of the world—the Orient.

In Pekin and Canton, the world's largest jade market, the largest piece of rose quartz from 20 to 30 pounds, are sold at auction, bringing about 60 cents a pound. These are turned into little rose quartz gods.

Scotch Passenger (to friend's yacht)—I say, what about going back? After you've seen one wave, you've seen them all.

How Bees Spend Winter

Do Not Hibernate But Live Chiefly Visiting Food

Honey bees do not hibernate in the true sense of the word, for they move about within the hive and are continually taking food during the winter months. As the winter progresses, and the temperature outside in the hive becomes between 50 and 60 degrees Fahrenheit, the queen bee starts to lay eggs in their cluster and as soon as the bees have gathered together into compact cluster, that form in the centre of their cluster produce heat by muscular activity and those on the outside act as an insulating coat. The temperature of the cluster is maintained at approximately 95 degrees throughout the winter. The colder the hive the harder must the bees work to keep up the necessary temperature, but as work shortens a bee's life and became it is necessary that they eat likewise the more active the bees are the more food they consume. It is surprising that the honey bees by intense energy in coming here and there for water and food suffering privations is provided in such a manner as to prepare themselves to emerge in the spring of the year in the best of health and that the bees take food continually but as it may prove disastrous to feed them during the cold weather, sufficient food to carry them safely through the winter should be given before the bees form their winter cluster. During the winter months the cluster of bees changes its position in order to keep in contact with the food supply and the bees themselves discharge their waste material only when in flight, but during the winter when the bees are confined to the hive for several weeks at a time, this waste material collects within the bees, and unless the food consists of high grade honey or sugar syrup, a bad attack of dysentery results in the death of the colonies may follow. Should the weather during the winter turn warm enough to raise the temperature of the hive to around 70 degrees Fahrenheit the cluster of bees will expand and if the outside temperature be high enough a flight will take place. For the best wintering however, a steady low temperature which causes the bees to remain at rest for the greater part of the winter is desirable.

Makes A Good Story

Probably Not True But Press Danger In Talking

Paul Mallon, in the Detroit News says: "It is probably not true, but it's a good story anyway—the one about the Justice Department Republican who talked out of town. He was being elevated in a barber shop one day when the barber asked him if he expected to keep his job.

"Why, yes," he replied.

"Those Democrats cannot fire all us Republicans. They must keep some of us in order to get anything done."

Next day he received his walking papers.

The gentleman in an adjoining chair with a towel on his face was the Attorney-General."

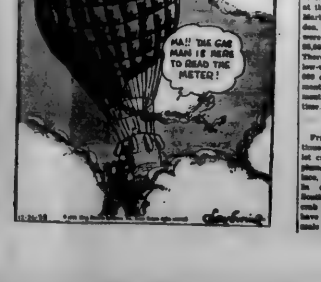
Cutlery For London Hotel

New Cumberland House Has Forty-Five Tons Of Silverware

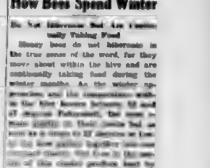
"Fish and cutlery not supplied," runs many an advertisement for a furnished house to let, and most prospective tenants think that a small matter. It is scarcely a trifle at the Cumberland, the new hotel at Marble Arch, W., just opened in London, England The plate and cutlery were made in Sheffield. There are 60,000 pieces, weighing 45 tons. There are 20,000 pieces of bronze ware, 47,000 of flat-ware and 35,000 of cutlery. They have taken six months to make and given employment to 700 hands throughout that time.

Alberta's Fruit Industry

Fruit production in Alberta runs thence on the increase with excellent crops of apples, crab apples and plums in many sections of the province, according to a provincial report in certain irrigated sections of Southern Alberta, crops of apples, crab apples, plums and cantaloupes have been produced on a commercial basis for some years.



LESS THAN 1¢ WORTH IN A CAKE



If nothing makes delicious cakes in worth of Magic Baking Powder to make a cake, and you can count on good results—every time! Such wonder Canada's cookery authority is doesn't pay to take chances with inferior baking powder. Bake with Magic and be sure!

MAGIC
MADE IN CANADA

"CONTAINS NO ALUM"

"CONTAINS NO ALUM IN IT." This statement on every can is your assurance that Magic Baking Powder is free from alum or any harmful ingredient.

OCCASIONAL WIFE

by
MRS. EVAN ESAR SHAW

Author of "Jocelyn," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her Peter is a young, struggling sculptor trying to win a competition for a sub-starship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Ava Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Mason, his former roommate with whom he has quarreled. At a party at an artist's studio Ava introduces Peter to Camilla's cousin with impersonations.

(Now Go On With The Story)

CHAPTER XXV.

A brief lull followed Peter's resumption of his own character, during which Terry busied himself with the mixing of highballs.

"Let's go somewhere," Cathie announced suddenly. She turned sweetly to Camilla. "Not that your party isn't a riot, darling, but we need new inspiration. Let's drive in to the Maddox and dance. We'll just about make it for the rest fun!"

Her suggestion carried unanimously with those who supported Cathie's motion, as there followed a general melee while the girls removed their make-up and secured wraps, and the boys formed an impromptu parade of powerful motor cars to await them.

Camilla lingered for Peter alone. Would they ever—or might she—be alone? It seemed not. It just went on and on, from one alarming prediction to another. If only he might talk with Camilla alone and persuade her to announce their marriage That would help somewhat, and provide diversion. As it was, being at the mercy of them, he found himself obliged again to share Terry's rumble seat with Avia, who secretly deplored the fact that she hadn't her own car in which to drive alone with Peter. Still, a rumble seat had its advantages, by which she might profit.

The Maddox Club was filled almost to capacity when they arrived, notwithstanding the economic depression, but enterprising waiters found room of their lost patrons in the group, and managed tables for ten. Jewels blazed in the smoky haze of the room like bonbon lights in a fog. Laughter sang a high obligato to the remaining notes of heavy dance shuffling feet and the dozen less accompaniment Odors of perfumes and cosmetics, food and liquor fumes, smoke and perspiration, drifted straight like the ingredients of a witches' brew. Camilla shuddered and repelled a fastidious inclination.

The cafe, the cabaret, the spectacle, all were old institutions, but revised only by their kind But this elaborate display of artistic effects, ten-thousand-dollar-a-night music, daring vaudeville entertainment and exorbitant food prices, where millionaire and pauper and crook not only rubbed elbows but tempted the one another on the dance floor, was the offspring of war's lust and chaos.

The same instincts loosed for mental and physical carnage. Yet conscientious promoters will denounce the one with horror and hand the other with display of patriotism and noble sacrifice.

Peter managed at last to dance with Camilla and to say, "Let's get out of here, honey. I know you didn't want to come. Can't we take your car and let Terry and Avia ride with someone else?"

"I wish we might. But how can we do that and not hurt their feelings?"

"It was Cathie who wanted to come here. Let her take care of the rest. Tell her that you're not coming back with them. If she objects, tell her others want to leave them, all right. But I've had enough of this, and so have you. Talk about leaving the city to go out to the beach where it's cool, and then come back to this!"

"I know, but you know how restless they get if they have to stay in one place for long. I never expected to have them here, and I don't care what mother thinks of me for dropping the party. Shall we go back in the beach where it's cool and quiet?"

It was so they escaped, to stroll up the shore in the moonstruck night where the sea was softly whispering waves which caressed the sands with gentle fingers, disturbed their peace. His contrast with the clamor they had quitted was so unbelievable as it was encouraging.

Peter's weary discontent encountered by its soothing embrace. "Sometimes," he told Camilla, "I have reproved myself for taking you out of that life, but I never should have. You do not belong there, you belong just with me."

"That is what I have told you many times. It is just your kind of life I want to share, Peter, all of it —from the first anxious days of effort and hope and disappointment to the last years of triumph and reward. Never—no matter how much fame and money you may have—shall we return to this idle waste of riotous living. Wealth may be a blessing as well as a curse."

"It should be—and it will be, for us, Camilla. I was thinking just now of a cottage by the sea, and you and me with work and inspiration to fill our days and nights. There are studio studios within walking distance of the tropics and it's easy to reach Portugal or Spain. There is a Mediterranean coast established there at the end of the line. Were you ever in Spain?" I feel I can imagine it.

"No, I think I [illegible] that same village where I [illegible] Mediterranean coast established there at the end of the line. Were you ever in Spain?" I feel I can imagine it.

"No, I think I [illegible] that same village,

Women's Institute Enjoy Home Economics Course

The regular monthly meeting of the Fort Saskatchewan branch of Alberta Women's Institutes met in the Union Hall, Thursday afternoon, January 10th.

Mrs. C. H. Grenert, First Vice-President, was in the chair owing to the removal of Mrs. H. A. Ardley from the Fort. It was necessary to fill another president. Mrs. J. P. Weber was unanimously elected president and Mrs. Edward Graham, secretary. Other officers for 1924 are, 1st Vice-Pres. Mrs. C. H. Grenert; 2nd Vice-Pres. Mrs. F. R. Waters; Treas. Mrs. J. Westover; Directors, Mrs. Gordon Heath, Mrs. Cecil Ashton, Mrs. Fred Smith and Mrs. F. S. Tenby.

The tentative programme for 1924 was presented and approved. At the February meeting Mr. E. S. Anderson will speak on Wild Life in Alberta.

The January meeting was devoted to the first two lessons of the W.I. Home Economics Course prepared by Mrs. J. Macgregor Smith, Federated Canwest of this department, in collaboration with the Home Economics Association of Edmonton. Mrs. Macgregor Smith is not only a Household Science graduate who was for some years head of the Household Science Division in the University of Saskatchewan but she is a practical housekeeper as well.

The lessons dealt with such matters as cereals, measurements, dishwashing, flour, baking powders, batters and doughs. Charts on how to choose and use foods were given as well as some choice recipes from each of our cooks as George Hector and Madame Pecherd. At each meeting one lesson in the course will be given. Members were provided with copies of recipes and charts will be ready for next meeting.

Miss Fuffs made from one of the recipes in the Course were served with coffee during the social hour. Mrs. Grenert and Mrs. Rogers were hostesses.

Fort Band To Hold Dance

A meeting of the newly organized Fort Band was held on Monday night in the Town Hall with a large number in attendance.

After reading the minutes of the previous meeting held last week, a report from Mr. Baker and Mr. Hopper was received and found very encouraging and after much discussion it was decided to hold a dance on Friday, Feb. 2nd, in order to raise funds for the band.

The following committees were elected to make necessary arrangements for the dance:

Ticket Committee: Mr. Broomfield, Art Simmons, G. Robertson and Mr. Baker.

Lunch Committee: Mr. Hargreave, Mr. Baker, Mr. Aitchison and G. Lamoureux.

The Secretary was instructed to interview the Town Council regarding the band instruments and place to practice.

A practice will be held next Monday evening in the Council Chambers at 8 p.m.

Partridge Hill

We are glad to report that Mrs. C. H. Pinhoff is progressing fine after having undergone an operation for gall stones.

Mr. and Mrs. W. Allen are delegates to the annual U.F.A. Convention now being held in Edmonton this week.

Mr. and Mrs. George Oshaldeston and Miss Beesie Allen were Lamont visitors last Sunday.

Large Crowd Enjoys Bobsleigh Riding

The bobsled hill in the Fort was the scene of much enjoyment last Sunday afternoon, when nearly two dozen bobs of all sizes and numerous small hand sleds gave their riders thrills galore.

A large crowd of spectators were on hand and watched the big bobs carrying nine and ten passengers go down the hill at breath taking speed across the river to the other side in less than 25 seconds.

This sport has given much pleasure to a large number of young and old alike and the committee who due to their efforts were responsible for this fine bobsled hill are to be commended for their thoughtfulness and foresight.

A hearty vote of thanks is due to Warden McLean for his kindly cooperation which has enabled the Town and District to enjoy another of Alberta's winter sports.

The slide is fast and built in such a manner that there is the minimum of danger to any youngster or adult who can handle a coaster or bobsleigh. It should be emphasized however that the slide is no place for little children who are not under the control of an adult. Persons using the slide do so absolutely at their own risk. An appeal is made to the older boys and girls, as well as adults, to see that they operate their sleighs with all due care. A sleigh should not start on the run before the party proceeding it is seen to be safely coasting on the ice. There is time and room for everyone, so lets all get together and see that our next winter fun is not marred by an accident.

It is reported that a light installation on the hill may be possible, but until then it would help the cause of safety if coasting was not indulged in during the dark evenings.

One and all, let us agree, "Safety First".

I.O.O.F Lodge No. 14 Holds Installation

A large and representative gathering of members of the Independent Order of Oddfellows was in attendance at Edmonton Lodge No. 30, last Thursday evening to witness the installation of officers of the following lodges; Fort Saskatchewan Lodge No. 14, Lamont Lodge No. 78, and Wanhatenau Lodge No. 152.

James Seddon, of Edmonton Lodge No. 30, conducted the installation ceremony, assisted by W. Dawson, as deputy grand marshal, and inspiring staff.

Officers for the ensuing term in the Fort Sask. Lodge No. 14, are as follows:

Noble Grand, G. Frey.
Vice-Grand, E. Chesluck.
Recording Secretary, T. Todd.
Financial Secretary, R. Hagen.
Treasurer, Nels Pelmar.
Junior Past Grand, A. Gibson.

Following the business session, a banquet was served by the ladies of Maple Leaf Rebekah Lodge.

Taking advantage of the fine weather during the last two Saturday evenings, a number of the young folk held successful dances on the skating rink, after skating was over.

Good music was furnished by the radio, and idle time orchestra music from Calgary as well as the Tivoli orchestra was enjoyed. A small charge of ten cents per person was made to cover expenses.

Weather permitting, another dance will be held next Saturday evening at ten o'clock, so bring your moccasins, or rubbers and dance.

An unusual sign appeared on the main street this week to this effect: "Ten tonnes Wanted at Park", this kind of sounds like things are picking up.

Josephburg News

The Junior U. F. A. Local No. 95 held their annual meeting at the home of Mr. Edward Frey on Jan. 5th.

The following officers were elected: President —Wilfrid Mann, re-elected by acclamation.
Vice-Pres. —Lloyd Willis.
Secretary-Treasurer —Esther Frey, unanimously elected.
News Publisher—Margaret Mann.

A vote of thanks was moved to the retiring secretary Alfred Hennig.

A membership drive is now in force, lead by Mrs. W. K. Griffin and Mrs. E. Ashton. The drive ends March 1st.

The next meeting is to be held at the school No. definite date has been set. The roll call is to be answered by "Something we can do without". This is to be a joint meeting to which other local will be invited to hear Mr. Wilfrid Hoppins, President of the Junior U. F. A. speak.

Mr. Adolph Becker spent several days in Edmonton last week.

The ladies aid meeting was held on Thursday, Jan. 17th, at the home of Mrs. Frank Hennig.

The following officers were re-elected for the coming year:
Hon. President, Mrs. Wiesbrauch.
President, Mrs. Gus Berg.
Vice.-President, Mrs. John Mehr Jr.,
Secretary, Mrs. Frank Becker, Sr.
Treasurer, Mrs. Reinhold Haas.

The next meeting will be held at the home of Mrs. Ed. Frey.

Mr. and Mrs. Val. Berg, Miss Mirian Berg, of Edmonton, and Mr. John Mills of Onoway, spent the week-end at the home of Mr. and Mrs. Albert Mohr

Mrs. Emil Kreis visited with her parents Mr. and Mrs. J. Becker of Edmonton for several days.

Fort Old-timers Celebrate Diamond Jubilee

An event of unusual interest occurred in this community to-day, January 16th, when Mr. and Mrs. William Simmons celebrated their Diamond Jubilee, which we believe is the first of its kind in the district.

They were married 75 miles from Collingwood, Ontario, on January 15th, 60 years ago.

In 1882 they came west with a colony of 200 from Parry Sound, and took up land in the Partridge Hill district.

Mr. Simmons is 80 years old and Mrs. Simmons 78 years and both are enjoying good health. They had a family of four, one of whom is living, Mrs. Tom Bland of Billingham, Wash.

They have 15 grandchildren, all but three living in the district, and four great-grand-children, also living here.

During the day, the honored couple held "open house", members of friends and relatives of both town and district called to offer their congratulations and best wishes and to enjoy the hospitality of the host and hostess, and many reminiscences of earlier days were re-called.

The Record extends the heartiest of wishes and the best of luck for many more of their years together.

W. Harry Ross, Liberal, successfully won the byelection in Calgary, on Monday by a majority of 1,700 votes. His nearest opponent, Austin Turner, C.C.F., polled a total of 9,000 votes.

On the farm of W. Ross, south of the Cemetery, a robin was seen last Friday afternoon. This is the second to be reported this week.

ST. GEORGE'S CHURCH HOLD ANNUAL MEETING

The annual meeting of the Congregation was held in the Rectory on Tuesday evening at 8:30 p.m., the Rev. C. Read in the chair. The Warden's report showed that all expenses had been met, though there had been a slight falling off in revenue.

The Rector reported that attendances had been up to general average, with various organizations in a healthy condition. He said that he would be taking a long leave of six months this year to visit the Old Country and hoped to be able to help the parish during his absence. The W. A. report showed excellent results of the Women's work and the Church Guild, the A.Y.P.A. the Junior W.A. and the Tennis Club reports were all satisfactory.

After elections when Mr. J. M. Carscadden and Mr. C. Hague were re-elected Wardens, the usual votes of thanks were passed, and refreshments served at 10:30 p.m.

C. G. I. T. NEWS

On Monday evening, January 15th, the "Happy Hours", group of C.G.I.T. were the guests of a sleigh ride to the home of Mrs. Logan O'Brien their Superintendent. After the usual business meeting a missionary meeting was held and plans made for future meetings.

The hostess served a dainty luncheon which was enjoyed by all.

Their leader, Mrs. Stanley Dennis and Group, wish to thank Mr. and Mrs. Logan O'Brien for the most enjoyable evening.

The meeting closed with taps.

Clearance Sale Continues
A FEW MORE OF THE MANY BARGAINS WE ARE OFFERING TO CLEAR WINTER GOODS BEFORE FEB. 1st, WHEN WE FINISH STOCKTAKING.

LADIES' CASHMERE, SILK & WOOL HOSE
—A clean up of Ladies' Cashmere, Silk and Wool Hose. Values at 75c, 1.00. To clear per pair 59c

LADIES' ANKLE SOX
—A clearance of Ladies' Cashmere and Silk and Wool Ankle Sox. Values up to 75c. Price per pair 35c
3 Pairs for $1.00

Mature Age and Efficiency

An Eastern professor recently informed a gathering of Eastern educationists that no person over 40 years of age should be permitted to teach school. This recalls that other dictum of that famous doctor who said that every person over 60 should be quietly chloroformed. Both statements fail to convince because they are so palpably overstatements.

It is true, of course, that youth is becoming more insistent for recognition in the world of affairs, mainly because the problems of the times appear to call for that courage, initiative and energy which are compact of youth. The war robbed one generation of its birthright and opportunities. The depression appears to this generation to have repeated the process. Thus youth grows impatient and insurgent against conditions which it considers absurd, to natural in the circumstances, and, possibly, salutary in the result. The Communist movement in Russia was energized by the youth of Russia. Hitler won his way to power largely from the ranks of youth. Hitler had assembled German youth under the Nazi banner. These are manifestations of youth's protest against forces inimical, they believe, to youth's fulfillment.

The trouble is to set a hard and fast line where youth ends and age begins. If that were possible, it would be possible more accurately to estimate the significance of the two statements and their many imputations and implications. But there is no such line. It is possible to cite instances innumerable of men beyond forty who have proved great benefactors of the young, and men who have made their finest contributions to civilization after passing sixty-five. Had Arnold of Eton been forced to retire at 40, British education would have been that much poorer. Had Edison acknowledged his faculties were shrivelled at that age, much of his work in the development of science and enhancement of living, would have been left undone. Had forty seen the vitality of Einstein's mental powers reach its zenith, there would not have been that competition among the great institutions of learning for his services which followed his expulsion from Germany. It was after he had passed the age of forty, that Henry Ford had his great idea and launched the enterprise coupled with his name. The tally of similar examples can be carried indefinitely.

In the political field, President Roosevelt, far beyond the assigned "meridian" of forty, has tackled the vast problems of his country with a courage, vigor and mind quality less like a plea with youth in them. Premier Mackenzie, MacDonald, with equal energy and rapport, did not hesitate, when the needs of his country called for drastic action, to scrap the ideals of a lifetime for those of more practical efficacy in the crisis of the hour. The youth of Russia, Germany and Italy accepted leadership of men beyond the "allotted span," because these men oriented the chaos of those countries in the youthful minds. Youth, apparently, construed in terms of its thrust qualities, cannot be measured by age,—which suggests the well-known saying, "A man is as old as he feels."

There must be some reason for a prominent statesman to make a public declaration of his preference for old counsellors, however. It is impossible to believe that, with such an audience, he spoke in jest, in an idle moment or without proper forethought. Perhaps his inspiration may be found in the words of the Spanish philosopher, Ortegay Gasset, who, in "The Modern Theme," has suggested that each generation has allotted to itself in that it utilizes in its reactions to ideas and environment from the generations preceding it. If this thesis be admitted, it would follow, of course, that one generation's viewpoint, being naturally different from that of the one preceding it, the former is out of touch with the youth of its own day and therefore not qualified to be its mentor. The more remote the generation from that of school age, the more out of touch it would be with the students, ideas and ideals.

Whatever the difference, custom has decreed that the one should be vested with the teachings of the other. It is difficult to see how it could be otherwise. While there may be something in the statement that the information from which the teacher he drawn should not be too remote from that furnishing the school population of today, it must not be forgotten that the knowledge gleaned from experience of life and humanity over the centuries cannot be of inestimable value in preparing the young for their responsibilities.

After all, no new social structure is created with each new generation. They may borrow, or remodel, but the social structure characteristic of Western civilization is the cumulative result of such improvements. Something constant is imparted from generation to generation however. So long as this condition exists, the accumulated experience of the past should retain its value and, finding expression through the process of education, in school or in the home, be passed on to those preparing themselves for the duties and responsibilities of full citizenship.

Youth demands recognition and should be recognized. But an intelligible definition of youth, other than that of mere time, is necessary to complete acceptance of the statement that no person over forty should be entrusted with the task of teaching youth.

Science gradually is extending the period described by Sir Isaacs Pitman companion as "life expectancy." Why bother, if chloroform is the best potion when one has reached sixty-five?

A wheat in the great clock of the former royal palace of Potsdam, Germany, revolves only once in a period of 365 years. There's a check to hand a clock-watcher.

Canada exported 4,662,000 pounds of beef to Great Britain up to October 1st, nearly four times as much as for the same period last year. In this year, an increase of 1,082,000 pounds over the corresponding ten months of last year.

Shortness of Breath
Weak, Sinking Feelings

If going up stairs, climbing hills, walking too fast, if the least exertion causes you to stop to get your breath, or if you have weak, sinking feelings, it is time for you to stop and think as to the cause of your trouble.

What you should do is take a course of Milburn's H. & H. Pills. They tone up and strengthen the vital organs so as to prevent any harmful attacks of illness.

Ask your druggist for Milburn's H. & H. Pills.

Bold Slavage Congress

Discussion Of World Plan Rekindled—Head Of Rotary Club Speaks

"Cipaions of the world unite!" is the motto of the General Association of Romanians which held a stirring congress in Bucharest

The spirit of frantic nationalism which is sweeping these parts of Europe has also affected the nomads who want to give up their free and easy life and organize themselves into a race-conscious and stable community. Thus the last scientific researches and theorizing in the Arabian nomad is about to be ruined. It will be regarded, in all probability by political demagogy.

Hundreds of Romanians in picturesque dresses came to the congress, flocking in from all corners of the country. The meeting took place in the open air, in the gipsy quarter of Bucharest and the speeches of the moralists and bards built around a sentimental love on the outskirts of the city. A regiment of gendarmes took care that the participants behaved themselves.

The congress was held in perfect order. The delegates were convinced that they were entering upon a new era of "national dignity," as was announced by their leader, George Lemnian, an exceptionally good impersonator of Hitler both as regards aspect and oratory. Following are characteristic and galvanizing phrases:

"We are a great and noble race. We don't want to be ridiculed and treated as beggars. We want to unite to form a strong nucleus in Roumania, and all the Romanians of the world will be inspired by us and become proud of their race."

WORKED ONLY ONE WEEK IN TWO

Scientists Kept Him At Home

It is the wife who sends us this information about her husband's condition. She writes: "Some months past, my husband has been unable to work only one week in two on account of sciatica. He suffered so much from it that I was completely worn out for the pain. We tried many things, but without result. Then I got him to try Kruschen on account of the good results that had been obtained from Kruschen Salts. Now he is free to give them a trial. For twelve months past, my husband has taken Kruschen Salts in his tea or Kruschen every morning. Now, he is able to work with the whole week and is working regularly."—(Mrs.) M.

Doctors estimate that one-half of civilized humanity suffers from personal constipation. The constipation accounts is an unexpected number of waste matter, which poisons the blood and undermines health. Like so many of the mystery solved and cured from which people suffer, Kruschen keeps the organs of elimination in perfect trim, so that every particle of poisonous material is passed on, period gently, regularly and completely.

Export Increase In Live Cattle Shipments

Canadian Officials Anticipate Better Market In United Kingdom

Officials of the agricultural department look forward to a good year in the export trade of live cattle from Canada to the United Kingdom, despite the quota which will limit shipments for the first three months. The limit is slightly under 5,000 head, equal to what was shipped last year during the same three months.

The United Kingdom had a shortage of root crops last season. The result was that many cattle raised without sufficient fodder sold their cattle for slaughter when only partially finished. The shortage of feed in Canada also caused many marketings of cattle in this country to be shipped to Great Britain. The result had a depressing effect on the market which was injurious to both British and Canadian cattle raisers.

Rule For Egg Shipments

No Canadian eggs are allowed to be exported out of Canada unless they are packed in Canadian Standard cases—each case contains 30 dozen eggs—in new dry export fillers and flats, and with new lids; dated, paper-covered, canadair pads at top and bottom, or with any other pad, flat, or cushion approved by the Dominion Minister of Agriculture.

How to Stop a Cold
Quick as You Caught It

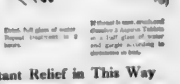
Take 2 Aspirin Tablets. Drink full glass of water. Repeat treatment in 2 hours. If throat is sore, swollen, or tonsils inflamed, gargle with a half glass of water and gargle according to directions on box.

Almost Instant Relief in This Way

The simple method pictured above is the way it is used throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check an ordinary cold almost as fast as you caught it.

Ask your doctor about this. And when you buy, be sure you get Aspirin Tablets. Aspirin



Does Not Harm the Heart

is the trademark of The Bayer Company, Limited, and the name Bayer on the form of aspirin is on each tablet. Then double almost instantly. And this work almost instantly when you take them. And for a cold, Aspirin Tablets combine so completely, they leave no irritating particles. Get a box of 12 tablets or bottle of 24 or 100 at any druggists.

Aspirin Tablets are made in Canada

Egg-Grading Regulations

New Schedule Came Into Effect The First Of January

The riddle of why does a chicken cross the road is not a whit more baffling to a great many people than the new federal egg-grading regulations which came into force on January 1. To those who take time out to study the act, however, it presents few difficulties. The terms "fresh gathered" are to be discontinued. In future fresh eggs will be designed as "A," large; "A," medium, and "A," pullets. Eggs of more than 22 ounces to the dozen will be in the large category; the medium grade will weigh between 18 and 22 ounces, and pullets' eggs will weigh up to 18 ounces. The regulations put storage eggs in "B" grade, but patrons of Central market need not be concerned about that section of the act, because a city by-law prohibits the vending of storage eggs on the public square. Alfred Rosson, manager of Central market, drew attention to the fact that interior quality was a main factor in the new grading scheme. There will be none to dispute that, except for throwing, a fresh Brice egg is much to be preferred to a dip one. Superficial inspection of the exterior isn't helpful to egg shoppers, either. The customer must rely on the honesty of the purveyor, and the government, in its wisdom, gives egg dealers an especial incentive to be honest by providing stiff penalties for those who are not. For the purpose of the act, a fresh egg is one to which the cell repair does not exceed one-quarter of an inch. There is a continuous process of contraction within the shell and when candling reveals an egg to have more than this amount of air cell space, it is taken as prima facie evidence that the product is making ready to grow a beard.

Egg dealers with an established clientele will not be annoyed about the new regulations. They cannot afford to sell eggs of inferior grade and, for the protection of their business, would be careful to keep quality up even in the absence of official regulations.—Hamilton, Ont., Spectator.

Basis Of Egg Weight

The attention of egg shippers and egg packers is called by the Dominion Department of Agriculture to the fact that in the revised standard egg grades, individual eggs serve as the basis of weight rather than dozen or case lots. In the instance of Grade "A" large, for example, each individual egg in the pack is required to weigh five ounces and over. Similarly in the medium pack each individual egg should weigh at the rate of 22 ounces and under 24 to the dozen.

Time heals all wounds. But our time on earth is limited. That's the trouble.

Little Investors Save Billions

National Savings Movement In England Has Proved Successful

British thrift is increasingly becoming a national virtue, as indicated by figures given by Walter Runciman, president of the London Board of Trade in connection with the national savings movement.

"The total wealth of small investors in various types of investment is the amount standing to the credit of depositors in the post office and trustee savings banks and to investors in national savings certificates and in government stock purchased through the savings banks during the last three years, in spite of the financial crisis, was more than 5½ times the increase during the previous three years.

Just About Equal

The Rocky Mountains and the mountains are just about equal in the mind of Airman Humphrey Madden. Forced to a low altitude by rain, sleet, strong headwinds and ice forming on the wings while flying from New Glasgow to Halifax, early in January, Pilot Madden said it was the toughest flight in his experience — nearly corresponding to a honeymoon crossing of the Rocky Mountains he had once made.

Experiments Being Carried Out By United States Railways With Aerodynamic Trains

The experiments being conducted by United States railways with aerodynamic types of trains which will flash over the rails between New York and Los Angeles in 60 hours at an average speed of 65 miles an hour are being carefully watched by Canadian railway officials.

While quite new as to the feasibility of the new trains operating in Canada are divided. Canadian motive engineers are eagerly awaiting the results of the experiments although they point out that any developments in this direction will have to wait for better times.

From the Canadian viewpoint a serious problem is presented in the initial construction of the trains which motive men say will likely prove to be a conductor of the bitter Canadian winter. Heat will be lost through steel structures and unless heated by heavy insulation the all-steel cars would be impractical in Canada where steel, heavy insulation and wood are utilized in the making of railway coaches.

Engineers viewing the experiments in a favorable light point out the new type of trains will permit lower operating costs in addition to increased speed, comfort and luxury.

On the other hand some motive men take the view the huge increase in speed will mean a decrease in safety. At present some Canadian trains average between 50 and 55 miles an hour but to achieve this speed to travel at 60 miles an hour on occasions. The new trains to maintain an average of 65 miles an hour would have to touch 110 miles per hour in places. The strain on the present type of roadbed which is expected to be used.

The roadbed is one of the contentious points of the contrasting points of view Opponents say the present roadbed would not be able to stand the strain of high speed and a special rigid type would be needed—the cost of replacement being tremendous.

To give weight to their argument they cite the case of the "Flying Hamburger" which developed a speed of 140 miles an hour in Germany. The company which introduced the stream-line car is now completing a special train.

High rate in initial building of the trains through the use of duralumin—an aluminum steel in addition to the building up of other trains to permit the "comet" train to clear track are other reasons against the new trains. Low operating costs, possible future reductions in materials and passenger appeal might possibly offset these facts.

However, some of the engineers are of the opinion that if special roadbeds were constructed and sufficient safety allowed there was no reason why the experiments should not be successful.

In any event they believe if the public desires the new types of trains, motive power will not be long speaking across continents in two days and two nights.

Good Sugar Beet Yield

Saskatchewan Crop Grown On Northern Alberta Irrigated Land

Lethbridge Northern Irrigation District sugar beets yielded 12 tons to the acre, an average yield of better than 11 tons per acre. Tests so far stands at the top with almost 12 tons, while from Springs is second with 11.38 tons. These tonnages are far ahead of the Taber-Barnwell district which, up to this year, has always held the high yield record.

A Valuable Manuscript

Francis Scott Key's original manuscript of "The Star Spangled Banner" was sold at public auction recently for $24,000. The buyer was Dr. A. S. W. Rosenbach, noted bibliophile. The manuscript is on a sheet of ordinary foolscap paper, the ink brown with age.

Badges And Evaporation

Interesting Results Proved Through Observations At Swift Current

A dangerous badge proved effective in checking evaporation, but its inventor did not extend beyond a dip tanks of 75 feet, according to observations made at the Dominion Experimental Station, Swift Current, both during the past season.

Weather factors which cause evaporation of water from the soil also stimulate the dispersion of water by crops Checking evaporation of water from the soil, therefore, means more water for crops, and checking excessive evaporation from plants means increased transpiration, will accomplish the same objective. Experiments have shown that 27 per cent more water is used in the production of each bushel of wheat from land where evaporation of water was allowed to proceed over bare soil than from land where evaporation was checked.

His/her observation showed that a thick, sticky film of oil from Shell-Mex Limited, was effective on a windbreak to a distance of 50 feet for each foot in height of the badge. Wind is the most potent factor in causing evaporation of the material, but is very fickle in its direction. In the Swift Current observations on evaporation, the badge is five and a half feet high and lies in a north and south direction. At times the influence of the badge in checking evaporation was unsatisfactory, but at other occasions, according to change in wind direction, it proved quite effective.

Champion Women Wrestler

Cannot Find Anyone To Challenge Her Supremacy

Miss Emmer is travelling all over Turkey looking for someone who will wrestle with her. She is the champion wrestler of Turkey, and weighs exactly 300 lbs. For the last year no one has cared to challenge her supremacy. She is, therefore, forced to earn her living by displays of strength. She will support a mob of wheat weighing fifty pounds on her chest, with four men standing on the mob; or she will hold an iron bar between her teeth and invite two men to bend it.

A chasm, 10 feet across and encased in wood, from Tibet. Host Prasang motor car driven across the stream in a recent "Sky German" parade in Berlin.

One Of Strangest Lakes

Possible To Walk On Body Of Fluid In Trinidad

Lake La Brea, in Trinidad, is one of the strangest lakes in the world. In legend there are tales with its bads, sacred lakes into which rivers flow without raising waters, and lakes that vanish in a night and reappear as quickly, but Lake La Brea is remarkable in that it is possible to walk upon it.

It is a lake of pitch occupying the center of an old volcano. Vast quantities of bitumen are exported every year for use in road-making, yet the lake shows no signs of drying up. Fresh deposits are continually forming on the bed of the lake at a depth of about 130 feet.

It is considered by some of the noblest places in the world yet the bitumen forming the lake is sufficiently hard to allow of driving a horse and cart across it.

The lake area an area of some hundred acres, and is estimated to contain more than nine million tons of bitumen.

Seed Wheat For Russia

Thousand Bushels Of Canada Wheat Goes To Siberia

Sixteen thousand bushels of seed wheat, chiefly Garnet, from Swan River, Manitoba, was recently bought by the Soviet government for the districts standing in early wheat. According to information received from Noel Sievert, president of the Saskatchewan Registered Seed Growers' Association Farmers in the districts have received a satisfactory premium over commercial prices.

Mr. Sievert stated the association could have handled a larger order had field inspected seed been available.

Grain which is now stored in the Registered Seed elevator at Moose Jaw has been cleaned there and will go for February delivery at New York.

Some of the wheat was grown in Alberta.

Retaining Winter Moisture

Wheat Yield On Such Land Shows Big Increase

The Dominion Experimental Station at Swift Current has been experimenting with yields of wheat on stubble ploughed under against land left unploughed from running off, and has found an increase of 42 per cent in some cases where the water was retained by the standing stubble. Land left standing trapped the snow, and in the same study of cultivation, where the water was allowed to run off.

A common page of print may yield as many as 117,000 ems.

Scheme For Furthernace Of World Peace Is Advanced By A Toronto Resident

Proving Huge Success

Speaking Clock in Paris Brings In Huge Revenue

The recently installed "speaking clock" of the Paris telephone system is proving a huge success, the Ministry of Posts has announced. Every day it tells the time to an average of eleven thousand inquirers, incidentally bringing in a revenue of four million francs yearly, half of which goes to the State.

This recent clock can tell the time to thirty persons simultaneously. On Sundays and holidays the average rises to 6,000 an hour. The peak hour is around 8 in the morning, when hundreds of workers call for the exact time.

The mechanism of this clock is highly complicated, though for the subscriber it is a simple operation. Only "Odeon 36-00," states the Daily York Times Correspondent. Three strips of film, equipped with sound tracks, run each for the hour, minutes and seconds, are used. The strips are wound about a drum, which is driven by an electric motor controlled by a pendulum clock. A light, falling on the paper-wound drum, is reflected to a photoelectric cell which converts the varying bright and dark lines into electric impulses. The cell is connected with amplifiers and three loudspeakers, one of which announces the hour, another the minute and the third the second, always in the proper order.

When no one is calling the clock does not "talk." Everything is turned off until a telephone call comes, when the mechanism starts instantly to work.

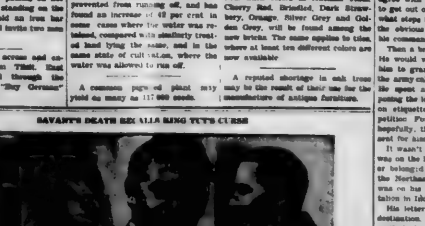
Britain In Color

Multi-Colored Rough Textures Britain Coming Into Use

Recent developments lead towards the use of multi-colored rough textures bricks, with emphasis on the color rather than the evenness of texture in the old methods of construction. Such fine colors as Autumn Tints, Cherry Red, Brindled, Dark Stourbery, Orange, Silver Grey and Golden Grey, will be found among the new bricks. The same applies to tiles. Many of these tiles are of a rough texture and are now available.

A reputed shortage in salt trees may be the result of their use for the manufacture of antique furniture.

SAVANT'S DEATH SEE ALLA KING TUT'S CURSE



CARNARVON AT ENTRANCE TO TUTANKHAMEN'S TOMB — HOWARD CARTER — LORD CARNARVON

The mysterious death of Dr. Arthur E. P. B. Weigall, noted author and Egyptologist in London, recalls the series of misfortunes that overtook those who were connected with the expedition which opened the tomb of King Tutankhamen, at Luxor, Egypt, more than a decade ago. Superstitious Britons, say the savant's death is proof that the curse, placed by the ancient Pharaoh on defilers of his tomb, is still working. While excavation work on the tomb was still in progress, Lord Carnarvon, financial backer of the expedition, died mysteriously. Soon after Howard Carter, leader of the expedition, was stricken, but recovered. The Hon. Reginald Wendell, Carnarvon's brother-in-law, died at the age of 39, and Lady Carnarvon was afflicted with a mysterious malady but recovered. Colonel Audrey Herbert, Carnarvon's half-brother, died, and many others whose connection with the

A Scheme For Furthernace Of World Peace Is Advanced By A Toronto Resident

A scheme for the furthernace of world peace has been advanced by a Toronto author, W.K. Dyer. The proposal, still in the early stages, is to develop a flag with the word "peace" emblazoned in deep black letters on a white oval, representing the universe, and placed on a sky blue background. The finished product would be known as the "World Peace Flag."

It is intended by the author to have the word translated into various languages and send prints to their respective countries. Already the word has been placed on ten different periods English covering the British Empire and the United States, German, Russian, Greek, French, Italian, Chinese Hebrew and Esperanto, the international language.

When the proposal has become concrete it is intended by the designer to have the peace flag submitted to the League of Nations for official approval action, and it has been stated the League of Nations society in Colorado Springs, U.S.A., would adopt the scheme when it is placed in their hands for discussion before submission to Geneva.

However Mr. Dyer does not believe his scheme has advanced to the stage of much success, and is endeavoring to have the world peace flag in as many languages as possible before taking a step in that direction.

The basis of the scheme, after it has been recognized, is to place the flags in the school rooms of the world as the meaning of "peace" may be impressed into the minds of future generations thus accepting the flag in a five verse song, termed "The Children's Song of Peace."

When the scheme would gain maturity, Mr. Dyer has not stated but he believes the next few months would see the proposal advanced much further.

Appeals To King George

Private Wanted Help To Get Out Of Army

Private Sean Lee, of the 2nd Battalion of the Northamptonshire Regiment was troubled. The army did not agree with him and he was anxious to get out of it, but he did not know what steps to take to get out and relish the obvious method of approaching his commanding officer.

Then a brain wave dawned on him. He would write to the King, asking him to grant his discharge on what the army calls compassionate grounds. He spent a considerable time composing the letter He consulted a book on etiquette and finally settled his petition For several days he waited hopefully, then one morning the C.O. sent for him

It wasn't long till Private Sean Lee was on the high seas, but he no longer belonged to the 2nd Battalion of the Northamptonshire Regiment He was on his way to join the 1st Battalion in Malta.

His letter to the King reached its destination, for His Majesty recently had to refer it to Private Lee a CO And Lee CO. after pondering, but firmly pointing out that privates are not addressed to Kings in the King, gave him some good advice which on reflection, he thankfully accepted.

Language Of The Bees

Accurate Knowledge Based Of Smell And Sound Established

Bees have a language of their own, according to Mrs L. Hingston of Hertfordshire, England. She is the Beekeepers Convention at Cheltenham that the bursars employed a kind of deaf and dumb alphabet. A bee that found an abundant source of honey returned to the hive and by dancing to his brothers and sisters informed the rest of the colony of his discovery If they failed to follow him, he opened a second glass on his back and waited the pleasure of them they might follow him.

Athlete Pessimist: "Your husband's a poor sailor, I believe"

Impressing Dittie "Indeed he's not he's a rich produce merchant"

WORLD HAPPENINGS BRIEFLY TOLD

The Turkish cabinet has definitely approved the new five-year plan to industrialize formerly agricultural Turkey.

The discovery of five new small planets between Mars and Jupiter was announced by Leo Algiers (No dewsley).

Dr Lachlan Gilchrist, professor of physics at the University of Toronto, was elected president of the Royal Astronomical Society of Canada at the society's annual meeting.

Two carloads of silk have been shipped from Wainwright, Alberta, to Harwich, Ont. This follows a similar shipment nine months ago to the Ontario Department of Game and Fisheries.

Efforts will be made by the agricultural committee of the Ontario legislature to bring about an inquiry by the Dominion and provincial governments into the operation of chemfeeds in Canada.

A new world's land plane speed record for a 1,000-kilometre (approximately 622 miles) course was set by the French pilot, M Maneyrol, who flew it in two hours, 47 minutes 33 seconds.

Canada was officially invited to participate in the next Olympic games at Berlin. The invitation was received by James G Merrick, of Toronto, member of the International Olympic Committee, for presentation to the Canadian Olympic Committee.

The University of Montreal (which has been in financial difficulties for several years), is the recipient of a gift of $100,000 from P. V. Reagor, Persian manufacturer. The sum is to be devoted chiefly to the medical laboratories of the university.

The winter of 1933-34 is considered by aviation companies to be the worst they have had since they started operating in the northland, according to Pilot Walter Gilbert, Canadian Airways. Through many causes, planes had to stay idle when there was plenty of work for them to do.

The Wheat Pool

From- Reported To Be Doing Her Part To Live Up To Agreement

France is doing her part to live up to the credit and letter of the wheat agreement, according to information reaching Hon M A MacPhers n who represented the prairie provinces at the world wheat conference in London, 1933.

Samples of the literature broadcast over France have reached Mr MacPherson. They include extremely large posters which urge the greater use of wheat and the limiting of the areas sown to wheat and particularly stress the importance of feeding wheat to livestock and poultry. Farmers are advised to mix one quarter wheat with each feed for a horse.

Prince Of Wales Sells Land

Proceeds To Go Toward Fund For Slum Clearance

Sale of 16 acres in Kensington, southwest London, belonging to the Prince of Wales' Duchy of Cornwall estate was announced in London, the proceeds to be devoted to slum clearance. The area borders the famous Oval, classic cricket-ground which however is unaffected.

The Duchy has a policy of never selling and the gesture came from the Prince of Wales himself, without which the Kensington clearance plans would have been materially hindered.

Improved Medical Discovery

Miss Pearl L. Moorman, 24, a native of the Ozark country, was acclaimed by the medical world for her major part in developing pullmotor-thorax, a method of quickly reviving a person from an unconscious state caused by an overdose of an anaesthetic, drowning, suffocation or accidental shock.

Mrs Jessie Thomas: "So you and your wife have been fighting again, Prisoner: "No, sir; she licked me this time."

Highway On Pacific Coast

Starting At Fairbanks, Would End At Buenos Aires

Longest single highway project ever undertaken, the 12,000-mile International Pacific Highway is reported to begin at Fairbanks, Alaska, follow down the Pacific Coast to Valparaiso, and terminate at Buenos Aires.

Semi- sections already are completed. Others are possible in Central America, most of the route has been surveyed.

From Mexico southward the road would be the same as the long-discussed Inter-American Highway. President Roosevelt has offered to finance the survey from Panama to Santiago, Chile if the governments concerned agree at a cost of probably $500,000.

The tremendous undertaking of a Pacific road was canvassed four years ago in Southern California. Since then, Frank Sherry Chandler, powerful western publisher, and Pyke Johnson of the National Automobile Chamber of Commerce have become identified with the plan. The Automobile club of Southern California has successfully mooted the route for nearly a month in Rotarian, having sent two motor caravans from Los Angeles.

Speakers of the road do not urge an overnight upsurge of primary highway construction from here to Cape Horn. But they have obtained pledges that the participating nations will lay out their road-building programs hereafter with a view to completing segments of the route as soon as possible.

Approximately 33 per cent. of the International Pacific Highway is an accomplished fact. The route from Hazelton, British Columbia, down the coast to San Diego and thence eastward to Nogales on the Mexican border, is a continuous stretch of 2,500 miles of primary highway.

Recipes For This Week

(By Betty Barclay)

TURNIP CHARTREUSE

1 large yellow turnip
2 potatoes.
2 egg yolks.
1 teaspoon sugar
Salt and pepper
Cream and egg

Wash, peel and quarter the turnip. Cook until tender in boiling salted water to which has been added one teaspoon sugar. Press through a sieve Peel and cook the potatoes separately. Mash until smooth. Combine three quarters of a cupful of the cooked turnip with one-half cup of the mashed potato. Add the two slightly beaten egg yolks. Cool. Form into small croquettes. Dip in cracker crumbs. Fry in deep fat. Drain on brown paper

YEAR-ROUND SALAD

1 package lemon or lime-flavored gelatin
1 pint boiling water
1 tablespoons vinegar.
½ teaspoon salt.
1 cup celery, finely cut.
1 pimento, finely cut.
1 tablespoon green pepper, finely chopped
½ cup cabbage, finely shredded.

Dissolve gelatin in boiling water. Add vinegar and salt. Chill. When slightly thickened, fold in remaining ingredients. Turn into individual molds. Chill until firm. Unmold. Garnish with mayonnaise Serves 6.

Employing Hand Labor

Employers in Argentina Try To Give Work to Many

Following the need of a cigarette manufacturer who has just removed from his factory all cigarette-making machines in order to give work to several hundred unemployed men and women, working-men's leaders in Buenos Aires, Argentina, are trying to enlarge the idea. They are starting campaigning to induce plant owners in many other industries to substitute hammer for machine labor and thus give employment to thousands of idle hands.

Two men doesn't like each other at once in a room where two women are whispering.

Save Has "Goods Day"

Customers in Medan, Dutch East Indies, Get Bargains

Customers of two department stores in Medan, Dutch East Indies, may get a cash refund for goods purchased on a certain day, the day chosen by lot. Under the new plan all purchases made during the month are recorded on a cash slip, a copy of which is given to the customer. On the first day of the following month slips representing each day are deposited in a container, from which one is drawn represents the "grabs day," and those who made purchases on that day are given their money back.

Iron Ships Are Cheaper

Like potatoes and tomatoes, rhinoceroses are cheaper. Frank Buck, who brings 'em back alive, has offered to sell the St. Louis zoo a young "rhino" for $5,000. About 10 years ago the price was $50,000 for choice specimens.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Opticien, Calgary

NO. 5—MYOPIA, OR "SHORT-SIGHTEDNESS"

As explained in Article No. 4 to obtain normal vision, the depth of the eyeball and the curvature of the Lens and Cornea needed be in exact relation to each other.

Should the depth be too great or the Lens or Cornea too convex then the focal point of the image will be the Vitreous Humor in front of the Retina instead of on the same Looked at after forming will spread and present to the Retina forming an enlarged but blurred image This is the Myopic condition, and unlike Hyperopia, nature does not provide any means of overcoming it.

The average Myope (Myope person) has no trouble at the reading distance, his trouble being poor distant vision. It is significant that Myopes usually indulge in outdoor sports or recreation but turn to books and study. The Germans as a nation are typical of this especially among the "intellectuals" who mostly account for their advancement in science. It is estimated that of all the refractive errors of the eye only six or seven per cent of people are Myopic.

Myopia may be congenital or acquired. It may be acquired by excessive close work especially during childhood, before the eyeball has reached its maturity. True Myopia will never improve and all that can be hoped for is that by wearing

SUNDAY SCHOOL LESSON

JANUARY 21

JESUS BEGINS HIS MINISTRY

Golden Text: "Repent ye; for the Kingdom of Heaven is at hand." Matthew 4:17.

Lesson Matthew 4:13-25.

Devotional Reading: Isaiah 61:1-6.

Explanations and Comments

(Copyright Bruce The Theologian- The Fourth Gospel, verse 13-16.— Most of the activities of Jesus in Judea, Chapters 1 to 3. From Judea He went first to Nazareth, but left that city (Luke 4 16-30) given the reason for Capernaum which lay on the road to Galilee in the midst of a densely populated region. Matthew wrote his Gospel especially for the Jews, and emphasizes them that Capernaum was in the borders of Zebulun and Naphtali, the two tribes who settled there in the Old Testament times, and tells them that this was foreshadowed by the saying of Isaiah (Isaiah prophet, verses 15 and 16. The people that sat in darkness in Galilee did in truth see a great light, for in Jesus was He, and the life was the light of men.

"When the gospel was first preached to the Gentiles of Northumbria, by Paulinus (as we read in Bede's History), King Edwin sat in Council with his chiefs and wise men to consult whether they should give up their idols and believe in the Lord Christ. One of the Councillors arose and spoke thus: "In winter, O King, when thou art sitting in thy hall at supper, with a great fire burning, and thy nobles and commanders around thee, sometimes a little bird flies through the hall, in at one window and out at another. The moment of the passage is sweet to him, for he feels neither cold nor tempest but it is gone and from the dark winter he commes into the dark winter again Such, O King, seems to me the short life of man; the we know not whence we came nor whither we go. If, therefore, this new doctrine can teach us anything certain let us embrace it." And so Edwin and his people came out of the dark winter of heathenism into the glorious light of the gospel, and became Christians, and destroyed their idols; just as the day on day had been done in Nazareth, and in many of the South Sea Islands. In our Saviour's own preaching is described: "The people who sat in darkness saw a great light; and to them that sat in the region and shadow of death, to them did light spring up."—E. R. Conder.

Women Suffragette Dies

Lesson Valuable Guide To Some Salaries If She Was Set

The late Elizabeth Knight, one of the pioneers of the women's suffrage movement in Britain, one of the first women doctors in England, left an estate of $1,260,000 It was discovered when the will was proved in court and a single man was among the beneficiaries.

Dr. Knight served prison terms twice for her suffrage activities, first in 1908 following a call she paid on the prime minister's residence at 10 Downing street, and again in 1914.

Extend Trade Treaty

Second Extension Is Arranged Between Canada And Germany

A second extension as from January 1, 1934 has been arranged between Canada and Germany for the trade treaty initially contracted a year ago, according to an announcement made at Ottawa recently. On January 1 last year Germany agreed to exempt Canadian goods from the "conventional tariff," or surtax, rates that were applicable to the products of countries which had not then negotiated commercial treaties with the Reich. This agreement terminated on March 31, 1933.

As from April 1, it was reserved that Canada, according to Germany the benefits of the intermediate tariff, in return for which that country granted Canada the "conventional" or treaty tariff on such commodities as normally were embraced with the "conventional tariff schedules." On other commodities Canada was granted the general tariff, with no application to any Canadian goods of the "general" rates. This agreement held until Dec. 31, 1933.

Watches Over London Parks

Woman Detective Visits Different Fines Every Day

A mysterious visitor known to the London park keepers as "The Watcher." Day after day she strolls into one or other of the London County Council parks or open spaces to sit knitting or reading, but always with an eye open for wrongdoers. She is a real one, sometimes employed by the London County Council who watches over the safety of women and children.

The mystery of her identity and the secrecy of her movements help her greatly in her work. Then anyone woman has a rota of parks to visit. Every day she is in a different place. If she sees any mischief she reports it to the park keeper's A watch is kept, evidence obtained, and the offender arrested.

Her rota is only broken when she has to investigate complaints made from any particular park. She also inspects the gymnasiums in the parks, the paddocks, and the children's playgrounds. Many mothers have come to be thankful for her vigilance.

Bad Nursery Slaps

Cries for help, uttered as he was being drawn slowly towards the roaring flames in the Toronto Terminal Heating Company furnace, brought rescuers who saved William Francis M. Ross from a terrible death by fire. Frank, shovelling coal, was stuck in the coal-feeding chute which led directly into the burning furnace.

The only thing civilization has learned to produce in sufficient quantity is table knife.

One of the moral stings of defeat is the sympathy that goes with it.

ST. LAWRENCE PROJECT IS UP FOR DISCUSSION

Ottawa, Ont.—If the United States congress followed President Roosevelt's suggestion and ratified the St. Lawrence waterways scheme, the treaty would come before the Canadian parliament this session for similar action. The understanding has been that Canadian ratification would be withheld until Washington had dealt with the treaty.

United States would bear most of the expenses of the international section, which Canada would bear the main burdens necessary in the Beauharnois and Lachine sections.

The international section would develop 2,000,000 horse power of electric energy, half going to each country The Canadian half would be distributed in the province of Ontario which would bear part of the cost of the hydro development

Toronto, Ont.—Opposition to the proposed St. Lawrence waterway appeared at the Great Lakes division section at ning of the National Association of Marine Engineers of Canada on convention here.

The proposed waterway was opposed "in its entirety" by Lee Orval Lakes division which term d the belief Toronto mans day would become an ocean port through construction of the waterway a "political dream."

Lift Restrictions

United States Government Moves To Enlarge Supply Of Liquor

Washington Lifting the restrictions on importations of American type whiskey for the days, the United States government moved to enlarge the supply of liquor, lower prices and rout the bootlegger.

What effect the order might have on the Canadian liquor business with the United States was not readily ascertainable. An American type whiskey has been flowing from Canadian distilleries into the republic outs de of any quota restriction, the order was taken to refer to countries other than the Dominion with such right types of liquor.

Next Eclipse Of Sun

Partial Shadow Will Cover Half Of Pacific In February

Northern Lights An eclipse of the sun "which ends the day before it begins" will cross the Pacific next month and astronomers observers of strictly appeal to stamnships to change course and head into this temporary night in the interest of science.

The partial shadow will cover nearly half the ocean. Just before sunset it will strike the west coast of Canada and the United States.

Find Headquarters Intact

Wellington, New Zealand Dr. Lincoln Ellsworth, leader of a proposed trans-Antarctic flight expedition, has arrived at Ice Bay of Whales, Antarctica, to find the Richard E. Byrd expedition headquarters established in 1928 intact. The report of his find was received here in a wireless message to the "Scar," supply ship of the present Byrd expedition to the Antarctic.

Prince To Visit South Africa

London, Eng.—Prince George has accepted an invitation to climb Table Mountain at Capetown with General Jan Smuts, he announced at a dinner in his honor. In connection with the forthcoming visit to South Africa, his royal highness said he anticipated an enjoyable instructive tour, with good golf in the invigorating South African air.

Altered Sister

Washington. Emma Goldman, deported to Russia in 1919 as an anarchist and who was recently in Toronto, was given permission by the Labor Department to enter the United States for not longer than 90 days.

Employment in Finland is much greater than a year ago.

Chicago Milk Strike

Government Move Terminates Struggle Of Farmers

Chicago. Ten Chicago milk strike was ended as the United States government moved toward stern interference against interference with interstate shipments and with the United States Senate.

Settlement of the strike was in the form of a truce signed by representatives of the farmers, the big Chicago dairies, and even the lodge minor dairies, which in the past have refused to guarantee any minimum price to producers.

Under the terms of the truce a mediation board of three members, one from the distributors, one from the farmers, and a third to be selected by the first two, will be named, to agree on a fair price to be paid farmers.

When the embargo ended there was but a drop of milk for sale in Chicago stores, four hundred well small children could obtain none, and hospitals, asylums and institutions were threatened

Safety Of Missionaries

Reassurance Regarding Safety Of Americans In China Is Received

Hong Kong, China Reassurance regarding the safety of six American missionaries trapped in the Fukien province fighting zone was contained in a report that Nationalist forces will not attack Foochow, the provincial capital and centre of anti-Nationalist revolt.

The missionaries were isolated when the Nanking regulars and rebel forces engaged in fierce fighting near Ihsien, about 100 miles from Foochow, and disrupted communication facilities made contact with them impossible during the last 10 days.

After a relentless offensive that reportedly brought Lonza to within 25 miles of Foochow, Nationalist units were said to have abandoned the idea of bombing Foochow, hoping that the threat would bring the capital forces to capitulate to avoid great property damage.

Gold Seekers Stranded

Exp ition Meets With Sliver Accident In British Guiana

New York. Associates of William La Varre, head of an expedition exploring the headwaters of the Essequibo River, deep in the jungles of British Guiana, were informed by cablegram of a river accident that cost the explorers their 54-foot canoe and all their supplies.

The accident occurred in the Rupunni River, leaving the expedition stranded from civilization. La Varre had discovered indications of rich gold and diamond fields in a region that may prove to be one of the world's greatest sources of such treasure.

Monument To Explorer

St. John, N.B. The province of New Brunswick has sold $799,000 in 20-year 5 per cent. bonds, at 99.01, to a syndicate composed of the Bank of Montreal, Royal Bank of Canada, R. E. Amos & Co., Ltd., Wood, Gundy & Co., Ltd., Eastern Securities, Ltd., Nesbitt, Thomson & Company, Limited, Canada, according to an announcement made by Premier L. P. D. Tilley. The issue was made for the purpose of refunding debentures maturing in 1934.

Free Industry Dispute

Regina, Sask Only eight industrial disputes occurred in Saskatchewan in 1933, states a report of the Department of Railways, Labor and Industries. They affected 304 employees and 37 employers. Total time lost was 4,101 man-work days. Trades involved were coal miners, painters, plasterers, and motion picture projectionists.

Fix'd Grain Shortage

Barrie, Ont.—Shortage of feed grain has become so acute in Lambton county, Ontario, that farmers fear they will have to draw from their seed grain reserves. Feed grain crops were poor last year and with most of the winter feeding still to come it is certain feed will have to be imported.

CELEBRATES BIRTHDAY

Sir William Mulock K.C.M.G., Chief Justice of Ontario, who celebrates his 84th birthday in January

Attains Ambition

Girl Who Worked in Burned Flelds Soon Convert Artist

Toronto. Out From obscurity in a restaurant to a highly paid concert artist is the story of Anka Meyer-Schmidt, a [illegible] Canadian born she was granted naturalization papers and it was then revealed the hardships the young woman fought in western Canada to obtain art education.

In the west the young Swedish maid found herself in need of money. She donned men's clothing and worked in the harvest fields Finally she reached Winnipeg in a box car and started her dishwashing career for a time.

She searched for a while on reaching Toronto in a hat and dress store, but she beat the job There in Montreal to return to dishwashing.

One day at a party her voice attracted a concert manager. Now Anka is singing for a living.

Russian Trade Agreement

Soviets Will Purchase Large Quantities Of French Products

Paris. France Soviet Russia agreed to buy $17,000,000 worth of French products within the next year in a commercial agreement which was prepared for signature.

In exchange France is to grant long credit and a minimum tariff on Russian products not competing with the French in case competition may be the Canadian Prime Minister stand Australia had no intention of new naval building They pointed out that impose quotas on such products

France's exports to Russia are to amount to [illegible] the agreement as reported [illegible] than $3,200,000 worth of products to Russia in 1933.

THRILLS AT THE CHRISTMAS CIRCUS AT THE OLYMPIA

Every Christmas thousands of Londoners flock to the Olympia to see the famous annual circus, and this year the circus again proved the most popular of the Yuletide entertainments in the British Capital. Our picture, taken during the performances, shows the Madrano Sisters, in their wonderful apparatus act. This is their first appearance in England.

Continue Drive For Highway

Action On Road From The Pas Is Urged

The Pas Men Continuing their drive for action on The Pas Highway connecting with the cities of the plains, civic organizations of The Pas and Cranberry Portage united to put their case before Premier John Bracken of Manitoba

The Pas Board of Trade wired Premier Bracken asking if the proposed road had been placed on the provincial programme and before the federal government for consideration in anticipated public works schemes to go into effect next spring.

Premier Bracken answered as follows

The Dominion Government has not requested us to submit a program of provincial works, nevertheless a program has been prepared of works suggested by various communities which list includes The Pas Highway among provincial works"

The members decided the premier's wire was ambiguous and drafted another asking whether or not The Pas Highway would be on the list sent to Ottawa At the same time Cranberry Portage representatives sent similar wires.

Bread Control Law

Legislation Governing Selling Of Bread in Alberta To Be Introduced

Edmonton, Alberta Legislation to control the production and selling of bread in Alberta is likely to be introduced at the coming session of the legislature, Premier Brownlee and members of an government were assured by a delegation of master bakers for an act covering production, cost price control will probably be added to the government on its own initiative.

That the province should have a Bread Act similar to those in Saskatchewan, British Columbia, and Ontario was the request put forward by the delegation.

No Navy Building

Australia Has No Intention Of Embarking On Construction Program

London, Eng. Australia, like Canada, has no intention of embarking on a program of new naval construction.

Rounding out a review of Empire naval policy authoritative Australian sources in London, in response to enquiry by the Canadian Press, stated Australia had no intention of new naval building They pointed out that the present strength of the fleet was adequate for the present time. No orders and no appropriations for any other vessels.

DEBT PROBLEM STANDING IN WAY OF RECOVERY

Ottawa, Ont.—Readjustment of international debt was an essential prerequisite to world economic stability, Hon. H. H. Stevens, Minister of Trade and Commerce, told the University Club here.

"But," the minister continued, "equally important is that the weight of internal debts be lightened by the lowering of interest rates and by extending the term of payment In some cases actual forgiving of debt is necessary."

Canada's chief concern was how to secure for the farmer producer a fair return for his efforts. "We know he cannot pay his debt at present prices"

Mr. Stevens favored the remonetization of silver "I hold its view that an international exchange based on currency with a metallic backing is the most secure, that is, a currency based on silver and gold. Such has been known and understood by all peoples of the world from time immemorial."

Speaking of lessons from the depression, one thing was clear and that was that problems whose cure, true, or three years ago we could not see, or mystery were today clearly discernible, if not yet actually solved, the trade minister said. "Where formerly there was only obscurity and fear we now know what it is we have to face. What had been deemed eternal verities immovable have crumbled and fallen."

In the realm of finance, one other another the great nations of the world had abandoned the gold standard, he said.

What was to be done " One economist suggested a bankers' holiday, another a commodity dollar, a third an international exchange based on the quantity of primary products. While others urged return to basis of silver One man opinion was as good as another He held the view for remonetization of silver.

We have also learned that the paradox of poverty amid plenty is not only possible, but terribly real," said Mr Stevens.

Fair Pay For Teachers

Alberta Government To Take Action In The Matter

Edmonton, Alberta — Action is proposed by the provincial government to ensure fair and equitable settlement of disputes between school boards and teachers Premier Brownlee told a delegation from the Alberta section of the Canadian Labor Party.

The Premier stated that the Minister of Education and himself were working on a draft of legislation dealing with the formation of a board of reference and it was hoped that Lieg would be acceptable to all cons.

Wins For Second Time

Edmonton, Alberta. - Championship for the best bird in the provincial poultry show here was awarded to a brown turkey shown by Mrs Frank Hoocher, Carr, the bird that was best poultry in the recent Royal Winter Fair in Toronto Reserve championship honors on the best bird in the show here went to Mrs. Wm. Cox of Chilliwack B.C., on big champion B.C. Rhode Island Red.

Dance Tours Barred

Montreal Que Eight of the latest dance tunes will not be heard over the air, at least from station CFCH in Montreal. Mr Justice Frank Curran having granted an interim injunction to the Canadian Performing Rights Society against the Canadian Radio Broadcasting Commission operators of the station.

Wheat For Horses

Calgary, Alberta. Ten thousand bushels of farmers wheat stored in the Olds district, have been shipped to Russia apparently for seed purposes, according to an announcement by the Alberta wheat pool This was part of a total shipment of 16 000 bushels, which will be loaded out of Nov. Vessels during the present month.

One Hundred Bulletins

United States Government Receiving Wireless Press Bulletins

It seems almost too good to be true, yet a dispatch from Washington says that the Federal Government at last is going to do something about bulletins.

Wherever possible, the Postal Works Administration is going to see that roads constructed with federal money are built on 150-foot right-of-ways, so that trees and enlarged motoring watch exist may be kept and new screening may be planted where it does not exist. Driving along many roads of the future, our eyes will rest on cool, green foliage, never let depressed, tall pines or eucalyptus and not nauseate's blasting bid for our money.

These wider right-of-ways will provide room for telephone where poles-trains may walk to safety as well. Planned on either side, they will protect the road from and erosion as well as sheltering it from heat and cold.

More fundamental reforms than this are looming from Washington, but few which fill us with greater satisfaction. Nelson, Mont., Independent.

Stories Of Lucky Days

Robert Meade To Complete History Of Old Towns In The West

Many fine stories of the early days in the west are being neglected. These persons who might recall stirring instances of the "olden golden days" in Saskatchewan and Alberta are leaving the stage of life. The northern Alberta pioneers and Old Timers' Association is, as a result, making arrangements to compile a history of the days when Edmonton was a sleeping fur-trading fort, a village and then a thriving town.

"This year," the president said, "we should visit the oldest pioneer in each district, for instance starting in Clover Bar, then into Lac Sturgeon and so on. All of the incidents should be combined into a book. It's well worth our time and any expenditure necessary."

Food And Fodder Relief

Saskatchewan Response Large Quantities Per Rural Areas

Relief to the livestock population of Saskatchewan runs into 1,500,000 bushels of oats, 1,500,000 bushels of barley, 3,000 tons of fodder and 150,000 bushels of wheat, according to information given by C. B. Daniel, general manager of the Saskatchewan relief commission. In addition to this, there have been substantial transfers of feed and fodder made locally.

Mr. Daniel states also that the commission was making provision for immediate supply of feed and fodder due to be on hand in the spring to make possible the expedient handling of the spring operations. No useless or starting reports of horses dying were evident, he said.

Performs Kindly Service

Toronto Woman Sends Envoy Thirty Ten Miles Through The Heath

A Toronto woman who lives near a market garden, which produces every herbs, has been drying and canning up small parcels to go to women in the north who can never get the real Canadian flavor of marjoram and sage and summer savory, but must rely on the occasional tin of herbs which comes their way and savory, "I tell him a pioneer mother," the plant-therapist declared. "So they must have grown over their storing of herbs in old days."

A Valentine Prisoner

A wild partridge having discovered that it can obtain food without difficulty there has become a voluntary prisoner in one of Charlebois's flat, outside Quebec. This is an exceptional case, according to the Canada game department of the Canadian National Railways, which points out that the partridge, being a very thin d bird, generally shuns population.

For the first ten months of this year 33,564,627 pounds of branded beef were sold in Canada, an increase of 7,710,420 pounds on the 1928 corresponding period.

"The Editor Regrets"

Record Of Rejecting Manuscripts Probably The Same In Time

Many people submit articles and "poems" to editors, often for no other reason than the hope of seeing their brain children in print, and in most cases the manuscripts are returned with a formal slip to the effect that "the editor regrets" the article is not suitable for the paper, or that there are too many of that kind in hand at present.

In Victorian time's editors were more profuse in their remarks than they are now. Some of the best instances, Charles Dickens, who was editor of Household Words, soothed the feeling of forty-two ladies and eleven gentlemen who sent him poems on the opening of the Exhibition in Hyde Park, London:

"The Conductor of Household Words presents his compliments to the forty-two ladies who, during the week which ended on the 6th instant, were as good as to forward epic, didactic, didtravisable, and lyrical poems, on the occasion of the Great Exhibition in Hyde Park and beg to assure them that a conscientious perusal of all their communications has produced a result which will, he trusts, be quite unanent to the pleasure of conveying their communications separately. The editor regrets that he have obliged him with copies of verses on the same subject will also, perhaps accept this general acknowledgment of their poetic zeal. The result will, he fears, prove unsatisfactory to all parties; for, to the religion of persons, he has never to add the pain of retention. Not one of the forty-three productions has he been able to print, with the slightest hope of gratifying its readers."

But what Mr. Dickens most likely said was: "Boy, carry this trips and this dustbin, and paperbag can."—St. Thomas Times-Journal.

Hooking Turkeys In Winter

Plans Chosen Should Have No Cost-ended Space For Birds

Turkeys should be wintered where they are expected to lay in the spring. Housed during the winter months in such a place as a straw-barn, they have a very fine chance to make their nests in unwanted places, due to the'r wild instinct, and if some provision is not made for them to make their nests of the eggs may be lost or destroyed by predatory animals. About the time when the hen starts to bring consciousness of the need for food, nests can easily be constructed with boards of one inch material, eight to twelve inches wide and three feet long, making a square frame.

Mrs. (to husband driver)—Sherly, dee dalliest. Or most my mother-in-law at the trath.

Driver—O.K. Put suppose I miss her, or she doesn't come?

Mrs.—Then I'll give you ten dollars.

Sale Has High Record

Alberta's Dairy Industry Shows Record Value Of $800,000

Nearly a million dollars more in value of production than in the preceding year is the record of the Alberta's dairy industry for 1928.

A preliminary estimate of the dairy branch of the Department of Agriculture at the end of the year gives 32,750,000 pounds of creamery butter as the approximate output of 86 creameries. This is some 300,000 pounds increase over 1927, and with a price of about one cent a pound better through the year the total value is put at $12,775,000, a gain of $800,000 in butter alone.

Dairy Commissioner of Alberta, as represented in these figures made last year a new high record in the province. A large part of the production going to British Columbia markets.

Cannot Wheat

Confined Of Registered Seed Held At Ottawa

In charge at the government elevator in Edmonton in the only carload of Garnet wheat, from field inspected crops, in all Canada. What is more, it is, as far as is known, the only lot of registered Garnet seed wheat in the world. The Alberta Department of Agriculture says that this holding if pending decision of the government as to what shall be done with it or what method of distribution shall be adopted.

"And so," said the applicants severely, "this is the fifth picture you have knocked down this year?"

"Pardon me," said the girl meekly, with dignity, "the fourth. One of them was the same peanut twice.

Intelligence And Humble Work

Wrong Opinions Held Regarding Relative Values

Some fallacious ideas prevalent regarding the value of a high school education, the danger of nationalism in education and of other "isms" now so glaring were discussed by Miss C. I. Mackenzie, principal of the high school for girls, in an address before the women's guild of Christ Church Cathedral, Montreal.

As an example of a high school education not properly fitting a pupil to adjust herself to her environment, Miss Mackenzie cited the case of a girl who finished her course and obtained a job as a stenographer and sit on a chair in a fine office in a large city in the world.

"Although she will be working a machine every bit as mechanically as her sister in a factory, yet she feels she will have reached a higher social standing by being on the office staff and to bridge this social gulf she goes to high school, this does not want any of the cultural offerings opened before her. When a degree, I assume her ambition will be to be a stenographer and sit on a chair in a fine office in a large city in the world.

"Although she will be working a machine every bit as mechanically as her sister in a factory, yet she feels she will have reached a higher social standing by being on the office staff and to bridge this social gulf she goes to high school. She does not want any of the cultural offerings opened before her. When a degree, I assume her ambition will be to be a stenographer and sit on a chair in a fine office in a large city in the world.

"What we lack," said Miss Mackenzie, "is the young man or woman of the Ph.D. intelligence applied to the manufacturing or handling of the raw strunk dumb with admiration at the perfection of the work done by a master-artist, whether it be scrubbing, surgery or statesmanship. Not very few things we do the perfect marriage of the man to his job."

Animals In 5th Inland National Park

According to a recent count of the animals in 6th Inland National Park, Alberta, as reported by the Department of the Interior there are 1184 buffalo within this area; 473 elk; 393 moose, and 303 mule deer.

A Chain Of Lods

Life Of Average Farmer In Seven Very Busy

In his address to the Canadian Society of Technical Agriculturist at Ottawa, Sir H. John Russell, director of Rothamsted Experimental Station in England said that even "with all the help of science and the kindly office of well wishers, life can never be made entirely easy for the average farmer. He may be protected by quotas and tariffs and helped by scientific advice; as much as you like, but he must always take risks. It is usually a choice of evils, and he has to decide between one or more courses of action, neither of which he would choose to take, but he has got to do it.

"The farmer's life is well illustrated by an incident I once met with in the west of England. There was a great stir because a lady of seventy was going to marry a gentleman of seventy-one. But the matter was explained simply by one of her neighbors 'The winter is coming on,' said she, 'and the pair has to get in for fuel, and the potatoes have to be lifted and brought in, it was a case of either marrying a husband or buying a donkey.' Well, that is very much the farmers situation. He is called upon to choose between two courses, neither of which is exactly what he would like to do. Our job as agricultural experts is to give him more data and advice, to try to make the various possibilities better for him, and the decision between them more easy."

The Most Useful Drug

Lord Dawson Thinks First Place Goes To Morphia

So far as I have observed no reviewer of Lord Riddell's Peace Conference diary has quoted what seems to me one of the most interesting conversations recorded there Mr. Lloyd George curiously asked Lord Dawson what drug he would choose if he were only allowed one out of the whole pharmacopoeia. His answer, "Morphia," seems surprising. Not aspirin, not morphia, I take it, is a purely sedative and not a curative, agent. But, as the first doctor on whom I tried the question said "Opium," which seems to the same thing. Well, suppose we had three drugs, the Prime Minister pursued. Ah, said Lord Dawson, that would be more difficult; but taking a world-view he would put quinine second, and as to the third place hesitate between mercury, digitalis and arsenic.—London Spectator.

Wheat Still In Work

Young Agriculturists Receive Wheat Samples From Home Yards

Herman Trelle, "The Wizard of Wheatley" and holder of the world's champion grain growers, may have been debarred from competing for another world's title at Chicago this year, having won the supreme honor three times in a row, but his heart is still wholly in the work of improving the strength of wheat and oats and other grains in Peace River.

At a banquet tendered by the Canada Pacific Board of Trade to qualified agriculturists who are members of clubs for seed growers, calf and swine breeders and kindred growers, Mr. Trelle presented to the junior clubs a dozen packages of type samples of wheat and oats and announced that he would present a sample to every member writing for them.

Tread Like Camel's Foot

Now The Invented For Cars Crossing Roads In Desert

An automobile tire with the tread of a camel's foot has been invented for use in the Sahara Desert. It puts the same amount of tech on the sand as does the foot of the "ship of the desert," having a nine-inch tread with an area of only 13 pounds. Cars so equipped cross the desert at thirty-five miles an hour. In recent tests desert police were able to overtake five men who were smuggling drugs by camel.

The governor of Craigiochie; prison, of Aberdeen, Scotland, recently suggested that there would be larger church congregations if women and men by their minds met to worry a man, unless he belonged to a search

Couples that rack the whole system—there's a job for SCOTT'S EMULSION OF COD LIVER OIL 14-28

SCOTT'S EMULSION RICH IN VITAMINS

OCCASIONAL WIFE

By EDNA ROSS WEBSTER

Author of "Jeretta," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and well to do, marry secretly deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model and Guy Mason, his former room-mate with whom he has quarreled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a ranked to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them.

(No Go On With The Story)

CHAPTER XXVI

Avis' surprise and consternation over her discovery of Peter and Camilla on the beach in the early morning were no less than Camilla's. The first light of dawn cast grotesque shadows on the four there that stared at each other while their conglomerate thoughts made hasty adjustments and conclusions.

The pallor of fatigue and faded make-up gave to Avis the haggard appearance of a much older woman; while even in the dim light, Camilla's vivid beauty gleamed like the promise of sunrise in the sky. She met Avis' accusing, triumphant, angry gaze with a half smile, as if the situation amused her.

All four of them appeared ridiculous enough, for there is no light more merciless than that of the first of the early dawn and there is nothing that so leaves its stamp upon the features as the night abused at day.

Avis' condemning hauteur increased. "So, this is where our hostess spent the night!" her words hissed with scathing emphasis.

Camilla dismissed all effort at self-defense. "I bents spending the night where you were. Did you just get back? Peter and I were waiting for you, but we didn't think you would stay in town all night. We must have dropped at sleep." She had scrambled to her feet and was shaking the sand from her bobbin evening dress.

"I should think you did waiting for us!" Avis sneered, and turned to Terry with a scornful appreciation of laughter.

Terry shifted his weight uneasily and fled to another avoided Camilla's eyes and looked at Peter.

Peter's jaw was set hard in the expression which Camilla knew denoted his serious concern. Both had forced the issue he was dreading. Perhaps it was best, after all. He looked at Camilla and met her little. They certainly did not look guilty culprits. Avis was thinking with surprise: "I wouldn't say any thing more now," he advised quietly. "I had better get you up to the house she suggested, very regal and at all perturbed.

Avis looked at her queerly. She was willing to go the limit for love by modern social conventions, but Camilla's nonchalance in the face of such evidence as this astounded her. The four turned and plodded through the sand in silence single file, a decidedly little procession. The waves lapped the shore as if in gentle sympathy.

The girls mounted the steps that led to the lawn of Camilla's home and Avis leading. The two stopped before a light cigarettes.

"Well?" Terry inquired under his breath holding her lighter for Peter.

Sorry we went to look for you last night," What are you going to do about it?"

Peter inhaled and exhaled the smoke slowly. "Whatever Camilla decides," he said and started up the steps.

"I can't see fit it" suggested Camilla's guests with their own personalities. When the rest of the members of the party go to a ranked to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them.

Little Helps For This Week

"The Lord is good, a strong-hold in the day of trouble; and He knoweth them that trust in Him."—Nahum 1:7.

Leave God to order all thy ways, And hope in Him whate'er betide Thou'lt find Him in the evil days Thy all sufficient strength and guide Who trusts in God's unchanging love Builds on the rock that cannot move

Our whole trouble in our lot in this world rises from the disagreement of our mind therewith Let the mind be brought to the lot and the whole result is instantly hushed; let it be kept in that disposition and the same shall stand at ease in his affliction like a rock unmoved when the waters beat upon it T Boston

How does our will become sanctified? By conforming itself unreservedly to that of God. We will all that He wills, and will nothing that He does not will we attach our feeble will to that all-powerful will that performs everything. Then nothing can ever come to pass against our will, for nothing can happen save what God wills, and we find in His omnipotence the unalterable course of peace and consolation —Fenelon.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile

—No Calomel necessary

Are you so tired, sluggish, headachy, constipated and miserable that life seems not worth while? Then your liver bile is probably at fault. Don't dose yourself with salts, calomel or purgative pills. Just get a 25c bottle of Dr. Edwards' Olive Tablets and take as directed. Then see how much better you feel. Dr. Edwards' Olive Tablets are a purely vegetable compound of proven worth. They act on the liver like Nature's own remedy. Don't be persuaded to take anything else. Insist on Dr. Edwards' Olive Tablets. 30 tablets 25c.

Peter, aged six, was given two-pence and had been forbidden to buy a water-pistol.

"What happens if I do buy a water-pistol Mummy?"

"You will have a good smacking and be put straight to bed."

"Yes, I know all about that, but whose water-pistol will it be when I get up?"

May Be Slight Variation

Figures Regarding Speed Of Light Are Fairly Accurate

The speed of light is placed at 299,774 kilometres or 186,271 miles per second, in a new estimate made at Pasadena, Cal. Dr Walter S. Adams, director of the Carnegie Institution's Mount Wilson Observatory, said in announcing the new figure that it was not absolute, but that the final computation which will be completed in about six months, would not vary much more than two kilometres from it. The new value is 13 miles per second slower than that reached by the late Dr Albert A. Michelson in 1927 after he had flashed light beams with mirrors from Mount Wilson to another nearby peak

THE RHYMING OPTIMIST

By Alice Michaelis

TO SING ANEW

Song must come welling
From out the heart,
There's no compelling
Glad notes to start.

Lyrics must bubble
Like Limpid streams.
No sigh to trouble
Their shining dreams.

No carols cover
A spirit's mona,
Quick ears discover
Pain's cadence.

So you, when bringing
Gladness again,
Set my lips singing
Their old refrain.

Yes, you have taught me
To sing anew,
Dear, since you brought me
Joys deep and true!

LOCAL NEWS

Mr. Dave Roberts is attending the U.F.A. Convention in Edmonton today.

******

A meeting of the A.Y.P.A. was held last Thursday evening at Mrs. W. G. Taylor's. The Edmonton Central Committee, consisting of Mr. A. Patton, Mr. R. S. Williams, Miss M. Leggett and Mr. D. Simms, were present for the annual election of officers.

During the business part of the evening it was decided that the A. Y.P.A. should hold a dance on Feb. 8th, 1934. After arrangements were made for attending the A.Y.P.A. rally to be held in Edmonton on Feb. 2-4, 1934.

The election of officers took place. The old slate were returned complete, and were duly installed by Mr. Patton. They are as follow were: President, Bill Roberts.
Vice-President, D. McLellan.
Secretary, Peggy Graham.
Treasurer, G. Taylor.

The members wrestled with the answers to a couple of contests; then all gathered around the table for refreshments. After this a delightful lunch was served and the members departed for home, all having enjoyed a pleasant evening.

OLD-TIMER OF THE DISTRICT BURIED IN PAYNTON, SASK.

Word has been received here of the death at Paynton, Sask., of Alexandra Hunter Murray Setter, brother of Colin Setter, Winnipeg. Mr. Setter was born in Manitoba, and moved to Battleford in 1882, but had resided at Paynton for a number of years.

The late Mr. Setter was one of the many old-timers who resided in Fort Saskatchewan for a number of years in the district long before the advent of the Railroad. One of his many activities being conducting the mail stage once into Sedgy to and from Edmonton.

Many old-timers of the Fort District will regret the passing of Mr. Setter.

He is survived by his widow and three sons, Archie, Paynton postmaster; Hall, Saskatoon; and George, Paynton; four daughters, Mrs. Chas. Stewart and Mrs. Geneva, Edmonton; Mrs. Wm. Smith's Falls, Ont.; and Mrs. J. Schrick, Unity, Sask.; also two brothers, Colin, Winnipeg; and Hall Setter, Bend, Man. He was a brother of Mrs. John Norquay, wife of Manitoba's fifth premier, who died last October.

The funeral service was conducted at Christ Church, Jan.8, by Rev. W. H. Walton, assisted by Canon Gibbon, an old friend of the family, who read the address. Pall bearers were, George Wyatt, Angus Chisholm, Edwin Taylor, Cuthbert Taylor, J. W. Douglas and Fred Harris.

VOL. 12 ? 35 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, JAN. 24th, 1934 $2.00 PER YEAR IN ADVANCE

Last Meeting of Present Town Council Held

A regular meeting of the Council of the Town of Fort Saskatchewan was held in the Secretary's Office on Wednesday the 17th. Instant at 8 o'clock. Present Mayor Montgomery Councillors Fillmore, Magor and Neale.

The minutes of the meeting held on the 3rd January were read and adopted.

An application from Ed. Barnett for permission to install a gasoline dispensing pump at the curb near his premises on Railway Ave. was approved.

Albert Jacobs appeared before the Council regarding his request to buy the house on lot 22 block 5 (the house lately occupied by the Jacobs family), to be used as a Welding shop. After being discussed at length a motion was passed authorizing the sale of the house and lot to Albert Jacobs for $300.00 cash.

A resolution was passed That J. Ritchie, the Sec.-Treas. of the Town of Fort Saskatchewan do deposit in the name of the Town in the Royal Bank of Canada all moneys received on account of the said Town. That all cheques etc., payable to the order of the said Town be endorsed by the said Sec.-Treas. thereof or by rubber stamp for deposit in the Royal Bank to the credit of the said Town. That all cheques of the said Town be drawn in the name of the Town and signed by the Mayor G. T. Montgomery and countersigned by the Sec.-Treas. J. Ritchie. That the usual receipts for cheques returned and the certificate of balances be signed on behalf of the Town by the said Sec.-Treas. thereof.

A By-law was passed appointing James Ritchie, Secretary-Treasurer, to be Returning Officer for the next Municipal Elections.

Two appointees in connection with Relief Settlement Plan 1932 received, but were not approved by Council.

The Council authorized the purchase of flash-light coils to be used by the Town Constable while going same on the business of the Town.

Dog tags for the year 1934 can now be had at the Town Hall by dog owners, and the Town Constable was instructed to enforce the Dog By-law in this connection.

19 Years Ago Today

Thursday, January 27th, 1916

Yorkville Methodist Congregation voted unanimously last week to unite with the Fort Congregation. A formal welcome will be held.

On Thursday evening last, a large number of young people enjoyed the hospitality of the manse in honor of Miss Telford, who left on Sunday night with Mrs. Sutherland and family for their home in Bendorth, Ont.

Hiram Whitson is building a fine barn at Partridge Hills.

Daniel Sibbs will serve six months for breaking and entering A. L'Abbe's harness shop and R. E. Staples fruit store. He was captured by Mounties on Monday.

BLACK GRANITE FOUND NEAR LOCH KATRINE

An important deposit of black granite has been uncovered near Loch Katrine on the border line between Antigonish and Guysborough Counties, Nova Scotia, according to information received by the natural resources department of the Canadian National Railways. The deposit covers a wide area and the stone is of good quality. As black granite has always been imported into Canada from Sweden it is believed that there will be a large and ready market for the local product for the marketing of which plans are now being made by a Nova Scotia syndicate.

CATTLE DISEASE PREVALENT

In some districts in the province there is prevalence of the diseases in cattle known as hemorrhagic septicemia, or shark yard fever, according to the provincial veterinarian, who warns owners of cattle to be on the look-out for symptoms of pneumonia or digestive disorders, and to take necessary steps at once to deal with it.

LOCAL POLICE COURT

At a preliminary hearing in the local court yesterday Chester W. McPherson was remanded for week, and admitted to bail, on the charge of stealing barley from field grazing on Herbert Todd on the W½ of River Lot 5.

Rebekahs and Oddfellows Hold Grand Dance

The Fort Rebekah Lodge and the Fort Oddfellows Lodge held a very successful dance in the Fort Dominion Hall last Friday evening.

The hall was suitably decorated for the occasion, and a large number enjoyed dancing until the early hours.

At midnight tasty refreshments were served by the Rebekahs.

Peppy Pals orchestra supplied the music for dancing, which consisted of modern and old-time dances.

People representing every district and town between Edmonton and Lamont were in attendance.

HOCKEY

The Fort Senior Hockey team invaded Bruderheim Monday night playing an exhibition game, the final results being 4 to 0 in favor of the Fort boys.

The game was well contested. Fast and brilliant stick handling was the outstanding feature. The successful goal getters were: Rensburgh 2, Gauf 1, and Karvan1.

A number of spectators accompanied the team and all report welcoming a very good game.

The line-up was as follows:: Pocock, Rensburgh, Gauf, Hatton, Karvan, Connelly, Fintoff, Lemoureux.

******

Fort Junior Hockey team journied to Edmonton over the week-end and played a friendly game with the Edmonton Jesuit College team.

The locals lacked punch and could not seem to click on their plays, therefore were to the College boys to a 6 to 1 score.

Four cars of players and their supporters motored to the city and all report having a fine time.

The Town of Fort Saskatchewan Financial report appears in the middle section of this paper.

Any local merchant who is not advertising in this paper has nobody that he can recommend.

Under a new Australian ruling all canned salmon imported into the commonwealth after August 31, 1934, must bear a definite indication of the particular species of salmon contained in each tin. British Columbia salmon, which goes to Australia in large quantities, already satisfies this requirement for under a regulation brought into effect last April the name must be marked in prescribed manner to indicate what variety of salmon each can holds.

Wife: So you think my new hall gown looks like the same?

Hub: In a card room, my dear. The dress, you know, is the lowest possible cut.

Fort Band Holds First Practice Monday Night

A large number turned out for the first practise of the newly organized Fort Band Monday evening.

A few minutes were taken up with business, when further arrangements were made for the Benefit dance to be held in the Dominion Hall on Friday, Feb. 2nd.

It was suggested that there might be a number of visitors who would like to donate refreshments to help the band out, if so, the Secretary would be pleased to hear from them.

The entire proceeds will be used to buy band instruments and music.

The ticket committee have the tickets and are out to get a record sale.

The business being finished, a short practice took place. The Band Master and Band Manager seemed quite pleased with the results of the first practice.

Remember this is a Community enterprise, so give your part by attending the Benefit Dance on Feb. 2nd.

"Canada 1934"

A copy of the 1934 edition of the official annual handbook dealing, in concise and handy form, with present conditions and recent progress in the Dominion has come to this office.

The publication opens with a foreword by the Hon. H. H. Stevens; also touches on the world situation as it affects Canada.

The book is designed to give a concise but well-rounded picture of the current Canadian situation to those at home and abroad, and to provide a better basis of information for the discussion of Canadian affairs generally and in particular for dealing with the business problems of 1934. It is freely illustrated.

Throughout the handbook the latest available information is included in each section, the figures in many cases extending to the end of 1933.

Ex-Fort Hockey Players Play Game Here

A band of ex-Fort Saskatchewan hockey players visited the Fort last Thursday evening and played an exhibition game with the present day team. A large crowd turned out and excitement was keen, as many rosters were pulling for the former 'sweethearts' of bye-gone days.

The visitors in capacity of past other material tried very hard to over ride the local youngsters, but had to bite the bitter end of a 6 to 4 score.

The Fort team was composed of Seniors and Juniors of which the youngsters played speedily and upheld their end while in action.

The outstanding player on the ice was Francis Fintoff being very dangerous at all times. He gathered in no less than 5 goals from his trusty war club.

Our old pastal friend Bill White was in charge of the visitors, and threatened at times to pull off his coat and get into action as his team getting on the low end of the score.

The visitors were as follows:

Doug. Kimball, Don. Blythe, Johnnie Benning, Nab Tevrier, E. Chard, G. Eldridge, R. Karvan, Pete Karvan and R. Girling, Mrs. Doug. Kimball and Mrs. Bill White accompanied the team.

Local line-up: Pocock, Shorty Karvan, Fred Karvan, Hatton, F. Fintoff, Compo, Earl Sherman, A. Fintoff, Bud Williston.

The game was handled satisfactory by Sherman and Dimond.

Of the world's 3,636 languages and dialects known 1634 are spoken on the continent of America. No wonder some folks get peeved on the telephone.

Coming Events

The ladies aid of the United Church will meet at the home of Mrs. Frank Murray jun Thursday, Feb. 1st. at 3 p.m.

******

St. George's W A will meet at the home of Mrs. A. M. Carmoddon on Thursday, Feb. 1st at 3 p.m.

******

The Fort Band will hold a dance on Friday, Feb. 2nd. Good music. Admission 50c each. Refreshments

******

This dance is to raise funds to purchase several instruments. Come out and support the Band.

Wife (breaking the news of good-for-nothing brother's arrival): Hester has come to stay for a few days. Poor boy, he's looking very seedy.

Husband: Seedy, is he? Well, he's not going to plant himself here.

World War Changed Everything

An article appearing in the daily papers quite recently told of a professor at Harvard University who had compiled a "table of wars," showing that there have been no fewer than 968 major wars since the year 500 B.C., and drawing attention to the fact that the World War, 1914-1918, was eight times "greater" than all the other major wars since 500 B.C. rolled into one. Stated another way the meaning that the four years of war, 1914-1918, was eight times greater than all the major wars combined in the preceding 2,000 years of the world's history.

If the calculation is even approximately correct it should help us to more fully appreciate the truth and force of the statement so frequently made that the financial and economic difficulties of the nations today had their origin in the World War, and that our troubles are not the result of the breakdown of the existing system because of the unsoundness or inherent weakness of that system, but that the cause is to be found in the destruction of 1914-1918 and in the new conditions and circumstances resulting from that colossal struggle.

To the World War, and the need and emergencies of that terribly costliest, can be directly traced the speeding up of invention, the improvement of machines, and the urge to mass production, to which some people attribute much of the existing unemployment.—Man replaced by machines. To the World War, also, can be directly traced the bringing of tens of millions of acres into production of various foods and other products then in great demand, and to the uneconomic and more or less artificial production of certain products in countries which prior to the war did not attempt to raise those things but imported them from other countries where their production was a natural process.

The World War, too, is directly responsible for the development of that spirit of narrow nationalism which has infected all nations, a narrow nationalism political in character but which has been developed along economic lines in order to promote and strengthen political nationalism. It is not necessarily the system under which the economical life of the world grew so amazingly and prospered so greatly in the last half of the 19th and first decade of the 20th centuries that is at fault; rather, it has broken down because of an outside force, the World War, which prevented that economic system from functioning for the welfare of mankind, and threw it completely out of gear.

That is to say, no matter what system had prevailed in 1914-1918 it could not have withstood the impact and upheaval of the World War and continued to function. Had any of the various new systems now being advocated for adoption to supersede the system which came down from the last century been the prevailing system in 1914-18, they would have broken down and the present outcry would be raised against it.

It is the World War that has changed everything, and that change must be met. It cannot be met in a single year, nor by the adoption of any one new system whether it be political, economic, or social. The need of changes cannot be best and most quickly brought about by destroying existing foundations which inevitably would mean great loss and suffering, and degeneration. Rather there must be a multiplicity of changes, some small and seemingly insignificant, others large and startling, but all tending behind and having a bearing on each other and upon the whole.

The nations of the world have recognized the failure of narrow nationalism, both political and economic. They are all suffering from it, but they have not yet agreed upon a formula for its removal. Recognizing the disease, they are not yet prepared to apply a universal cure. Consequently, are find the nations as separate units devoting their energies to a solution of their own problems and difficulties regardless of the effect which their actions and policies may have upon other nations. On the face of it, this is but a continuance of extreme narrow nationalism, but the almost certain outcome must be a still more acute realization that the nations of the world, themselves alone and most come together, and work together for their mutual advantage if they are not all to crash together.

Narrow nationalism, born of war, one only end in war. And the next World War—if it comes, —with far exceed in its magnitude and disastrous results in civilization even the great conflict of 1914-1918, tremendous in its unprecedentedness as it has proven to be.

Health For Young Girls Happiness For Tired Women

Thousands of women become tired out and run down, because thin and pale, and pestered with nerves make life a burden.

The whole outlook of life is changed when the nervous, sick headaches, the despondency, the spells of dizziness, of weakness and discouragement, and the tired, tired feeling disappear with the use of Milburn's H. & N. Pills. They tone up the nerves, enrich the blood, and bring the health back to sound.

A Remarkable Invention

Has Been Introduced in London, England, Does Many Wonderful Things

One of the most remarkable inventions of the age has been secretly demonstrated in London, Eng. It is a ray that will make flower-buds grow into flowers in a few minutes; bake a cake; photograph objects several hundred miles distant, penetrate 1-in. damask log, and cure a number of complaints.

The ray upon which its inventor, Mr A. H. W Hatchelor, has been working for the past ten years, is nothing tremendous, explains an Anglo-British industry, particularly the one connect d with horticulture. A demonstration of the marvels of a long-lived firm of modern research produced astonishing results. A pot of crocus bulbs which had not even begun to show signs of flower buds, and which normally would have tak n several days to bloom were placed in the radius of the ray. Within ten minutes their petals had appeared and spread themselves.

"It is possible materially, to increase the yields of all crops," Mr. Hatchelor said. "Clover, clover hay, cereals, roots and sugar beet can all be improved both as regards yields and food value. The maturing proportion of the ray are shortly to be extended to fruit and vegetables so that strawberries and fresh garden p as and beans out of season are all within the realms of possibility."

One of the remarkable features of the ray is the case with which it is claim d it penetrates darkness and the densest fog, clearly revealing objects at several hundred yards distant.

When She Lost 28 lbs.

She Gained Energy

This young woman's method of reducing overweight is evidently as pleasant as it is effective, and a letter she writes is therefore worthy of publication:

"I am 24 years of age; height 5 ft. 5½ ins.; Before a short time ago my weight was 28 lbs. above normal. I was listless and without energy. Now after taking Kruschen Salts regularly I have lost 28 lbs. in weight, and have much more vitality. Also I have a very good complexion and I do not have the blemishes of skin that I used to have. I think this is due to my having pure blood, and I attribute the fact to my taking Kruschen Salts." (Mrs) M S.

Kruschen combats the cause of fat by assisting the internal organs to throw off each day those waste products and poisons which would otherwise be converted by the body's chemistry into fatty tissue.

Driven Explorer Alive

Albert De Winton, of Los Angeles, a movie actor has returned to Rio de Janeiro after a nine-month search in the Matto Grosso region of interior Brazil for Col. P. H. Fawcett, British explorer Dr Winton, who has been on several trips into the wilds, had only vague leads as reports concerning the Britton but expressed belief he is alive. Col. Fawcett disappeared in 1925.

THAT DEPRESSED FEELING IS LARGELY LIVER

Wake up your Liver Bile — Without Calomel

You are "feeling blue" because your liver is not functioning properly. Only one gallon of liver bile should flow into your bowels daily. If this bile is not flowing freely, your food does not digest. It just decays in the bowels. Gases form. Poisons are absorbed into the blood. You feel sour, sunk, "all in." Your entire system is upset.

Don't take a dose of calomel to start this bile flowing. Calomel is a severe drastic purgative. It irritates. Calomel should be used only when you have a severe cold. Dodson's Liver Tone, Purely vegetable, does the liver bile job gently but thoroughly. Just ask for Dodson's Liver Tone. Read directions and use only as directed. 75c.

Demand For Wheelbarrows

The wheelbarrow is staging a comeback. John created by the civil works program, and Lumber, Nebraska, others hand labor is given preference, increased the demand for wheelbarrows until it far exceeds the supply. Lancaster County Engineer Pinkerton said he was unable to purchase a single wheelbarrow from supply houses here.

"You pushed your wife out of a moving storey window through forgetfulness?" asked the magistrate.

"Yes, sir; we used to live on the ground floor. I forget you'd moved."

Review Favourable Year For Royal Bank of Canada

STRONG POSITION MAINTAINED

Sir Herbert Holt, President, Takes Strong View That Canada Is Now Definitely on the Upgrade.

Morris W. Wilson, Vice-President and General Manager, Reviews Strong Statement.

The annual meeting of the shareholders of the Royal Bank of Canada marked the close of a most successful year.

Sir Hi rbert Holt, President, in his address struck an optimistic note when he stated that he considered that Canada was now definitely on the upgrade, but however he cautioned that what was being t aid by the heavy taxation and the cost of maintaining so many Governments in the country was rapidly becoming unbearable.

Morris W Wilson, Vice-President and General Manager in his address reviewed the outstanding features of the year's statement of the Bank. The feature of paramount importance in connection with the proposed creation of a Central Bank added Mr Wilson, would be the quality of the management

President's Address

Sir Herbert S. Holt, President, in moving the adoption of the Directors' Report said in part

The 64th Annual Report and Balance Sheet submitted to you today has the strong position of the bank pointed out. While Balance Sheet figures are somewhat smaller than those of a year ago, this reflects a falling off in international deposits rather than any shrinkage of Canadian business. In fact a notable feature is an increase in Canadian Demand and Savings deposits during the year. The liquid position is eminently satisfactory As you would expect the restricted demand for commercial loans and the resultant increase in our holdings of bon s remun rative assets in the form of Dominion and Provincial Government securities, has combined with other factors to reduce profits In April last the dividend was reduced from 10 per cent to 8 per cent, and the last three quarterly dividends have been paid at that rate The improvement which has taken place in business during the last six months has already had a beneficial effect on earnings

Referring to the situation in Canada, the President said: "I am pleased to say that since we last met there has been a distinct improvement in Canadian business. I have had the opportunity of seeing this country recover from depressions on various occasions during the last fifty years and the present movement appears to be taking place along the accustomed lines. As soon as world trade commences to revive there is an improved demand for Canadian raw materials. Canadian exports increased substantially, surplus inventories disappeared and greater activity in the principal exporting industries provides additional employment with consequent improvement in purchasing power and domestic trade. This has been the history of every boom in Canada during the last six months."

The Railway Situation.

Dealing with the situation of the Government railways, Sir Herbert expressed the opinion that the loss for the half measures had passed and that bold and courageous action was required. He felt that the views expressed at the last Annual Meeting in favour of co-operation between the two railway systems would not be a satisfactory solution, and this was confirmed by the experience of the past year and is still of the opinion that the maximum of economy could only be obtained by some form of administrative amalgamation.

The President made a strong demand for a reduction of Government civil debts and pointed out that the cost of maintaining too numerous governments, Federal, Provincial and Municipal, was becoming unbearable. He said: "Greater activity in business will reduce unemployment, produce increased revenues, and a reduction in disbursements for public services. Advantage should be taken of these developments to reduce debts rather than increase expenditures.'

Confidence In Other Countries.

In referring to conditions in other countries he expressed the view that the low point in the depression for most of the world was reached in the latter part of 1932, and since that time there has been a general increase in international trade. Reference to the United States was made as follows:—"While business in the United States commenced to improve from the middle of 1932 it later suffered a relapse due to their banking difficulties and the hesitation and uncertainty which preceds a change of administration. Since last March quite material progress has been made. It is difficult to analyze the effects of their policies and impossible to prophesy the outcome. Their central idea that an increase in the cost of commodities should be obtained by currency means and is now quite generally accepted as such throughout the world. At the Annual Meetings for the next few years we have emphasized and re-emphasized the necessity for a higher price level I see no reason why it cannot be achieved in due course."

In moving the adoption of Herbert Holt said: At our last Annual Meeting I expressed the feeling that indications for a revival of trade at the end of a shrinkage last year in 1933. This year it is my pleasure to go one step further and to venture the opinion that we are now definitely on the upgrade If we deal satisfactorily with the main problems that confront us we can expect a fairly favourable time a return of general prosperity."

General Manager's Address.

Mr M W Wilson, Vice-President and General Manager in referring to the profits of the bank pointed out that equal sums to dollar $342,471. and were equal to 55.76% of paid-up Liabilities compared with 52.80% of last previous year A notable feature is that 24.26% of such liabilities is represented by cash and cash balances aggregating $157,099,- 501. He mentioned the further interesting fact that in Canada current deposits increased about $17,000,000 during the year and savings deposits were higher by $7,000,000.

In discussing the proposed central bank Mr Wilson said the hope which he expressed at the last Annual Meeting that the Government would see fit to have the project examined by a board of experts and said: "The Royal Commission on Banking and Currency which was constituted last summer could not have been better chosen. Under the Chairmanship of Lord Macmillan their sittings in all parts of the country were notable for the freedom with which all possible evidence was received and for the patience and tact displayed in dealing with the material submitted. While I do not agree with the Report in its entirety I believe that a properly constituted Central Bank can be developed as a useful adjunct to our banking system."

Note Issue.

Mr. Wilson expressed the strong opinion that the recommendations in the Report with respect to the gradual withdrawal of the note-issuing privileges of the Chartered Banks did not appear to be in the public interest Retention of these privileges would not hamper the Central Bank in its efforts to control credit. In this connection he quoted an editorial which appeared in the London Times, comment to the effect that the Central Bank would not be in the least weakened by allowing the Chartered Banks to retain their present issues under the present restrictions. Mr. Wilson went on to say: "I think, therefore, that we should view the elimination of bank note issues not as a step which must inevitably accompany the creation of a central bank but as a separate matter entirely. The real question is whether the Government desires to have banking service maintained at many points throughout the country or to appropriate the revenue of note issues for themselves. I believe that the gain to the Government would not offset the loss to the public through curtailment of banking facilities. Unquestionably there are many places which could be more economically served by a branch bank if note issuing privileges were to be withdrawn. The operation of a number of small branches at a low margin of profits is characteristic of banking in this country. We have a system which in many of its aspects is native to the Dominion and prudence should prompt us to be very cautious in advocating fundamental changes."

In conclusion Mr. Wilson said: "At our last Annual Meeting I ventured to suggest that the prospect of further improvement in the coming year was very much more hopeful than it was the previous year. That prediction has been borne out by subsequent developments. For the first time in years an attitude of quiet but confident optimism is in evidence almost everywhere. Many problems still have to be solved but I have full confidence in the ability of Canada to share in the continued improvement in economic conditions which I believe lies ahead of us."

Miss Freda Thompson, who has just been granted a flying instructor's license in Australia, is the first woman in that country and third in the British Empire to hold such a license.

I have audited the accounts of the Town of Fort Saskatchewan for the year ending 31st December, 1933, and have compared the said accounts with relative Vouchers and certify that in my opinion the foregoing financial statements and property drawn up so as to exhibit a true and correct view of the financial affairs of the Town, according to the best of my information, the explanations given to me, and shown by the records.

I have also examined the Assessment Roll and Tax Collector's Roll with the books and records of the Town, or from information supplied by officials of the Town.

Dated at Fort Saskatchewan this 17th day of January 1934.

E. DENBY, Chartered Accountant, Auditor,
Bank of Toronto Building, Edmonton.

REGISTERED GARNET WHEAT

The only natural or certified Garnet Wheat seed obtainable in Canada and possibly in the world, is now owned by the Alberta Department of Agriculture, who obtained it from the grower, Tom Jones, of Trochu. The seed will be distributed in accordance with an approved plan.

The seed was in great demand, being bid on by the Soviet Government of Russia, which was just a few hours behind the Alberta Department in the bidding.

An essential adjunct to the main business of Canada's export markets is the grading and inspection of live stock products as they enter into the foreign trade.

SUGAR BEET CROP

just closed was about 45,000,000 lb., in addition to which there were 32,-

Final figures on the sugar beet crop of southern Alberta show the total yield for 1933 to have been 197,- 480 tons, from 14,040 acres, or a little less than ten tons per acre.

Government agriculturists in the West Indies have their troubles. The experiment station for demonstration of sugar manufactured at of guano rust disease, had to be re-

The total paid to farmers for the beets was about $900,000. The destroyed by hurricanes and embarkment of the Raymond factory in the season arranged and re-seeded.

"A new word is wanted," remarks a writer, "to signify the horrible noises now made by such things as pneumatic drills and motorcycles." What's wrong with "jazz," for goodness' sake?

PARRY SOUND COLONISTS (1896)

By W. C. Pollard L.L.B. Uxbridge, Canada

They got their land in an honest way,
For the red man was their neighbour;
By the instrument of labour.

They ate their bread with sweat on their brows;
And smoked their pipes at leisure;
For they said as we know now,
That the fruits of toil is pleasure.

When work was done;
Each had some fun,
And the world has need of such men;
Be I say with pride
(On my father's side)
That I am a typical Englishman.

They held their faith without offence,
And said their prayers on Sundays;
But they never could see a bit of sense
In burning a witch on Mondays.

They loved their God with love so true;
And with their hands so level;
That they could afford to love man too,
And not be afraid of the devil.

They kept their word in deed and creed;
And the world has need of such men:
They were solid and strong as have lasted long
And were true born Englishmen.

THE LIFE OF A FARMER

In his address to the Canadian Society of Technical Agriculturist at Ottawa, Mr E. John Russell, director of Rothamsted Experimental Station in England, said that even "with all the help of science and the kindly office of the extension officer and other well-wishers, life can never be made entirely easy for the average farmer. Crops and animals and quotas and tariffs and helped by scientific advice as much as you like, but he must always take risks. It is mainly a choice of evils, and he has to decide between one or more courses of action, neither of which he would choose to take, but he has got to do it.

"The farmers life is well illustrated by an incident I once met with in the west of Ireland. It was a great stir because a lady of seventy was going to marry a gentleman of seventy-one. But the matter was explained quite simply by one of her neighbors: "The winter is coming on, and the poat has to be got in for fuel, and the potatoes have to be lifted and brought in; it was a once of either marrying a husband, or buying a donkey." Well, that is very much the farmer's situation. He is called upon to choose between two courses neither of which is exactly what he would like to do. Our job as agricultural experts is to give him more alternatives, to try to make some of the decision between them more easy."

MARKETING BOARD ASKED

Urgent demand upon the Federal Government for the formation of a national marketing board whose chief function would be to stabilize prices for live stock and its products on a sound economic basis, was made at the annual meeting of the largest conference of live stock interest ever held in the province, at Edmonton.

The conference, which included representatives of every interest connected with the live stock industry, also passed a resolution endorsing the recommendation of the McMillan banking commission, for a system of short term and intermediate credits for farmers and stockmen.

The proposal for nationalization of stock yards was turned down, but the conference asked for a review of stock yards operations and the charges made.

The chairman was presided over by Hon. Geo. Hoadley, minister of Agriculture.

WORLD HAPPENINGS BRIEFLY TOLD

Soviet Russia sent free military newspapers as a gift to Turkey on the occasion of the republic's 14th anniversary.

A student objecting to military drill because he opposed war was exempted from the first time in University of Minnesota history.

The League of Nations central opium board decided not to include Manchukuo in countries to which forms will be sent for an estimate of opium requirements.

Ambassador Mashake Sato denied rumors Japan was following in Germany's footsteps and gradually withdrawing from the disarmament conference.

At Agassiz B.C., a White Leghorn pullet, 10-1, attained a pinnacle in the poultry world by laying her 357th egg in 365 days. Dominion Dorreen" deposited the egg which enabler her to equal a world egg-laying record.

The British empire is an example to the world that co-operation for positive ideals is possible between great and free nations, declared J. H. Thomas, secretary for the dominions, in a speech at London, England.

David M Lee Yuen, second year science student at McGill University, has been awarded the Robert Bruce Scholarship, tenable for one year and having a value of $300, it was announced at Montreal.

Veteran of three campaigns in Africa and also of the Great War Sergt.-Major James Robinson, D.C.M., one of the chief known figures in Canadian military circles died in Vancouver on the eve of his 76th birthday following a stroke

Since the British Empire trade pacts formed at Ottawa imperial conference had come into effect, Canada's trade with the empire had increased $213,000,000, according to Hon. H. H. Stevens, Minister of Trade and Commerce.

Veteran of three campaigns in Africa and also of the Great War Sergt.-Major James Robinson, D.C.M., one of the chief known figures in Canadian military circles died in Vancouver on the eve of his 76th birthday following a stroke

His Majesty the King hopes to deliver for the second time a Christmas Day message of greeting and good will to the people of the empire by radio, Dec. 25. He spoke for several minutes last Christmas from the ground floor apartment at Sandringham Palace.

OFF COLOUR? HOW IS YOUR LIVER?

Wake up your Liver Bile
—Without Calomel

Your liver's a very small organ, but it's absolutely vital to your digestion and health. Bile empties into the intestines and digests each day. If bile is not flowing freely, your food just decays in the intestines. Then gas bloats you up, you become constipated, your head aches and you feel sour, sunk and miserable.

Carter's Little Liver Pills will soon help bring the needed bile to make you feel fine. They're purely vegetable. Safe, sure. Ask for them by name. Insist on them. At all druggists. 25c.

Boys At Lower Price

Canada Pays Less For Used Wheat Than Other Consumers

Canada enjoys lower coal prices than most other countries forced to import coal," Sir Alfred Cave, president of amalgamated Anthracite Collieries, of South Wales, testified in Quebec at the continued trial in court of king's bench of six coal companies charged with forming a combine to maintain the price of coal.

"Canada's imports of coal in summer while prices are low while most other countries import during the high-price winter season," Sir Alfred stated.

Saskatchewan Has Lowest Tuberculosis Death Rate

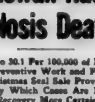
Reduced From 43.5 to 30.1 Per 100,000 of Population Since Inauguration of Preventive Work and Free Treatment Four Years Ago—Christmas Seal Sale Provides Funds For Preventive Work by Which Cases Are Discovered in Early Stages Making Recovery More Certain and Reducing Period of Treatment and Cost to Taxpayers.

Slowly but surely Saskatchewan is gaining in its fight against Tuberculosis. In 1923 the death rate from Tuberculosis in this province was 30.1 per 100,000 of population This is the lowest tuberculosis death rate in the west and is more than half the average for the Dominion of Canada which in 1932 was 67.9 per 100,000 population.

In 1929, when free treatment was provided and active preventive work instituted, the death rate in Saskatchewan was 43.5 per 100,000 of population

The reduction of the death rate from the preventable disease by more than 25 per cent in four years is eloquent testimony of the value and necessity for continued preventive work.

The "Christmas Seal" sale provides funds for Preventive Work.



Examination Week

The most important phase of Preventive Work in the examination of those showing symptoms of Tuberculosis or who have been in contact with Tuberculous patients. Discovery of the disease in its early stages makes recovery more certain and lessens the period of treatment decreasing the burden which the general taxpayer is called upon to shoulder to maintain the three Sanatoria of the province

In 1932 the revenue from the sale of Christmas Seals made possible the following Preventive Work:

12	babies born of tuberculous mothers were cared for in the Preventorium in conjunction with the I.O.D.E.
2052	persons were examined at the Travelling Clinics.
1046	cases were diagnosed at City Clinics.
1269	persons were examined by travelling consultants.
720	Normal School students were examined
208	contacts were examined by family physicians.
194	school children were examined

Since 1926, 32,579 persons, nearly all children and young adults, have been examined at the expense of the Christmas Seal Fund Out of the number 1957 active cases of Tuberculosis were discovered, and have been received the attention which they were in need of, thus preventing both the deaths and suffering from tuberculosis.

Still Greatest Cause Of Death

The great need for Preventive Work is shown by the fact that Tuberculosis is still the greatest single cause of death in the age period 12 to 44 years There were last year 281 deaths from Tuberculosis in Saskatchewan. Tuberculosis is by far the greatest cause of death among the diseases classified as infectious in this province, accounting for more than one-third of the deaths from epidemic, communicable and infectious diseases

The Sale of Christmas Seals last year provided approximately $10,000 for the carrying on of this Preventive Campaign. As much, or more, is needed for next year's work

Purchasers of these seals are investors in a great and necessary humanitarian cause Residents of every community in Saskatchewan will have an opportunity of assisting All will receive Seals containing sheets of Christmas Seals. There value is one dollar a sheet—one cent a seal. Those who desire might up letters and parcels and their presence lends added the sender to be imbued with the true Christmas spirit.

Need Is Great

Because the Cities are difficult the need for Preventive Work is greater than ever. The fight against Tuberculosis, now being waged unceasingly and with such encouraging results, must go on. All can help by purchasing Christmas Seals in small contributions, combined with those of the thousands of citizens in every city cheerfully contribute each year to this worthy effort will assist to still further reducing the mortality from this preventible disease.

Buy Christmas Seals and thus help to protect your own children.

SUNDAY SCHOOL LESSON

NOVEMBER 12

PAUL IN MACEDONIA

Golden Text: "Believe on the Lord Jesus Christ, and thou shalt be saved." Acts 16:31.

Lesson: Acts 15:36, 17:15.

Devotional Reading: Matthew 5:10-16.

Explanations and Comments

On To Macedonia, verses 11, 12.— From Troas To Philippi crossing directly to the island of Samothrace and on the following day proceeded to Neapolis in Macedonia. It was a nine mile trip on foot to Philippi.

"No one could have guessed that this little advance guard represented a greater kingdom than that which Xerxes represented when he invaded Europe. Soon it was to be brought into the armies of forty-six nations to contend against Greece constructed a road for his ships to ride upon, and flung a bridge across the Hellespont, over which his soldiers marched incessantly for seven days and nights. The picture of the magnificent Xerxes seated on his throne of gold watching the tremendous disaster of the battle of Salamis, fades away with the years, so, also, does the glory of the victories of the Roman Augustus; but the King whom Paul came to Europe to herald forth rises still to greater and greater power."

The First Convert in Europe, verses 13-15 Evidently there was no synagogue in Philippi, for had there been Paul would have gone there on the Sabbath. Learning that there was a place of prayer by the river-side, beyond the city gates, he went there and found a company of women.

"We are told sometimes today that the church is full of women and there are no men going to church I contradict that statement wherever I hear it made. But the measure in which it is true is the condemnation of men, and the men who are becoming 'Christless and churchless ailment of the hour should come to the women cause to worship." G. Campbell Morgan.

Among the women was Lydia, a purple-dyer merchant from Thyatira, who dealt in purple-dyed garments. She was a Jewish proselyte, for "she worshiped God." Paul gave to new message to these women, and Lydia received the good news She brought the missionaries to make her house their headquarters, and this they did Hospitality was always a marked characteristic of the early church

When we read the Epistle to the Philippians and sense the spiritual power and the rich quality of life in that wonderful church to which Paul wrote from his prison in Rome it is not easy to picture its beginning in this little company of women meeting by the river bank to whom Paul told in familiar intimacy the story of the gospel. Yet this small seed produced a rich harvest.

Knitting Industries Busy

Increase In Employment Since May Has Been Steady

Steady increase in employment in Canada in the woollen, silk and knitting industries since May, 1932, is indicated by Dominion employment bureau figures, according to a Woollen and Knit Goods Manufacturers' Association.

The woollen employment index figure increased from May to September of this year by 22.6 per cent., the silk index by 7.2 per cent. and the knitting index by 13.9 per cent.

Due To Public Sentiment

Cruelty To Dumb Animals Becoming Thing Of Past

The day of the cruel steel trap is doomed. This reproach to any people permitting it all decent men and women will, sooner or later refuse to tolerate. Time has cut out of the statue books of many a state and nation their sanctions of even greater cruelties.

A few years ago no one thought a law could be secured in Massachusetts or New York forbidding the cropping of dogs' ears; and now Pennsylvania has followed with a similar law. Public sentiment made possible the law it will yet deal with the torturing traps and by the same way Our Dumb Animals.

WEAK WOMEN

Take Lydia E. Pinkham's Vegetable Compound

Have you ever felt that you were not well, so do nothing . . . that you did not have the strength to do your work? Many women who are run down and overtired find a tonic such as Lydia E. Pinkham's Vegetable Compound helps restore and build their nerve like vitality so they can enjoy the things they want to do.

At least 9 out of every 10 who report to us say that they are benefited by this medicine. Buy it at your druggist today . . . and watch the results.

Tips Indicate Prosperity

Prosperity has returned to Denver, Colorado, and with it dimes, quarters and dollars are again rolling into the pockets of the redcaps at the union station. Dwight Robinson, who has been a redcap for six years, reported the travelling public was again remembering the men who carry the baggage, after several years of neglect.

A three-year aviation development program has been launched in the Philippines.

National Peace Study Project To Bring To People Of Canada Vital Facts Regarding Peace

A national peace study project to bring to every man and woman in Canada the importance of peace, was announced by J. S. MacDonnell, president of the Association of Canadian clubs, and Hon. Ernest Lapointe, president of the League of Nations society.

In "A letter to all Canadians," the details of the society's project were announced. For the first time in Canadian history, it was stated, an attempt was to be made through the combined use of the radio, the press and group discussion at have a unanimous study of a subject throughout the nation.

What is described as Sir Arthur Currie's last great message was read by Mr MacPherson and Mr Lapointe to emphasize the importance of their plan, and his question whether Canadians were "learning themselves" this night of hysteria which may end in war" was reiterated

Persons desiring self-evident literature on the various topics listed in the discussion and study outline. The addresses, which will be broadcast, follow:

Jan. 31 St. Hon. Sir Robert Borden and Hon Mr. Lapointe on Canadian responsibilities.

Jan. 28 Col. George A. Drew, president of the Toronto branch of the League of Nations' Society in Canada, on "Why Should Hamilton Be Interested in World Peace."

Feb. 4 Dr. R. C. Wallace, president of the University of Alberta, on "How Is Peace To Be Maintained — By Force or Co-operation?"

Feb. 11 Dr. H. F. Munro, superintendent of education for Nova Scotia and delegate to the Assembly of the League of Nations, on "What Does Partnership in the Collective System Involve for Canada?"

Feb 18 Hon. Irene Parlby, member of the Alberta government and former delegate to the assembly of the League of Nations, on "What Might Happen to Canada If The Collective System Were Abandoned?"

Feb. 25—Mrs. H. P. Plumptre, member of the Toronto board of education and former delegate to the assembly of the League of Nations, on "Present Obstacles to Peace."

March 4—John W. Dafoe, editor-in-chief of the Winnipeg Free Press on "Why Did the Collective System Fail in Manchuria?"

March 11 Hon. R. J. Manion, minister of Canadian National Railways and delegate to the last assembly of the League of Nations, on "Disarmament."

March 18—J. M. MacDonnell, president-elect of the Toronto board of trade, on "How Can We Work For Peace In Business."

March 25—Prof. T. W. L. MacDermot, national secretary of the League of Nations' society in Canada, on "How Can Schools Work For Peace In the World?"

April 1—Hon. Mr. Lapointe and Brooke Claxton, Montreal, vice-president of the League of Nations' Society in Canada, in a summary and survey.

Should Study Politics

All Those Who Have Interests Of Country At Heart Should Give Subject Attention

Politics defined up as it is with the ruling and progress of a people should not be considered degrading nor beneath the notice of respectable persons, Hon. Ernest Lapointe, former minister of justice, told the Women's Canadian club at Quebec.

Stressing that people should not decry politics due to a dislike for th's or that politician, Mr Lapointe argued that after all the basic control of politics was human nature with all its qualities and imperfections

All Laws who had the interests of their country at heart, he emphasized, should study politics.

For Benefit Of Ireland

Money Left To Mrs Valera Will Continue Work Of Late Husband

Eamon de Valera, president of the Irish Free State, was the winning party in an action concerning the will of Miss Polly Fitzpatrick, of Brighton wemen, 72 years old, who was found dead at her home in July, 1932.

Miss Fitzpatrick left a will part of which read. "I give and bequeath to Mr. de Valera my house and all my furniture and effects." The value of the estate is a little more than $10,000.

The will was contested by Jane Fitzpatrick, of Dublin, who claimed his sister was of weak intellect and executor that in late years she had become a recluse and that she died in a neglected condition, having refused medical treatment. When Miss Fitzpatrick died, said counsel for De Valera, she had no relatives with whom she had been in touch for years She had said that her property would go to Ireland when she died She also expressed a fear of becoming conspicuous in who had done any good for Ireland was Mr De Valera

It is not Mr de Valera's intention to profit by a penny piece from this estate His intention is that the money shall be used by him as a trust for public purposes of the kind which Miss Fitzpatrick was known to approve, said counsel.

Had Fairly Good Luck

Cow Coup Failure In Eighteen Years Considered Good For Record

W. L. Clark, in Border Cities Star says: "The ramifications of the poor crop in Western Canada extend to the apartment houses in Toronto. As we met a man in Los Angeles who commended a farm near Saskatoon many years ago He worked the land, improved it and finally got title to the property.

Eighteen years ago he rented the farm on a crop basis. Each spring, after that he moved out to California for his health When he left the prairie he continued to rent his farm on the same basis. Last year he got his cash rental for the eighteenth year in succession.

"Eighteen years without a complete failure is considered good for the record," he said, but he had successes and collected."

Got Their Man

The Forest Canadian Mounted Police took six years but they finally indicted Lemuel Stathkopf in Philadelphia and took him to Montreal to face a charge of counterfeiting currency. He pleaded guilty. In 1927, Stathkopf jumped bail in an amount of $11,500 which was forfeited to the crown.

Hid Fairly Good Luck

One Crop Failure In Eighteen Years Considered Good For Record

W. L. Clark, in Border Cities Star says: "The ramifications of the poor crop in Western Canada extend to the apartment houses in Toronto. As we met a man in Los Angeles who commended a farm near Saskatoon many years ago He worked the land, improved it and finally got title to the property.

Eighteen years ago he rented the farm on a crop basis. Each spring, after that he moved out to California for his health When he left the prairie he continued to rent his farm on the same basis. Last year he got his cash rental for the eighteenth year in succession.

"Eighteen years without a complete failure is considered good for the record," he said, but he had successes and collected."

Sailing Sheep Pole

Valuable Information Regarding Proper Method For Shipping

When sheep pelts have to be shipped a long distance to market, they should be carefully spread west side flattened, paying close attention to see that all wrinkles or folds are carefully straightened out in the head, ears and legs, according to Dr. Bell, veterinarian in Regina. Each sheep pelt is about a foot and a half to a pelt—should then be evenly sprinkled over the pelt, which is left spread out for a few days until the salt melts and soaks in. It can then be hung up to dry. Drying may be hastened if the pelts are stretched by tacking a small cord or lines in a manner similar to the practice in handling the pelts of fur-bearing animals When the sheep pelts are thoroughly dry they may be shipped in safety by placing one on top of the other, and baled in lots of 45 to 50 according to size and weight. Drying and curing instructions Chester Hamblin, Dominion Department of Agriculture.

Get Their Men

A Hollywood film actress is keenly interested in a farm she is cultivating Most of the store make a hobby of husbandry

Nearly 1,700,000 foreign tourists visited Italy in the first eight months of 1932.

HAMILTON GIVES BANQUET for CHILDREN IN LONDON

For several years a banquet has been held in the Guildhall, London, England, at which the City of Hamilton, Ontario, has been host to some 1,300 children of the British Capital Our picture, taken at the forty-first banquet, shows the Lord Mayor of London (lower right), among the children, while the girl pipers of Dagenham prepare to lead the processions into the banquet hall.

Proposal Is Put Forward For An Arctic National Park For Game Protection Purposes

Sheep Collection Is Missing

Collector Probably Stranger Among Sheep at Mt. Asher's, Near Brookfield

Swinging from an extensive investigation into widespread stamp forgeries, government detectives are delving into the mysterious disappearance of stamps valued at more than $20,000 from the St. John's post office and the Newfoundland museum building

The operatives were tight-lipped as they traced down slender clues, but from the department of justice came an intimation the search might turn toward postal officials.

Difficulty had been met, an official statement said, in getting information from postal employees because of a fear of becoming conspicuous in who had done any good for Ireland was Mr De Valera

It is not Mr de Valera's intention to profit by a penny piece from this estate His intention is that the money shall be used by him as a trust for public purposes of the kind which Miss Fitzpatrick was known to approve, said counsel.

Yesterday's issue of the Winnipeg Free Press contains the following report of a meeting held in that city:

A proposal that a national park for the protection of game resources in the Far North.

The proposal comes from Dr. A. D. Bajkov, fisheries expert, biological board of Canada. He suggests it as the first step toward saving Arctic species from extinction He would transplant and propagate the musk-ox, which is one of the natural food supplies of the natives.

Dr Bajkov believes that the ideal park would be a strip of land astride the Churchill river near the seaport. He claims that the preservation of the musk-ox is not only necessary, but urgent. He says that they have been transplanted to Alaska and Greenland, but they are almost extinct in the Mackenzie portion of their range.

Apart from the educational and animal conservation considerations in the proposed park, there is another thought. It is, that interest between Canada and the United States is moving northward.

A number of indirectly related forces have been working over a period of years, and suddenly gathered from different points, to strive for a national park at Churchill.

From widely important contributing factors included mining prospects in Great Bear driving game ahead of them. Eskimos moving south in search of game caused experts finding animals decreasing in numbers; an authority of the mounted police, of Churchill, hoping for action; curiosity seekers looking for entertainment; promoters interested in resort posting places for tourist accommodation, impelling looking northward.

It does not require a wide stretch of the imagination to vision a second Winnipeg right pretty in the north and in a few years thousands of musk-ox may be slaughtered to provide optimum benefit with scientific measures.

As early as 1880, David T. Hanbury, official northern traveller, met them. Down Winnipeg to explore the Thelon river, he found a great natural game preserve. He noted that there was a stretch of country 90 miles in length, with no human occupant.

The natural sanctuary was further west than the coastal Eskimo roamed. It was further east than the Yukon Indians hunted when the Dog Ribs roamed. It was apparently beyond the northern limits of the Hudson Bay Company.

In 1900, J. W. Tyrrell, D.L.S., noted Canadian explorer, covered the ground and recommended Thelon as a game preserve.

In view of these and other explorations, and the fact that Thelon is not in a mineralized zone, the government established the sanctuary by order in council on July 15, 1927.

History in Dots And Dashes

Big Events Chronicled When Telegraph Was First Used

Big events and big names in history were chronicled in the days when the telegraph was a new means of communication, Acnor King in T. S. Davey, writing in the Canadian Journal, recalls. Samuel Finley Breese Morse, inventor of the Morse code, the arrival of Napoleon III, and the Empress Eugenie on a visit to London, the opening of the first Red Cross hospital by Florence Nightingale in the Crimea, the laying of the cable by the Great Eastern," and the opening of the first team system in London. When the first Christmas telegram was sent between Toronto and Montreal in 1847, Mr. Davey points out, there were less than 700 miles of wire in use In that year, the provincial Telegraph Company, forerunner of the Canadian National Telegraphs, sent out 32,000 messages. Today, the successor has 25,000 miles of wire and more than 100,000 miles of cable. Exclusive of cables, sometimes, the 7,500,000 messages are sent annually a year.

FORT SASKATCHEWAN RECORD

WORLD HAPPENINGS BRIEFLY TOLD

The Flin Flon board of trade is backing The Pas and Cranberry Portage in their renewed fight for a highway outlet to the prairies.

Madame Helena Wilz of the noted pianist Ignace Jan Paderewski, died on Jan. 16, at Basle with Ig Morgenstierned. She was 76 years old.

The Commissioner Stephen Kapitsa sent cabled to London for staging a Mau storm trooper hanged himself in prison.

Georges Jeanneau, noted artist and illustrator of the books of Victor Hugo, City Dr Haupmann and Emile Zola, died in Paris recently, at the age of 65.

Princess Alice, Countess of Athlone, Prince George, youngest son of his majesty is expected to make a six-months' journey to Australia with-out, however touching Canada.

Lord Rothermere's advocacy of Fascism as a form of government for the United Kingdom was announced in a scathing editorial by the Daily Herald, official organ of the Labor party

In the past four months best growers in southern Alberta have received nearly $1,000,000 in crop payments. This includes final payment on the 1932 crop. A final instalment of $97,000 on the 1933 crop was paid Jan. 13.

A new record for a flight between Edmonton and Winnipeg was been established by Pilot G N Forester, of Canadian Airways Recently he held his plane down in Winnipeg five hours and five minutes out of the Alberta city, two miles away

Wireless sets for the police of London assumed a good idea until they were tried Experiments have shown that they are not practicable in London and other large cities where transmission of messages is rendered uncertain by atmospheric conditions and electrical disturbances.

HEALTH BRINGS CHARM AND HAPPINESS

Sparkling eyes and smiling lips are the result of good health. Clear complexion, clear eyes, and buoyancy of spirits are the happy consequences of health. Give your body proper nourishment

Remember that 92 out of 100 people regard health as the most precious possession. Let it help you too.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 6.—ASTIGMATISM

We now come to a very common defect of the eye, one little understood by the general public, and yet one that is a visible inflammatory condition or disease or that it is a temporary ailment, which is not so.

The simplest explanation of Astigmatism would be to describe it as an eyeball in which one or both refractive surfaces (Lens and Cornea) are not spherically curved. Try and visualize a perfectly round ball of glass from which you cut a slice. Now the Cornea of the eye should be as equally curved in all meridians as that slice of glass and when it is not, the condition is known as Astigmatism. It is usually congenital but may be acquired by a blow or result from a scar after an ulcer has healed. It is also considered probable that many cases of Astigmatism have resulted from undue pressure on the eyeball in infancy by the parent washing the child's eyes also by the children rubbing their eyes in the hot mental direction in their crying years as it is usually in the horizontal direction that Astigmatism exists An unsymmetrical (not uniformly curved) Lens is usually due to the muscles forcing it to assume a shape which suits it best and unsuitable, either natural or the unnatural Cornea, in the instances of good vision.

We have not a that rays of light from any object to be seen clearly and comfortably, must focus on the Retina and to do so must pass through symmetrical surfaces which you see is impossible where Astigmatism exists for as the focus is a blurred line instead of a sharp point. The poor vision result would result from Astigmatism of moderate amount is often overcome by the above action of the Lens. The third meter nerve sends power to the Ciliary muscle (which controls the action of the Lens) and the Lens is forced into an unnatural shape in the effort to instead a clear vision Sooner. But imagine, if you can, the necessary strain of nerve energy used up by such eyes for any station hours daily year after year. Is it any wonder such people eventually break insane under the strain.

Some symptoms of Astigmatism are headaches, nervousness, irritability of "pep", tilting of the head to see better, nausea, indigestion, chronic constipation and even St. Vitus' Dance. Different individuals are differently affected. The symptoms occurring in an individual depend upon the age temperament physique and occupation

Errors up to ½ D. may cause the discomfort experienced as a result of Astigmatism is not all in the comfort,on to the amount of error. In fact it usually bears no reverse ratio to what we call better vision the greater the eyestrain before a small amount of error exists. It is estimated that normal eyes are about thirty-five per cent of the nerve energy of a normal body. How much is used by eye that are although thirty-five per cent healthy under such circumstances? You shall see.

We have no more reason to expect the eyes to be perfect than the features or any other organ. Neither are they necessarily free from a scar after an ulcer has healed. It is also considered probable that many cases of Astigmatism have resulted from undue pressure on the eyeball in infancy by the parent washing the child's eyes also by the children rubbing their eyes in the hot mental direction in their crying years as it is usually in the horizontal direction that Astigmatism exists An unsymmetrical (not uniformly curved) Lens is usually due to the muscles forcing it to assume a shape which suits it best and unsuitable, either natural or the unnatural Cornea, in the instances of good vision.

We have not a that rays of light from any object to be seen clearly and comfortably, must focus on the Retina and to do so must pass through symmetrical surfaces which you see is impossible where Astigmatism exists for as the focus is a blurred line instead of a sharp point. Bridge Advice Costly

The Dayton News says an argument took place in a women's bridge game—as they often do. A technical question of counting the cards was referred by two disputants to a New York bridge authority by telegram. The answer came quickly. Next day came a bill from the expert for $26. The women took it to a lawyer. He charged them $5 for his advice When read, $26.

In the first eight months of the past 30,000,000 tons of shipping passed through the Suez Canal, a large increase over the same period of 1932.

It is estimated that if all the ice of Greenland and Antarctica should melt, enough water would be added to the oceans to raise their level 126 feet, enough to submerge most of the world's great seaports.

SOUR STOMACH, GAS

"I could not relish a good meal and after eating would suffer with sour stomach, gas and indigestion. Since taking Adlerika I can eat anything I like and enjoy it. Adlerika relieves me in one hour." Mrs. Edith Lindberg, Chicago. Adlerika relieves GAS, SOUR STOMACH, CONSTIPATION in 1 hour. Also for Appendicitis. Dr. H. James, Clinton, Ontario, says: "Adlerika relieved me of appendicitis." Get Adlerika today. Sold by Rexall Druggists everywhere and 3 Ont. in Canada. Bruce Dr. Hance's Clinic, Buffalo, N. Y.

SUNDAY SCHOOL LESSON

STANDARDS OF THE KINGDOM

Golden Text: "Blessed are the pure in heart: for they shall see God." Matthew 5:8.

Lesson Matthew 5:1-48.

Devotional Reading Psalms 15.

Explanations and Comments

Receipts for Blessedness, verses 3-10 "Blessed"—with this word Jesus begins each of the "Beatitudes," as we call these verses, from Brazil, Blessed, the word with which they begin in the Latin version. Blessed means something more than happy. It is estimated that normal eyes are about thirty-five per cent of the nerve energy of a normal body. How much is used by eye that are although thirty-five per cent healthy under such circumstances? You shall see.

We have no more reason to expect the eyes to be perfect than the features or any other organ. Neither are they necessarily free from a scar after an ulcer has healed. It is also considered probable that many cases of Astigmatism have resulted from undue pressure on the eyeball in infancy by the parent washing the child's eyes also by the children rubbing their eyes in the hot mental direction in their crying years as it is usually in the horizontal direction that Astigmatism exists An unsymmetrical (not uniformly curved) Lens is usually due to the muscles forcing it to assume a shape which suits it best and unsuitable, either natural or the unnatural Cornea, in the instances of good vision.

(To Be Continued)

Would Catch Sea Serpent

By prize Fisherman Submits Plan To Victoria People

George P. Wilson, experienced deep-sea fisherman of San Diego, Calif., has proposed a method of catching cadborosaurus here of Sunday Victoria sea serpent stories.

Wilson advises use of two vessels or a large fish as bait. He suggests a hardwood bait at least 40 feet long and six inches wide attached to 50 feet of half-inch steel cable, then 25 yards of one-inch manila rope. Then rope would be attached to a 50-gallon watertight oil drum and another 25 yards of manila rope would lead to a second drum. The entire "line" would be trailed from a motor-boat.

"Once caught," said Wilson, "Cadby would find his progress handicapped by two heavy drums of no real danger on the boat. If he dived and had sufficient strength to drag the barrels under, they would soon force him to the surface. In time, he would become exhausted and his capture could easily be accomplished."

May Be Badly Printed

But Bible Still Retains Its High Place in Literature

The Bible may be so discredited by the Rev. Pearcy Dearmer, canon of Westminster Abbey in London, the most perfect book in the world He complains that it is offered in forbidding form, with titles of essays and poems left out and chapters divided into a version of convenient length for parsing.

From the editorial and typographical standpoint, there may be room for argument and perhaps some support of Canon Dearmer's criticism Evidently he is not alone as witness several attempts to modernize the Bible in up-to-date vernacular and rearrangement of verses.

But from the standpoint of circulation standpoint there is no point in the criticism. The Bible, if it be the worst printed book, remains also the most printed book, the most widely read not only as Holy Writ but also purely as a high peak in literature San Francisco Chronicle.

Twenty-four persons who had passed their hundredth birthdays died in Canada in 1933.

PREMIERS FROM WEST DENY ANY EXTRAVAGANCE

Ottawa, Spokesmen for the four western provinces were understood to have cited facts and figures to meet recent allegations of governmental extravagances on their part were unfounded as they addressed the Dominion-provincial conference.

The premier of one province was of the Great Lakes is believed to have made a comprehensive reply to criticism directed at the west and to have been supported by representatives of the other three regardless of party persuasion

Crisis of the west, it is believed were challenged to produce a single reputable banking or bond house which would not say the west had gone further in many other parts of Canada in cutting governmental expenditures to meet the storm of falling revenues.

As to the charge that loan guarantees and advances made by the federal government to the western governments would not be repaid, the western spokesmen cited facts and figures to prove the contrary. Ellison Hicks counsel said, moreover, the western case was clearer in terms of revenue since the prairie provinces could balance their budgets and meet their obligations to the last dollar.

Another thing often forgotten, the conference was told to have been told, was that the western provinces for years not protested the bringing in of immigrants by the federal government. Now 60 per cent of the population on relief were people who had come to Canada within the last five years.

An analysis of the distribution of the Dominion governments expenditures on public works is believed to have been presented to show that the west got less than its equitable share on the basis of population. Figures on federal subsidies were cited with the same end in view.

Speakers for the session, it is understood, included Premier John Bracken of Manitoba, Premier T. D. Patullo of British Columbia, Premier J. E. Brownlee of Alberta and Hon. M. A. MacPherson, attorney-general and treasurer of Saskatchewan.

Coming In Lifeboat

Norwegian Making Second Atlantic Crossing In Pond Craft

Haldfar, Sorensen, a mid-Atlantic a final little sheet of a boat is plowing along between Africa and South America with only a 20-foot mast with a rag and oat. The navigator is heading for Rio de Janeiro from Sierra Leon, in Africa. A parcel to a friend have brought word of his latest venture. Their craft is a lifeboat decked over and equipped with sails. It is the strange trip he already crossed the Atlantic once—from Hansen's native Norway to North America.

Would Not Change Motives

Washington.—Repying to a speech by Senator J. Hamilton Lewis, Democrat from Illinois, that the St. Lawrence treaty would give Great Britain a "military swerve through the Dominion," Senator Arthur Vandenberg, Michigan Republican, told the United States senate, Britain and Canada have every navigation right on the Great Lakes now that they would have under the new pact.

Informer Gets Prize

Toronto.—As a "common informer," Leslie Saunders, telephone employee, of Niagara Falls, was awarded an automobile won by William Mottram, bank clerk, in a draw held at a service club carnival last July. Mr. Justice Charles Garrow, in Osgoode hall, made the award.

Deputy Minister Of Labor

Ottawa. The appointment of William H. Dickson as deputy minister of labor was announced officially here. His appointment dates from Jan. 1. Mr. Dickson has been private secretary of Hon. Wesley Gordon, minister of labor.

Trappers Are On Rations

Whiter Trails Of North Impassable And Supplies Are Delayed

Winter Winter trails Northern trappers and traders are so rutted an overland freighters have to make unprecedented deviations of travel to reach and a half late in arriving at Lac La Ronge and other trading centres.

Fresh feeds harden the broken trail, but there still remains 70 miles, mostly over muskegs, to be broken.

Flour and sugar are becoming a rarity in many northern camps and trading posts, were out of many of the staple commodities until aeroplane supplies to arrive in emergency have commenced to bring relief

Aviator's Strange Experience

Encountered Weather On Warm Gronne Melted On Plane

Edmonton One more example of the almost unbelievable flying conditions prevailed of the far north country must endure is cited by Pilot W Leigh Brintnell, president of MacKenzie Air Services, on his return to the city from a trip to the Nahanni river country, northwest of Fort Simpson. On his arrival in Edmonton, city, accompanied a party of mining engineers, Brintnell took off from Simpson in weather 60 degrees below zero.

As the flight progressed into the mysterious Nahanni land of the supposed "tropical" valleys, his first warm air current. A warm current which apparently swept in over the mountains from some part of the Japan current, Brintnell declared the air was so warm that heavy grease, plastered on the shock-absorbing springs of his ski-fitted landing gear, melted and ran down the undercarriage.

Garment Workers Strike

One Manufacturer In Toronto Says Demands Are Unreasonable

Toronto.—More than 2,000 garment workers went on strike here, completely paralyzing the industry, with the exception of a few shops where shorter hours which at least one manufacturer conceded were reasonable. The employers were unable to do anything without government intervention.

"The garment industry," declared Dr. Davies of the Davies Cloak Co., "needs someone like Roosevelt to step in with his NRA, take control, put a stop to cut-throat competition, stipulate maximum working hours and see that the workers get a decent wage.

The situation is so widespread that government intervention is the only thing that will be any use," he said. "All the charges that workers make are true."

Shows Great Improvement

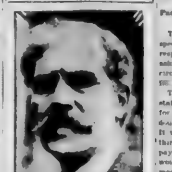
Bureau Of Statistics Issues Annual Review Of Employment

Ottawa Reflecting a steady march of workers back into gainful employment after long or short periods of idleness, the Dominion bureau of statistics has issued its annual review of employment covering 1933. A distinct upward trend, starting about April 1, is shown in the figures which are based on the payroll reports of some 9,195 employers.

In all, 1,046,000 people were added to the number of wage-earners in Canada by these firms from April 1 to Dec. 1. Basing that period the index number of employment stood on 1926 at 100; jumped 13.5 points or 20.5 per cent from year's low of 74.0 to 91.5.

Payrolls were increased in the prairie provinces by 13,000 and in British Columbia by 13,000

OPENS CAMPAIGN



Prime Minister Rao. MacDonald has opened a speech . . . promised to explain the aims of the National government to electors of the country He will speak at Leeds this week

Asks Stronger Air Force

Winston Churchill Pleads For More Adequate Protection

New York Winston Churchill is "girt about with many dangers," Rt Hon. Winston Churchill assured an audience of 10,000 persons at the building of a strong protective air force and full co-operation with the League of Nations

A transcript of the address made available in New York quoted the former chancellor of the exchequer as saying:

The hideous curse of war from the air has fallen upon the world and I say to you, don't you think we ought to try to make ourselves so strong against attack from this air as our navy used to make us against invasion across the sea?

Adopt White Baby

Chinese In Vancouver Legally Adopt Miss Sing-Mee Lowe

Vancouver. Leave to accept a six-months-old white boy was given a Chinese couple in supreme court by Mr. Justice D A McDonald.

The foster parents are Lim Won, proprietor of a Victoria greenhouse at and his wife, Lim Loo Shee, aged 36.

The boy will bear the name of Bryan Denis Lim, and will be brought up in the religion of his foster parents, who are Protestants.

Anticipate Change In Dollar

Parliament May Be Asked To Revise Gold Content

The Globe said "The adoption by statute of such a lower gold content for the Canadian dollar would undoubtedly have widespread reactions. It would in due time reduce by one-third the burden of all indebtedness payable in Canadian currency, and would tend to increase prices of commodities in the domestic trade of Canada in similar proportion."

The newspaper said there was now agitation in favor of parliament fixing a new gold standard "of say, 14 grains or 15 grains of pure gold to the dollar."

The present statutory gold content of the dollar is 23.22 grains.

Stratosphere Flights Planned

Two Announced By U.S. National Geographic Society

Washington Plans for two new stratosphere flights with the largest balloon ever constructed, Dewgar 1 to rise to altitude of 13 miles, have been announced by the National Geographic society and army air corps.

The two ascents, scheduled for June and September, will seek to reach the greatest height to which it is practicable for a balloon to lift a man The crew of the new stratosphere balloon will consist of Capts A Albert W. Stevens, noted observer and photographer, of the air corps and Major William Kepner, air corps balloon expert, with First Lieutenant Orvil A. Anderson, air corps, as alternate.

Will Eliminate Competition

Provinces Agree To Hold Fishing Seasons At Different Times

Winnipeg Agreements for elimination of competitive fishing seasons in the lakes of Ontario, Manitoba, Saskatchewan and Alberta were tentatively arrived at at the inter-provincial Selection conference called by Hon. J. S. McDiarmid, minister of natural resources for Manitoba

Instead of fishing seasons of the different provinces being held simultaneously, it was agreed they should be held as far as possible at different times as wasteful flooding of the market would be eliminated.

BANK CRASH CAUSES TROUBLE FOR FRENCH CABINET

CAMILLE CHAUTEMPS

Facing a chamber of angry deputies, Premier Chautemps was forced to defend his regime from corruption charges as a result of the gigantic Bayonne Pawnshop swindle, while mobs rioted outside the Chamber in Paris. Boldly scoffing at the police assertion that Alexandre Stavisky, central figure in the bank crash committed suicide influential Parisian papers demand a full investigation of the case known throughout France as "L'Affaire Stavisky." Already one Cabinet Minister Albert Dalimier of Colonies, has resigned over his connection with the case, and Joseph Garat, Mayor of Bayonne is under arrest What the French people want to know is how Stavisky a native of Russia known to the police as an invriant swindler and forger, was allowed to operate for years, perpetrating frauds that will cause a loss of $3,000,000 to investors. Political influence is blamed and sensational disclosures predicted.

NO CURRENCY WAR BETWEEN U.S. AND BRITAIN

London—A secret mission to London recently by a member of President Roosevelt's "brain trust" was reported here as the basis of an informal currency agreement which may hold the pound around a $5 value.

Americans in close touch with official circles in London heard various reports that a monetary expert of the United States government came here soon after the resignation of Oliver M. W Sprague as financial executive assistant to the secretary of the treasury on November 21.

The expert was said to have had conferences with Bank of England officials and to have arrived at an understanding about methods by which London and Washington would be kept informed of each other's policy. No formal agreement was proposed or deemed necessary, out the basis of the understanding was believed to be to let market trends take their course, with exchange equalization funds used to iron out fluctuations in currencies.

Highest authorities, meanwhile, gave assurance that rumors of an Anglo-American currency war as the result of President Roosevelt's refusal on were without foundation. Officials of the treasury and Bank of England were silent on the matter

Earthquake Takes Heavy Toll

Report From India States 2,000 Killed In Disaster

Calcutta.—Reports of damage and loss of life following original estimates flowed into Calcutta from 6 parts of India shaken in violent earthquakes on January 15. These unofficial reports indicated a estimate of 2,000 dead would not be excessive.

Reports dated stood at 3,123 as officials awaited further word from stricken areas, particularly Muzaffarpur, Jamalpur, Patna, Beura and Madhubani.

Hundreds were reported killed in Muzaffarpur. Despatches said the streets were littered with corpses.

Relief was being speeded to areas which suffered most heavily from the quake Tents and provisions were being conducted to areas where 23 were killed and 130 buildings destroyed. The populace in the Patna district, fearing further shocks, was living in the open air. Reports on 20 were killed Mild shocks continued but were nothing in comparison to the first one which rocked all India.

Seed Grain Is Mixed

Poor Quality Being Used In Saskatchewan Drought Areas

Saskatoon, Seed grain used in the areas of Saskatchewan last have had crop failures is now poorer and more mixed than at any time in the history of the province, F. W Townley-Smith, president of the Saskatchewan branch of the Canadian Seed Growers' association, warned members of the provincial body in convention here.

A special committee of the association is working on a plan to aid the grower of registered seed to sell his product, he announced.

General Currie's Horse Dies

Montreal Barely a month and a half after his master died mourned by the multitude that knew him in war and peace, General Sir Arthur Currie' cherished charger Brock died unbeknown to anybody in his stall at Sir Arthur's brother's farm at Strathroy, Ont., it was learn'd here

Endorse World Peace

Edmonton. Endorsing every action assuring world peace the United Farm Women of Alberta in convention here robbed Hon. Arthur Henderson, chairman of the disarmament conference at Geneva, commending him for his work and urging continuation of all endeavors to preserve world peace.

Military Plane Speedy

New British Machine Has Battle Of China That Is Impressive

Enclosed in London, Eng., ages-old thermal attack will, for the present, only to one emergency of the new "day and night" single-motor fighting plane announced by Sir Kingsley Wood. They call it the Hawker Hurricane, is reported to have a speed of 340 miles an hour, has a ceiling of 32,000 feet, climbs 16,000 feet per minute, is operational day and night and can fly high above the earth are contained.

The new aeroplane, which has been rumored as a fast step in construction methods to higher and rapid speed of new squadron of the Royal Defense Force, is reported to have the benefits of radio, being most powered by engines of 1,000 horse power.

Its speed of 317 miles an hour, reached at a height of 16,000 feet, where sea level, makes it the fastest radial-engined military aeroplane yet ordered by any air force. Though it is carries a big fuel load and extra equipment, its rate of climb is impressive. From sea level to 20,000 feet up occupies the "Gauntlet" less than twelve minutes. Its service "ceiling" the height at which the rate of climb has dropped to 100 feet a minute is no less than 33,000 feet, or 6,000 higher than the summit of Mount Everest.

In addition to eighty-one gallons of fuel and six gallons of oil, the "Gauntlet" carries two Vickers guns and 1,200 rounds of ammunition, compass, angle finder, gear, radio, signaling and homing apparatus, and oxygen-breathing equipment. Provision is made for the carriage of four twenty-pound bombs, held in flight racks below the bottom plane.

Exports Of Foodstuffs

Big Increases Shown In 1938 Over Previous Year

Exports of beers and hams from Canada in 1938 were doubled in value compared with those in 1937. Live cattle exports also show more than a 100 per cent. increase compared with the previous year, while the exports of eggs increased 700 per cent. The final figures for the export shipments of beers and hams will, it is estimated, total almost 70,000,000 pounds, and cattle approximately 70,000,000 pounds went to the British Isles.

More than 53,000 live cattle went from Canada to the British Isles in 1938. About 8,000 head went to other countries, or a total of over 61,000 head. In 1937 16,895 head went to Britain and 11,258 to other countries, or 28,081 altogether.

The 1938 egg exports totaled about 2,000,000 dozen. In 1937 the total was only 273,000 dozen. On the other hand practically no eggs were imported.

Canada shipped over 1,000,000 pounds of dressed poultry, mostly turkeys, to the British market for the Christmas trade.

The butter exports in 1938 amounted to about 4,000,000 pounds, most of which went to the British Isles.

Exports of milk powder, condensed milk and evaporated milk totalled nearly 30,000,000 pounds.

Seal Island Is Historic

Canada's First Life Saving Station Was Established There

It is interesting to note that Seal Island, which figured so prominently at the story of the burning of the Ellen T. Marshall, was the point on which the first life saving station in Canada was established. Its founder was Capt. R. Nickerson, whose brig "Friendship" was wrecked at Nickerson's Cove, on the west side of Cape Sable. He and his wife, Mary Crowell, it is said, were greatly distressed by the tales of sailors who had perished after fighting their way to land from wrecks. The first light of the beacon was on Nov. 20, 1852.

The Man Who Meant Well: "If all the public houses in Pole re-entry were placed end to end, they would reach from Glasgow to Edinburgh."

Macpherson: "Yeah, man, what a waste!"

VIOLENCE FROM OUTSIDE END CHICAGO'S MILK STRIKE

The milk strikers in Chicago had a wild time stopping the milk supply from entering the city till officials started to threaten embargoes and then the strike blew up. Here we see steel-toothed drags placed on the highway near the Wisconsin-Illinois State line by union strike pickets to discourage any attempt by trucks to run the picket lines, finished up in the Chicago River. An emergency supply of milk was flown into the city by aeroplane after strikers had held up several trains.

Strange Fish

Octopus Taken Commercially Off The Pacific Coast

Recent newspaper dispatches telling of the classic capture of a big octopus in Newfoundland waters, have had some special interest for British Columbians, since octopus, or squid if you prefer, are taken commercially off the Pacific coast. The catch is never large—only 21,000 pounds in 1931, for example—and whatever market is incidental to other fishing operations. All of the catch is marketed in the Orient, largely in Oriental residents of British Columbia on the Fraser.

It may be, naturally enough, that most Canadians do not know very much about the octopus of the Pacific coast and there's another fish found in the Canadian area with which they are not familiar. This is the dogfish, or spiny fish, which is known commercially all the Pacific coast. The catch is never large—only 21,000 pounds in 1931, for example—and whatever market is incidental to other fishing operations. All of the catch is marketed in the Orient, largely Oriental residents of British Columbia on the Fraser.

Power Tigers For Study

Suggestions In Connection With Project Include Many Subjects

Many of the collective organs of human-being world power failed in Manchuria is given as the topic of an address section in the Manchuria Society of the national power study project launched by the League of Nations Society in Canada.

The following other recommendations are proposed for examination by the groups which are limited to take up the study throughout the Dominion, the lack of confidence for enforcement of treaties, the fact the burden of enforcement would fall on men or less nations; the possibilities of a withdraw of United States representatives on conference, the world-wide publicity system in discussing effective action.

Canada's attitude towards actual 10 of the covenant which pertains for the preservation of the territorial integrity of the states members of the league as against external aggression is included for review. The question is asked whether war can be eliminated without removing its causes, economic, political, diplomatic and religious.

A Legend Continues

Betty, aged four, had been taken to see the three newly-arrived kittens. The next day there was only one, the other two having been determined unimaginable in a gunny sack.

Betty sought an explanation, and was told that, in those days of economic depression, it was difficult for a mother to bring up more than one kitten.

Betty remained silent for some moments and then asked, "Were they two Betty?"

At Swansea Wales, harvest festival a jug of water was given the place of honor owing to the prolonged drought.

A Real Bargain Hunter

Rich Englishwoman Sued Variety Of Articles Stored In House

A recent paradox for bargains in the late Miss Phillip Smith, wealthy old man of Hove, England, who died at the age of 104, leaving a fortune of $1,170,000, was revealed at Brighton. After her death it was found that spare rooms were crammed almost from floor to ceiling with these bargains. There were piles of old hats and other mixtures for dresses, curtains and sheets, dozens of rolls of brocade, scores of blankets and table linen, and articles of every kind. But the most extraordinary articles in the collection were thirty-four woollen shawls protective for boys and dozens of children's socks. The stuff was sold by auction, the sale lasting three days.

Young Women Advised To Learn Agriculture

Too Many Choosing Office Work Despite Of Welfare Needed

Everybody knows the United States is in the midst of a campaign to get the girls out from in front of typewriters and into cows and out from behind the guns.

The latest back-to-the-farm movement is sponsored by Miss Cheney Cowles, prominent in women's organization, who is now in Washington. On the side she is a director of the Y.W.C.A. and the Kiwanis Club in a drive to convert stenographers into dairy farmers.

"Why are women more than men?" Miss Cowles says. "Because the girls out of the professions are overcrowded and the girls are not finding jobs. And under the leading it agriculture comes dairying and farming. Why shouldn't a woman become a live surgeon for instance."

The trouble is Miss Cheney says, that there are too many girls who want to be stenographers and secretaries and not enough who yearn to run tractors. Few girls can become "the very best kind of stenographer."

The rest of them just count through the day's work and instead of having their minds on their business, they're trying to decide whether to wear the black velvet or the navy taffeta to Maggie's party, tonight.

Miss Cheney says the thing to do is to start right out in your own back yard. "If the soil isn't good, find out why it isn't. If the grass is greener on the other side of the fence, see if you can make yours just as green."

Get a spade with a powder puff attachment and a rake with a trick perfume attached to the handle and team into the agricultural situation. If you can get some sisters over, in a movie silk blouse and a pique jacket collection were Liberty-four woollen shawls protective for boys and dozens of children's socks. The stuff was sold by auction, the sale lasting three days.

Restored To Relatives

Woman Who Was Thought Drowned On Titanic Located In Montreal

Believed by her family to have drowned in the sinking of the Titanic 25 years ago, when more than 1,500 lives were lost, Mrs. Lizzie Gray Buchanan is to be restored to them when she journeys to Montreal in a few months.

Through a misunderstanding Mrs. Buchanan's family thought she was on board the ill-fated vessel, which she was not in Montreal. Mrs. Buchanan changed her address about that time and so did her relatives in Scotland. Letters were sent to the dead letter office.

There are three brothers and three sisters in Glasgow.

While we were walking in the park one day, a small niece's attention was drawn to the swans on the lake. After gazing intently for some minutes she turned and said, "Auntie, a long neck Annie Laurie must have had!"

FANCIFUL FABLES

Increase In Cotton Shipping

Decided Increase In Volume Of Export Of Commodities

Canada found shipping from the ports of Saint John, New Brunswick; Halifax, Nova Scotia; Quebec and Montreal on the River St. Lawrence, and Vancouver, British Columbia, was functionally greater in 1938 compared with 1937, despite a reduction of 61,000,000 bushels in the quantity of grain shipments which constitutes Canada's bulk of exports. The tonnage of vessels cleared from Canadian ports during January 11 months of 1938 was 20,000 tons more than in the corresponding period of 1937.

These figures reflect the decided increase in the volume of exports of commodities other than grains which for the 12 months ended November showed an increase of $41,000,000 over the previous year. The ports of Montreal and Quebec during the navigation season of 1938 cleared a total of 703,762 tons in the tonnage of vessels cleared. The ports of Saint John, Halifax, and Vancouver recorded slight reduct ion in clearances.

Considerable increases in the quantity of shipping in Canadian inland waters was also recorded in 1938. The tonnage of vessels passing through the new Welland ship Canal alone totalled over 8,000,000 tons, an increase of approximately 300,000 tons over 1937. The quantity of freight carried by these vessels amounted to over nine million tons, an increase of more than 978,000 tons.

Help From All Quarters

Many lives Bangs, Asia, Africa and the Americas has been industriously toward the building of a new channel in the port of the mouth of St. Andrew, situated in the nearby village of Greenstead, Congo, England. The rector of the parish claims that the Stracture dates back 1,200 years, and is the oldest Christian church in the world. He says a second has been erected.

When a doctor who said that a man's tongue could not stand with his feet together and his eyes open, without swaying, he was drunk in remedy at the Old Bailey challenged a witness to do so himself. The doctor agreed, and the case was dismissed.

says Miss ETHEL CHAPMAN, famous cookery editor of the Farmer

MAGIC cooks so fluffy—and you can always count on better baking results. Actually—it takes *less than ¼¢ worth* of this famous baking powder to make a big three-layer cake. Don't risk poor-quality cakes by using inferior baking powder. Always bake with Magic and be sure!

MAGIC "CONTAINS NO ALUM" This statement on every tin is your guarantee when buying Magic. Powder is free from alum or any harmful ingredient.

OCCASIONAL WIFE

By
EDNA ROSE WEBSTER

Author of "Loretta," "Loyalty Girl," Etc.

SYNOPSIS

Camilla Hoyt loves Peter Ames, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Kyra Worth, another wealthy girl who is trying to win Peter Sylvia Todd, Peter's model, and Guy Mallard, former fiancé of Camilla's, dozens of rolls of brocade, scores of blankets and table linen, and articles of every kind. But the most extraordinary articles in the collection were thirty-four woollen shawls protective for boys and dozens of children's socks. The stuff was sold by auction, the sale lasting three days.

"So you're married?" Rose had pronounced her. "That's no way to go into business or marriage, either. You don't know what you are or what you want. Gee! Ind, if I had your talent and somebody talent like you've got and a swell education I wouldn't look at a man."

"I'm not such an I get work. Rose. I'll help you to go to night school for that secretarial course." Camilla promised generously.

"That's what I want, all right. And you won't see me hitching up to drag back after me, just when I get to be a... Rose harnessed for me... a light, fancy load behind that is mostly myself."

"You will forget all those ridiculous ideas as soon as I get to work," Camilla smiled kindly, with her own wisdom.

Camilla waved the suggestion aside with a flourish of her fork "I don't believe in that kind of love anymore than I believe there's a Santa Claus. I'm going to help do you want to live with me, now? Why don't you go and live with your husband, now that the secret is out?"

"Weather or not it's a secret, has nothing to do with that, Peter and I agreed to live apart until he is able to take care of me. That may be for a long time yet."

"That's goofy, I'll say. Why wouldn't it be better for you to stay with Peter and go NOW? Why wait? Plenty of couples do that and manage to get along."

"I am not one of them don't. No, Rose, when a girl gives her best to her work for a salary and tries to keep house, she has to let down on one or the other. Usually it is housekeeping. As a wife, she fails; or at least, home becomes so unrestful that the man and woman go to thinking it is each other they hate. No, until Peter can take care of me, what he sees of me will be at his best. I shall only be home for pleasure, just as if we were lovers. That way, we always shall be sweethearts and our happiness will be saved for the future."

"I'll, I see," laughed Rose, "you prefer being an occasional wife—occasional mother—those occasional chairs and tables they advertise. I have around the house for extra use. They're there, ready to be used whenever they're needed. Handy that way, all right."

For an instant, Camilla resented her mother's comparison, then she laughed, also. "Put it that way if you wish I'll add to the metaphor. The occasional chair is not used as much as the old arm chair which is always never looking and is treated with more respect. It is the guest chair. That is what I shall be to Peter—his guest-wife."

"Well, Ha' all right to be a guest and sit in a bright new occasional chair for an evening, but you surely do like to get home again and slouch down in the old armchair that knows every crook and turn of your disposition, even if it is worn to threads on the arms where yours have rested when you're tired."

Camilla was delighted with Rose's sudden burst of droll philosophy. How wise she was, in spite of her limited education and training. She would make a shrewd business woman without a doubt, and Camilla resolved that she would sacrifice if necessary, to assure her more training for the position of which she was capable.

Peter isn't going to be much concerned with comfy... ...ture or wives rather, for awhile, she continued. "Right now, Rose, he's busy that he scarcely knows he has a wife. And that's what I'll have to do, to get work. I'll have to try harder, and perhaps ... take any kind of work to get ahead. Happen ... anything ... until I could do...."

Just a thing If I ... not the only ... in it at [illegible] I'd be afraid of my own job. Where ... two people are working all the same thing, there is a possibility of competition these days. You should be glad you have it easy, and forget about hunting for a job that some other girl needs."

"There's nothing fair about that idea. Anyone who has enough ambition and ability to work has a right to. And I want to leave the Hoyts right away. I want to start being independent, and I'll promise not to be a burden to you. I don't we look for a place on Saturday." Rents are lower now, and I've been noticing the food prices. It won't cost you any more than living at home and you've been wanting to have Ma and Henry and Mary out to visit. Wait all night, I'll ... you know and ... as you wished."

"Oh, sure, I do want to get away, and have more time to do Camilla. I was only thinking about you. I'm afraid you won't like it after being used to having everything so grand."

"You just imagine it's grand, honey. You wouldn't think so if you could trade places."

"Well, I won't. Would for awhile—that's all. I wouldn't be looking for trouble as you do. All right, then, I'll be waiting for you Saturday. If you have time, you might look around. If you see anything you like, let me know and I'll look it over, as well as I do what I can ... you with nothing and me with eighteen a week, she shrugged.

Peter looked up from his work to discover Gus Matson standing in the doorway, grinning broadly. "Oh, hello! I exclaimed "come in."

Gus sauntered into the room. "Quite a surprise to see me?"

"Yeah. Where have you been all summer?"

"Oh, around. Didn't think you wanted to see me," he dropped into a chair and gleamed up sarcastically.

"Can't all over," Peter dismissed the past. "Sorry you made a fool of yourself."

"Hasn't a fellow a right to make love to a girl if he wants to?"

"Sure. But that's not what I mean, and you know it."

"Oh, well, all's fair in—"

"That was neither," Peter interrupted him sternly.

"Oh, yeah? Gonna start bossin' me again?"

"I should say not. I wouldn't risk after the job again. In fact what you came here for, to offer me a chance to be your guardian again ?"

"No — and yes. Fact is, I'm up against it, and I thought if you could help me a little, Peter, you always were a good scout. I have some work promised after next month, but I gotta eat until then."

"While you finish your piece for the exhibit? It's the same with me." Exhibit! Who said I was working for the exhibit ?"

"Aren't you" surprised

"No. Are you?"

"Why, you thought you and the same model."

"Say, d'you suppose I'm crazy enough to think I have a chance to win anything you enter?"

"I don't know, why not. Besides, it brings your work to the attention of the right people. That's the reason I'm entering. I'd like to win, of course, but I don't expect to."

Has a hundred uses. Always have a bag in the kitchen.

Beecham's PILLS
The World Famous Remedy for LIVER & STOMACH TROUBLES

Now! Ease Sore Throat Instantly!

Remember: Only Medicine Helps Sore Throat

Modern medical science now throws an entirely new light on sore throat. A safe, that eases the pain, rawness and irritation in as little as five or *three minutes!*

It requires medicine—like ASPIRIN—to do these things! That is why throat specialists throughout the world are prescribing this ASPIRIN gargle in place of old-time ways

Be careful, however, that you get Aspirin Tablets for this purpose.

Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer in the form of a cross is on each tablet. They dissolve completely enough to gargle without leaving irritating particles.

General Situation In China

Women Gain Prominence And Are Prevailing Men Out

Women, from sing-song girls to university professors, are so much in the news in China that they are crowding the men out of the picture

The Chinese, long accustomed to keeping their women behind the scenes, now find them very much in the open. At dinner parties, balls, theatricals, sports events and all public and social functions China's women are very much in evidence.

General Han Fu-ciu, Governor of Shantung, who is a militarist of the old school, is a convert. On a recent visit to Peiping he complained bitterly because officials here spent so much time in the company of women. But on his last inspection tour of his own province he was accompanied by two women propagandists. In all the cities and towns he visited he turned the women loose to tell their sisters to box their hair and quit binding their feet.

The increasing prominence of women in the news has revived the ancient Chinese legend of a land inhabited entirely by women. Research indicates that the land referred to in the tale was meant to be the Kurile Islands. The yarn has it that in the old days the Kuriles were inhabited by fisher-women who knew nothing about men.

A Few Sips—A Few Coats —Coughs, Colds Gone

BUCKLEY'S MIXTURE is not a cheap preparation. It is made to do a job. It is a powerful bench & cough cure that is the last few days any other preparation.

Buckley's is so powerful, good that one dose gives unmistakable relief. You dose may bring your cough or cold severely. Good-bye to sleepless coughs and choppy inconvenience. Recovery Under Way
E. W. Beatty Believes

Reviewing Canadian business conditions of the past year and at the same time looking forward to the prospects for 1916, E. W. Beatty, Chairman and President of the Canadian Pacific Railway, thinks the country is on the way back to prosperity although the way may be long, and at times difficult. In a statement published in the "Montreal Star" he says —

E. W. Beatty, K.C.

"Of 1915 I think it is per haps with regret that few of us will say 'that's that,' and mark for Rita. We carry this New Year with something of a better understanding of the outstanding fact of what this so-called depression has been and what it has not been. There is no use beating about the bush and difficult spots, but it offers no danger or problem insurmount to be surmounted by the courage and energy of the Canadian people. We have before us problems that will tax the ingenuity and strength of our leaders in statecraft, finance and industry and make great demands upon the patience and understanding of men and women, but if these problems are met with courage and dealt with in accordance with the laws of immutable economics which are as relentlessly unconscious as the laws of nature, this country will emerge from the purging in far better shape to progress than it has ever been before, and indeed dual prosperity for all classes of our people will be more firmly established. I believe that the massive corner we were hoping to turn through many weary months, slipped past us all unnoticed some time ago, and that we have defin itely passed through the worst and most trying phase of the period.

Railroad Situation.

"The past year has been particularly difficult for our railroads and there seems little reason to hope that conditions are going to be much easier for those who operate them in the immediate or near future. Alteration in Canada's status from the position we used to claim as the world's chief producer of breadstuffs has already proved farreaching in its adverse effect upon our transportation industry. Under most favorable circumstances overwhelming development of other lines of agricultural production for export, it may reasonably take years to bring the volume of Canada's rail freight back to the high figures of a few years ago. It is therefore imperative upon the management of these railways depending upon earnings to meet operating costs, interest and other charges that all possible measures of economy in operation shall continue in force.

But when this is accomplished the problem for Canada is far from solved

Need Reduce Taxes.

"All that is true of the railways is true in some respect of most other public institutes, and such programs as has been made over the country along the line of effecting economies in administrations of public affairs has been helpful, but has served mostly to point the way to larger and more fundamental re-arrangements looking towards an easing of the great load of national debt and a reduction of taxation the extent of which has come to serious proportions. There is no time for further stressing the inescapable necessity for such action. I do not believe that any thinking Canadian viewing national affairs without prejudice, will deny that the drain upon public and individual wealth consequent upon the general railway situation contributes to over-shadow all other problems, and it is by far the most important difficulty that has to be surmounted before the way to prosperity lies open before us.

The Remedy.

In order to clarify the situation early in the year, I outlined in two public addresses what I believed to be the only possible solution of that problem in effect, I proposed that the people of Canada as owners of the Canadian National Railway should enter into a partnership arrangement with the shareholders of the Canadian Pacific, and that the resulting organization should be operated by the privately owned concern, then relieving railroad management in this country from the too-well proven evils of political influence and at the same time removing from the path of our greatly harassed political leaders the embarrassments that must ever accompany responsibility for railway operation My proposals at that time met with a volume of approval and support such as, frankly, I had not anticipated, and I found even in places where I was least to be expected that they received a serious consideration that showed how widespread was the conviction that this problem had to be settled in some satisfactory and permanent manner. Nothing that has since happened has tended to change my conviction that in these proposals lies the only sound ultimate solution of the difficulty. I can think of nothing short of this that may be attempted that will offer adequate relief from an economic drain that has in it all the possibilities of national disaster. I have reason to believe, also, that I share this conviction with a large and increasing number of citizens who are directly related to the state of real economic peril in which we stand."

Fort Saskatchewan Record

VOL. No. 44 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, JAN. 31st, 1934 $2.00 PER YEAR IN ADVANCE

Annual Town Meeting Well Attended

A large number attended the annual ratepayers meeting last Friday night in the Town Hall to hear the Financial reports of the Town, and of the Fort Saskatchewan School District No. 91, which were submitted, and found to be very satisfactory. Mayor G. T. Montgomery occupied the Chair by request

The Chairmen of the various committees gave interesting reports of the activities of their Departments during the year, which were well received. Mr. Fred Atkinson, Chairman of the School Board also addressed the meeting.

A motion was made, of appreciation and thanking the Council for the fine manner in which the Council had conducted the affairs of the Town during the past year, was adopted and the meeting adjourned.

STORE & POST OFFICE AT CORONADO BURNS

The Coronado store and post office was destroyed by fire on January 25, postal material being saved by the quick action of Mrs. E. H. Wood, proprietress, according to information received here. An overheated stove-pipe was given as the cause of the fire.

YPRES VALLEY NEWS

The annual meeting of the Ratepayers was held on Saturday, Jan. 20th. Mr. Ernest Pearce was elected trustee in place of Mr. Chas Dittrich retiring trustee. Messrs. Fred Dale, Bert Gunn, and Norman Latimer were elected on the Social Committee.

Mrs. Dittrich spent a few days visiting in Edmonton last week.

Miss Marion Latimer who has been visiting at the Latimer and Dave Gunn homes, left for her home at Viewpoint, Alberta, Friday.

The Ladies Aid held their regular meeting at the home of Mrs. Dave Gunn. The next meeting will be held at the home of Mrs. N. Latimer.

Mr. D. Gunn has left for his home at Lardner, B. C.

PRICES BETTER

Prices for butterfat and for hogs have reached during the last week the highest levels of the past three months. Prices for butterfat during the second week in January were 2 cents a lb. higher than those prevailing at the same time last year, and one cent a lb. higher than those of two years ago.

IMPORTANT CONVENTIONS IN ALBERTA THIS YEAR

Two conventions of international importance will be held in Alberta during the coming summer, with side trips to some of the famous Alberta mountain resorts as part of the entertainment provided. The International convention of Gyro clubs will be held in Calgary, during the month of July, in the same week in which Calgary's famous stampede is held. In June the convention of the Canadian Medical Association will also be held in Calgary, at which more than 1,000 delegates are expected.

Agricultural extension workers in both Canada and the United States have recognized that junior farm clubs prove to be one of the best methods for effective agricultural extension work.

—Let's Advertise Our Way Back to Prosperity.

Curling Club To Hold Big Jamboree Feb. 15

At a well attended meeting held in the Curling Club over the past week-end, it was decided that the Curling Club would make arrangements for their second annual Jamboree to be held on Friday, Feb. 16th Committees were drawn up and the same were posted on the board in the rink.

The Senior and Junior Hockey teams are putting up candidates for Jamboree Queen and the Curling Club will likely have one in the field also. Tickets will be sold good for one vote and the candidate receiving the most votes will be declared Jamboree Queen

It was decided instead of giving a set of Curling rocks this year, the Club would put up a hamper of groceries to the value of $25.00. Tickets are to be sold for this.

A splendid list of events have been arranged and prizes are displayed in the former Dubue Hardware store window.

MASS MEETING OF ALBERTA MERCHANTS

The Executive of the Alberta Retail Merchants are arranging for a special mass meeting of the retail merchants, to be held at Edmonton on Monday, Tuesday and Wednesday, February 12, 13 and 14 Plans are being prepared which will enable the Association to present to the Legislature the impossible situation which has developed in regard to retail distribution.

LOCAL NEWS

A number of citizens motored to Edmonton last Wednesday evening and heard Capt. E. Philpot of Toronto, give an interesting address on the policies of the C.C.F.

Price of bacon hogs are more than treble the price paid 12 months ago. On Tuesday at the Edmonton Stockyards bacon hogs off-cars were being quoted at $8.85. The farmer who has hogs to sell at this time will greatly benefit by this price.

Arrangements have been completed for the Big Dance under the auspices of the newly organized Fort Band to be held in the Badminton Hall this Friday evening. A large crowd is expected. Come out and support the band. Have you bought your ticket yet?

Due to unusual weather conditions for this time of the year, the young fellows around town are having quite a time keeping the surface on the new bobsled hill. Last Sunday an excellent day for bobsledding and a large number enjoyed this sport. Slides from Edmonton made their appearance last Sunday and reported having had a thrilling time.

Lights have been installed on the hill and bobsledding at night is in vogue.

One of our readers familiar with the C.C.F. Movement felt the urge to write, so we have published considerable account of the subject this week and will continue each week until the end.

A number of contributions will be received about the C.C.F. policies in the next issue. Watch for it.

Pure-bred Poultry Winners

Alberta won further poultry honors recently, when at the New York poultry show, a Barred Rock cockerel owned by T. R. Flynn, Edmonton, took second place. A year ago in the same show, two Alberta Black Leghorns, entered by F. S. Wetherell, Calgary, won first and second place.

Harrison Fuller, age 91, artist, died unexpectedly in New York after an emergency operation.

Co-operative Commonwealth Federation Principles

Illustrations of a Commonplace Common-sense Farmer on the morning and practical putting into operation of the C. C. F. Philosophy.

The following is taken from the manifesto and Program of the Co-operative Commonwealth Federation, adopted at the first annual convention held in Regina, July 19th to 21st, 1933.

"The C.C.F. is a federation of organizations whose purpose is the establishment in Canada of a Co-operative Commonwealth in which the principle regulating the production, distribution and exchange will be the supplying of human needs and not the making of profits.

"We aim to replace the present Capitalistic system, with its inherent injustice and inhumanity, by a social order from which the domination and exploitation of one class by another will be eliminated, in which economic planning will supersede unregulated private enterprise and competition, and in which genuine self-government, based upon economic equality, will be possible

"We believe that present glaring evils can be removed only by a planned and socialized economy in which our natural resources and the principal means of production and distribution are owned controlled and operated by the people

What we seek is a proper collective organization of our economic resources such as will make possible a much greater degree of leisure and a much richer individual life for every citizen. These changes can be brought about by the election of a Government inspired by the ideals of the Co-operative Commonwealth and supported by a majority of the people.

"We do not believe in change by violent means".

After every meeting addressed by prominent proponents of the C.C.F. philosophy one hears listeners express disappointment because the speakers did not go more into detail so as to how the ideas propounded would be put into effect.

One also hears statements by opponents, that the C.C.F. doctrine means the elimination of private property ownership, the distruction of the Church, a complete regimentation of the entire population and autocratic control of even the smallest details of private lives. Also that the C.C.F. program will be brought into operation by means of bloody Revolution, and, that even if given a trial, must fail because human nature can not be changed.

These statements can be dealt with first. The C.C.F. does not want a Revolution. The people of Canada have a weapon (vote by blood) which they can use to make any reforms which they think desirable,—the ballot. Unless and until the people of Canada express their desire for such a change, the C.C.F. must and will wait patiently and keep up the educational work.

The C.C.F. does not desire the distruction of the Church. Rather do thinkers believe that there will be a need for the Church as never before. Because the doctrine of the C.C.F. is founded on the principle of the Golden Rule and the most effective working out of this rule of living depends on the voluntary adherence to those principle rather than on compulsion by the law. The Church is the proper institution to inculcate those principles in the people.

The C.C.F. emphatically does not want to do away with ownership of, and the right to enjoy private property, but is just as emphatically opposed to the private ownership of public property and the means of the production of the needs of human life. The C.C.F. believes that by vesting the ownership of the means of production in the people, more of the people will be enabled to hold and enjoy private property and it will be more equitably distributed than at present.

And we believe that the claim that human nature can not be changed is also wrong Human nature can be changed although the process is extremely slow. But human thinking can be changed much more rapidly and that is where the Church again comes in. It will be the duty of the Church to teach the people that the true Religion must be lived seven days a week and that the idea that "Business is business" is not good enough. That the Golden Rule shall apply to our dealings with our neighbors rather than the law of the jungle rule—"Do unto others as they would do to you, but do it first". In fairness to present day business men it must be said that under our present system, they are forced to do things in order to survive and keep their head above water, which go against their nature.

The C.C.F. believes that the way to get the best out of people is to appeal to the best in them rather than that in order to get faithful service you must use their greed, or, in other words appeal to the worst in their nature in order to get the best out of them.

Look For A Silver Lining

During periods of difficulty and discouragement it is natural that the minds of people turn to and dwell upon those conditions which are the source of their difficulties and the cause of their discouragement. In fact the tendency is for people to dwell upon those things to the almost complete exclusion of subjects which provide reason for confidence and encouragement.

This, it may be repeated, is quite natural; just as natural, in fact, as it is during periods of rapid development and general prosperity to close one's eyes to all warning signs along the road. In other words, the vast majority of people are optimistic and quite impatient of words of warning and caution from many Lonesome Pines, when things are going well, but are just as confirmed pessimists and impatient with those who point to favorable signs, when the existing state of things is bad. Very few of us take note of the cloud small as a man's hand coming in the horizon when the sunshine sun is shining, and the number is equally small who can see the silver lining to the clouds when the skies are completely overcast.

As a result of this tendency, mankind plunges thoughtlessly ahead, the great majority sweeping all others long for good or ill. During boom periods, when the cry is full steam ahead, and when this, that, or the other grand pe part investing the expenditure of millions of borrowed money is being advocated, persons who loudest the advice that we should give most serious consideration to the project, count the cost, and give a thought to the ultimate and inevitable future payment, are termed back-numbers, fogies, non-progressive Governments which at such times tell the people that there is a limit to this discounting of the future, that a pay-as-you-go policy is much wiser, are swept away. The spenders take control.

But when the bubble bursts, when prosperity vanishes and depression takes its place, when the free spending comes to an end, and the bills are presented for payment, and taxation to meet these bills is imposed in heavier and heavier doses, then those who were most outspoken in favor of incurring the bills and most contemptuous of those who urged caution, are the first to complain of the shortsightedness of politicians and Governments upon whom they proceed to lay responsibility for all their troubles. On the other hand, during the prosperous periods most people take full credit to themselves for their own advancement, their increased prosperity, and the general improvement of their business and their community, and are inclined to give BUSH or no credit to anybody else.

After all, there are common traits in our human make-up. It is well, however, to occasionally take a good, square look at ourselves, to weigh ourselves in the scales, to be absolutely honest in an impartial sizing-up of ourselves, to consider our own past views and actions and their effect upon present day conditions. Furthermore, in this present period of discouragement, it is well to overcome our natural tendency to see everything through blue spectacles, and to take a look at the silver lining to the clouds.

Discouraging as our present problems undoubtedly are, is there room, in the course of these words added the people of other nations, for one people, what community in the whole length and breadth of Canada has been cheated and outraged by a lynching in its midst, such as is more or less a commonplace occurrence in the United States? How many kidnappings have occurred in Canada, even during these times of depression, as compared to the increase in kidnapping and violence, although kidnappings are daily happenings across the line? And why is it such a marked difference for the better exists on this side of an imaginary line?

The answer is to be found in Canada's far superior judicial system, resulting as it has in absolute confidence that even hundred justice will be administered, thus rendering the inventing of trash-law unnecessary on the one hand, and proving a deterrent to kidnapping and other forms of criminal activities. The tradition of respect for law and order in Canada is a great national asset, bringing comfort and security to all our people, and providing a sure guarantee against mob law and gangster rule in this Dominion. It is a strong foundation upon which Canada rests and will build through-out the future.

More of the silver lining is seen in the absence of strikes and riots and picketing in this Dominion as compared with many lands. There has been on occasional small strike in Canada, one or two small clashes with the officers of the law, an isolated case or two of picketing, but there have been no killings, and, generally speaking, peace and order have prevailed throughout the period of the depression. Canada's legislation dealing with the industrial disputes has been effective even under the grim stress of the present economic upheaval because that legislation is fair to all, humane in its principles and effective in its operation and administration of the prevailing justice for all. In this respect, Canada presents a picture that is most gratifying when placed in contrast to most countries.

In Canada, too, our political system and institutions have stood the test. Revolutions have taken place in other lands, in which lives have been lost, property destroyed, liberties taken away, dictatorships established, but in Canada, our people have been moving forward through the orderly processes of democratic, representative government. There has been no revolution, nor will there be. Confidence has been maintained in our system of law and government, and it is proving flexible enough to the people's will to enable them, in orderly fashion to get what they desire.

Many other examples might be cited, and will occur to readers of the article, but those mentioned above gives an indication to people to try and overcome their natural tendency to look constantly on the dark side, for there is a silver lining to the present clouds, and that every neighbor has certain grounds of still brighter, better things ahead.

Household Drudgery

The Bane of a Woman's Life

Nature intended women to be strong and healthy instead of weak and sickly, but how can a woman have good health when she has to go through the household drudgery without any relaxation. It is easy to see that the nervous nerves and kidneys, has her feeling faint and dizzy spells, shortness of breath, backing fluid and disagreeable sensations, and can't sleep at night.

Women who are weak and run down will find in Milburn's K. & K. Pills a remedy to strengthen the system and bring back the much desired health.

Women Entomb Her Body Somewhere This Week

Tale Of Bloody Journey Brought Down From Ahlavik

From out of the fastnesses of Canada's Frozen north emerged a tale of a woman's hazardous journey along 320 miles of the most dangerous part of the Arctic coast.

Miss Isobel W. Hutchison, young Scotswoman, completed the journey leaving hardship, hunger and bitter cold, and arriving at her destination, Ahlavik, just before Christmas. Word of her exploit was brought to Fort Resolution by Pilot Doug Bythell, Canadian Airways, returned from several months in the far north.

The Scotswoman made the trip by dog teams, Pilot Bythell said, when winter overtook her as she was making her way from Bathurst inlet westward around Point Barrow. When the ice formed she took to sledge.

It took Miss Hutchinson's indomitable to make contact with the Arctic boat Fullerton, near Pond Barrow, last Sept. Peterson was unable to proceed further because of ice condition, Herschel Island. She therefore chartered Eskimo schooners along the route to help her on her way.

Incidentally, about this time Miss Hutchison had the distinction of being bringing several mail-entro from the district Hudson Bay Company's band Bayshime, which was then still about 15 miles away.

Later, and after a succession of setbacks, she was finally frozen in about 250 miles short of her goal. This distance with severe hardship and difficulty she covered with her rescued dog teams, arriving at Aklavik a few days before Christmas.

Apparently, stated Pilot Bythell, she was little the worse for this tremendous journey, which if only for the hardships and the bitter cold, and arriving at her destination, Akl

WORLD HAPPENINGS BRIEFLY TOLD

The tendency to ghastly war in the armed test looms was demonstrated by Dr Tommy W. L. McDermott, secretary of the League of Nations Society, Toronto.

"Sunshine Inn", free dining room in Vancouver B.C., celebrated its second birthday on January 4 with a record of 200,000 meals served to the needy.

"The Call of the Land," wrote Charles Dickens wrote for his children, may be published after all. An offer of $100,000 was reported to have been made for the book.

Claimed to be the fastest war vessel afloat, a new type of torpedo craft, capable of a speed of 55 knots, is under trial at Saint-Nazaire, France.

British Columbia beef cattle growers have gone on record as favoring a maximum marketing board, it has been announced by J. A. Grant provincial

Churchill's first public stopping place on the new northern transcontinental next spring, Harry Cassidy, northern pioneer and herdsman, announced he received a permit from the Manitoba government for the

Described as one of the most valuable historic relics discovered in the northwest, a medallion left by Capt. James Cook, Pacific northwest and Antipodes explorer, when he landed at Nootka, Vancouver island 1778, has been found.

Completion by the government of Canada of a special chamber at the port of London for use in the handling of Canadian chilled and frozen meat products was announced by Hon. H. H. Stevens, minister of trade and commerce.

British Columbia's agricultural products, despite disastrously low prices, were worth $34,000,000 in 1933, a slight gain over the 1932 figure of $34,973,000, according to a year-end estimate, released by Hon. K. C. MacDonald, minister of agriculture.

Lewis Lehlen, pioneer Canadian railroad builder, is dead at Toronto at the age of 88 years. He was associated with Mackenzie and Mann in construction of the Canadian Pacific railway through the Rockies and in completing the Canadian Northern railway.

The success of the League of Nations depended on the development in each country of strong movements that would support the ideal of international co-operation, Hon. Ernest Lapointe president of the League of Nations Society in Canada, said in an address at Ottawa.

Working A Day

Grain Register And Supervisor Have To Be Figured

The tonnage of a vessel is of two kinds. First there is the gross register. This means the cubic capacity of the ship's hull added to that of all erections on deck, but excluding space occupied by machinery. This is calculated in units in 100 cubic feet - the Board of Trade ton.

Secondly there is displacement, which gives the vessel's actual weight. The part of the ship under water is measured and the weight of water that would occupy its place is calculated.

Uncle Fiddle Reading

Mrs. Belle Oldham, 88, of Fort Scott, Kas., has begun her 80th reading of the Bible and she plans to finish on Christmas Eve, just as she has done for 45 consecutive years. For good measure she has thrown in six other complete readings by following her weekly Sunday School lesson. Mrs. Oldham completed her 69th reading at the home of a daughter in Springfield, Missouri, on Christmas Eve.

Sister's Flame - "Well, Bobbie, have you heard that I was to be one of the family?"

Bobby "Sure, long ago: haven't you?"

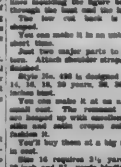
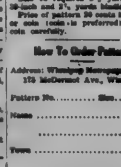
You Need Oil Rustled

Speedy Trains Are Not Put Into Regular Service

A train which travels so quickly that its high speed is still in advance of protected use is an anomaly but Germany possesses it today in the electrical "Flying Hamburger," and it is of interest to note that thirty years ago speeds unequalled in the world were achieved by electrical trains built by English electric companies. On September 15, 1903, a speed of 126.66 miles an hour was recorded, and this was increased on October 27 to 130.68 miles. Technical difficulties, especially connected with the rectifier, were responsible for the fact that these trains were not put into regular service. They were also no popular demand at that time for such rapid travel. The record of 162.9 miles made by the "Coppernob en rails" two years ago still stands unchallenged as the world's record for travel on rails, but the speed is too high for practical use.

By Ruth Rogers





Western Committee

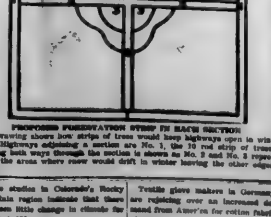
Hon. James F. Bryant, K.C., chairman of the Saskatchewan Committee on Conservation and Afforestation, has announced particulars of a contest which is open

(1) would result in the desired capital by years of shelter;
(2) would retain the moisture and prevent the drying out of the soil by the wind;
(3) would help to keep the roads open in winter;
(4) would furnish a wood supply for every farm;
(5) would provide a shelter for birds which would assist in keeping down insect pests;
(6) would add to the beauty and attractiveness of the landscape;
(7) would help very materially to bring back normal rainfall to the drought stricken areas of the province.

This could be accomplished by the planting of trees in strips ten rods wide running North and West, and North and South, through every farm section of land in the prairie districts of Saskatchewan.

If all the trees now growing on the Forestry Farms at Indian Head, Saltcoats and on the Provincial Institutional Farms at Battleford, Prince Albert, Regina, Moosomin and Weyburn, were made available for this purpose, and if supplemented very large acreage put in next spring for this object, through the co-operation of the Federal and Provincial Governments, a very large start could be made in the direction desired by the first season.

The experts are that there will be plenty of moisture in the next few years so that the trees could get a good start and grow rapidly, and it is essential that the lessons of the dry years be not forgotten, as provision made during the wet years



PROPOSED FORESTATION STRIP IN EACH SECTION

Drawing shows how strips of trees would keep highways open in winter. Highways adjoining a section are No. 1, the 10 rod strip of trees, passing both ways through the section is shown as No. 2 and No. 3 passes around the area where snow would drift in winter leaving the other open clear.

Tree station in Colorado's Rocky Mountain region indicate that there has been little change in climate for the past 400 years.

Textile glove makers in Germany are rejoicing over an increased demand from America for cotton fabric gloves.

Marvels of the Human Eye

By F. H. CROWE, Optometrist-Optician, Calgary

NO. 7—FORTIFYING OUR "OLD-AGE SIGHT"

Although forty years of age is of course not considered old, yet because Presbyopia usually manifests itself at about that age it is commonly referred to as "old-age sight." How often we hear people say "my sight is just as good as it ever was except for reading and sewing. Yes this condition is a common one, and as we consider the cause of this natural development which causes so much inconvenience after middle life

We have fully explained that in order to have a clear image of a distant object formed on the Retina the length of the eyeball and its curvature just right - else Long Sight must be properly related. The first two may be considered as fixed as to length and curvature respectively but fortunately the Lens is elastic and it is this elastic power of the accommodation" which enables us to change objects near at hand. Accommodation is most powerful around twelve years of age and then gradually diminishes, but there is no loss at age sixty-five or seventy.

For sustained work a certain amount is absolutely necessary and this the average person of forty five does possess. It is the necessity of assisting the failing Accommodation by artificial means to the focus of glasses and as the Accommodation continues to decrease, the glasses must be made stronger to correct. This change should be every two or three years

New York's Latest Idea

Will Be Huge Reproduction Of Solar System In Miniature

The New York Evening Post says: "Heaven has been a long time coming to New York. In fact, it isn't here yet.

But it's scheduled for the spring of next year.

It's an "artificial heaven"—a reproduction of the solar system in miniature. And it's to be shown in the planetarium building to be constructed by the Museum of Natural History on the Eighty-first street side of its grounds on Central Park West.

Crowning the two-story structure will be a dome having a diameter of seventy-five feet. At the base of the dome the horizon will represent the skyline of New York in silhouette.

Then will come the constellations which will be unfolded like mighty pageant of the skies.

"The inverted bowl," in the words of Dr. George H. Sherwood, director of the museum, "becomes a stage where the tremendous drama of the heavens, with an 'all-star cast', is presented within the short span of an hour."

Even a heaven—at least, an artificial heaven—has to be financed.

New York's is to be made possible partly by a bond issue of $650,000 to be purchased by the Reconstruction Finance Corporation and partly by a gift of $150,000 from Charles Hayden. The RFC money pays for the building and Mr. Hayden's gift provides the canopy of stars. Hence the announcement that the names of the structure is to be "The Hayden Planetarium."

Star-gazing will be a thrilling experience in New York's artificial heaven.

Price Of Bibles

Great crowds flock daily to the British museum to see the famous Codex Sinaiticus, bought at a cost of $500,000 from the Russian government, but few notice another smale nearby, which is priced at only $1,000. The huge family Bible belonged to William Cline, founder in the early 19th century of the first British settlement in remote Trafalgar in Canada.

A Scotch woman claims to have invented the war tank because she knew many of them in a vision.

PUBLIC WORKS PLAN FOR RELIEF ACROSS CANADA

Toronto Initial expenditures of $50,740,000 in eight provinces of which Ontario and Quebec receive major part one, end of white substantially all will be spent in construction of provincial and federal buildings, bonus the principal of the unemployed in public relief work which Prime Minister R B Bennett was quoted as forecasting, the bill and Empire was authoritatively reported.

The plan, it was stated, represents the work of 20 rep eaml committees auditored across Canada, in co-operation with a central committee at the headquarters in Toronto.

"Under its proposals, division of the total will be as follows: appropriations by provinces Britain Columbia, $3,510,000; Alberta $3,215,000; Saskatchewan, $3,571,000; Manitoba $4,484,000; Ontario $17,560,000 Quebec, $13,260,000; New Brunswick $2,075,000; Nova Scotia, $2,435,000 Prince Edward Island no apportionment so far."

Works will not include housing, deep waterways, nor road construction, the Mail and Empire was informed, but will be devoted entirely to construction of new buildings and rehabilitation of present buildings

Using Cull Dairy Cattle

Surplus Beef In California Will Be Canned For It Not Food

San Francisco California's surplus dairy cows and steer beef, totalling approximately 12,000 head, will be slaughtered during the next three months, cooked and canned for distribution to unemployed under the direction of the state emergency relief administration.

The plan, which will entail the expenditure of $230,000, has been endorsed by the California Cattlemen's association and the California dairy council as direct stimulus to their industries. R. C. Branion, state administrator, estimated the transaction will consume most of the available cull dairy cattl; in the state.

Must Leave Greece

Samuel Insull Told It Is Necessary In Order That He Stay In Europe

Athens. The supreme state council and the minister of the interior agreed that Samuel Insull must leave Greece and seek a new refuge from attempts to extradite him to the United States.

The council rejected the former Chicago utilities operator's plea to stay here longer than January 31 and ordered him to pay the cost of recent proceedings so as to "maintain the existing good relations between the United States and Greece."

Economy Is Necessary

Toronto. - Government economy that guarantees the national credit and protects the private investor against the confiscation of degree is "the," is the only solution of Canada's depression problem, Floyd E Chalmers, editor of the Financial Post, declared in addressing members of the Canadian Construction association at their convention here

More Marriages Last Year

Ottawa. - Marriage Bureau bureaus and clergymen found business picking up last year but undertakers and obstetricians had less at da. From 76 cities in Canada reporting vital statistics to the Dominion bureau of statistics came reports of more marriages than a year ago but fewer births and fewer deaths.

Fraudulent Sales Tactics

Winnipeg. Complaints that Manitobans have been victimized by long distance telephone high pressure stock sales tactics are being investigated by the municipal public utility board, W. R. Cottingham, K.C., chairman, announced.

Lone Winter Patrol

Mounted Police To Investigate Smuggler Report, From North

The Pas A lone w nt patrol of the Royal Canadian Mounted Police, mushed through the north country en route to Lac du Brochet to ring past where sinister and vague reports have aroused fears that a world gas or "Chemical-Spirit of hill" has recently swung the Chipewyan Indians of the Barren Lands

Grisly tales of a demented Indian being tied to a dog sled by a companion have be a rumor to come on the Hudson Bay to Lac Indian camps of Tadoule Lake, Wollaston Lake and the firing of the Northwest Territories

Quebec May Decide To Organize Lottery

Just Amendment To Criminal Code Would Be Required

Quebec. Rising on valid reason why the provincial government should be tied to the Dominion government in respect to the organization of a sweepstake, it was declared here, that "perhaps" the Quebec government would organize a lottery with an eye to charitable and educational purposes

If indications were given that such a step was in the house, legislators to this effect would be tabled, it declared The premier hoped that as a result of the Dominion-province conference in connection to the criminal code would permit this province to hold a lottery if it saw fit

Wheat Acreage Reduction

No Compulsion For Saskatchewan Farmers States Premier Anderson

Regina Farmers of Saskatchewan will not be faced by any compulsory wheat acreage r duction legislation, according to Premier J. T. M. Anderson

Details of the plan have not yet been announce J, but Hon. M. A. Macpherson, attorney-general, stated on the last day of the session that the government would launch an educational campaign as a means of meeting the principle involved in the international wheat agreement.

According to reports from Ottawa during the Dominion-provincial conference at Ottawa it was decided to limit the opportunity of hopping 4,000,000 acres off its wheat area.

Details as to how this policy will be interpreted in relation to the hatcheries will be announced shortly by Mr MacPherson.

Inherits Large Estate

Vancouver Man Going To England To Claim Fortune

Vancouver Ernest Kellett Long, 35, who came to the British Columbia coast for a time near Atlin. Later he came to Vancouver, where he has lived for the past 20 years.

The estate he inherits is Preston Hall, four miles from Norwich in Norfolk. It includes 3,555 acres of farm land and £32,000.

Trade With Russia

Washington. Secretary of the Treasury Morgenthau opened federal mints to Soviet Russian gold. It was one of three important orders affecting trade with newly-recognized Russia The other two lifted prohibitions against Russian lumber and pulpwood because of convict labor production and against Russian matches because of the plan.

Areas In India Devastated

Months Before Number Killed In Earthquake Will Be Known

Calcutta An appalling toll beyond any previous; known many was recorded in India's earthquake disaster it was indicated when the Rajah of Mongkyr and deaths in Mongkyr alone have reached 6,000.

It will be months before accurate figures can be removed to reveal the inscrutable bodies buried by the earthquake which shook the region during the important meat to festival of Bihar Fitr. The rajah predicted two generations will pass before the devastated areas can be rehabilitated.

The district of Mongkyr is in north-eastern India in the Bhagalpur division of Behar and Orissa. It has an area of 3,927 square miles and is divided by the Ganges

Cities Of Youth

Interesting Statistics Gathered Relating To Age Of Populace

Ottawa Three Rivers in Quebec and Sydney in Nova Scotia are the cities of youth in Canada, according to census figures just compiled by the Dominion bureau of statistics. In both these cities 46 per cent. of the population in 1931 was under the age of 20 years. At the other end of the list was Victoria, where only 28 per cent. of the people had yet to see their 20th birthday.

The prairie provinces showed up better than Ontario. Regina led the list with 36.94 per cent. and Edmonton followed closely with 36.45. Winnipeg had 28 per cent. under 20, Calgary 34 and the average was 34.

Ask Britain For Suggestions

Dominion Statesman Hopes And Germany May Be Settled

London An invitation to the British government at to formulate definite suggestions designed to lead to a settlement of th disarmament statements it was learned authoritatively was contained in a German reply to British note inquiries of a month ago.

Although official circles did not announce what this contained, it was ascertained in some political circles that acceptance of this bid would in effect more or less place the British government in a position of attempting to bridge the gap between the French and German views

Mounties Meet Old Timers

50 Members of 1874 Force Get-ot-Gether Reunion From Calgary Herald

Calgary Members of the Month West Mounted Police of 1874 saluted the dawn of the fiftieth year the Royal Canadian Mounted Police of 1904 at the annual round-up of the South re Alberta Pioneers and Old Timers Association. Col James Walker, G C King and John Herron, who helped pastes the plains in '74 greeted Redcoats from the Calgary barracks of today Mrs Alex MacLennan of Cardston headed the pioneers' roll call as the oldest pioneer present She came to Alberta in 1886.

Prospecting By Air

Noted British Aviators Will Search For Gold In Desert

London Sir Malcolm Campbell, holder of the world's automobile speed record, and Sir Alan Cobham noted British aviator, will leave London shortly on an aerial quest for gold in the waterless Kalahari desert. the Daily Mail announces.

They proposed to alight in the desert and use the plane as a base from which to explore on foot with the assistance of a geologist whom they will take with them.

Combination Car And Plane

Seattle Aircraft that will fold its wings and travel along highways was described here by Ha creator Prof John W Miller, associate professor of aeronautical engineering at the University of Washington, as a possible forerunner of a combined motor car and aeroplane

Earthquake In China

Shanghai. An earthquake that shook the province of Shansi and Suiyuan, destroying buildings and burying persons in the debris, said semi-official reports reaching here The extent of the damage was not known but it was believed that loss of life was small.

Naval Officials Deliberate On Vital Problems

Singapore, Straits Settlements — While deep secrecy surrounded the deliberations of high British naval officials aboard the cruiser Kent at this British naval base, it is was a belief the discussions might result in decisions on policy of great importance to the empire and the world

It is known the future of Singapore as a naval base, in the light of recent menace of rearmament alone by Japan England, Australia and New Zealand and the far east, is under discussion There was a tendency to believe the conferences headed by the naval officials might eventually result in a decision on the part of British authorities to actively pursue construction work, for the most part suspended in recent years.

Despite the base announcement of the admiralty in London the conference is an automatic and routine affair, the gathering continued to excite keen interest There seemed good reason to believe the admiralty would authoritatively recommend the modernization of Singapore as a powerful naval base, although this would not in any way mean a change in the traditional policy of naval defence.

Sweat Shop Charges

Clothing Abuses May Be Aired In House Of Commons

Ottawa — "Clothing abuses" will be brought to the attention of Hon. H. H Stevens minister of trade and commerce, at the annual convention of shoe manufacturers of Canada, in Toronto recently, will probably be aired in the house of commons.

In Toronto the minister struck out at sweat shops and the crushing cost of small competition in some buying and nation-wide organizations.

The speech of the minister, it is known, has e rolled in a flood of letters and communications which endorse its statements he made and support the attitude he took

These communications are rolling into the department of trade and commerce daily.

Uniform Companies Act

Expect Legislation To Be Enacted For All Provinces

Winnipeg Adoption of a uniform companies act in all provinces of the Dominion can be expected following a conference of legal officers of the various provinces in Ottawa next March Hon. W. J Major, K.C., attorney-general said, following his return from the Ottawa Dominion-provincial conference.

Mr Major said the legislation was expected to be introduced in the house of commons before the end of the coming session and at least several of the provinces would be able to pass the act in the 1934 sess ons. Definite agreement on the new companies act was reached at the Ottawa conference he said.

Garage Roof Collapses

Winnipeg The roof of a public garage caved in beneath weight of snow burying 25 automobiles Duncan F Campbell partner in the garage business, and Fred Bull risked injury to drive out 15 cars before the weakened roof gave way Fire caused by a short circuit following the collapse caused several thousand dollars damage before it was quelled.

Cancer Menace Increasing

Montreal Cancer is constantly increasing, Dr J. E. Gendron, director of the Radium Institute of Montreal, warned in an address here We are apparently waging a losing battle against the most horrible plague assailing humanity," he declared Establishment of radium institutes is regarded as the best means of fighting the disease.

MAY HEAD AVIATION

Captain Mary Mc director of the Ontario air d ve who has replaced Lieut. Col. Wilfrid Bovey as head of Federal Department of Civil Aviation and Transport, in the department of National Defence

EXPERT ATTENDS KEMPTON INDLANDS STAMP FRAUD TRIAL

Mr. Cyril Harmer, famous British stamp expert, was called for St. John's, Newfoundland, to give evidence in a case of alleged forgery of postage stamps. This is believed to be the first time that a member of the stamp trade in Great Britain has been asked to go to one of the Dominions for such a purpose. Three arrests have been made in Newfoundland in connection with the case, which is being brought by the Newfoundland Government. One of the defendants, is charged with attempting to obtain £50,000 from Mr. R. Harmer by offering to sell him forged overprinted copies of the Italian Air Ar...ada stamps. Here we see Mr. Cyril Harmer examining stamps in his office

Vancouver Shipping Has Shown Amazing Growth

Figures Ending For Above Level Of Year Ago

A rousing note of cheer and confidence is issued by the Vancouver Harbor Commissioners.

Shipping figures are rolling for above the level of a year ago and a wider range of export tells of new port growth.

"The people of Vancouver and the whole of British Columbia can take heart from the accomplishments of the past 12 months," said Sam Mackay, president of the commissioners.

"Such one of us is concerned with the shipping of Vancouver as a port. During the past year not only has it increased in total tonnage, it has shown new and greater life in practically every commodity handled."

Mr. Mackay pointed out that the increases embrace virtually all the major industries of the country, and reflect a healthier condition in Canadian business generally.

Large cash imports and exports, lower clearings, down and pulp and paper show big gains over 1932.

Concentration, almost completely absent during the past three years, reappeared in a considerable movement.

Other material gains were in flour, scrap metals, coal, fish, apples and molasses.

The latter, with a 66 per cent. increase over 1932, is a good augury for the future.

A new shipping movement by United Kingdom boats, to that of bananas and citrus fruits. Coming from Central America and California, these imports created a considerable amount of intra-coastal trade for above load of 1932.

Similarly significant was the large number of small fishing craft using the harbor commissioners' facilities.

A larger number of passengers passing through the port confirmed the active increase in port business.

"More and more, the products of the countries of the world pass over the docks of Vancouver, and the port can be said to be a virtual clearing-house of world goods," said Mr. MacKay.

With preparations under way for a busy term, the prevailing spirit at the harbor commissioners' office; is "Watch 1934!"

But Hard To Learn

He Stole Over The Key To Double Fortune

For The Third

Six days after the six day death of a debtor, give the blind a key which opens out for them the whole range of literature and music. By writing out one or more of these dot-and-dash combinations can be formed, and the inter-connecting machine now inaugurated. This is the famous Braille system, called Braille after its inventor, and it is used by blind readers and writers in every part of the world. The sixty-three combinations allow ample variety to cover any ordinary alphabet and also the punctuation marks and contractions. They can also be applied to numerals and music symbols. A thorough knowledge of the Braille system can be acquired by a few weeks' study, and proficiency in reading—performed by the fingers is obtainable after about six months.

New Planets Discovered

The Bloemfontein Observatory, Algiers, Africa, announced the discovery of two planets situated in the Asteroid region between Mars and Jupiter. The scientists reported the new planets were first sighted in November, and since had been confirmed by photographs made in observatories all over the world. The planets temporarily are designed as "19,128 WB and GH."

Westminster Abbey

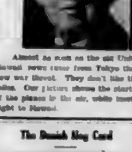
Westminster Abbey will receive additional stolen in the eyes of the empire in the course of a few weeks, when a bust of Adam Lindsay Gordon, the national poet of Australia, will be placed in poets' corner, next to that of Tennyson. The memorial is being erected at the expense of the Commonwealth government.

W. N. U. 1932

JAPAN SEES FLIGHT OF U.S. NAVAL PLANES AS NEW THREAT

Almost as soon as the six United States Navy seaplanes completed the 2,100-mile flight over the Pacific to Hawaii from Tokyo that the Japanese war lords were viewing the result with grave misgivings, it was announced here. They don't like the idea that seaplanes can fly across the ocean in mass formation for 2,100 miles. Our picture shows the start of the long hop (lower right), from Paradise Cove, San Francisco. At top, one of the planes in the air, while next to Lieutenant Commander McClusky, who commanded the squadron on the flight to Hawaii.

The Danish Hog Card



The picture above is a reproduction of a Danish "hog-card". This card is said to be the most valuable thing in Denmark.

When the United Kingdom announced the first restriction on imports of bacon from other than Empire countries, Denmark was forced to take steps to insure that the amount of bacon shipped should not exceed the quantity agreed upon with Britain. It became evident that two things had to be done, (1) to arrive at a fair basis of division between producers, of the bags that could be used in filling their British quota, and above which could not be used, and (2) as rapidly as possible to reduce production to a basis that would permit of the disposal of the total product.

The hog-card system was adopted to accomplish both purposes. By a carefully worked out system the number of bacon hogs that could be put into the British quota was determined. As Denmark is a very small compact country, this could be done.

To every farmer is given a card for each hog which he may deliver to the quota authorities. These are divided into monthly periods.

To dispose of the remainder farmers may also deliver bags without being accompanied by a card. All such bags are sold at a price determined by what can be secured for their product. A couple of months ago it was said that bacon was about half that of the "quota bags".

It is easy to see how under practical circumstances the bit of cardboard represented above may well be a thing of extraordinary value in Denmark.

Oldest Court Of Justice

The oldest court of justice in the world is the "Tribunal of the Welkom," held annually in the hill of Gemil, for 972 years. Eight judges have sworn concerning the vast water system of the province and quickly render their verbal decisions, which cannot be subject to argument or appeal.

History Of Ancient Church

Book Gives Insight Into Life Of English Parish

The Hampshire Advertiser and Southampton Times contains an interesting account of early history of the ancient church of Lymington parish in England. An insight into the life of the early times and the human side of the church's history is contained in a book by the Rev. Charles Bashaw and Edward Mapleford.

Reference is made in the "Notes" to a William Fitt, who was parish clerk for forty years in the early part of the last century. He used to occupy the lowest portion of an enclosed pew "Commodious, and being very deaf, he often said "Amen" at the wrong time The sexton, who, a regular duty is said to have been to creep stealthily about the church armed with a stout cane to thrash the boys, who, at critical periods of the service, were standing in the aisle opposite the deaf clerk to signal him when to say "Amen."

The church is thought to have been built about 1256, although it is thought probable that there was a parish church in the town centuries before that.

Filled His Place

A Scotsman holding an important job in the city was always being twitted by an English friend about his nationality. By a curious chance the two met on holiday.

"Hello," chaffed the Englishman, "how on earth is your office managing to get on without you?"

The unexpected the first, confidently. "You see, I left two Englishmen and four Welshmen in my place."

Matter Of Education

Nations Can Avoid War By L. aining To Trust Each Other

The unlikelihood of immediate war and the necessity of educating nations and individuals so as to finally, as a means of settling national problems were ideas developed by Prof. George M. Wrong in the course of an address on "Foreign Relations," at a meeting of the Women's League of Nations Association in Toronto.

"I don't believe war is at all imminent in Europe; I don't believe there are forces in Europe adequate to war. In fact, there seems to be no prospect of war unless some great emergency rises," was Professor Wrong's reassuring conclusion, after having discussed the European situation at length and having set forth the foreign relationships of various countries.

"The crisis will talk you we have always had wars and will always have them—that we cannot change human nature," he said. "We cannot change human nature, but we can educate it out of the idea that war is the solution of national problems," he said. The only logical solution is good-feeling, the willingness of nations to trust one another. Avoid the cynic avoid the man who says that nothing things have been done through ignorance and stupidity in the past, we cannot shape a better world," he advised.

Nearly forty wheels, which were hauled ashore on the British coast, have been offered to the British Museum in the past year, the institution having first choice of all those stranded.

FANCIFUL FABLES

Difficulty Overcome

Sterling Flexibility Of Wings In Posture Of New Aeroplane

The dream conception of every pioneer of flying since Leonardo da Vinci is a machine which can reproduce in their utmost delicacy, all the motions of a bird in winging, all flexibility of wing in the air. Lieut. Hawkins will make his first demonstration flight before an audience of experts from all countries, and it is expected that the Hawkins machine will be the most remarkable in the world.

The secret of this wonderful new development in man's conquest of the air lies not in its range of engine power, nor in any new mechanical principle such as the rotor or wind-mill plane, but in the flexible flexibility of the wings themselves.

The idea of a flexible wing or to be more technical, the automatic warping of wing is not new, but the difficulty of applying it to a practical machine has always proved insurmountable. Hawkins has overcome the difficulty of the automatic warping of wings, and after the direction of the air flow over the wing surface, resulting in an increase or diminution of the lift of the wing and rendering impossible a stall.

The effect of such manipulation of the shape and curve of the wing is to give the aircraft a wide range of speed from very slow to very rapidly and descend slowly without the attendant disadvantages of slow speeds when proceeding in normal and level flight.

Birds have the power of adapting the shape and curve of their wings to suit their speed, but it is the close study of their movements that has enabled Signor Ugo Antoni, the inventor, to achieve what had remained regarded as a practical impossibility.

He experimented with aeroplane wings. The surface of resistance to the air-flow of the wings—varying the camber—would achieve his purpose, and give to him a higher range of speed and safety than the aircraft of today could afford.

The wind have to be done by a mechanism of some sort—but a mechanism that would have to be installed inside the wing itself, so as light as to be negligible in the construction of the wing, and sufficiently strong to pass the rigid strain-tests imposed by the authorities.

The mechanism would also have to be controlled by a lever in the pilot's cockpit.

Now Signor Antoni claims that he has evolved this mechanism. He has, he says, triumphed in his lifelong quest of the real bird aeroplane, and he has gained the keen interest of the leading aeronautical experts of the world.

England's Fullest City

Commercial Travellers Give Shocks To The First Place

In Sheffield (as, pictured city in England? Commercial travellers say that it is. In the first place the commercial traveller is met outside the railway stations by an illuminator which, on his pressing a button will direct him by means of electric lights to the spot where he wants to be and where to get the nearest tramcar. If he is still in doubt, he has but to ask the first person he sees and he, or she, will not only tell him where to go but will actually walk with him round the corner. This attitude is borne out in all the city's social contacts with strangers.

For Interest Fast

The resignation of Albert H. Enlow, instructor of economics at Harvard university, to accept an appointment with the Canadian government in connection with the proposed establishment of a central bank in the Dominion was announced at the university. Enlow will be a tax investigator doing research for the Cyril, minister of finance in the promotion of the proposed central bank, it was said.

In accordance with his duties, with the duties of a wheelwright were combined over the floor of the fore-edge where he had worked for 40 years. In South London, and the premises were burnt in the summer.

13-33

OCCASIONAL WIFE

by

Elsie Rowe Wiebeth

Author of "Jeretta," "Lipstick Girl" etc.

SYNOPSIS

Camilla Meyt and Peter Amos, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Ona Matson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with his pervasiveness. When the rest of the members of the party go to a cabaret to continue the gaiety Peter and Camilla slip off to the bunch by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. The mishap is necessary for Camilla to announce before the party that she and Peter are married. Avis is stunned and Camilla's mother likewise. Camilla decides that she must leave the home of her adopted parents immediately and go live with Rose, her cousin, who is a file clerk in a business house. They decide to take an apartment.

(How Go On With The Story)

CHAPTER XXVII—Continued

"Well, you win the scholarship and go abroad, and that will give me a chance with your girl," slyly. "What girl?"

"The rich little dame we quarreled over."

"Camilla?"

"Sure. Lord, she's a beauty, though."

"She's my wife." Peter announced coolly.

"What?" Ona shouted. His incredulity and consternation surpassed even Mrs. Hoyt's. "Tell me somebody's fibbing."

"Believe it or not."

"I won't."

"Don't you ever read the society column in the papers? We were married

Send That Cough or Cold With Scotley's

It only costs a few cents to get relief from that cough or cold. Just send for a sample of Scotley's Cough Syrup. Take a few doses and see how quickly it relieves the cough, soothes the irritated throat and allays fever. Scotley's Cough Syrup is also a splendid remedy for children's coughs or colds. Write today for sample.

Write now with your coupon. Don't put it off. Send for sample of Scotley's Cough Syrup today. Address: Scotley's Cough Syrup, Dept. 1, Toronto, Ont.

W. N. U. 1932

rried the day after commencement, but it hasn't announced as yet. You know. We firmly determined the Hoyt affair all keeping it a secret among ourselves."

"What a breach for you!" I guess I came in the right place for help, all right. You live over there on that palace?"

"Not much! Neither will Camilla, after this week."

"You don't mean she's coming here to live with you, in this little room?" Ona exclaimed.

"No, she wants to live with her sister, until I get going. That was the arrangement from the first.

"Oh, trying a new stunt, to solve the struggle problem, is it, my son?"

Just about that. It's Camilla's idea until I can afford to keep her in a flat. Going to work, too.

Sure she thinks that's easy but it won't last. Not for her occasional wife, eh?" he grunted. "Well, I have to hand it to you. That's the kind of wife to have these days—one who don't have to take care of. But it might be dangerous to have a wife as successful as yourself."

Peter's jaw closed rigidly. "That is not for you," he said evenly, but the words were like a growl of warning before an angered dog leaps.

Ona stood up casually, but his eyes watched Peter warily. "Well, many congratulations, anyway, and good luck. I'll run along now. But how about a small loan, just for a few weeks? I wouldn't ask you if I didn't need it like the devil."

"Sorry, Ona, but I haven't ten to my name. I'm just managing to keep myself while I finish that work. After that, I hope to do better."

When Ona had gone Peter re-called his denial of entering the exhibit, and wondered what it could mean. Had Sylvia manufactured him, or had Gus given him the idea after he started? Peter was puzzled.

CHAPTER XXVIII.

It was by a strange chain of circumstances that Camilla obtained her position with Rose. Coincidence is linked coincidences in all life formed, and still doth wonder and exclaim over the strange interlacing of events it shapes and forges the connecting links of time and place and character in their consecutive position. That is why we believe in fate rather than fiction. We take for granted in life what we refuse to believe possible in the lives of fictitious characters.

The business depression and called upon the Wheatheart Cereal corporation, so upon what corporation had it not? The manufacturers of the fast cereal for robust children was the business that had builded the fortune of Alexander Hoyt I. and had conceived the original idea, founded the industry and invented the specialized machinery which manufactured this immediate food for health and vitality. It was Alexander Hoyt II. who now occupied the chair at the head of the table during directors' meetings, surrounded by his chief advisers behind a ribbed glass door marked "President."

But there was no Alexander Hoyt III. yet, would take up the burden of industry and fortune and carry on for a third generation. Perhaps that was why the twinkle of Alexander Hoyt the second's humor only escaped as far as his eyes and lurked there behind his bi-focal spectacles. A young man to add to the problems and pleasures of his youth, and an older one now to shift the burdens of commerce and finance to sturdy shoulders. Alexander would have coaxed laughter to his lips, to trace its happier lines upon a careworn face.

Between the burdens of big business at the office and the executive dominance of Amelia Hoyt at home, the laughter had left little chance. Only Camilla had managed economically to coax it into the somber eyes now.

Now, the business burdens were doubled, trebled. A crisis was imminent. An efficiency expert was called in. More advertising was the remedy prescribed. Not the pennic advertising on a small scale, which had been good enough heretofore. Heretofore was not now. Drastic measures were required. Sensational advertising, something novel and expensive ballyhoo. How much? Had a million at the least!

FREE TRIAL OFFER OF KRUSCHEN

If you have never tried Kruschen, try it now at our expense. We have distributed a great many special FREE TRIAL packets under it many for you to prove our claims for yourself. And, your doctor for the asking! Then, if you like the results Kruschen gives you, you can buy another bottle at your chemist's and continue with it as directed on the label and then—and only then—will you be asked to pay for it. Isn't that fair? Isn't that generous? Isn't that worth writing for? Then write to-day to: Kruschen (Dept. 1), 4 Stanley St., Montreal, Que.

To advertise Wheatheart Cereal we wish retained for eight cents a package." Impossible proposition, declared the cereal trade heard of it. Of Wheatheart Cereal corporation. It had all the earmarks of a failure from its inception. Might as well close up shop before they were started anyway. Better to make a graceful retirement than a disgraceful failure.

But, argued the efficiency expert, visions of profundities was the need and the cure for present ills. Immediate advertising on a small scale. Test it all out. Then, if successful, spend everything would. Letters exclaiming, congratulations, anyway, and good luck. I'll run along now But how about a small loan, just for a few weeks? I wouldn't ask you if I didn't need it like the devil."

"Sorry, Ona, but I haven't ten to my name. I'm just managing to keep myself while I finish that work. After that, I hope to do better."

When Ona had gone Peter recalled his denial of entering the exhibit, and wondered what it could mean. Had Sylvia manufactured him, or had Gus given him the idea after he started? Peter was puzzled.

CHAPTER XXVIII.

Not the pennic advertising on a small scale, which had been good enough heretofore. Heretofore was not now. Drastic measures were required. Sensational advertising, something novel and expensive ballyhoo. How much? Had a million at the least!

Rose had announced the telephonically while she breakfasted in her rooms She reached for the telephone instead, expecting to decline another invitation for tea, lunch, bridge, golf, theatre or dinner A strange voice greeted her

"Are you a Miss Hoyt who applied for a position with Weeks and Bowman some time ago?" it asked.

"Oh yes!" Camilla was almost breathless with excitement. Her heart raced wildly.

This is Mr Bowman speaking You showed me some pictures some time I believe

Her bejewed pale sketches. "Yes, Mr. Bowman."

"Are you working now"

"No, I'm not," weakly.

"Well, we have a new contract that requires juvenile stuff I don't know what, yet, but you might help us advise on in the matter I read promises you the work, now, because this program will require a lot of consideration Would you like to come in and talk with us about it."

"I'd be delighted, Mr. Bowman. When?"

"Make it the morning can you? The sooner the better."

"I'll be there in an hour," she promised.

"Good. You might bring those samples if you will."

Camilla's hands trembled when she replaced the telephone. She laughed to her feet. A dash for the shower. What to wear? The white knitted suit with the red patent belt and tam o'shanter. Neat, cool and trim. Rose had told her she looked like "ginger and spice, and everything nice" in it Dear Peter. Oh! she had work which to earn money to buy money to buy, and the thing moved by perpetual motion on its own momentum.

Finally, the carpet had his say. He recommended to handle the new advertising program the firm of Weeks and Bowman. The new contract created a furor in that established. Lament for big contracts were getting to be memories of the past. A new contract opened here, a new mailbox to advertise breakfast cereal —on one condition: that the half million double its returns within a year. Or no cash. That required something clever, something which would command attention.

Whose attention? Primarily, housewives'. But how? Tell them to send their husbands off in the morning with the memory of their breakfast cereal to inspire them all the day? In too many cases, the memory of the breakfast quarrel or Adeline in hid curlers was more predominant.

No, the way to a man's heart might be through his stomach, but the way to a woman's attention was through her children. And if the latter were within a reasonable happiness of her children, better still.

Juvenile attention, then, was what the new contract required. Weeks and Bowman considered. The talent of the present staff were reviewed briefly. No, they had no one who could write specifications. Juvenile somewhere in the back of Mr. Bowman's mind, a memory stirred. Somewhere he had seen some darned good juvenile stuff that had aroused his attention. Was it ad copy already published that he had admired—no, wait a minute. It was the little girl who had said that work was pleasure, and she had done a bunch of stuff to submit for samples.

After considerable search, Camilla's sample address was discovered, and she was summoned to the office of Weeks and Bowman. She had planned that morning to look at apartments, rather discouraged, but determined that she would be happier and perhaps more successful when she had taken up her new life with Rose.

"NOW I FEEL FULL OF PEP"

Little Helps For This Week

Shall we receive good at the hands of God, and shall we not receive evil? Job 2:10

Then has dealt with Thy servant evil, O Lord, according to Thy word. Psalm 119:65

Whatever our lot may be, Calmly in this thought we'll rest: Child we see as Thou dost see, We would choose it as Thou best.

It is a proverbial saying that every one makes his own destiny; and this is usually interpreted that every one, by his wise or unwise conduct, prepares good or evil for himself But we may also understand it, that whatever he receives from the hand of Providence he may so accommodate himself to it that he will find his lot good for him whatever much may seem to others to be wanting.— Wm. Von Humboldt.

Evil ones manfully trusted comes to be evil; there is generous battle-hope in place of dead passive misery, the evil itself has become a kind of good. T. Carlyle.

Expectant Mothers

Mrs. Wm Arthur of Bell Island, Nfld., writes: "I am the mother of two children and Dr. Pierce's Favorite Prescription brought me through each period of expectancy in the best of health. I believe it also helped me after a long illness." Send 10c for trial package to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for medical advice.

Sounds Encouraging

Modern Home Receiving Healthier Guests Noted Developing Doctor

Dr George W. Crile, of Cleveland, a noted medical man, who sees visions and dreams dreams in the laboratory where he investigates the riddles of life and death, told the recent Congress of the American Colleges of Surgeons that the human race would be a much finer and healthier one inside of a century. This is more encouraging than the pronouncements made by some doctors, who scientists that the present frail race of human life would result in an ever-increasing number of mentally diseased persons.

Reader—If you find The Record interesting, remember that you can make it even more attractive if you mail or telephone the editor all the personal items you can think of. Have you visitors at your home? Are your neighbors entertaining guests? Have any members of your family gone away on a trip? Are your friends out of town? Do you know of new residents coming here to live? Have any hidden goodbye to Fort Saskatchewan who will make their home elsewhere? Let the Record know.

LADIES ATTENTION!

Have you had one of those Electric Iron, can third less weight, from faster and easier, at Cunningham Hardware

A GOOD COLLECTION LETTER

Contributed by a Friend of Ours

It is reported that one of the fraternal orders married ladies of this town knocks hard with her glasses on. This incident may be somewhat peculiar but there are others. The editor of this paper needs bread with his cheese on, he needs bread with his paste on, and unless some of the delinquent subscribers to this "Old Rag of Freedom" pony up, before long he will need bread without a damn thing on, and Fort Saskatchewan is no Garden of Eden in the winter time.

UNITED CHURCH OF CANADA

ALL THE SAME

Irate Father: "I can see right through that girl's intrigue."

Lovesick Son: "I know, dad, but they all dress that way nowadays."

TOUCHE

A sailor, after placing some flowers on a grave in a cemetery, noticed an old Chinaman placing a bowl of rice on a nearby grave, and asked: "What time do you expect your friend to come up and eat the rice?"

The old Chinaman replied with a smile: "Same time your friend come up to smell flowers."

Carlos Mendieta, 69-year-old physician, statesman and revolutionary, has been made president of Cuba, the fifth president in as many months.

Here and There

The first event in the celebration of the Centennial of the City of Toronto, to be held this year, took place at the Royal York Hotel in the closing week of 1933 when Mayor Stewart handed out loaves of "centennial" bread to a large crowd of interested recipients.

Emile St. Goddard and Leonard Sopaluk, heroes of many Boxin' Deals; Dog Derbies, will fight it out again in the Quebec Dog Derby of February 23-25 next to be held in Quebec City. Many other teams have already registered and special training events for the big show are being held.

A tip for the encouragement of the younger ski generation is given by the Canadian Pacific Railway in the company's inauguration of a special school ans ski excursion at low rates to the Laurentians just outside Montreal. The special was heavily patronized by the youngsters.

Statistics recently issued by the Bureau of Railway News and Statistics show that the safest way to travel is by railroad. In a year's operation of Canadian and United States railroads only one passenger was killed out of the total of 460,048,529 persons carried a total of 16,941,546,169 miles.

The old belief that women cannot wear high heels without injury to posture and health was described as "bunk" by J. S. Brewer, shoe expert of Milwaukee, delegate to the National Shoe Retailers Association convention recently held at the Royal York Hotel, Toronto.

A Canadian inter-collegiate ski meet, unique in development in Eastern Canada as far as ski-ing is concerned, will be held at the Saignotry Club, Montebello, end of February. Toronto University, Ottawa University, McGill and St. Patrick's College in Ottawa are among the collegiate teams to be represented.

Snow shovels and trusty below to many places in Canada are replaced by machine and 55 above at Victoria B.C., these days where the sixth annual mid-winter golf tournament swings into action at the Royal Colwood course February 19-24. Enquiries and early entries from ardent golfers residents that again this year the tournament will be a big success.

Silver Fox Breeders' Association convention was the first of three big gatherings held at the Chateau Frontenac Quebec City this year. It was simultaneous with that of the Canadian Fruit and Vegetable Jobbers' Association and was followed shortly after by the convention of the Canadian Association of Tourist and Publicity Bureaus.

Gratification at the way in which the public is using the new rail "shuttle service" between Moose Jaw and Regina was expressed by H. R. Matthewson, general passenger agent Canadian Pacific Railway, Winnipeg when interviewed recently at Regina. He said had ample opportunity to view the running of the new "seven-a-day" train service between the two cities and was very pleased with the results being obtained.

VOL. 12 No. 48 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, FEB. 7th, 1934 $1.50 PER YEAR IN ADVANCE

School Board Holds Short Session

Minutes of a regular meeting of the Fort Saskatchewan School Board held in the Council Chambers on Monday the 29th February, 1934, at 7:30 p.m.

Present Mr. F. Atkinson, Chairman, and Trustees, Dr. Calhoun and Dr. Turner.

The minutes of the last meeting held were read and adopted on the motion of Dr. Calhoun.

The Secretary reported that at the nomination meeting held this day, Dr. C. H. Grunert and Mr. R. M. Ray were elected to fill the vacancies on the School Board by acclamation.

Mr. Anderson the Principal was present and submitted attendance and other reports to the Board.

The following accounts were passed for payment on the motion of Dr. Calhoun: Calgary Power Co., $18.30; F. N. Meyer Co., $7.30; Dept. of Education material for manual festival $6.89; A. M. Carmichie $2.95; Canadian Surety Co., $6.00; C. R. W. Magor 50c.

The first meeting of the new Board will be held on Friday the 16th at 7:30 p.m.

The meeting adjourned on the motion of Dr. Turner.

Election for Town Council Next Monday Feb. 12

Five candidates were nominated on Monday for three vacancies on the Council, Gordon Neale is up for re-election and J. R. Lauf, H. Pettet, W. J. Foster, and F. S. Truby are also in the field.

The polling will be held on Monday, Feb. 12th.

For the school board there will be no election, two members were required and Dr. C. H. Grunert, who served last term and R. M. Ray were the two acclaimed.

Band Dance Successful

The Benefit dance in aid of the Fort Band held in the Shannon Hall last Friday evening. A fine crowd attended. At midnight refreshments were served.

The Fort Band wishes to take this opportunity of thanking, The Redminster Club, the Peppy Pals Orchestra and many other who so kindly donated to this noble cause in various ways.

oooooo

Mrs. James Johnston is around again after a lingering illness.

oooooo

Misses Janet Webber and Velma Magor were Edmonton visitors over the week-end.

Candidates Picked For Big Jamboree Feb. 16

The candidates for the honor of being Jamboree Queen have been selected and the following will represent the respective teams: Junior Hockey Club, Miss Rena Berg, Senior Hockey Club, Miss Rita Sherman, Curling Club, Miss Fern Butler

Tickets are being sold by the respective teams and the candidate getting the highest number of votes will be proclaimed Queen of the Fort Curling Club second annual Jamboree.

Tickets are also being sold on a grocery draw valued at $25.00. Since last week a second prize on the draw have been announced. H. H. Cooper of Edmonton, distributors of Blue Ribbon products have kindly donated the second prize.

The prizes are now on display in the window of the former W. A. Dubue Hardware store.

Get your costume out of the old trunk and lets' all go to the big Jamboree next Friday night.

Co-operative Commonwealth Federation Principles

Resolutions of a Commonplace Common-sense Farmer on the meaning and practical putting into operation of the C. C. F. Philosophy.

(Continued from last week)

So much for the more general arguments of the opponents of the C. C. F. There are others, scarcely worth comment, such as—free love chapter of genesis, people becoming lazy etc. The only comment necessary is that under the proposed Social System people will be enabled to lead a more moral life than at present because they will be freed from the haunting spectre of fear.

The membership of the organization composing the C.C.F. is composed of all classes of Canadian citizens, led by people of outstanding repute, who have either been born in the British Isles or are Canadians with several generations of Canadian born people behind them. Most of these leaders have been in public life for a number of years and all their actions have shown that they were at all times out to improve the condition of the common people.

The rest of the membership are the average commonplace, law abiding, common-sense Canadian citizen. Among the membership are very highly trained people in various lines and from this class will be drawn the people to plan and work out the details necessary to bring into operation the program of the C.C.F. and to carry on afterwards. The people, selected for this work will not be selected for their popularity but for their fitness to carry out the various tasks assigned to them.

Some questions asked are. How will the C.C.F. take over? Will private owners be paid? How will they be paid? Where will the money come from? How will the enterprises or industries be managed? Will all persons be paid the same wages? Will there be taxes? What will be done when there is a crop surplus? Will goods be imported from foreign countries? Will they be sold in Government stores? and numerous others.

The reason that prominent C.C.F. speakers do not touch more on detail is lack of time. Expounding the fundamentals is no much more important and takes up so much time that the other is perforce neglected. It is not even very important at the present time that much time be spent on the details by the leading lights, but for us lesser lights, (if light at all), it may be permissible to make conjectures and allow common-sense to suggest answers.

Let's see what answers are suggested. Well, common-sense tells us to find out which are the first things to do, and then to do them in a practical manner. Common-sense also tells us that the only authority in Canada capable of bringing into effect the program of the C.C.F. is the Government at Ottawa, backed by a majority of the people of Canada. So the first thing to do is to get power at Ottawa. Since the only manner in which the C.C.F. wishes to attain that power is through the mean of the ballot, it will be at once apparent that when the C.C.F. is called to form the Government the majority of the people must be in sympathy with the ideals and objects of the C.C.F.

LESS THAN 1¢ WORTH IN A CAKE

MAGIC

JUST THINK—it takes *less than 1¢ worth* of Magic Baking Powder to make a delicious three-layer cake! And Magic is always dependable—gives the same perfect results—every time. No wonder Canada's leading cookery experts say it doesn't pay to take chances with inferior baking powder. Bake with Magic and be sure!

MADE IN CANADA

"GUARANTEED NO ALUM." This statement on every tin is your guarantee that Magic Baking Powder is free from alum or any harmful ingredient.

Intolerance

Repentance is a great teacher, and the world is learning many things from this period of financial and economic difficulty through which it is passing, in the process of learning. It is, of course, not only observing mentally and accepting new standards, but it is also changing old ideas and methods. The world is losing certain things it can well afford to lose, the loss of which can indeed be set down as gain. The danger is, however, that it will lose other things which it can ill afford to lose, and may accept and adopt things which will spell loss and disaster in the future.

Signs are by no means lacking that one of the greatest losses which the world of mankind may suffer as the result of the times through which we are struggling is the loss of much of the political liberty gained through centuries of persistent striving and battle. In one European country after another dictatorships in government have been set up in varying degrees and in somewhat different forms, but the effect in every instance is to deprive men and women of much of the political liberty and rights of citizenship they formerly enjoyed. One or two individuals, or a small group, backed by force are imposing their will upon tens of millions of people.

Acceptance by people in many countries of these dictatorships is one of the phenomena of this age. It appears to be the outcome, not of one only, but of several reactions to the experiences through which people are passing. In the first place, many individuals have had confidence in themselves, and in their own ability to manage their affairs and order their lives. With this lack of confidence there is, of course, less of ambition and initiative. They are willing to throw up their hands, and let some other person, or group of persons, do their thinking for them. Then and there they have lost their self-respect, and should be given considerable attention. They suffering in this way will find in Mother's 22 and N Pills a remedy with which to reorganize their health, build up their run down system, and bring back their healthy vigor.

Ask your druggist for Mother's N & N Pills.

Smothering Sensations Faint and Dizzy Spells

These feelings of faintness; then dizzy spells; then all-gone smothering, making sometimes what seem even simple, from time to time, are warnings that should not go unheeded. They indicate an extremely weakened condition of the nerves and other vital organs, and should be given immediate attention. These feelings in this way will find in Mother's 22 and N Pills a remedy with which to reorganize their health, build up their run down system, and bring back their healthy vigor.

Ask your druggist for Mother's N & N Pills.

Boneless Fish Air Mail

Related Christmas Gifts Delivered At Copper Mine, N.W.T.

Winter isolation of the little post of Copper Mine on Canada's Arctic shore was broken January 26 with the arrival of the first air mail it has received.

The mail machine, piloted by Walter Gilbert, of Canadian Airways, hero of a sensational dash to the magnetic pole three years ago, brought packets of mail, including a 3,000 "first flight" covers for collectors from all parts of the world. Accompanying the shipment was Postal Superintendent Wynne Hale, of Edmonton. Their train in the machine was Low Parry-Arter air engine r

Mail and boxed Christmas gifts from "outside," were distributed by Rev. J. Morris, Anglican missionary, who was sworn in as postmaster Mackenzie, Parsonsfield, working in the shelter of a special igloo constructed by willing Eskimo hands to house the mail, and the 2,000 pounds of boneless, cleaned cod over the motor in readiness for the return flight.

The new post office serves trudeau and trappers on a circle of Arctic rough 1,000 miles in length.

Canadian Composer

Celebrated Contralto Sings Songs Composed By Montreal Man

Sigrid Onegin, celebrated contralto, is proud to have in her repertoire a song written by the Canadian composer, Hamilton Renaud, of Montreal, whose works, she believes, will become famous in years to come.

"I was in Switzerland five years ago," she began, telling the story of her first meeting with him in the course of an interview, "and one day I received a great pile of music from this Hamilton Renaud, who said he was an admirer of my voice. I looked through it and I went over the music and found some songs of rare beauty. I at once learned them and sang them for the first time on my next visit to Montreal."

No Danger From Gases

Shellfired Mind Can Never Be Used In War

By getting into a hot bath the average person could be almost completely safe during a wartime gas attack, Dr. Francis Frouth, of the headquarters staff of the London Hospitals Institution, Ltd., said in a lecture at London.

Dr. Frouth ridiculed popular fears of the poison gas as a war weapon. The deadliest gases, he said, can not be used in a war.

The only effective military gas, Dr. Frouth declared, is mustard gas, the value of which is now ended, he said, since complete defensive measures have been discovered.

Wonderful Jewel Display

Costly Stones Seen At Exposition Jewellers' Annual Ball

An astonishing display of jewels took place at the first annual ball of the Canadian Jewellers' Association, when single pieces of jewellery on view were worth more than $30,000 each. There were diamonds as big as cannon balls and few gentlemen in evening clothes amethysts, topaz, and pearls set in platinum and gold rings, brooches and necklets. The jewels, which were valued in the hundreds of thousand dollars, were worth altogether about $750,000. Mingling among the guests at the luxurious dinner dress were immaculate "tails."

Cost Of Municipal Government

The cost of municipal government in Canada in 1932 exceeded that of any previous year, according to a report of the Citizens' Research Institute, made public recently. In that year the per capita cost was $54.74, as compared with $53.13 in 1931, $60.63 in 1930 and $47.87 in 1929. Toronto was third on the list with a per capita cost of $64.61, behind Victoria west a cost of $80.98, and Edmonton, with $66.51.

Small Boy "What's the use of washing my hands before I go to school, teacher. I'm not one of those who are always running them."

Here's Quickest, Simplest Way to Stop a Cold

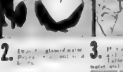
1. Take 2 Aspirin Tablets.
2. Drink plenty of water.
3. If cold is not then relieved, repeat in 2 hours. Usually relief comes in one to two hours.

Almost Instant Relief in this Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check an ordinary cold almost as fast as you caught it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer on the form and a cross is on each tablet. They quickly relieve painfully. And then work almost instantly when you take them. And for a gargle, Aspirin Tablets dissolve completely they leave no irritating particles. Get a box of 12 tablets or a bottle of 24 or 100 at any drug store.



Predicts Second Slide

Geological Advisor Peeps At Frank, Alberta, To Move

Warning that the railroad, highway, telephone lines and homes of people in the valley should be moved, Dr. J. A. Allan, geologist at the University of Alberta, declared that a second slide is possible at Frank, Alberta.

"Three million cubic yards are definitely preparing to give way on Turtle mountain," he said. He declared that it was impossible to attempt to dynamite anything but to clear the area "and let nature take its course."

Between 85 and 90 persons died in the slide, which occurred on April 29, 1903.

Dr. Allan said that he spent some time last summer in examining the mountain and found new fissures, some of them 40 feet wide and hundreds of feet deep, and giving off peculiar noises.

Peaks Building Industry

Appointment Of Federal Government Commission Is Upheld

Appointment of a federal government commission to investigate the building industry was urged in a resolution passed at the final session of the Canadian Construction Association, completing a three-day convention in Toronto.

The purpose of the commission, the resolution indicated, would be to maintain a more even level in the industry, abolishing the wide fluctuations in employment which it now moves from year to year.

The government was asked in a resolution to appoint nominees from the association to sit with the government in all deliberations about unemployment relief insurance.

W. H. Yates, Jr., of Hamilton, was elected president. Col. W. A. Foster, of Vancouver and Cecil Gunn, of Winnipeg, were elected western vice-presidents.

Asking Too Much

The manager called his office boy into his room and indicated his dad. "Look at this," he said sharply "It is disgraceful! Why can't you keep it cleaned and polished as you do the hammer rail outside?"

The boy shook his head artfully. "Well, sir," he replied, not in the least put out. "I can't very well slide down your desk."

More program will be made by cutting guns than by guessing outlaws.

Through traffic on the Peiping-Mukden railway in China has just been resumed.

A Coveted Honour

Manitoba Horticulturist Envelops New Type Of Lily

Another popular assumption has been shattered by a doughty champion from the West. While public opinion has identified Eastern Canada more or less as the hub of floral plant breeding in the Dominion, the winning of a highly-prized and significant honour by a Manitoban at the world's great horticultural centre, the Royal Horticultural Society at London, England, has come from a directed attention to the long list of champions emanating from Western Canada. A coveted honour, the Cory cup, has been awarded to Mr. F. L. Skinner, Dropmore, Manitoba, for breeding a new variety of lily which he has named the Maxwill. The cup is awarded to the originator of the best new hardy plant of garden origin shown to the society during the year. The Maxwill lily was exhibited last July in London, and the presentation of the cup will be made with due ceremony at the next annual meeting of the society this month.

Money Will Spend

It will cost $3,615,526 next year to operate the Royal Canadian Mounted Police force, the same figure as this year, it was shown in the financial estimates tabled in the house of commons. The total includes pay, clothing and allowances for the men, arms and ammunition, building and repairs to barracks, purchase of horses, dogs, and all items down the line to stationery and printing.

Minnigaite, Scotland, has abandoned its street cars and is seeking government permission to operate trolley buses.

Have You Pimples or Boils?

Mrs. T. A. Bowery of 65 Wellington St., Toronto, Ont., writes: "I had a bad case of boils on my face. They disfigured me terribly. I certainly was in misery for the boils were all over my face. I tried many kinds of medicines but the Prince's Golden Medical Discovery and the boils gradually disappeared. In a few hours of taking Prince's Golden Medical Discovery I noticed a change." Sold by druggists everywhere. Prince Bro. Prince's Chem. Bulletin, St. Thos.

Tablets—no ill effects—no ill reaction.

Nearly Five Hundred Distinct Species Of Birds Are To Be Found In Canada

It is probably not generally known, and the statement may cause some surprise, that there are some 454 distinct species of birds in Canada. By "species" is meant "kinds of birds" that average so distinct from each other as dogs from cats, or horses from donkeys. If really fine points are considered all the bird forms that the expert ornithologist recognizes, viewing species as do cattle raisers when they discriminate between breeds of cattle, then the species would be increased to about 600 subspecies, or even more, depending on how finely it is desired to distinguish. All these birds cannot be seen at any one time or in any one place in Canada or, in fact, anywhere else. Each species has its own season and limits of distribution. Some are not birds, rarely seen far from salt water, some are denizens of the deep forest, while others frequent open prairies, marsh or meadow according to their natural requirements. Some are modern, others western, some northern, others southern. Many are just birds of passage through much of Canada, nesting in the high north, wintering in the near or far south from just below the International boundary to the Bermuda tropics or even to Antarctica itself.

A certain proportion of these birds are just stray wanderers far from home, storm-blown waifs, visitants of seashore or pioneers seeking out new territory to inhabit. But with all these complications and restrictions of distribution almost any given locality in Canada can boast of many kinds of birds than most people realize. Ottawa is not a particularly birdy locality although in the world's great horticultural centre, the Royal Horticultural Society at London, England, has since been directed attention to the long list of champions emanating from Western Canada. A coveted honour, the Cory cup, has been awarded to Mr. F. L. Skinner, Dropmore, Manitoba, for breeding a new variety of lily which he has named the Maxwill. The cup is awarded to the originator of the best new hardy plant of garden origin shown to the society during the year. The Maxwill lily was exhibited last July in London, and the presentation of the cup will be made with due ceremony at the next annual meeting of the society this month.

Holding up a piece of collapsible Mr Picks declared that if technical knowledge could carry on with experimental work such as had led to the discovery of that by-product of pulp, the Dominion's pulp and paper industry could not visit. It is fidently "let those make newsprint from southern pine, and let them make it all."

Good Citizenship

Development of good citizenship is a great army of young men was the annual conference of the civics and conservation corps, Professor Nelson C. Brown, of the New York State College of Forestry, stated at Mont Co. of the Canadian Pulp and Paper Association.

Bird Broadcasts From Plane

Stage And Films Only Instruments Not Taken Along

Jack Hylton and his band flew over London for an hour and a half to an Imperial Airways liner and broadcast a program of music to the Post-office Exhibition in the Strand. The object was to test a new type of apparatus for the general post-office.

The principal tune, appropriately, was "I'm on the telephone now." Every member of the band took part except the pianist and the harpist, whose instruments were too big for the aeroplane and the flautist, whose flute was broken just before the band left Croydon.

King's English Bad

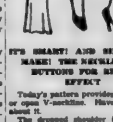
George Bernard Shaw Ends Discussion Over Oxford Accent

If King George delivered a regular broadcast in an "Oxford accent" his people would rise up that very day and proclaim a republic declares George Bernard Shaw in a letter to the London Times.

The letter closes a battle over English "as she is spoke" which for many weeks has been the learned professors number. The British broadcasting commission's committee over which Bernard Shaw presides began the whole thing by issuing another list of the pronunciations recommended for announcers.

Should Cinderella sit in the best style of West End London rhyme with "pundit" or should it it? And so on down the list. Newspapers wrote editorials. Indignant readers wrote indignant letters. The chronically minded sought solace in scraps of Latin and bits of Greek. The whole affair was broken just before the band left Croydon.

IT'S SMART! AND SIMPLE TO MAKE! THE NEUTLINE U-BUTTONS FOR REVERS EFFECT



Wood Not Four Competition

Canadian Pulp And Paper Industries Can Carry On

Canadian pulp and paper industries need have no fear of competition from potential newsprint output from the northern United States, where authors are among the country as a pulpwood, if laboratory technicians in Canada progress at the rate they have in the past, C. D. Howe, minister of department of lands and forests, Quebec, stated at Montreal. He was addressing the annual dinner of the Canadian Society of Forest Engineers, of which he is president.

Holding up a piece of collapsible Mr Picks declared that if technical knowledge could carry on with experimental work such as had led to the discovery of that by-product of pulp, the Dominion's pulp and paper industry could not visit. It is fidently "let those make newsprint from southern pine, and let them make it all."

Tuberculer Cows

May Indicated Animals Being Pushed In Ontario

In the absence of legislation making it compulsory to destroy tuberculer cows, many of these infected animals are being pushed throughout the province, according to findings made public by the Ontario Veterinary Association in Toronto. The members of the association, who were holding their annual meeting, unanimously demanded some legislation which would compel the marketing, at least, of tuberculer cattle.

The fear is now much that any farmer may have his herd examined free of charge by the government veterinary providing he agrees to handing all animals found infected over the rail, or "punched" through the ear, but if a farmer engages a veterinary to examine his herd he is under no obligation to mark the infected animals and he usually sells them to some other farmer. In this manner he may have brought in them. In this way they get peddled about the country-side.

Where the milk from such cattle is pasteurized, no danger exists to the consumer of the milk becoming infected with the disease, the veterinarians indicated. The real menace from infected cows concerns the health of people in rural districts, where milk is not pasteurized milk. The man rarely get pasteurized milk. The farmer's children are exposed, as are also the people in the villages and towns in which he sells his milk.

French Pond Colony

Devil's Island Not Bad Place Unless Missing Gaoroler

Devil's Island French penal colony, the very name of which is synonymous in the popular conception with horror and privation, is not such a bad place after all, according to Dr. J. Wilmore, mining operator in the newly territory of British Guiana.

"As a matter of fact," said Mr Wilmore in an interview, "Devil's Island is a hospital colony and contains the sanitarium and other buildings. It is really quite a nice place for any individual on visit. It is on the island of St. Laurent where the desperadoes who have made several attempts to escape, and are recaptured by the native canoe, are put to work in chain gangs, like they did in the southern states of America."

Population Of Winnipeg

Winnipeg's population, exclusive of suburban municipalities, is 221,943, according to a compilation completed recently by the civic assessment department.

Large Sums Of Money Still Being Expended On The Collection Of Antiques

One thing that the economic depression hasn't put, at any rate, put out of business, is the collection of antiques and the paying out of goodly sums for the same. Or, as an Ontario paper, in discussing the matter, puts it, the all-absorbing worries of these days "have not seemed to be diverting the world completely from certain habits so that relate to the collection of treasures valued because of their cost, their association or their merit in art."

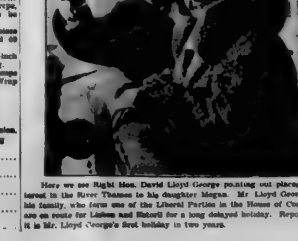
There was noted the other day the purchase, at a large price, by the British Government and the British Museum, of one of the oldest Hebrew scripts in existence. A few days later came word of the paying out of a large sum of money by a New York connoisseur of same document; participating to very costly days in the political life of the American republic. Next there was added another "deal" that drawn its inspiration from Napoleonic times. Some years ago Mrs. Edith Rockefeller McCormick, of New York and Chicago, purchased the famous gilded silver dinner service that Napoleon I. once possessed in his palace, Fontainebleau, and her husband, Prince Camillo Borghese. Mrs. McCormick paid $60,000 for it. A few days ago it was put at auction at the home of Mrs. McCormick, who now seems to be disposing of a lot of her bric-a-brac. Her daughter Muriel, whose husband is Major Edwin Lloyd Hubbard, of Middletown, Conn., tried to buy the dinner service as a unit for $30,000, but this was refused. It was then sold to individual pieces, this bringing altogether $57,305. Then there were linens and laces that sold for $32,000. Linen and lace are always valued for as much as $125, and someone paid $150 for a lace handkerchief. The laces were museum pieces and had been collected in several of the largest American cities. One man paid $4,600 for a point de Venise lace lampshade and another man so readily parted with $3,300 for a seventeenth century lace coverlet. A woman fancier bought one lace piece for $1,000 and another, for $875, and last another where it was put up for a second time and bid up from $2,000 to $2,900. Another lady paid $1,400 for a pair of silk dishes of Napoleonic vintage, rosy turrons of the same gilded age were snapped up at $1,250 each and a pair of snuffboxes brought $1,000

It is being deduced from these and other transactions of the sort that quite a few people are betting on the likelihood that society is going to continue for some time much as it has in the past, and that certain grey-gaves of gold and silver, lace, diamonds, mahogany, tablecloths, oil paintings, and precious stone will still possess monetary value in whatever brand of society the future may hold for us. Even as it is, there is the natural appeal that surrounds sucs so-called treasure Even some of the seemingly most hard bedrid among men warm up to the antique in life.

Such things, too, may ra se their moral question in the minds of s me persons In the light of such human suffering as exists to-day, it may be asked what is wrong with diverting some of the money that are going out so freely in the acquirement of material antiques to snatching a few "relics" from the scrap heaps of bankrupts, disaster-sound men and women that is to be seen on every hand today" - Leader-Post Regina.

Send Book To Queen Mary

Copies of "Elk," the memorial biography issued by the Hon Ben Rhodes, Canadian Minister's Press club have been sent to Queen Mary. The subject of the book is Elizabeth Blake Coleman, who founded the women's section of the Toronto Elk and Empire. Copies of the biography also were sent to the Countess of Bessborough, wife of Canada's governing general.



THE LLOYD GEORGE PARTY ON HOLIDAY

Here we see Right Hon. David Lloyd George posing out places of interest in the River Thames in his daughter Megan. Mr Lloyd George and his family, who form one of the Liberal Parties in the House of Commons, are en route for Lisbon and Sintra for a long delayed holiday. Reports say it is Mr. Lloyd George's first holiday in two years.

WORLD HAPPENINGS BRIEFLY TOLD

Passenger traffic receipts of British railways in two recent months were $1,300,000 higher than in the same period of last year.

The ministers of industry has announced the Irish Free State is planning to centralize a large section of dairy and to launch other projects from industrial undertakings in 1934.

Veterans of the Northwest rebellion of 1885, and one of the originals of the old Royal Northwest Mounted Police, Charles R. W. Stuart died in Ottawa at the age of 78.

More than twelve milk coolers are out of requirement in Manitoba. This is caused by the fact that 65 milk factories have closed down due to the lack of freight on cans for shipping milk.

Mrs. Amy Johnson, Mollison, British aviator, who has fined $50 on a reckless driving charge at Fort Lauderdale declined to discuss the incident. Sheriff W. H. Clark said she speeded 70 m.p.h.

R. H. Diamond, of Trail B.C. has received the Mechanics award for his research activities in metallurgy and chemistry at the University of Toronto. The award is worth $1,000 and includes a gold medal.

It is believed that the Prince of Wales will be a competitor in the Army golf championship which will be held at St. Andrews at the end of April. His Royal Highness will probably represent his own regiment of Guards.

The Eighth International and International Exposition, the most important event of the kind in North Africa is to be held in Tripoli for one month beg.nning March 11. Not only will there be a large number of local exhibits, but many local foreign countries.

Conditions in Canadian pilot industries have improved steadily if somewhat shorty and thus improvement has been especially noticeable during the last years says the report of the committee on criminology of the Social Service Council of Canada.

Little Journeys In Science

SALT

(By Gordon W. Gerrd, M.A.)

Common salt, known to the chemist as sodium chloride has played an important part in mans everyday life since the beginning of time. Although it now has wide-spread commercial uses, it is primarily essential to the diet and it is estimated that each person consumes twenty-nine pounds of salt in a year.

Salt was first valued by primitive man when cereals became part of his diet. As time went on, it became increasingly important and after the end of April His Royal Highness will probably represent his own regiment of Guards.

The Eighth International and International Exposition, the most important event of the kind in North Africa is to be held in Tripoli for one month beg.nning March 11. Not only will there be a large number of local exhibits, but many local foreign countries.

Conditions in Canadian pilot industries have improved steadily if somewhat shorty and thus improvement has been especially noticeable during the last years says the report of the committee on criminology of the Social Service Council of Canada.

Dream Of Garden Highlanders

Germany Returns Captured Banner To Old British Regiment

General Sir Ian Hamilton journeyed to Berlin to receive from President Paul von Hindenburg the drums of Gordon Highlanders and what he describes as a "gallant gesture from a very old soldier of world-wide reputation."

When the second battalion of the Gordon Highlanders landed at Ostend on the autumn of 1914 they were ordered to stack their drums at the police station and proceed with pipes alone in rapid marches. Hearing they were likely to be overwhelmed by heavy German forces, they edged off towards Ypres and never saw Ostend again.

After their long occupation of Ostend the Germans took the Gordon drums and placed them in their war museum. Sir Ian recently made representations to the highest quarters in Berlin with the result he was invited to go to Germany and get the drums.

Soviet Russia plans to use aeroplanes in sowing 1,325,000 acres to grain next year.

Port Arthur boasts two consecutive years without a street traffic fatality.

Ask Mother—She Knows

Mother took this medicine herself and after the babies came, it gave her more strength than anything when she was up—no bad reactions ... kept her feeling fine all through the Change, let mother tell you about it.

SUNDAY SCHOOL LESSON

FEBRUARY 19

TIMELY WARNINGS

Golden Text: Every one that bringeth not forth good fruit is hewn down, and cast into the fire. Matthew 7:19

Lesson: Matthew 7:1-29

Devotional Reading: Proverbs 2:1-8

Explanations and Comments

The Golden Rule. verse 12 All things therefore the context shows the meaning of the word therefore. Jesus had just been giving us what to be good to others, verses 7-11. With the passage beginning verse 12 He brings the teaching of these chapters and lays them all up in a little bundle. "Martin Luther observes Whatsoever ye would that men should do unto you even so do ye unto them "Taken literally and without qualification this would mean that we must do whatever others want, and give them whatever we might wish under the circumstances. So interpreted it would mean that a man must give the child his money, the robber his purse and even the burglar his booty. Altruism, as we have shown is an error in morals, if taken to itself, and followed to its logical issue ends in anarchy against which an elemental nature protests. Obviously Jesus means that we must do to others not necessarily what they want us to do but what we ourselves would like them to do to us if we were in their places. As disciples of Christ, were in their position. And just as we like to be treated, not exactly according to our whims, but according to what we are hoping and trying to be, so we should treat others." (Joseph Fort Newton).

"If you have been reading the Golden Rule just as it has been given you look in it compared with your appearance in your bathtub dress. Put it on your church Do you recognize your church when it is wearing the Golden Rule? Put it on the city and your nation In what respects would they change their attitude and conduct if they had on the Golden Rule? Is there any other rule so a law from heaven like that? Put it on the human race It belongs there It is for nations as well as for individuals. It is universal and not local. It is everlasting and not temporary If only every man and every woman should on every day of all the year obey the Golden Rule" (Charles E. Jefferson).

Teacher (in bookkeeping) What is a debtor?

Witty Student—A man who owes money.

Teacher And what is a creditor?

Witty Student A man who thinks he is going to get it back.

SUFFER ON THE WORLD?—THAT'S LIVER

Wake up your Liver Bile

Many people who feel sick, sluggish and miserable, have a liver that needs attention. Your liver should pour two pints of bile into your bowels every day. If this bile is not flowing freely, your food does not digest. It just decays in the bowels. Gas bloats up your stomach. You get constipated. Your whole system is poisoned and you feel all run down.

Carter's Little Liver Pills will soon fix you right. They gently but surely stir up the liver to bring you back to feeling fine. Ask for Carter's Little Liver Pills. 25

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Opticians, Calgary

NO. 5.—CATARACT

Much ignorance exists as to what a cataract really is. A great many people think it is a growth of some kind on the outside of the eye, which can be seen with the naked eye but such is not the case

A cataract is that condition of the eye in which the Crystalline Lens (as from various causes, lost its clear image on the Retina This loss of transparency usually progresses very slowly Sometimes it starts from a single point or nucleus and gradually spreads throughout the whole Lens while in other cases the entire Lens is involved at the same time In the latter case it is very difficult even for an expert with instruments to recognize it in the early stages but as and when it continues to progress, the Lens becomes more and more closely or "milky", the Retina becomes more difficult to observe (with instruments) and finally when the Cataract has become "ripe", the pupil instead of being black, is grey, which can be seen by anyone without the aid of instruments.

That condition then, in which the Lens has become cloudy is known as a Cataractous Lens or Cataract and causes seldom suffer much assistance In fact, as the condition changes, the Lens swell, necessitating the frequent changing of the glasses worn till eventually the Lens having become so convex, the effect of the convex glasses formerly worn is neutralized and such people can read better but not satisfactorily without glasses than with those formerly worn and that is how the false idea of "second sight" originated. There is no such condition in normal life as second sight" and such an apparent experience was, or is due to the cause It is next to impossible, however, to make many people believe this. They insist in all sincerity that a relative loyal to be over ninety years of age and could see to read without glasses although he formerly had to wear them, hence he must have got his "second sight". In the first place people have no means of knowing the percentage of normal vision in a relative possessed at any time of life and the only founded on for their belief is that the relative himself could see better without glasses then with them—the explanation of which I trust hereunder (see) No do not hope that you will ever get your second sight", in fact in both eyes are simultaneously affected but usually the opacity appears in one Lens years before the other but rarely do both eyes become diseased When the Cataracts have become "ripe" the patient has difficulty in distinguishing daylight from darkness and in proportion to the progress of the disease, dimness of vision follows for which glasses are of little or no avail. Patient sees as if he were in a fog or as if a film is before the eyes. He usually has an aversion to bright light and in fact prefers a dark or cloudy day because he sees better and more comfortably Cataracts do not cause any inflammatory condition to the eyeball.

Technically there are several varieties and the causes are many There is the senile due to extreme old age but fortunately few even very old people in life afflicted. Injury to the eyeball at some time of life is a common cause while certain diseases of the body have a tendency to produce it, Bright's Disease for example

There is no medicine, exercises or other "cure" for Cataracts although much money and time, with consultant sorrow, have been spent by people who have fallen into the hands of the fakir (usually by means of literature) who has promised cures with his nostrums or "special glasses". Surgery, performed by a skilful operator, when the Cataract is "ripe" is the only solution and when the opaque Crystalline Lens has been successfully removed from the eyeball and proper glasses supplied, there is nothing to prevent the rays of light from passing into the eye and focussing on the Retina and very often one hundred per cent vision obtainable.

(To Be Continued)

Refuse To Take Balloons

Paris Powerhouse Lend Money On Nearly Everything Else

The state pawnshop of Paris will lend money on balloons. A man has just been successful in pawning an aeroplane, and in doing so was told it was lucky he was not trying to pawn a balloon, because the institution had loaned money on a balloon 60 years ago and had a suit brought against it because the balloon's fabric burst and made it look badly. There is everything in the storerooms of the shop—saucepans and bicycles, gold teeth and toys, sewing machines, furniture, and even a canoe.

Not only must the present day reporter be able to write what was said, but he must also know what the speaker meant to say. Outside of that, the job's a cinch.

Record For Single Seed

From a single citron seed, John E McKinley, Decatur, Ark., three year Mena, Arkansas, grew a vine that produced 46 citrons. They ogled more than a quarter of a ton, or 562 pounds. The fruit is known as "pomelons" in that section.

European scientists have determined that there are 13,000 bees to the average hive.

Children's Coughs and Colds

Do Overnight

Mothers don't worry when one of the little ones has a cough, cold or croup. Just rub on Vicks VapoRub and see how quickly it relieves. Its double action—vapors to inhale and ointment to rub on—starts to relieve at once. Many mothers say it's "wonderful" for croup. Try Vicks tonight. Over 17 million jars used yearly.

And don't forget — RESOLUTE SOFT TISSUE will be on display at a special, low price at your druggist's next visit. Ask him about it.

W. N. U. 2082

MOVE TO SET MINIMUM WORLD WHEAT PRICE

London.—Government legislation and a thorough-going propaganda campaign to encourage a wider use of wheat were reported to be among the main recommendations of the international wheat commission which seeks to relieve an unfavorable price situation in that commodity.

The committee completed its study of proposals for creating a plan of world stability by increasing consumption

Its drafting committee was expected to combine these suggestions with a project to set a minimum world wheat price the commissioners meaning the conference when they report as a body for final approval.

It was considered almost certain that the minimum price recommended today will go to the 21 governments of the countries represented on the commission without publication here but it was also said strongly that the minimum price will be about 50 gold cents the average British parcel price

A campaign in the far east to educate millions of people in those countries to eat wheat—now a negligible part of their diet—probably will be recommended it was learned

The governments can enforce a greater consumption by law through measures restricting the amount of flour extracted from wheat and requiring the debarturing or cutting of green wheat to insure its use for animal feed A Cairns, Canadian secretary of the commission, and Italy as precedents for such action

President Of C.N.R.

Official Announcement Of Promotion Of S. J. Hungerford Has Been Made

Montreal Official announcement of the promotion of S J Hungerford to the presidency of the Canadian National Railways was made here by Hon Charles F Fullerton, chairman of the trustees

Mr Hungerford has been acting president since July 20, 1932, following the resignation of Sir Henry Thornton, who died later in New York City Mr Hungerford also carried on his former duties as vice-president in charge of operation since last date.

Mr Hungerford has been acclaimed as a thorough railwayman since the days when, in 1906, he trudged with his dinner pail to the Southeastern railway shops in Fareham, Que., to start his career as an apprentice

In due course he became a mechanical road from that start moved speedily on until in 48 years he has become president of one of the largest railway systems on the North American continent.

Neglected Getting Permit

Edmonton.—John Morawski, a prospector, neglected to get a permit for the gun which he had borrowed "to protect myself from bears," and from most, who, he said, had threatened to kill him, he will serve a year in jail. He was convicted of a charge of carrying a revolver without a permit.

For Shipping Bears

London.—For snapping the postmen of 1,000,000 stars, Miss Ethel Bellamy has received an honorary degree of master of arts from Oxford university. For 45 years of age, Miss Bellamy has been assistant director of the university's observatory for many years.

Oil Well On Prince's Ranch

High River, Alta.—The ranch of the Prince of Wales near here, well known as the E.P. ranch, comes into the news with the spudding of a small well half a mile from the prince's property line and a mile and a quarter from the ranch house.

Problem Of The Idle

Hon Arthur Wiglesworth Says Canada Should Study Efforts Of Roosevelt

Ottawa.—Canada should study carefully and with a bit of open public the courageous efforts of the president of the United States to overcome the problem of unemployment which that country is up against, Hon Arthur Meighen declared in the senate. As government leader in that chamber he was speaking on the address in reply to the speech from the throne.

Canada was doing its best to the best it could to meet the situation.

They did the best they knew the great problem of the unemployed was being impressed upon him, Senator Meighen said.

Searching For Coal

Miss Experts Have Already Passed Iron Ore In Irish Area

Dublin The green of Cull Irish may be counted in the search for coal, it was announced in the government in message to the assembly determination to make the Free State independent of the imported fuel supplies

French engineers and mining experts engaged in boring operations in the Arigna valley County Leitrim under government auspices have discovered three rich veins of iron ore it was announced. They were proceeding to search for coal

Receives Letter From Queen

Cambridge Man Offered Gift When Royal Car Stalled

Cambridge England Mr and Mrs Percy Timmons have received a letter from the queen.

Her Majesty expressed to the Timmonses her grateful thanks for their assistance when the queen's automobile broke down on the road between Cambridge and Ely.

On that occasion Mr. Timmons transported the queen in his Hillman motor car from the stalled royal limousine to the queen's destination in Cambridge

Seek Lower Freight Rates

Crow's Nest Rates Asked For Grain Moving Westward

Ottawa.—Designed to provide lower freight rates on grain from Fort William to the Pacific coast, an amendment to the Railway act will be introduced in the house of commons by Thomas Reid (Liberal, New Westminster).

The bill would make the Crow's Nest rates, now applying on grain moving eastward from Calgary to the head of the lakes, applicable to grain shipments from Fort William to Vancouver.

Bonus Paid U.S. Farmers

Washington, D.C. — Bonus payments to farmers reducing wheat acreage in co-operation with the agricultural adjustment administration program for January 31, last, totalled $30,984,785 among 300,762 farmers in 35 states. It is planned to pay out about $100,000,000 in this drive

Says U.S. Should Join

Ottawa. An appeal to the United States to join the League of Nations was made by Senator Raoul Dandurand in the senate. For seven years he was one of Canada's representatives to the league and president of the assembly in 1930. He is opposition leader in the upper chamber.

World End Economic War

Dublin.—The Free State senate passed a motion urging the government to approach the United Kingdom with a view to setting up a joint commission to put an end to economic warfare.

Relief Fund For Italy

London.—The lord mayor has opened a fund for relief of sufferers from the earthquake in Italy's northeast age. He said latest news indicated the death toll would be more than double previous estimates.

NEW DEPUTY MINISTER

Verne Sankey Arrested

Former Westerner Is Suspected Of Kidnapping

Chicago Verne Sankey, one of the United States notorious kidnappers suspected of the fatal Lind-bergh abduction, was arrested here, federal agents announced.

The former Montana cowboy was taken into custody despite a gun battle in a Northside barber shop. He was unarmed and offered no resistance.

In his clothing were found several ransom bills presumably carried for the purpose of ending his own life in event of apprehension. He was overpowered however, before having a chance to use them

In the apartment of the 43-year old naturalized Canadian was found a small arsenal two 38 calibre revolvers, a sawed-off shotgun and a large quantity of ammunition In a tin box was found $3,200 in $100 bills, $120 in $20 bills and $30 in $1 bills. A woman giving the name of Helen Mattern also was arrested in the apartment. She denied knowing Sankey's true identity.

Want Relieved Homeless

Victoria — Extension of mortgage moratorium legislation to include interest as well as principal is sought in a resolution passed by the Union of British Columbia Municipalities at its convention here. The union decided to ask the provincial legislature to provide that judges may vary interest as well as principal payments entirely within their own discretion

Propose Wage Investigation

Hon. Chas. Stewart Would Probe Industrial Activities

Ottawa Hinting beyond tariff protection some Canadian manufacturers have made, reverses profits throughout the depression yet paid the lowest wages in history to their employees it was charged in the house of commons by Hon Charles Stewart former minister of the interior He proposed a sweeping investigation into industrial activities along the lines proposed for chain and departmental store buying practices

I am creditably informed" said the former Alberta premier, "that I am going to maintain the truth of the matter that in western Ontario there is an individual engaged in the manufacture of silk stockings who is making a profit of more than 200 per cent and he is paying the lowest wages in the province.

He was replying to an suggestion to stop extravagant profits and low rates of pay said Mr Stewart and at the same time, to determine how manufacturers were hiding behind tariff protection.

Takes Resolution

Labor Member For Hamilton East Makes New Motion

Ottawa Humphrey Mitchell, Labor member for Hamilton East withdrew his Tilley resolution from the house of commons order paper and filed a substitute with the clerk based on the suggestion made by Premier R B Bennett

The new motion reads that the opinion of this house the prime minister should refrain from recommending to His Majesty the King the granting of titles, honors and awards to British subjects resident in Canada

Intercollegiate Debates

Results Are Announced Of Four Trans-Canada Contests

Toronto Results of four intercollegiate Trans-Canada debates were announced here as follows

Dalhousie University defeated University of New Brunswick, Fredericton; Laval University, Quebec, defeated the University of Ottawa; University of Western Ontario, London, defeated McMaster University, Hamilton; University of Saskatchewan defeated University of Manitoba, Winnipeg.

GOVERNOR-GENERAL OPENS PARLIAMENT

Our picture shows His Excellency, the Earl of Bessborough, Governor General of Canada, arriving at the House of Parliament to preside at the ceremony in connection with the opening of the fifth session of the 17th Parliament of Canada.

ARMS EQUALITY FOR GERMANY IS BRITISH PLAN

London.—Hopes for a way out of the present deadlock in efforts towards limitation and reduction of world armaments were revived here by publication of a revised British disarmament plan, now being studied by the principal powers concerned

Stepping into the breach existing since Germany abandoned the disarmament conference and the league, the United Kingdom called for adherence to a concrete 10 year plan of actual disarmament, recognition of Germany's claim to equality in arms, and acceptance of further security proposals.

The plan, circulated to principal governments in the form of a memorandum, definitely aims at satisfying Germany's claim for equality and thereby bringing her back into the arms conference and the League of Nations.

The memorandum was seen as an attempt to bridge the gap between the Hitler equality claim and assurance of France on security It said

The object of His Majesty's government in formulating these proposals and presenting them for consideration is not to describe the terms of an agreement which they themselves would accept even without regard for the claims or needs of others, but to propound a basis for compromise on which it would appear to the present circumstances a general agreement could and should now be reached

The heavily-armed powers are urged to reduce certain classes of weapons. It is pointed out that Chancellor Adolf Hitler has declared Germany voluntarily has given up claim to possess "offensive" weapons and limits herself to normal "defensive" weapons.

Declaring Chancellor Hitler advanced this proposition on the assumption that heavily-armed states are not prepared to disarm, under the convention, any portion of their existing weapons, the memorandum said

"His Majesty's government, entirely unwilling to accept this last assumption must insist that the only agreement worthy of the name disarmament convention will be one which contains a reduction as well as a limitation of armaments"

The British memorandum heavily stressing the importance of the principle of equality or rights. Parity between the principal nations is considered of greater importance than any actual figures of army strength or categories of weapons that may finally be approved.

Flight Ends In Tragedy

Crew Of Soviet Balloon Killed While Attempting To Land

Moscow.—All three members of the crew of the Soviet stratosphere balloon "Osoaviakhim" were killed, several hundred kilometres southeast of Moscow, near the village of Potishnoye.

After reaching an altitude which they reported as 67,585 feet and beginning a descent, the crew reported they could not determine their position

The crew was killed while attempting to land the great balloon.

The balloon bag broke away from the gondola as it hit the ground in a bird landing. The force of this concussion killed the three members of the gondola and destroyed all the scientific instruments aboard.

Following the crash the bag tore loose from the gondola and disappeared into the clouds.

What Canada Has Gained

Toronto One thing Canada had gained by the recent years of depression she has passed through was the realignment of trade routes and the formation of new trade channels, according to the monthly crop report, compiled for the Ontario department of agriculture by S. W. Shannon, statistician and economist.

Frozen Meat Products

Special Facilities At Port Of London To Prevent Deterioration

Completion by the government of Canada of a special chamber at the port of London for use in the handling of Canadian chilled and frozen meat products was announced by Hon. H. H. Stevens, minister of trade and commerce.

The chamber, which is of 35,000 cubic feet capacity, is designed to prevent the condensation of water vapor on frozen and chilled meat products when these are being removed from the cool air chambers of ocean transports.

Action is now being taken to place the new facilities at the disposal of Canadian exporters The construction of the chamber is expected to result in an improvement in both the appearance and quality of Canadian meat products passing through the chamber on their way to the United Kingdom market.

Water vapor from the atmosphere collects on meat products when taken out of cool air chambers just as it collects on the outside of a glass of ice water on a summer day or frosts on the outside of a window on a winter day. When this occurs on meat products, the appearance is marred and the quality sometimes affected.

Particularly serious losses on a shipment of Canadian poultry late in 1932 resulted in W. A. Rivers, chief of the poultry division of the live-stock branch of the department of agriculture, taking action. The refusal of physicians of the National Research council was requested, and the development in London has followed upon the investigation there undertaken.

The First Pawnbrokers

Business, Started Thousands Of Years Ago In China

The history of pawnbroking is interesting. Like banking, it has its European origin in Italy, but, like most everything else, its real inception goes back thousands of years to China, we are told. The Chinese were very wary with their debtors, charging merely a nominal interest. In Europe the Christian spirit of the dark ages set first, purely benevolent, — hence their name "Monts of piety," established by the state with the interest of the needy, for the good of the poor, lending money without interest. It was found, however, that the effort was doomed to failure as various dishonest interest were charged to defray expenses. Bitter opposition to the change had to be overcome before official sanction was given and the business then became more or less commercialized. In England pawnbroking has remained largely in the hands of the Jews, but in many European countries the state assumes more or less responsibility for the institution.

Employees Can Be Trusted

Honesty Of British Civil Service Valuable National Asset

Sir John Eldon's tribute to the Foreign Office staff was well deserved, indeed, he might have extended it to the whole Civil Service. "Secret and confidential" documents, supposed to be seen only by a few high officials and responsible ministers, are, in fact and inevitably, seen by typists and stenographers, clerks and messengers. Knowledge that could be sold profitably "in the city" is often in the possession of civil servants whose pay is certainly not munificent. Yet "leakages" hardly ever occur. The tradition of trustworthiness is an inestimably valuable national asset.—London Daily Herald.

Origin Of Old Saying

"He's got the sack." It was formerly the custom for employers to be given the tool-bags of their mechanics while the latter were in their employ. If one of these employees were discharged he would be given back his bag or sack for his tools, so that he might go and seek another post. This seems the most reasonable derivation for the phrase, and it has received the widest acceptance.

Here we see Captain James Mollison, famous British aviator (second from left), all set to shoot away on the Bob Run at St. Moritz, Switzerland. With the trans-Atlantic flier are Tacoma Gravelink and Mr. and Mrs. Day, from Los Angeles. Captain Mollison has not given up the idea of trying to set up a new non-stop long distance record with Mrs. Mollison, but is waiting for the spring and good flying weather.

Question Still In Doubt

Whether Columbus Or Cabot Discovered Continent Of America

Just who did discover America? Christopher Columbus got away with the honor for a long time but the claim of John Cabot, sponsored by his sons, Christopher Columbus discovered the West Indies but not the continent of America, it is claimed. John Cabot in 1497 landed on the island of Cape Breton on the eastern Canadian shore at the tip of the province of Nova Scotia, thereby establishing a claim to the whole continent. Then along came claims on behalf of the Norsemen who also, it would appear, made landings in the province of Nova Scotia about the year 1000 A.D., having behind them stories with rune inscriptions, one of which was found on the head of Yarmouth harbor and is now seen in the public library in that town. Now the Egyptians are being put forward, one of the basis for the claim being that when Christopher Columbus arrived he found the Indians making the constellations of heavenly bodies the constellations of heavenly bodies by the ancient Egyptians, stating the Tourist Bureau of the Canadian National Railways. In these constellations pyramids, hieroglyphs and sculptures in which the hair on the human figures portrayed is dressed much like that shown in Egyptian paintings.

Recent researchers have also declared that some of the ancient songs of the Indians were of Chinese or Mongolian origin, as that there were Chinese on this continent centuries of years ago. In fact, some of the Indian tribes have a distinctly Mongolian "mark". It must be remembered that thousands of years ago there was no such thing as a country as Alaska, and it would have been quite possible for Eskimos to travel overland from China to Alaska and Canada.

$5 Bail To Bondage

Found Hard Bringed From Both At Wainwright, Alberta

Continuing the policy of restocking depleted areas with indigenous species of wild life from surplus herds, the department of the interior recently shipped a carload of wapiti or elk from Buffalo national park, Wainwright, Alberta, to Kamloops, British Columbia. This shipment, consisting of six males and 20 females, was made at the request of the provincial game commissioner.

The animals will be liberated in the country at the head of Adams Lake, an area eminently suited to the requirements of this species.

Britain has saved about $300,000,000 in one year in interest charges by refunding its national debts at a low rate of interest. Many cities in Canada would like to have an opportunity of doing the same thing.

Twenty-Three Inches Tall

World's Shortest Man Weighs Only Twenty-Four Pounds

The smallest adult human being in the world is claimed to be an exhibitian at a Music Hall amusement resort in Dallas, Texas. Pierre Pyoll, the English midget. His age is twice his height in inches, his 46th birthday being in September. He weighs 24 lbs., and can sit comfortably inside an ordinary silk hat. His mouth fit inside an ordinary tobacco. He is of strong and healthy constitution, and his mental faculties are fully developed. He is 12 inches less than Tom Thumb. General Tom Thumb of Barnum fame. He has travelled round the world, touring Africa so far back as 1905, playing before the Queen Victoria and King Edward, appeared three times before Royalty.

French Bull Fight Back

Famous Matador Retires From Arena After 17 Years

Affairs of honor are settled with swords or pistols in France. M. Armand Massard, the famous French matador, who was for seventeen years President of the French Olympic Committee, entertains that about 30 sword duels are fought in the country every year. They take place in private grounds, with only a referee, a doctor and four seconds present. Usually they consist of two-minute rounds, with pauses of one minute between each. For sword-dueling, special gloves are worn to protect the hand and sword arm. This enabled it all the more dangerous, as it rules out the possibility of a duel being ended by a slight scratch.

There are thirty-two different types of climate distributed over the earth.

Might Be "Canada Place"

New Name Suggested For Island Site In London

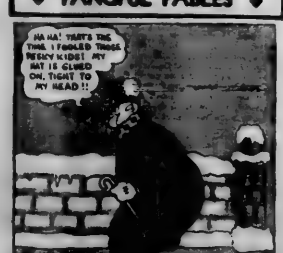
We are interested to see the suggestion in a London evening newspaper that the Westminster City Council should give to the island site on which Canada House and the Sun Life of Canada building stands the name of "Canada Place." Years ago Canada suggested that the short length of Cockspur Street might be advantageously changed to "Canada Street," as it containing the offices on the south side of the Canadian National Railways and the Imperial Life of Canada and on the north side the great block of the Sun Life of Canada adjoining Canada House. Possibly our contemporary's suggestion might be more acceptable to the Westminster authorities, because it would not do away with the old street names, but would merely give a new postal direction to the few buildings on the island site which consists only of the White Star Line, Sun Life of Canada, Canada House, and the Royal College of Physicians. We can warmly commend the suggestion to the Westminster City Council.—Canada, London, Eng.

Not Making Trip

Although it was suggested in the "gossip" column of the London Daily Telegraph the Prince of Wales might possibly go to Canada this year, the Canadian Press learned authoritatively such a trip had not even been discussed. Prince George, however, is slated for a six-months' visit to South Africa, and shortly after his return he will go to Australia and possibility New Zealand.

And rheumatism is almost a social asset if she can name it tactfully.

FANCIFUL FABLES



Perfect Crime Impossible

Clues Usually Left For Modern Science To Follow Up

Criminologists long have sought for the perfect crime and much study has been devoted to an analysis of the methods and manner of operating used by law violators, in order [illegible] it is claimed that no crime is committed without leaving some trace, [illegible]

[illegible] disappeared during the course of police history, [illegible] would occurred or it would have been duplicated in medium time.

A study of crime over many centuries as shown in available records and from the judicial opinions that [illegible] according to some crime experts that crime of to-day is no different than it was years ago.

True, the methods have improved through the instrumentality of science, but [illegible] of problems to contend with, but the [illegible] remain the same.

At the same time methods of detection have improved, apprehension have improved to a like extent

To-day modern science has provided means of detection which render it more difficult for a crime to be committed and remain undiscovered

Naturalists have taught that no man or animal can walk across a field or path without leaving a distinct manner leaving a trace, no matter how insignificant, definitely showing that such man or animal did cross such field.

Footprints, a broken twig, Disturbed grass, a stone or pebble inadvertently tossed to the one side, are important record will be left to establish the presence of the foreign creature.

Thus it can be seen that a man who commits a crime, who does something that the majority of people vigorously condemn, will have to take into consideration the fact that leaving some trace of his activity.

In a New England town a burglary was committed. Valuable silver was wantonly removed The suggestion to the Westminster authorities, because it would not do away with the old street names, but would merely give a new postal direction to the few buildings on the island site which consists only of the White Star Line, Sun Life of Canada, Canada House, and the Royal College of Physicians. We can warmly commend the suggestion to the Westminster City Council.—Canada, London, Eng.

Ends a Cold SOONER

OCCASIONAL WIFE

by
HILDA ROSS WEBSTER

Author of "Jocelyn," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her Peter is a young, struggling sculptor, trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and is studying commercial art in the hope of landing an agency job. Others in the story are Avis Worth another wealthy girl who is trying to win Peter; Sylvia Todd, Peter's model and Gus Mason, his former roommate with whom he has quarreled At a party at an exclusive club Peter entertains Camilla's guests with his personations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand When they awake it is early morning and Avis and another boy are standing near them. The makes it necessary for Camilla to announce before the party that she and Peter are married. Avis is stunned and Camilla's mother likewise. Camilla decides that she must leave the home of her adopted parents immediately and go to live with Peter, her plan to win is a file clerk in a business house They decide to take an apartment Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work, send for her and tell her they have a new account which requires unusual treatment of feminine appeal. To Camilla's surprise she learns that the account is that of her foster father's company, which has decided on an ad-venture campaign to bolster up beggling business.

(Now Go On With The Story)

CHAPTER XVIII

Camilla's first thought was to rush to Peter with the news. Then a second one assailed her—what if she failed? Could she admit that? No, she was riding the crest of the wave of excitement now so was she riding on the clouds again, she scurried gaily, as she guided her car by instinct and hazel through the lanes of traffic It behooved her to come down to earth, forget her own reactions and breathless hopes and consider seriously the problem before her.

This was not a matter of willing items to work or desire for success or even artistic talent Success involved creative genius. If that lacked her brain had to produce from somewhere a new idea to think of something which no other brain had produced, to originate that which did not and exist The thought quickened her breath stirred her imagination and awed her a little.

And then—it happened Like a flash, the inspiration struck her, forcefully. In an instant, the whole idea exploded before her, like a panoramic scene of a moving picture film. Of course, there would be endless details to develop and all sorts of problems to solve, but in a general manner leaving a trace, no matter how insignificant, definitely showing that such man or animal did cross such field.

Footprints, a broken twig, Disturbed grass, a stone or pebble inadvertently tossed to the one side, are important record will be left to establish the presence of the foreign creature.

Thus it can be seen that a man who commits a crime, who does something that the majority of people vigorously condemn, will have to take into consideration the fact that leaving some trace of his activity.

In a New England town a burglary was committed. Valuable silver was wantonly removed The suggestion to the Westminster authorities, because it would not do away with the old street names, but would merely give a new postal direction to the few buildings on the island site which consists only of the White Star Line, Sun Life of Canada, Canada House, and the Royal College of Physicians. "Mr. Anson calling. I thought you might—"

"Why, of course, I didn't include Peter when I said I wasn't at home to anyone," she laughed.

"I thought you didn't." Bates smiled slyly His servant realized anyone's presence mve Camilla's.

"Hello, Lovelies," Peter's manly voice greeted her. "What are you doing?"

"Oh, don't ask me darling, because I can't tell you now, please. Is that no? Why fed, I'd like to know?"

"It's a surprise a nice one. And if you ask me another question, I won't be able to keep the secret, Peter. What are you doing?"

"Well, that's a surprise, too," he muttered, "but I just finished it and I'm coming over right away and be there days or didn't you know?"

"I thought it was three weeks, but I may be wrong. But darling I can see you now."

"Soon then," he insisted "Meet me at Charm Cottage for dinner at 7 and I want to look at something beautiful and talk to something sweet."

"Oh, Peter, I'm so sorry, but I have a terribly busy week and to be disturbed at all tonight." Her heart yearned to my "you" and meet him eagerly and share that sweet moment with him. But Charm Cottage — where they had shared their wedding dinner. Here, already, was where her career stepped in and demanded first consideration. Perhaps if she explained to him, it would help. No—she had to take a chance that Peter would understand. Perhaps, after all, a test of his faith. But her doubt repunched her.

"Darling—at what?" he inquired with dismay.

"Work."

"Did you get a position?" quickly. "Oh, that was fine!" It was so difficult not to tell him about it.

"Well, then, there's tomorrow and all the other tomorrows for your work."

"No, Peter, I can't see you, tonight. Army

"When then," he asked, after a moment of silence, and his voice

She clung to her resolution and sounded decisive

"I should be decided tomorrow, she thought rapidly. If something definite could have dinner with him and tell him the wonderful news. Probably there would be no decision even for days after she submitted her drawings. Even so, it would be wonderful to see Peter, and she would have to try to keep her control from him. "Make it tomorrow," she said. "And I'm awfully sorry about tonight, dear."

"May I stop in for a few minutes, then, later?" anxiously. "You're not ill?"

"Oh, no, dear. And please don't stop in. I do want to see you awfully much but I can't."

"Okay, then. Tomorrow at six."

Relieves Congestion — Does Not Blister

Goodbye, Peter."

"Bye Lovelies."

She put down the telephone regretfully and musing forlornly for a moment, then rose quickly and returned to her work. "If you're a good sport, you'll play this game by the rules you had out when you invented it. Your and Peter's careers come first — marriage second, for awhile Peter has been splendid about it all Now, don't you give us a chance that Peter would understand. Perhaps, after all, a test of his faith. But her doubt repunched her.

"Darling—at what?" he inquired with dismay.

"Work."

"Did you get a position?" quickly. "Oh, that was fine!" It was so difficult not to tell him about it.

"Well, then, there's tomorrow and all the other tomorrows for your work."

"No, Peter, I can't see you, tonight. Army

"When then," he asked, after a moment of silence, and his voice

She clung to her resolution and sounded decisive

"I should be decided tomorrow, she thought rapidly. If something definite could have dinner with him and tell him the wonderful news. Probably there would be no decision even for days after she submitted her drawings. Even so, it would be wonderful to see Peter, and she would have to try to keep her control from him. "Oh, no, dear. And please don't stop in. I do want to see you awfully much but I can't."

"Okay, then. Tomorrow at six."

THE RHYMING OPTIMIST

By Alice Michaelis

TO MY MOTHER

You, who have never faltered,
Once through the changeful years,
You, who have never halved me,
Whether in joys or tears.
You, who have soothed each sorrow,
You have assuaged each ache,
What can my poor toil offer
Fit for your heart to take?

Just as your love is flawless,
Steadfast and not of earth
It will endow my efforts
Out of its own true worth
So I dare bring you daily
Work of my faulty hand,
Certain you have a perfection
Ever will understand!

Feed For Average Flock

The amount of grain and mash a flock of birds will eat in a week will vary with the flock and with the season. Some flocks will eat more than others. On the average, however, in a week's time, fifty White Leghorns would eat about fifty pounds of grain and about an equal amount of mash in the fall and winter In the late spring and summer birds may be expected to eat more than the grain by eating down the amount of mash.

37 lbs. OF FAT GONE

No Wonder She Looks Younger!

"How much younger you are looking!" What a pleasure to hear that compliment from your friends' lips — as mine do!

"Since I started taking Kruschen Salts," she writes, "I have reduced myself by 37 lbs. I am still going down and hope soon to be normal weight. My health has greatly improved My friends see much a difference in me now. I look younger, and I have such a fresh look always about my face which I never used to have I take my usual food, but my first drink in the morning is my little dose of Kruschen Salts, which I will never be without."—(Mrs.) E.

The six salts in Kruschen keep the organs of elimination in perfect trim and so ensure a regular, gentle and natural clearance of all fat-forming food refuse.

FREE TRIAL OFFER

If you have never used Kruschen try it now! Get a bottle at any chemist in the world (price 1/3 or 40 cents) and if you are not more than delighted after the first bottle, return the empty bottle to us and we will refund the purchase price.

Write a postcard at once to "Kruschen," (Dept. 77), 4, Stonecutter Street, London, E.C.4, and you will receive by return a generous trial bottle of Kruschen, together with a very valuable booklet containing many hints for reducing and keeping healthy. Don't miss this opportunity of getting a free trial bottle of Kruschen. Remember, you will be under no obligation whatever to purchase. Kruschen is sold by Druggists, Stores, Chemists, etc., throughout the world.

Little Helps For This Week

"My presence shall go with thee and I will give thee rest." Exodus 33:14.

Then will show me the path of life, in Thy presence is fullness of joy, at Thy right hand there are pleasures for evermore." Psalm 16 11.

Thy presence fills my mind with Brightness the thought so dark everwhile.
Hide curses and sad foreboding cease.
Makes all things smile.
—Charlotte Elliott

How shall we rest in God? By giving ourselves to Him entirely. By trusting ourselves to Him. By casting all our trust; there will ever be a lurking suspect in the heart which will withhold it. Surrendered and taints have tried this rest, and counted themselves happy in that they endured. A countless host of God's faithful servants have drunk deeply of it under the daily burden of a weary life; dull, commonplace, painful or desolate. All these God has been to them he is ready to be to you. The heart once fairly given to God with a clear conscience, a fitting rule of life, and a steadfast purpose of obedience, you will find a wonderful sense of rest coming over you. Jean Nicholas Grou.

No job too small or too large.
THE FORT RECORD

It looks like the citizens of Fort Saskatchewan will go to the polls next Monday to elect three out of five candidates running for Town Councillors. All five having signified their willingness to serve the town for another year, the choice is one of the five.

As we have said in former years, vote for whom you please, but get out and vote.

CARD OF THANKS

Mr. and Mrs. Wm. Sims and family wish to take this opportunity to thank their many friends for their help and sympathy when their home was destroyed by fire.

Coming Events

St. George's W. A. will hold a "Bean Supper" on Saturday, Feb. 10th at 6:30 p.m. in the Fort Confectionery store. Charge 35c.

On Thursday and Friday, Feb. 22 and 23 the Fort Saskatchewan Choral Society will present, under the leadership of Mr. H. A. Watt, a comedy opera, "Aladdin and Out". Please keep this date open.

The regular monthly meeting of the Women's Institute will be held in the Union Hall on Thursday, Feb. 8th at 2 p.m. Mr. K. H. Anderson will speak on Wild Life in Alberta.

LOCAL NEWS

Mrs. A. H. Rogers, left Sunday evening for Calgary to attend the Annual Alberta School Trustees' Association Convention, of which she is Secretary.

Members of the Vegreville Badminton Club were entertained last Saturday afternoon and evening by the local club. Many games were played and all reported having had a most time.

Mrs. T. W. E. Henry, Miss May Tranter, Miss Lillian Berg and Dr. Henry will represent the Fort Saskatchewan Club in Edmonton this week at the Annual City and District Badminton Tournament.

The ladies of the United Church wish to thank Mr. and Mrs. Guy Armstrong for their kindness in making the sleigh ride a success and for the lovely prizes they donated. They also wish to thank Mr. R. Fischer and Mr. F. Shierton for their kind donation of team and sleighs.

A rink composed of Lawrence Hodgins, A. Simmons, J. Wright and Kurt Graham, skip are representing the Fort at the 17th annual bonspiel of the Alberta Curling Ass. being played off in Edmonton this week. The final standings were not prevailing, the bonspiel with a few breaks might be able to fill some of the silver ware.

The Fort's Bob-sled bill came into some excellent publicity Tuesday, when the team visited by the Bulletin "Inquiring Reporter" asked several Bulletin readers to pass their opinion on our bob.

They all admitted that it was fast and seemed to envy Fort people. One went so far as to say, "A city the size of Edmonton should not be satisfied by a small town and we certainly are behind the times at present".

OBITUARIES

THOMAS STEVENS

Thomas Stevens passed away at the residence of his daughter, Mrs. J. B. Adamson, Fort Saskatchewan, February 5th, at the age of 81 years. He is survived by one daughter, Mrs. J. B. Adamson of Fort Saskatchewan, one sister, Mrs. E. Walker, one brother, Edward, both of Roscommon County, Ireland. The funeral was held this afternoon at 2:00 p.m. at St. George's Church, Fort Saskatchewan, Rev. C. Read officiated and interment took place in the Fort Saskatchewan cemetery. Howard & Mc Bride, funeral service.

MRS. ELIZABETH THOMLINSON

Elizabeth Thomlinson, widow of the late Ernest D. Thomlinson of Brunner, Alberta, passed away in an Edmonton hospital on January 30th aged 49 years. She is survived by two daughters, Mrs. Simmons and Miss Edith Thomlinson; one son, Harold; and one grandson, Ernest, all of Brunner; three brothers, Joseph, Philip and Jack Thomas, all of Fort Saskatchewan; and four sisters, Mrs. L. T. Levesque of Erickson, B. C.; Mrs. C. Berg of Bruderheim and Mrs. Ed. Frey and Mrs. Phillip Mohr, both of Fort Saskatchewan. The funeral service was held on Friday afternoon at 3:00p.m. at the family residence, Brunner. Rev. W. J. Kidd and Rev. Alex. Stewart officiated and interment took place in the Clover Bar cemetery. Howard & McBride funeral directors.

How to Fashion Belts from Package Wrappers

SMART, colourful, shimmery belts, made from the transparent envelope of cigarette tins, cakes, candy and other packages, are the craze both in New York and Hollywood. Belts of this description combine making their belts on the lot between shots. Cellophane, it is then taken as piece on a material for the pockets of another dress and easily acquired in these unusual times. It is used, and can be had for the asking in various forms and finished versions are attractive with sports clothes, but for evening hand and hats as well.

Unusual colour combinations and patterns are obtained through various methods of weaving the strips. One of

the simplest is the Rick Rack, shown in the sketch at the left. The strips of cellophane, being long and narrow, are easily woven in and out, and the ends may be made to project from the belt on the outside edge, alternating in the centre and then the belt is half finished. Fold each end in the opposite direction to the centre, making the ends of the belt about 2 inches long and nearly 1½ inch wide. Fold across the centre, making the strip 1 inches long. Fold each end in the opposite direction to the centre, making the ends 1 inch long. The 1 inch fold is then folded back on the centre fold, making the ends 2 inches long. Fold the ends back on the centre fold, making the ends 1 inch long. Fold the ends

Handicrafts In The West

Shortly after the conclusion of the World's Grain Show held at Regina last summer the question arose as to the uses to which the big quarter of a million dollar Grain Show building could be devoted, not only in connection with the annual provincial exhibition but throughout the year. Many suggestions were advanced, but few had any relation to the subject of the uses to be made of the building in connection with the annual Provincial Exhibition, possibly because of the size of the structure, the great extent of floor space, and the difficulty in these recent years of finding necessary funds to permanently any large development.

The writer now proposes to advance an idea for the consideration not only of the Regina Provincial Exhibition Board, but of people throughout the three prairie provinces. This idea is advanced because it is conceived in keeping with the international character of the project for which the building was originally constructed; because it presents an opportunity to encourage and develop one aspect of our western life we are in danger of neglecting; and because it appears to be a feasible undertaking at the present time, and, in fact, may even provide a small measure of income to many people who are in dire need of every cent they can earn.

The suggestion we advance is that this building erected to house grain and other exhibits of the nations of the world, or at least a portion of it, should continue to be utilized each year for the display of the handicrafts of the people of the many nations who constitute such a large proportion of the population of Western Canadian provinces. In other words, that the various racial and national groups throughout the West be invited, encouraged, even urged, to revive their home handicrafts on a larger scale than before and to exhibit the same, the understanding being that the exhibitors have the right to sell the goods they have placed on exhibit if they so desire.

What, we ask, could provide a more colorful, interesting and instructive exhibition than a continuous series of booths each devoted to the handicrafts of different national groups, presided over by men and women of each particular group, dressed in their national costumes?

Some years ago the C.P.R. sponsored the holding of exhibitions of handicrafts throughout Canada, and these were attended by thousands of interested visitors. In conjunction with such exhibitions, festivals and concerts featuring the music of different countries were held. Recently, at Regina, a highly successful folk festival and dance was held in which hundreds of citizens of non-English speaking nationalities participated, each providing their own orchestra or band.

The people of every nationality have some worthwhile contribution they can make to the upbuilding of this Canadian nation. These people have chosen Canada, yes, Western Canada, as their home; they are bringing their children up to be Canadians. They have a wealth of tradition or song out of the past histories of their native lands, of music, poetry, literature, and a bewildering array of handicrafts to contribute that will add richness to the young nation now in the making. They should be encouraged to make this contribution. It should be impressed upon them that they are welcome in Canada; that so far from asking or expecting them to forget their old homelands and the customs and traditions and handicrafts of their native countries, we want them to add them as a contribution to the grander beauty and strength of Canada.

Why not, therefore, utilize at least a portion of the fine World's Grain Show building to develop a little annual international exhibition put on by the people of many lands now resident in our midst on these Western plains? Let us have the flags of all nations waving again over booths filled with the arts and handicrafts of Germany, Poland, Norway, Sweden, Iceland, Belgium, Holland, Italy, Jugo-Slavia, Czecho-Slovakia, Roumania, Ukraine, Greece, Russia, Austria, Hungary. Let us include China and Japan, who have representatives in our midst. And the Irish, the Scotch, the Welsh should join their contributions with the English, and the French-Canadian to round out the whole.

At the World's Grain Show last summer there were a few of these handicraft exhibits, and they were most interesting although rather overshadowed by the magnitude of the show in other respects. But with one wing of the big building arranged in attractively decorated national booths, with exhibits of the arts and handicrafts of each nation on display, with national flags and national costumes,—and all of which could be provided by and through people now resident in Canada—a wonderful show can be made of the Grain Show building which will return a dividend to Canada, not in cash perhaps, but in nation building. At the same time activity in national arts and handicrafts will be encouraged, and new arts and skill in workmanship will not be lost, and, in fact, a valuable and growing domestic market developed for hand-made products from many a humble and needy home.

Strength In The Air

Outlook Of Air Ministry Satisfied With Britain's Efficiency

Our stunt pilots so frequently seize our fresh creeping by allusions to our inexperienceness to ward off air attacks that it is refreshing to hear the views of a real expert.

I had a talk to-day with one of the high officials of the Air Ministry. He scoffed at the notion that we should imitate Italy in constructing "tank buster" h.mouth our arter al mode. He was not even greatly concerned that civilians should be trained in the use of gas masks. When I reminded him that in the matter of aeroplane armament we came very low down in the list of the seven big powers, his contention was that it was not horsepower that counted, but the efficiency of the pilots. Aeroplaning could be turned out at the rate of hundreds a month if necessary but the training of pilots is a different matter. "It is the matter of efficiency!" "Measured by this result," he said, "we are right up to the standard of the best. The best power next is America. Her position would be just about twothirds up the scale."—London Cor., Ottawa Journal.

Strange Story From Desert

Captive Legionaries Have Been Slaves Of Arabs For Years

The members of a colony of captive legionaries who forgotten by the world, have for many years labored under Arabs in the burning heat of the desert, are now beginning to find their health re-established. The first intimation of the existence of such a colony came when an ex-legionary named Lopez Pedro, who had been reported dead for many years, three months ago staggered into the Spanish garrison of Villa Cisneros in Rio de Oro, almost completely exhausted. Too Spaniard told a strange tale of a band of legionaries of all nationalities held captive and held under conditions of virtual slavery for Arab taskmasters. A Jew named Aaron Cohen later arrived in the French zone with a similar story. Thereafter a Spanish commission took up the matter and after negotiations aided by friendly Arab chiefs, the first party of ex-legionaries arrived at Cap Juby, near Villa Cisneros.

Good Business With Japan

Value Of Exports In 1926 Over Million Dollars Higher

An increase of more than $1,000,000 in Canadian exports to Japan during the past year was one of the bright spots of Canada's foreign trade in 1926, says a trade review of the department of trade and commerce. Exports increased from $11,898,687 in 1927 to $13,001,704 in 1926.

Exports of wheat flour to Japan increased in value from $363,663 to $909,367, wood pulp shipments increased in value from $664,322 to $1,644,394 and newsprint from $18,069 to $280,683. On the other hand, however, the total decrease was shown in the value of exports of wheat and lumber.

YOUR LIVER'S MAKING YOU FEEL OUT OF SORTS
Wake up your Liver Bile
—No Calomel needed
Here you are, just when you should enjoy life the most, don't you feel sluggish, sour, sick and all upset? Your liver is probably to blame. Bile is what digests your food. Bile is what makes you feel "up and doing." Digestion and elimination are being slowed down. Your bowels need a cleaning out. Then you'll be feeling your best. Nothing else will do the work of Carter's Little Liver Pills so safely and surely. Ask for them by name. Refuse substitutes. Only 25c at all druggists.

Pitchblende Shipped Out

Nine hundred pounds of pitchblende concentrates were brought down from Great Bear Lake, by Pilot Matt Berry, Mackenzie Air Service, and shipped east by rail to La Rue brothers radium refinery at Port Hope.

Lunch Condiments

The condiments for lunch and meat tea are as follows: Meat sauce with cold meat lunch (hot or cold); currant jelly with roast mutton (cold); caper sauce and spiced fruits with boiled mutton (hot or cold).—Dominion Department of Agriculture.

Heavy Days—Sleepless Nights
Wreck the Nervous System
Men and women rise night after night or sleepless beds. Their eyes do not close in the refreshing repose that comes to those whose nerves are right. They are irritable and nervous, weak and worn out, and everything looks dark and gloomy.
Milburn's H. & N. Pills is the remedy that is needed to restore them the blessing of good health. They bring back the sound refreshing sleep, tone up the nerves, and impart that sense of buoyancy to the system that is the result of renewed mental and physical vigor.

Planning Huge Stadium

Germany Getting Ready For Olympic Games Of 1936

Germany is at present building for the Olympic Games of 1936 the great stadium which was constructed for the Olympics of 1916, cancelled because of the war.

Werner Marsh, son of the original builder, is in charge of remodelling the huge arena in the Grunewald, four kilometers of Berlin, and plans to make it more complete even than the Los Angeles stadium.

It is planned that the main stadium will be surrounded by a tennis court, a cycling ground and a swimming pool, with accommodations for 400,000 spectators. Furthermore, a ground for equestrian sports will be erected. A home for athletes, to be called "The Home of German Sports," is also planned, as well as buildings with social centres for the athletes participating at the 1936 games.

In issuing orders for the reconstruction, Chancellor Hitler declared: "Germany receives herewith a sports arena the equal of which has never been seen anywhere in the world." The German sports commissioner, Von Tschammer-Osten and the minister of interior, Wilhelm Frick, have full powers for conducting construction work. The money needed for the purpose has already been appropriated by the ministry of finance.

If all is achieved as foreseen the German Olympic Stadium for 1936, it is claimed, will be the greatest and most practical sports centre in the world.

Protective Association

Toronto Landlords Have Problem With Destitute Tenants

Toronto landlords have formed a protective association. Landlords should not be shouldered with the double burden of providing both free rent and most of the city's issue, the meeting agreed. It was attended by about 300 people and lasted more than three hours.

H. L. Rogers, former alderman, was the principal speaker. "It is unfair," he declared, "that the landlord should be faced with the ugly alternative of having either to turn a destitute man out on the street or to give him free rent. It is dishonest to make you pay for relief through taxes, and then to make you pay rent for the poor when others who own stocks and bonds have to pay no more than income taxes."

Wife—"John, I gave you this letter to mail a month ago and I just found it in your plaid coat pocket!"

Husband—"I remember! I took off the coat at the time to have you sew a button on it and it isn't sewed on yet!"

Engineer Of Famous Train Receives Medal

New York's Honor Conferred On Driver Of Royal Scot

On the platform of Euston station, from where many travellers have started a journey to Canada, J. H. Thomas, secretary of state for dominions, presented William Gilbertson, engineer of the famous Royal Scot, with the medal of the Order of the British Empire, conferred on the driver in the New Year's honors lists in recognition of the great tour of the train through Canada and the United States.

Out of a million eggs hatched last year by duck workers at Brisbane, Australia, only one was broken.

Evidence Leads To Belief That There Is A Gradual Recession Of The Ice Caps At The Earth's Poles

Science is at it again, this time taking away the reputation of the Arctic. That resort is getting warmer. Not much, it is true, but give it time enough time, that is. Recently it was discovered that the Cornell glacier, in Greenland, which in 1906 was four hundred miles north of the Arctic Circle, is now about three-fifths of a mile further forward. Further it was found that in Labdra district of our mainland the forest line is advancing at the rate of one mile a century.

However, it will be quite some time before sledding will have to be abandoned, for there is a matter of five million square miles of ice at the Antarctic and 1,000,000 in the North, and, anyway, scientists give it as a considered opinion that we are now living in the Quaternary ice age, which began about 600,000 years ago. They add, just in case there are some laymen who consider this too at the poles and elsewhere as a settled earthquake, that there have been various ice ages and between these there are mild intervals which are measured by lots of millions of years.

When the ice melts it will mean a lot of increase in the oceans and perhaps in the lakes, and there is even danger that some sections of the earth will be completely submerged. But there is no need yet to hitch rafts. People dwelling in these parts, however, have no particular difficulty in looking forward for they have overlooked at least three of times long before this geological age, in the old lake shores, in glacial remains, and in fossils that bespeak a time of warmer seasons where the white silence of the North now reigns. Winnipeg Free Press.

A New Milking Apparatus

Inventor Reserves Patents On Non-Suction Milking Pail

The new sanitary, non-spillable milk pail which, according to its inventor, Charles G. Gyzler, 37, will have "practically" no flavor, was explained to newspaper men at Winn pag. When friend cow feels the urge to spill the milk with a well placed kick, it will be just wasted effort, Gyzler said.

Patents on the invention have already been secured at Washington. Gyzler stated one United States manufacturing firm considers the patents worth $25,000 to them.

An inset chamber on top of the milk pail is the secret behind the revolutionary milking apparatus. After filling the chamber with water, Gyzler demonstrated the "holding power" of his pail by kicking it across the room. No water was spilled.

Poultry On The Prairies

Nearly Half Of The Poultry Of Canada In Prairie Provinces

That the prairies are appreciating the position they are being recognized, says the Dominion Poultry Husbandman, for in three years the poultry population of the three prairie provinces increased over four million, and in 1931 nearly one half of Canada's poultry was upon the prairies. In the whole of Canada there is only one province -- Ontario -- that has more poultry than Saskatchewan and Alberta. Of the millions of bushels of grain consumed by poultry each year, nearly one half of it is fed in these three provinces. Saskatchewan alone has nearly as many head of poultry as the provinces of Prince Edward Island, British Columbia, and Quebec combined.

Land Use Survey Made

British Columbia Seeking Requirements For Provincial Purposes

Requirements for provincial purposes alone in the next five years will be not less than $7,000,000, an unofficial survey conducted at the legislative buildings revealed. No such program could be financed by the province unaided however, it was stated.

Vitamin C In Apples

Study Shows Baldwin Is Rich In This Respect

The horticultural Experimental Station has recently started a study of the vitamin contents of the leading apples of the northwest.

Information on the Baldwin and McIntosh varieties has been published, it seems there that the Baldwin is a rich source of vitamin C, while the McIntosh supplies very little of this important food supplement. Spraying with lime sulphur and arsenate of lead had no effect on the vitamin content. Fresh cider from the Baldwin was found almost one-half as valuable as the fruit itself, while pasteurized or boiled-out cider lost practically all its value. Fresh apple juice stored standard unstrained, while lower than the juice in vitamins, was useful, but in canned apples some vitamin C is practically destroyed.

England Fighting Potato Bug

Common Colorado Beetle Is Giving Farmers Considerable Trouble

The Colorado beetle or potato bug, which made its appearance in some parts of the United Kingdom this past summer and caused damage to the potato crops and led to a campaign being begun for its extermination, is still causing uneasiness.

It does not keep dogpond of by any means, and a proposition for next season's attack on the crops by "digging fresh in" is a suggestion that is eminently upsetting to potato growers.

Tillbury, Essex is the scene of the beetle's latest exploits, according to reports. While ministry of agriculture officials were slavishing the pest by the dozen they found four beetles at a depth of two feet. The spot was near the allotment on which beetles were found in August following the discovery by a ministry official of a crushed beetle in the roadway.

Officials of the ministry have been at Tillbury for some time in connection with the matter. When the presence of the beetle is suspected, digging is carried out. If the laborating insect is discovered, the whole adjoining land is fumigated with carbon disulphide, injected by a kind of glorified hypodermic syringe.

One of the men who has been fighting the beetle under the direction of the ministry says: "We have been occupied, off and on, since last August. 'We found several specimens in different places," he said.

Prizes For Quality Bacon

Canadian Chambers Of Commerce Urged To Encourage Better Grade

Regina Board of Trade has put its shoulder behind the Canadian bacon hog policy and is offering a trophy for the best wiltshire bacon from the Regina zone, and offering that a sum of $50 be set to the regular classification for the best group of three hogs at the fat guss fall show and the champion hog of the year, from the Regina zone. In addition to this they are suggesting to the Chambers of Commerce that they be called action by Boards of Trade for the bacon hog policy, and that each Board of Trade sponsor similar encouragement in its own locality.

An ancient well, 250 feet deep, has been found at Pompeii, Palestine and is relieving the drouth.

Graphic Description Is Given Of Conquest Of Mount Everest By Intrepid British Aviators

Men Work Isolating

Hinds Island School Children Interested In Flooding Town

Hinds Island is experimenting with a novel reforestation plan which will find many imitators if public funds ever again become available for conservation work. It is an idea deserving to be on file for future use.

On five acres of land donated to the town the school children of West Greenwich are planting 4,000 trees donated by the State Forestry Association. An expert forester heads the planting job.

That will a new forest be planted, children schooled in forestry and the aims of reforestation brought home to an entire community. The school children will plant and cultivate their forest and protect it from insect enemies, and will go out into the world knowing more than their parents about trees.

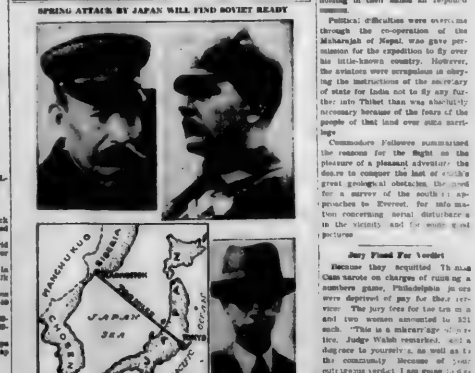
With the constantly increasing importance of forestation the school forest idea constitutes a practical contribution to rural education. Without involving a large expenditure of public funds it furnishes an opportunity for public spirited citizens to make a real contribution to their community and to posterity.

Canadian Wall Paper

Exports Are High To Several Countries Including Japan

There must be a very large number of homes in the United Kingdom whose interior decoration to Canadian wall paper for the export of that commodity to Great Britain is a large one every month. In December, for example, it was 53,000 rolls. The same month to end of June India and New Zealand, whether 32,000 rolls went. Japan uses considerable Canadian wall paper and the fact that Italy does also—the country of all countries that appeals to us as a nation of artists is testimony to the standard of that product of the Dominion. The December export was 90,838 rolls compared with 66,788 in December, 1932. The 1933 export of 419,562 rolls was somewhat less than in 1932.

SPRING ATTACK BY JAPAN WILL FIND SOVIET READY



That war with Japan is regarded as almost inevitable this coming spring is indicated by reports reaching London that the Soviet Government is concentrating large supplies of food, munitions and aircraft at Vladivostok, the Russian seaport lost in only 780 miles from Tokyo. Commissar of War, Clemence Voroshilov, (top, right), is reported to have been visiting the Trans-Siberian Railroad for many months for the transportation of men and munitions for the port that it is believed would be the first objective of a Japan se attack. Observers say the Soviet may fire the magazine may be the occupation of Heavy Pu-Yi (lower right), as emperor of the Japanese controlled state of Manchukuo on March 1. In announcing he would follow the policies of his predecessor, General Sadao Araki, the new Japanese Minister of War, General Senjuro Hayashi, (top, left), is believed to have dispelled the hopes of peace that were born with Araki's resignation.

Jury Fined For Verdict

Because they acquitted Thomas Cain tarote on charges of running a numbers game, Philadelphia jurors were deprived of pay for their service. The jury fees for ten men and two women amounted to $21 each. "This is a miscarriage of justice," Judge Walsh remarked, and a disgrace to yourself as well as to the community. Because of your outrageous verdict I am going to discharge you from further service and fine you one dollar pay.

New Swimming Equipment

An inventor in France has designed equipment to enable man to swim like a fish. The invention consists of a couple of paddles attached to the hands, each covering an oblong surface of 60 inches square, and a paddle, one's toes are, attached to the feet.

FORT SASKATCHEWAN RECORD

WORLD HAPPENINGS BRIEFLY TOLD

Approximately $15,000,000 would be required for a works program to meet Premier Aberhart's unemployment demands, Premier T. D. Pattullo announces.

Capt. D.A.R. Mains, of Victoria, has been named sergeant-at-arms in the British Columbia legislature as was announced by H. G. Perry of Prince George to the speaker-designate.

The decision of Mr. Speaker Black to stop women knitting in the galleries while listening to debates in the house of commons was taken as a blow at the yarn making industry by one company.

Senator Raoul Dandurand, K.C., former president of the assembly of the League of Nations, has been named president of the University of Montreal. He succeeds Senator W. L. Mcgee, who died Sept. 1, 1933.

Establishment of a birth control clinic in Winnipeg will be the aim of the Winnipeg Birth Control society as soon as funds permit, a meeting of the organization here was told by Mrs. W. F. Osborne chairman of the society.

"Time is running against the friends of disarmament," warned Sir John Simon, secretary for foreign affairs, before a crowded and deeply attentive house of commons as he initiated a full-dress debate on disarmament.

Amos Williams, 70, veteran of the Northwest Rebellion of 1885 and last survivor of the famed 90th Winnipeg Rifles (Little Black Devils) until a few years ago, died in Winnipeg recently. Mr. Williams came to Manitoba 57 years ago from Cornwall, Eng. William Williams of Moose Jaw is a son.

Are You WEARY?

Do you find it hard to do things these days when body and brain feel oppressed? Does the slightest effort of body sometimes make you tired? Do you feel that you have not the energy to do the things you used to do? If you are in this condition you are suffering from a lack of nerve force. Your nerves are your life force. They are the power that keeps your body going. When your nerves are weak you are tired and nervous and irritable. Your nerves are like a storage battery. If you have used up your energy you must recharge your nerves. That is why Dr. Chase's Nerve Food is so famous. It helps to restore the nerve force. Try it. A Regular Cure. 60 cents.

Dr. Chase's Nerve Food

Deal With Beggars

Says Farmers Should Observe Injunction Of Hindoo Prophet

Wheat acreage reduction in the next crop year would offer no difficulties if the farmers in the gra n-hopper-plagued sections observe the instructions of the entomologists, assisting them in fighting this plague, Hon. W. M. Aseltine, Rosetown, told the senate.

The farmers have been advised not to attempt wheat seeding on areas over which the locusts laid their eggs last fall, and that area would constitute more than would be necessary to achieve the 15 per cent. acreage reduction, he said.

"There is no instrument in my hand," says a well known orchestra leader, "that I cannot play equally as well as the player himself." He seems pretty good on his own trumpet, too.

QUIVERING NERVES

When you are just on edge . . . when you can't mend the children's noise . . . when everything you do is a burden . . . then you are feeling nerves . . . say Lydia E. Pinkham's Vegetable Compound, 50 cos of 100 common sense bombs.

It will give you just the extra energy you need. Life will seem worth living again.

XXXIX

(By Gordon H. Good, M.A.)

Flashing their messages in brilliant hues across the skies, meteorites have in recent years become a familiar sight in almost every community. They revolve thusly many from the gas, meet, which is used in their manufacture, and which is one of a rare family known as the inert gases.

Argon was discovered in 1894 by Sir William Ramsay, an English chemist but it was not used extensively for commercial purposes until the last decade. It is obtained from the air, where it is found in small amounts, namely in the ratio of twelve parts of neon to one million parts of air. Its chief uses are for illumination and for heating spark plugs in gas engines.

Neon is the result of glass tubes containing small quantities of the gas. An electric current is passed through the tube causing the neon to become illuminated. The gases produced by neon is found in proportio for much more clearly than ordinary white light and hence it is used extensively in England to guide traffic during fogs. At the Lympne aerodrome in England, on the London-Paris air route, there are huge illuminated signs composed of neon through glass tubes twenty feet long and producing an illumination of six candle power per foot.

In testing spark plugs of gas engines, tubes containing neon are used, a brilliant pink-orange glow showing when the spark plugs are in order.

Neon is known as an "inert" gas because it belongs to a family of elements which have neither color nor odor, and do not combine with any other elements. However, used extensively for inflating balloons and dirigibles it is another member of this family. Argon, used commercially for filling the best types of light bulbs is another inert gas. The well-known members of the same family are krypton and xenon.

Good For All You

Silver tickets 175 years old and good for all time are still used by their bankers as passes to the best seats in Britain's oldest theatre. It has been revealed. The playhouse is not in London, as might be supposed, but in the Theatre Royal, at Bristol. The silver tickets, admitting the bearer to any performance were presented to subscribers when the house was inaugurated in 1766, and recently have been handed down to their descendants.

Long Brown Gal Story

Walter Thompson took a book from the Atchison, Kansas, library 30 years ago, read half of the book, and then took it back to the library. A few days ago Mr. Thompson went back to the library, got the same book and finished reading it.

Yes, life is a puzzle, but isn't it fun to work it?

SUNDAY SCHOOL LESSON

FEBRUARY 18

JESUS' POWER TO HELP

Golden Text: "I desire mercy and not sacrifice: for I came not to call the righteous, but sinners" Matthew 9:13.

Lesson: Matthew 8:1 - 9:34.

Devotional Reading: Isaiah 35:1-6.

Explanations And Comments

Jesus Came Not to Call the Righteous, But Sinners, 9:10-13. How could Matthew better honor his new-found Master than by letting his friends know him, too? He invited Jesus and others to a feast in his house (Lk 5:29). As Jesus reclined at table with Matthew's friends, he was criticized and met with Jesus and his disciples. Publicans and sinners were often classed together in the Gospels. The word "sinners" in this connection does not necessarily mean evil men, more often it means men who fail to perform the stated rites required by the religious leaders. The Pharisees regarded with greater abhorrence a man who transgressed the traditions of the elders than a man of immoral life. Pharisees were often an invited guests at the feast it was customary for unbidden guests to present themselves at feasts as onlookers and even to engage in conversation with the guests. These Pharisees at once found fault with Jesus' conduct in the disciples' Lord their Master who with publicans and sinners. Jesus answered for His disciples: "They that are whole have no need of a physician, but they that are sick." The force of this argument is, of course, that as a physician goes where the sick, so the Physician of souls must labor among sinners. The Pharisees knew the words of their Scriptures, but their failure to apply them showed that they did not know their Lord's meaning, and Jesus rebuked them, saying, "Go ye and learn what this meaneth, I desire mercy and not sacrifice." In quoting from Hosea 6:6, The Pharisees were taught that the act will publicans and sinners but that the real test of their ceremonial laws, but they would not show them a kindness; they cared for sacrifice, the externals of their religion, and not for mercy the religious spirit. "For I came not to call the righteous"—and the Pharisees deemed themselves righteous—"but sinners."

South Africa expects an auto boom.

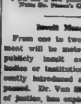
Wireless Operator Thought Ship Had Struck A Rock

The Dollar liner President Taft, bound from San Francisco to New York, struck a giant smoke when 1,667 miles northwest of Honolulu.

"The impact was terrific," the liner's wireless operator messaged. "I thought we'd hit a rock. The boat trembled violently and the passengers all ran out on deck."

He said the whale appeared stunned after the shock and remained on the surface, apparently dazed. The Taft is nervous and detour around it.

Women's Business



"I had a breakdown, and was told that I completely destroying me, I found, both, that I might and finally I be well. I took Dr. Pierce's Favorite Prescription and Dr. Pierce's Golden Medical Discovery. From Dr. Pierce's Clear, Reliable, U. S.

Sent Home Prison

From one to two years' imprisonment will be meted to those who publicly insult authorities, public bodies or institutions, if a bill recently introduced at The Hague is passed. Dr. Van Houth, the minister of justice, has explained that liberty to authorities and to certain groups of persons has been increasing gradually, and often public order is endangered.

A Logical Conclusion

Odds have their "seasons" in England, the peak periods being January and February, April and May, and September and October, owner's tip to abstinion recently issued. We presume that during the other six months you just own the "million."

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 9—ARE HUMAN EYES DEGENERATING?

This question is frequently asked by people who observe closely the steadily increasing number of glasses worn as compared with a generation ago. The answer is No. The eyes of the present generation are in no wise better or weaker than those of our ancestors unless it can be proved that the whole physique of the race has degenerated. As is the whole physical body so are the eyes.

But much more is required of our eyes today than formerly. The unprecedented growth of manufacturing and commercial life, the strenuous struggle for existence, the ever increasing complexity of modern civilization, the knowledge of the world in all lines of human endeavour, knowledge that must be mastered to achieve success, put far greater strain on the eyes to-day than heretofore. Our schools are far more exacting and severe, the business and scientific worlds require closer application and more painstaking care from every worker whereby they are turned night into day making it possible to do much work by artificial illumination that was formerly impossible and unnecessary. All this then requires the use of sharper vision and more hours per day of it than was necessary in former times and because of those exacting demands on the eyes, latent imperfections and errors of refraction causing eyestrain, are made manifest by symptoms of discomfort and distress, compelling us to seek improvement in vision and the comfort afforded by proper glasses.

Investigation has shown that primitive races of most have the same irregularities of the eyes we we have, the difference lies in the use to which they are put to when Nature gives the warning signals common sense would say take heed.

(To Be Continued)

Teacher "Now, if I write 'n-o-w' on the blackboard, what does that spell?"

Bright Scholar—"New."

Teacher—"How I'll put a 'k' in front of it and what have we?"

Bright Beginner (quickly)—"Cakes."

BUCKLEY'S Gives You For More For Your Money

Buckley's gives more than so far as sufficient cough relief is concerned. Buckley's Mixture is unsurpassed for quick relief from coughs, colds, bronchitis, influenza, whooping cough, asthma, etc. Buy a bottle of Buckley's today and see why. "It's the mixture that makes you say, "It gets at the cough right." "It's the mixture that makes you say, "It gets at the cough right." Buckley's Mixture is unsurpassed for quick relief from coughs, colds, bronchitis, influenza, whooping cough, asthma, etc. Buy a bottle of Buckley's today and see why. "It's the mixture that makes you say, "It gets at the cough right." Buckley's is sold everywhere.

TORONTO, ONT.

INTEREST CUT IS URGED TO SPEED UP BUSINESS

Ottawa. Drastic changes in the general financial policy of Canada were urged on the Bennett government by one of its supporters in the house of commons James H. Britt Conservative, Selkirk Man. He suggested compulsory reduction of interest, conversion of government bonds at lower interest rates and the issuing of $100,000,000 in cash to establish a reconstruction purchasing board.

Canada stood at the economic cross-roads, the Manitoba member said urging the government to accept a motion proposed by George Cooke, United Farmer member for MacLeod. It proposed a large scale national building program financed by new currency, to escape interest charges on borrowed money, and if the Coote motion, the debate not being concluded.

"There is an issue facing the government to-day, the like of which has never faced any government in Canada," said Mr Britt

"To the extent to which the government faces that issue it will be either victorious or defeated and the welfare of the great mass of the Canadian people will be enhanced or the opportunity lost."

Uncontrolled inflation was not acceptable to him, the Manitoba member contended, but "I favor the kind of preaching of sound money we have had in this country in which everybody has been assured sounding for the recovery of interest but it has meant fury for the masses of Canadians."

If the government placed $100,000,000 behind a reconstruction purchasing board, Canadian industry would employ $1,000,000,000 in new orders, Mr. Britt predicted. The board would act as a hopper, where farmers could place orders and receive payment in bonds to cover their property without interest. The orders would go to Canadian manufacturers, financed by the $100,000,000 fund.

Canadians were being placed in serfdom by "this straight-jacket of interest," Mr. Britt said, advocating compulsory rate reductions. He proposed legislation cutting 33⅓ per cent. off interest rates payable in Canada, with a view of ruining none. In addition, Canada might approach United States owners of Canadian bonds through the international joint commission, asking one-third reduction rates in that country. Overtures might be made to English owners of Canadian bonds.

Claim To Be Investigated

Natural Resources Compensation To Be Discussed February 19

Edmonton. Investigation by special commissioner of Alberta's claims to compensation for natural resources since the province was formed in 1905 is scheduled to get under way at Ottawa on February 19, according to information reaching here. Mr. Justice Twaddle of the Alberta supreme court will be Alberta's representative on the commission.

Saskatchewan will be join.d with Alberta in pressing for compensation.

Business Shows Improvement

Montreal. There has been a distinct improvement in business in general during the past few months and this has been immediately reflected in the output of electricity for industrial purposes, James A. Morris, president of the Montreal Light, Heat and Power Cons., told the annual meeting of shareholders.

Noted Mountain Guide Dead

Cranbrook, B.C. Conrad Kain, 56, one of Canada's most noted Alp ine guides, is dead. He was cred ited with the only ascent of Irene-rerson Mount Farnham in the Selkirk range and had accomplished many other notable ascents.

Disorders In Paris

Inability To Balance Budget Parlay In Internal Trouble

New York. The serious disorders in Paris accompanied unbridled attention in Wall Street because of the importance of France as international finance and her position as leader of the "gold bloc" nations.

The consensus in banking quarters was that if the republic is forced to abandon the international gold standard it will be because of continuous vacillation, chiefly aroused by the spring of budget relief. Its withdrawal on the part of other nations is being about such an eventuality by importing gold.

It was generally believed that if the country should declare any set on war against the export of gold it would have an adverse effect in the stock exchanges of the world, especially for the time being.

Bankers also were studying the situation in France for some time, believe the instability of the several French governments which have held power in the last few months to be largely responsible for the uncertainty than anything else contributing to the internal upheaval. Important also they pointed out is the inflated price structure of French industry and the unfavorable trade bal- ance.

Welcomed At Naval Base

Prince George Meets Long Tour Of South Lines

Simonstown South Africa With the battleship naval ceremonial Prince George, who is starting a long tour of South Africa, was welcomed to the Simonstown naval base, headquarters of the African station of the royal navy.

After a civic reception, the king's youngest son visited the training ship General Botha and then went aboard the cruiser Dorsetshire flagship of Vice-Admiral E. H. G. Evans - Evans of Brecon.

Canberra Australia — Tentative arrangements announced for the visit several months hence of Prince George to Australia and New Zealand, provide for his arrival at Freemantle on Oct 4 He will come direct to Melbourne to attend the Centenary celebrations of Victoria state. Later he will visit all the other states.

Elect Officers At Convention

Saskatchewan Man Heads Canadian Shorthorn Breeders' Association

Toronto The Canadian Shorthorn Breeders' Association in convention here, passed a resolution that no money paid in grants at various exhibitions must be paid over by the exhibition boards to persons not bona fide to all winning animals and not on the prize list alone, as has been the practice.

The following officers were elected, President, N. M. Ross, Indian Head, Sask.; first vice-president, Duncan Marshall, Dunnes, Ont.; second vice-president, William Waldo, Stratford, Ont.; secretary-treasurer, C. E. Day, Guelph Ont.

Amendment To Marking Act

Ottawa Designed to prevent deceptions in the marking of articles manufactured from precious metals, while of the same time at assisting such manufacture among the goldsmiths and silversmiths of Canada a bill was pending the Precious Metals Marking act, put into force by order-in-council on the recommendation of Hon. Ernest Lapointe, minister of justice, was explained by Hon. Henri Stevens, minister of trade and commerce, who stated the object of the measure was to protect the consumer from buying anything else under the impression that it was gold or silver.

Supreme Judge Retires

Ottawa Mr. Justice Robert Smith has bidden farewell to his brother judges of the supreme court of Canada. A native of Owensville, he has retirement follows the reaching of the superannuation age of 75 years.

Probe U.S. Army Contracts

Washington. United States army contracts, already laden with treats for at least three persons the administration accused of lobbying for them, will become the vehicle for another congressional inquiry.

MAYOR BYNG

House Of Lords Reform

Lord Salisbury Moves For Consideration Of Reform Bill

London. Lord Salisbury moved in the house of lords for a humble address be presented to the king praying" his majesty's consideration of a measure for reform of the house of lords.

Lord Salisbury in his step because he had been entrusted when he first presented the measure the premier 19 few months ago, the proposal of the King to Lord Salisbury should have sought permission of his majesty to introduce the measure.

The bill would have provided that in the upper house of about 750 members 150 would be hereditary peers 150 chosen from outside the hereditary peerage royal peers and ecclesiastical members of bishops and archbishops. Lord Salisbury said his scheme would give the lords sufficient powers to prevent hasty legislation being rushed into vast changes without time to review her them.

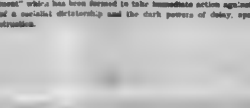
Riding The Rods

Youth Is Killed Under Wheels Of Train At Jasper

Jasper, Alta. RCMP were investigating the death of Bill Hose 19, a victim of coming under the wheels of a train in the Jasper yards after he had jumped from the tender of the engine.

With Alex. Hedden Jasper he was returning from Vancouver and was "riding the rods" between the tender and the first car. It is believed that he struck a stipper snow bank and skidded down to the rails. Hedden when the train stopped at the station returned to find the lifeless body

ANOTHER POLITICAL PARTY FORMED IN ENGLAND



Our picture shows the leader of the newly-formed United British Party, Cecil Reynold Rhode, an organization opposed to the Fascists, seated in his office in London. Note the large Union Jack and a portrait of King George Mr. Rhode, who will be the party's candidate in the coming by-election at Cambridge, says the United British Party is a "National Loyalist movement" which has been formed to take immediate action against the menace of a socialist dictatorship and the dark powers of delay, apathy and obstruction.

Recall Revolution

Meeting In Paris Brings Back Memories Of Fateful Days Of 1871

Paris As mobs continued rioting in Paris, despite steps towards formation of a cabinet of national union, jobbers recalled the fateful communal revolution of 1871 when Frenchman fought against Frenchman in Paris, virtually under the eyes of the new German conquerors.

The Franco-German war ended with the capitulation of Paris, Jan. 29, 1871 after a five-month siege and bombardment.

On March 8, two weeks after the Germans had formally occupied Paris for two days, the communa was proclaimed, in other words, Paris was declared independent of any government except that chosen of its own people regardless of any outside or central power.

The revolutionarian took over affairs and then began the second siege of Paris a siege by French troops while victorious German troops looked on. The communards massacred fourteen citizens, destroyed many fine buildings. The punishment was ruthless: 20,000 men and women were slain in the streets before the government regained control.

Railway Amalgamation

This May Happen Unless Conditions Improve, Says Hon. Cahan

Ottawa. — Amalgamation of the Canadian Pacific Railway and the Canadian National Railway will be unavoidable unless there is considerable improvement in operations during the present year Hon C. H. Cahan secretary of state said in addressing the annual meeting of the Ottawa Women's Conservative Association and the Conservative Women's Forum.

The minister said he did not speak for the government in making this suggestion, but that it was his considered opinion there would be no remedy for losses of the great railroads unless conditions improved.

Banking Committee

Fifty Members Who Will Compose Body Announced In House

Ottawa. Of particular significance in view of the important banking legislation which will be considered during the present session, the names of the 50 members who will compose the banking and commerce committee have been announced in the house of commons.

Members from Saskatchewan include W. A. Boyden (Con., Moose Jaw); C. H. Bothwell (Lib., Swift Current); T. F. Donnelly (Lib., Wilcox Bench); R. R. MacMillan (Cons., Saskatoon); H. E. Perley (Cons., Qu'Appelle) and John Vallance (Lib., South Battleford).

CATTLE EXPORT FROM CANADA TO BE GREATER

Calgary.—Jack Byers, manager of the Western Stock Growers' Association, has received notice from Hon. H. H. Stevens, minister of trade and commerce, that cattle shipments to the United Kingdom reporting in 1933 would be permitted in a period until June 30. An announcement from Ottawa in December had stated shipments for the first three months of 1934 would be restricted to those in the same period of 1933.

In January, February and March of last year a total of 7,865 cattle left Canadian ports for the United Kingdom. To date this year nearly 8,000 head have gone to overseas market and had the December ruling been followed, cattle shipments would have very expectations would have shortly ceased.

According to the statement from Ottawa 20,000 head of cattle will be permitted to enter the United Kingdom in the first six months this year. In the first six months of 1933, 22,650 head left Canada, 9,807 of these coming from western Canada, of which 4,796 were from Alberta.

Mr. Byers said the situation for the last half of this year is still obscure. Advice from the United Kingdom indicates the quota against Irish and Canadian cattle may be reduced after the first British farmers returning for home-produced beasts have not been increased, he said.

Simon Issues Warning

Of Disarmament Efforts Fail British Must Strengthen Army

London.—Clear notice that if present disarmament talks end in a state of unlimited rearmament follows, the United Kingdom will be compelled to "make the greatest effort her own army, was issued in the house of commons by Sir John Simon, foreign secretary.

Before embarking in debate on disarmament, stressed the need a British plan for disarmament was a realistic plan seeking a reasonable compromise. He declared it would be followed up by a visit of Anthony Eden, lord privy seal, to Paris, Rome and Berlin to make sure the British proposals were completely understood.

The British belief that Germany's claim to equality of armaments is recognized before any progress can be made with all-round limitation and reduction of armaments was stated by Sir John. There was little likelihood of any peace while a great nation was held in subjection he added.

Seriously Injured In Riot

Senator Member Of Paris Once Well-Known In Canada

Paris Senator Gaston Menier, wealthy chocolate manufacturer was beaten during the rioting in the Place de la Concorde Knocked down by his head his condition was reported serious.

Senator Menier, seriously injured during the height of the Paris riots, used to be well-known in Canada where he formerly owned land in the island of Anticosti, in the St. Lawrence river.

Highway Accidents

Philadelphia Take it from Captain W. J. Rush, of the state highway patrol, there is no reason for the modern automobile to be geared up to more than 50 m.p.h. an hour because the average man is not physically or mentally capable of driving at greater speeds. That, says the Irish commander, is the explanation for most accidents.

Proposed Aid For Belgrave

Singapore A proposal by the official members that the government of the Straits Settlements contribute $500,000 toward improving defence will be made when the legislative council meets on February 12.

Would Not Mean Inflation

Some Change Noted Existing Gold Coin Could Absorb

At the present time there is outstanding something like $275,000,000 of Dominion notes, against which gold is held by the government amounting to $120,000,000, or about 44 per cent. The delegates to the World Economic Conference will be asked to approve of 50 per cent. Should these notes should be sufficient. On that basis, therefore, the gold reserve held by Canada should permit of an issue of $275,000,000 of Dominion notes, or approximately $155,000,000 of notes in excess of the existing issue.

There are those who believe and the prime minister appears to be of them that the possible $150,000,000 of extra notes should be issued. It is argued by some that instead of issuing and selling bonds in the public to take care of current government indebtedness the government ought to pay these debts with this $150,000,000 of new currency. Others think it should be used to finance a program of public works. In either event the money would be good money. And it wouldn't be inflation.

It may be just as well that we get some of these things in our minds. No war was inflation. Only a fanatic would want uncontrolled inflation. But we ought not to hold the idea that any change whatever from his existing order means inflation, and we certainly ought not to be terrified by the mere word "inflation." The actual fact is that some of the most conservative of money men hope that in doing what he is doing President Roosevelt is laying the foundation on which Britain, the United States and Canada may maintain their connection, and stabilize them with a gold content and upon a gold standard that will work.—Ottawa Journal.

Canada's Resources

Large Variety Of Non-Metallic Minerals Found In Dominion

A variety of non-metallic minerals are found in Canada. The Dominion is the leading producer of asbestos, has the largest talc output on the British Empire, and is one of the three mica producing nations. The Dominion is an exporter of feldspar, gypsum, salt, arsenic, diatomite, graphite, corundum, and a producer of calcium sulphate, natural and artificial abrasives, magnesite, n. alca, moulding sands, soapstone, phosphate and many others. Minerals known to occur rather extensively include barite, celestite, sulphur (pyrites), volcanic dust, and garnet. Development of these minerals is largely in the initial stages. To the foregoing should be added structural materials which are generally classed as non-metallics and which include clay, sand and gravel, limestone, granite, and marble. Occurrences of these are abundant in Canada and in the main are of excellent quality.

Munitions Explosion

Shot Taking Of Flashlight Photo Gives Important Personages, A Scare

The Archbishop of Canterbury and the famed Codex Sinaiticus, $500,000 fourth century Biblical manuscript, figured in a harmless explosion at the British museum recently.

Sir Grace was standing with Sir Frederick Kenyon, director of the museum, and distinguished clergy and laymen beside the codex while a photographer prepared to take a picture.

Something went wrong with the flashlight apparatus. There was a terrific bang and the sound of shattering glass. The company feared fire is about but no one was hurt and the picture was taken with another apparatus.

An elderly lady was asked which she thought were happier, people who were married or people who were not.

"Well, I don't know," she said, "Sometimes I think those are so many in their ain't so ain't that is."

FAMOUS AEROPLANE COMES TO HUMBLE END

The Columbia, one of the most famous aeroplanes in existence and survivor of many dangerous flights in aviation history, has come to the end of a long trail only to be destroyed by fire at Wilmington, Del. This single-motored veteran of the skies was built in 1928 and took many trans-Atlantic honors in the early carrying on Clarence Chamberlin, the Columbia flew from New York to Helliston, Ireland, and the commercial, and the consolation of Chamberlin's piloting of a plane which once won it A.D. 63: "Letters however small and dim, are comparatively large and distinct when seen through a glass globe filled with water."

It is probable, too, that lenses of glass were also used, though the first mention of spectacles in which convex glasses were employed is made by Raimund de Gordon about 1267.

The first microscopes were very simple in construction, consisting of short tubes of any material that would not admit the light, with a lens at one end and a glass plate was the other. On the glass plate was placed the object to be examined. Dim-caries around such a simple microscope in which the rays of light were reflected on the object by means of a mirror.

The highest development of the simple microscope was reached in the employment of lenses of very short focus. Robert Hook, "Curator of the Royal Society when it was first formed in 1662, made those lenses by fusing a thread of glass until it formed a tiny ball, the ball was then snapped off, stuck into wax and the remains of the stalk ground away. The tiny balls were then fixed with wax into a pin hole made in a metal plate.

For better lenses than these, however, were made by Anthony van Leeuwenhoek, father of microscopy. This old Dutch investigator spent a long life in perfecting his lenses and making observations with it. His instruments reached such a degree of perfection that he was able to see with ease the minute organisms which live in the mouths of people, and even caught a glimpse of the still more minute bacteria.

The idea of combining two lenses in a microscope or a telescope, one concave and the other convex, has been attributed to several different inventors, but it is usually accepted that the discovery was accidentally made by a Dutch boy named Zacharias, who worked in the shop of his father, a spectacle maker. The great scientist Christian Cadbius became acquainted with the principles of Zacharias' instrument and immediately set to work to produce one for himself. Understanding the scientific theory of its action he rapidly surpassed everything that had previously been produced.

Then followed a great number of investigators who constantly modified and improved the instruments they used.

First Microscope Simple

Crude Magnifiers Were Used By Ancient Gem Cutters

Some sort of magnifier must have been in use from very early times, for it does not seem possible that the ancient gem cutters could have accomplished their work without some aid. Possibly a monocle of a glass globe filled with water, the use of which is A.D. 63: "Letters however small and dim, are comparatively large and distinct when seen through a glass globe filled with water."

It is probable, too, that lenses of glass were also used, though the first mention of spectacles in which convex glasses were employed is made by Raimund de Gordon about 1267.

The first microscopes were very simple in construction, consisting of short tubes of any material that would not admit the light, with a lens at one end and a glass plate was the other. On the glass plate was placed the object to be examined. Dim-caries around such a simple microscope in which the rays of light were reflected on the object by means of a mirror.

The highest development of the simple microscope was reached in the employment of lenses of very short focus. Understanding the scientific theory of its action he rapidly surpassed everything that had previously been produced.

Then followed a great number of investigators who constantly modified and improved the instruments they used.

Tuberculosis Control

Six-Week Summer Sanatorium In Under Its Main Satisfactory Progress

Material progress has been made in Canada in the control of bovine tuberculosis, and the commissioner, at his demand for action through the adoption of more aggressive and liberal policies has resulted in the Dominion Department of Agriculture obtaining the co-operation of public health bodies, dairymen and the stock owners. The demand for this work has increased to such an extent that in recent years this problem has been the controlling factor in regard to the personnel and expenditure of the field division of the Health of Animals Branch. The work has exceeded the resources of the branch and it has not always been necessary to limit the activities of the branch in this most important undertaking.

"I desire, upon the veterinary director general in his annual report just issued, "to particularly point out that this work is accomplished. Herds under the single herd plan should be tested at least once annually, while in town work, general reactors may be detected in areas with a negligible incidence of inspection for a period of three years but no longer.

"We cannot hope to make satisfactory progress unless careful attention is paid to re-test work. With nearly two million cattle under the jurisdiction of the department of agriculture, re-test work has reached large proportions, and consequently must limit materially the number of initial tests which can be undertaken with our present staff. In addition to the general re-tests in areas and the annual re-tests of herds under the accredited herd and supervised herd plans, initial tests of cattle for entry into these areas and herds must be undertaken. St. Thomas Times-Journal.

Fortune From Fossils

Daughter Of Crimean Veteran Leaves Large Estate

Emily Smith, ordinary old woman in England who lived in one of the poorest parts of Paddington on the upper reaches of the Thames, left an estate of more than $250,000, it was shown when the will of the late spinster was probated.

It all started from pension, too. She was the daughter of a veteran of the Crimea who was given charge of the famous Garden Maze at Hampton Court palace, with the privilege of charging for admission, in recognition of his exploits.

The estate gathered by this means was largely increased by the shrewd investments of Emily Smith.

Wrecking English Open

Sir Thomas Beecham, noted conductor and critic of the world of music, calls opera in England "a washout." "There is no future at all for opera here or for opera singers," he told the society of musicians, "and it is best to face the fact."

The Shah of Persia is reported to have the most expensive automobile in the world. It having cost $250,000, the workmanship and steering wheel being studded with diamonds, sapphires and rubies, and the cloth lined with gems.

Fatherless Children Helped Fund Is Over

Fatherless In Germany An Aided Fund Is Over

Bridgehead Island, which Germany forfeited to gain an entrance to the Rhine river, the shelter of the Kaiser's warships, against the British fleet, is crumbling away, slowly but surely.

Almost every year during the stormy season, thousands of cubic metres of rock fall into the sea which is constantly gnawing away at the soft sandstone strata of the island. The latest large slide occurred early in December, when, following a heavy gale, 4,000 cubic metres of rock dropped into the sea. Since 1925, approximately 30,000 cubic metres then have been eaten away.

Bridgeheaders are demanding that Germany do something about it, the suggestion being that the ramparts surrounding the ships before the ring fleet-up in Europe be strengthened further under the government's program for preserving work for the unemployed.

The bit of news recalls the transfer of Heligoland Island in 1890 to the Germans by Britain in exchange for the island of Zanzibar in East Africa. Immediately afterwards the Germans started to construct heavy ramparts to protect the island from the ravages of the sea and also build thereon forts of exceptional power, offensive and defensive. That cost the Prussian state treasury at the time a fortune several times over. But since the German fleet went to its rest in Scapa Flow and the Kaiser is chopping wood in Holland the island's usefulness as a giant fort has disappeared and it is being neglected.—St. Thomas Times-Journal.

The Strongest Timber

The yate, one of Australia's numerous hard woods, seems to be the strongest known timber, with an average tensile strength of 34,000 pounds to the square inch and a maximum as high as 38,000—about equal to cast and wrought iron.

District Visitor—"I thought the doctor put you on a light diet, Lizzie?"

Lizzie—"I've had one diet, Miss Ellen, and now I'm having no diet-one."

Using Steel Scaffolding

Fashions In England Find It Better Than Wood

Development of the use of steel scaffolding in Great Britain indicates a possible development in Canadian construction, according to W. D. Lamble, Winnipeg, deputy British trade commissioner.

The steel scaffolding in being used in England as a substitute for the familiar wooden scaffolding only met conducive strain of the island. The latest large slide occurred early in December, when, following a heavy gale, 4,000 cubic metres of rock dropped into the sea. Since 1925, approximately 30,000 cubic metres then have been eaten away.

Bridgeheaders are demanding that Germany do something about it, the suggestion being that the ramparts surrounding the ships before the ring fleet-up in Europe be strengthened further under the government's program for preserving work for the unemployed.

The bit of news recalls the transfer of Heligoland Island in 1890 to the Germans by Britain in exchange for the island of Zanzibar in East Africa. Immediately afterwards the Germans started to construct heavy ramparts to protect the island from the ravages of the sea and also build thereon forts of exceptional power, offensive and defensive. That cost the Prussian state treasury at the time a fortune several times over. But since the German fleet went to its rest in Scapa Flow and the Kaiser is chopping wood in Holland the island's usefulness as a giant fort has disappeared and it is being neglected.—St. Thomas Times-Journal.

The Biggest Objection

Lotteries Take Money That Poor People Cannot Afford

Leaving moral or ethical questions out of consideration altogether, the objection to a lottery for the purposes proposed is that it would place the main burden of unemployment relief upon the classes least able to carry the load. The great bulk of lottery money in all countries comes from the poorest classes, and responsible in most cases involuntarily service on the part of the family of the subscriber to the lottery—food taken from the mouths of undernourished children, or women and children deprived of warm clothing they might have had.—Winnipeg Tribune.

Prefer Advertised Goods

Public Forgets Brands It Sees Not Read About

Widespread preference by the nation's consumers for persistently advertised products was revealed in a survey of consumer requirements in four major markets—New York, Philadelphia, Pittsburgh and Milwaukee—conducted by Daryl Hoover Associates, research organization, under the auspices of Crowell Publishers, Inc., operating department stores in the four cities.

Of twenty-four products in the wearing apparel and household furnishing groups, branded and nationally advertised merchandise were found specifically in demand. Long known branded goods on which advertising has been curtailed, however, were found to yield their popularity to products being extensively exploited at the moment.

Welsh Steel Works Opened

After an interval of nearly two years Brymbo steel works in No. 13 Wales is resuming, and employment has been given to more than 1,000 men. Sir Henry Robertson, chairman of the company, said it is hoped to put all former employes back to work shortly.

FREE TRIAL OFFER OF KRUSCHEN

If you have never tried Kruschen—try it now at our expense. We have distributed a great many special "GIANT" packages which make it easy for you to prove your claims for yourself. Ask your druggist for the new "GIANT" 10c. package.

This consists of one regular 75c bottle together with a generous trial bottle—enough for about one week. Open the trial bottle first, put it to the test, and then, if not entirely satisfied, return the 75c bottle to your druggist and get your money back. If it isn't good as new. Take it back. Your druggist is authorized to refund your money immediately and without question. Kruschen is a blend of six mineral salts which assist Nature to throw off waste matter. Sold throughout the world. Manufactured by Kruschen Products, Ltd., Manchester, Eng. Ltd., Toronto. Can. Importers: Hamilton, Ont., Canada.

OCCASIONAL WIFE

By
ESNA BOSS WEBSTER

Author of "Joretta," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Heyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her future in a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla as the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and is studying commercial art in the hope of landing a spot. Enlisting in the story are Avis Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model and Gus Matson, his former roommate with whom he has quarrelled. Al a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. To make it necessary for Camilla to announce her marriage that she and Peter are married. Avis is stunned and Camilla a modern heroine Camilla decides that she must leave the home of her adopted parents immediately and go to live with Rose, her sister, who is a file clerk in a business house. They decide to take an apartment. Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work, need for her and tell her they have a new account which requires unusual treatment of juvenile art. To Camilla's surprise she learns that the account is that of her fiancé Peter's company, which has decided on an extensive campaign to increase up lagging business. After a conference with Mr. Bowman Camilla decides to attempt the work. With ideas running riot in her head she goes home and spends the night sketching. In the morning, armed with her samples she sets out for the agency.

(Now Go On With The Story)

CHAPTER XXX

It was a question which girl had received the sudden announcement of Peter's marriage with more disappointment and amazement, Avis or Sylvia. To Avis, however, it was merely another obstacle in the path toward her ambition. To Sylvia, it prompted a certain finality for the two possibilities she had visioned, and for which she had been playing a double hand. As she exclaimed to her astonished image when she read the announcement in the society column of the morning paper, "Well for crying at the moon! Who wouldn't thought they could fool everyone like that! Uhm, when, I guess I had kept me out with Bowers, all right, either way you look at it. I'll bet the high and mighty Avis Worth feels like a cracked up green apple, herself."

The rattling of the telephone bell interrupted her monologue. "Uhm! the press again, herself. I'll bet." "Yeah hello." she drawled, and nodded her head with confirmation toward her silent audience of one, in the mirror.

You've seen the latest news?" inquired Avis.

"I just read it, and as if to read my mind, the phone rings. I guessed it was you right away."

Clever of you. I'm sure. But you haven't been so clever with Mr Anson as you expected to be."

"Well, and isn't this good enough proof of the reason why? A new bride going out with you expect of me with such competition as that? I guess it surprised even you, didn't it." Avis sends chances for either of us, there."

Either of us?" surprised.

Well, you know what I mean. Now that you're going to run away with your fiancé, I'm going to run away with my hello to anyone."

"Oh, yeah?" thought Sylvia. "Well, they might say more than hello to you, but she said to more to Peter. "You can Camilla telephoned Mr. Bowman on the morning after her first conference with his executives and announced that she had completed the work on hand. he reviewed and thanked her, and disappeared. But Miss Heyt, surely you haven't had a week in which to complete your time, even though we are anxious to have your suggestions as soon as possible."

"But now that I understand," she agreed patiently, "and they are ready now."

Very well. We shall be glad to see them whenever you can come in." But his voice indicated that he expected to be keenly disappointed, and when Camilla arrived at his office worthwhile suggestions and the evidence within less than twenty-four hours.

Camilla, however arranged the precious ink and color drawings in the order she wished to display them, and with confidence entered the office.

Mr. Bowman had called a second conference with his optimism, and Camilla found herself once more seated at his right, with six men surrounding the polished walnut table. Her fingers trembled a little with fatigue or apprehension as she opened the portfolio and laid the drawing before them.

"Perhaps I had better explain the idea briefly before you look at these," she suggested modestly.

"Very well, Miss Heyt."

(To Be Continued)

Ontario's Mineral Production

The aggregate value of metals from the time production began in Ontario and of other mineral productions since the year 1891 reaches the huge total of $1,964,183,077. The metallic output accounted for $1,534,782,473 and the metal mines in the province have distribution in dividends, up to the end of 1932, the sum of $379,972,203, more than a quarter of the value of the output.

The Oxford dictionary has admitted gat, gangster, and ga-ga, and the Society of Pure English sanctions blah, applesauce, cinch, hooch, and wop. It is fast becoming the English language.

MADE IN CANADA UNDER

Little Helps For This Week

"Because Thy loving-kindness is better than life my lips shall praise them." Psalm 39 3.

"Whosoever shall seek to save his life shall lose it, and whosoever shall lose his life shall preserve it."—Luke 17:33.

O Lord, my best desires fulfill
And help me to live
Life, health, and comfort to Thy will
And make Thy pleasure mine
—Wm. Cowper

What do our money hearts prove but that other things are sweeter to us than the will, that we have not attained to the full mastery of our true freedom the full perception of its power, that our sonship is not yet realized, and its blessedness not yet proved and known. Our consent would turn all our trials into deliverance: and therefore should no longer be used for human food

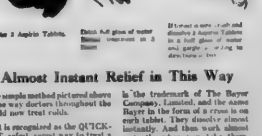
Must Change Diet

Humans No Longer Permitted To Eat Monkeys

South China eyewitness will no longer be permitted to eat monkey meat nor monkey brains, according to a prohistory order issued by the public safety bureau, which describes them as "the flesh of animals possessing many of the traits of man, and also a considerable amount of intelligence," and therefore should no longer be used for human food

How to Stop a Cold

Quick as You Caught It



Take 2 Aspirin Tablets. Drink full glass of water. Repeat treatment in 2 hours. If it must a cold, drink and dissolve 2 Aspirin Tablets in a half glass of water and gargle—swallowing to drive germs down.

Almost Instant Relief in This Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check an ordinary cold almost as fast as you caught it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer in the form of a cross is on each tablet. They dissolve almost instantly. And then work almost instantly when you take them. And for a gargle, Aspirin Tablets dissolve so completely, they leave no irritating particles. Get a box of 12 tablets or bottle of 24 or 100 at any druggists.

LOCAL NEWS

Dr. and Mrs. MacGregor Paterson and Mr. and Mrs. Jack Russell of Red Deer are spending a short visit with Mr. and Mrs. Johnston Carscadden.

Mr. and Mrs. Jack Bassett of St. Albert, were Saturday afternoon visitors at the home of Mr. and Mrs. Chas. Hooper.

Miss Rose White of Edmonton is spending a week with her sister Mrs. Gordon Neale.

We regret to have to publish in our columns the news received of the very untimely death of Hughie MacMasters of Edmonton. Hughie passed away in a Winnipeg hospital last week after a critical operation for acute appendicitis. He was just 20 years of age. He was taller in the Winnipeg Branch of the Canadian Bank of Commerce, having been sent there from Hanna.

Hughie was stationed in the Port a few years ago, and played on the local town team. He showed outstanding ability as a hockey player. He was very popular in the sportive as well as social activities of the town.

Miss Ada Hooper is visiting with Mr. and Mrs. J. D. McLean. Her leg injury is progressing very satisfactory.

Dr. and Mrs. Roy Walton and family spent Sunday at the home of Mr. and Mrs. F. H. Walton.

Taken from the Files

19 Years Ago Today

February 18th, 1914

Fort Castles under skipper, J. Bawden was the Visitors trophy at the Edmonton bonspiel last week.

Jos. Mesdag had the misfortune to lose part of his right hand in a saw mill at Lamoureux.

The visor we unsparing of one of his flock when he had not been to Church for several Sundays.

"Well, you see," said the man sincerely, "I've been troubled with a tension on my feet."

"Strange," commented the pastor, "that a tension should impede the pilgrim's progress."

Co-operative Commonwealth Federation Principles

Ruminations of a Commonplace Common-sense Farmer on the meaning and practical putting into operation of the C. C. F. Philosophy.

(Continued from last week.)

The one fact outstanding above all others in the C.C.F Movement, is that all aims are towards improving the condition of the great mass of the people, not the taking away or the dividing up of anything, except the privilege of the strong, whether singly or in corporations, to exploit the weak. The aim is not only to improve production methods by improving all kinds of ingenious machinery into our service, but also to reconstruct our distribution system with the view of overcoming the present inefficiency.

Last week we pointed out what would logically be the first steps in bringing into power the C.C.F. and commencing the working out of the program. First, the attainment of power by the C.C.F. through means of the ballot along perfectly Constitutional lines, by the exercise of the rights Canadians have at the pre sent time under the law. Second, the immediate appointment of a Planning Commission, so that subsequent steps may be intelligently and effectively undertaken.

Subsequent steps will naturally depend on the result of the investigations by the Commission and its reports. What these would be and in what order can, of course, not be stated at present, because conditions and circumstances may be tremendously changed by that time.

One point on which a great deal of guessing, questioning and opposition propaganda is hung, is the so-called nationalization of land. Nationalization of farms is not in the C.C.F. Program, so any reader of this program may find out for himself if he gives to the trouble of getting one to read. It is rather something which opponents have attempted to make people believe is one of the main planks of the C. C. F. platform, in order to frighten people on the farms. By pointing to what they say has happened in Russia and intimating that a republican would occur in Canada, they are successful in putting the fear of losing their homes into the minds of many people.

No. 6, in the C.C.F. Program reads:

Security of tenure for the farmer upon his farm on conditions to be borne down by the individual Provinces; insurance against unavoidable crop failure; removal of the tariff burden from the operation of agriculture; encouragement of consumers' and Producers' Co-operatives; the reorganization and maintenance of an equitable relationship between prices of agricultural products and those of other commodities and services; and improving the efficiency of export trade in farm products.

Opponents of the C.C.F. endeavour to frighten the rural population by telling them that as soon as the C. C.F. is in power the farms will all be taken from the present owners and conveyed to somebody else, presumably favorites of the Government. Instead is always pointed to as a horrible example of what will happen to the farmers of Canada. So many people seem unable to grasp the fact that we in Canada, are entirely differently situated to so many regards that we do not need to follow in the footsteps of any European people, but being blessed, profiting from experience, intend to thus not blaze our own trail. A trail found by our own pathfinders, tried, fool-hardiness, scientifically trained men on our Planning Commission.

Now, one of the motives of the C. C. F. Philosophy, is to overcome this inefficiency in providing for human needs and to enable people to live a better life and enjoy greater happiness. This objective must also be reached with a minimum of suffering to any one. In fact, the ideal would be to reach this goal without causing real suffering to one single individual.

Aladdin and Out Empress Theatre Thurs. & Fri., Feb. 22 & 23rd

Good Attendance At Fort Curling Club Jamboree

The Fort Curling Club's second annual Jamboree held last Friday evening at the skating rink was a decided success. Despite mild weather and poor ice, a large gathering from town and district attended.

With Harry Thomas as Master of Ceremonies, a grand march of all those in costume led by the Queen finished at the foot of the throne where Miss Fern Butler the winning candidate for Jamboree Queen was crowned by Mrs. H. Savage of Clyde — Judging of the various fancy and comic costumes by Mrs. H. Savage, L. Bassett of Edmonton and R. Porter of the Fort followed

The winners were: E. Truby as Cigarette Girl; A. Truby as 1904 Bathing Girl; Sheriff Cleaver as a White Nigger; M. MacPherson as a Colored Lady; Ezld Pollard a Fairy; Buster Ashie a Bat; Dorothy Lane a Chinese; R. Smith a R.C.M.P.; B. Hatch a Preacher; Chas. Roberts a Pirate; Billie Smith, Wyne; G Roberts a Pirate; Riley Thorne, Jr. a Minky Mose; Dick Grunert as Alarm Clock.

Some very fine costumes were disregard and showed the results of a lot of time and work.

Speed skating followed the judging of the costumes, but again poor ice hindered by the shooters and made racing practically impossible.

Broom-ball game between two pick-up teams was an added feature which caused much excitement.

But ice prevented the masked curling events being held.

The bad-day rised in the curling rink did a land office business and sold everything but the rink.

Comic Opera to be Presented To-Night and Friday Night

FORT SASK. CHORAL CLUB
presents
Aladdin and Out
(Continued from last week)

ACT III

The marriage has taken place. Wishy-washi pays a visit to Aladdin's palace. They propose to go hunting, and all the men leave. Scheherazade, disguised as a beggar, enters singing a "New lamps for Old." Phalnoon discharges Aladdin's lamp for a new one. As soon as the suspicion that the lamp is rubs it and, at the appearance of the Genie, orders him to the palace to be removed to his home in the Night of Afrien. The curtain falls amid general confusion.

In Scene II the palace has disappeared. Wishy-washi and his courtiers return from the chase and are amazed. Aladdin is held responsible for the disappearance of the palace, and, unless able to replace it by the morning is to be killed. The lamp again saves him, and he is taken by the Genie to the place where the palace stands. Here he finds Phalnoon and the magic lamp in peril. It is proposed that Phalnoon should chloroform Badroulbadour. This is done, and Aladdin regains the lamp. Upon the appearance of the Genie, he orders the palace to be removed to its former site and the magicians to be changed into a Rooster. Wishy-washi conveyed Aladdin on the safe return of his palace. Their one difficulty now is how to dispose of Phalnoon and his son. Aladdin does not wish to be hard upon them, so Mrs. Mutnabin offers to marry the prime Minister and keep him in order. The opera closes with general rejoicings.

Truck Plunges Over Fort Bridge Approach

When the truck they were riding in plunged over the Saskatchewan river bridge approach on the north side of the river, Mr. Best on to the ship before, three Edmonton people from Kinsmen, owner of the truck and two passengers, a man and a woman, had a miraculous escape from death or serious injury at 6 p.m. Friday

They were severely bruised, how-

The truck was proceeding toward Edmonton on the main highway. It crossed the bridge and was proceeding down the sloping north side, when it skidded on the ice-coated surface. Striking the right side of the approach railing the truck crashed and reversed across to the left side where it crashed through the wooden railing, toppled over and landed on top of the cab then settled upright on its four wheels. Several cases of eggs carried by the truck were broken, the smashed and rendered crushed into omelets.

The passengers spent the night in town and early Saturday morning, Frank Johnson handled the truck on to the highway, where the McKenzie truck handled the damaged truck to Edmonton.

RED CROSS NOTES

The annual meeting of the Fort Saskatchewan branch of the Red Cross Society was held at the home of Mrs. Ramsay, Monday afternoon, February 19th.

The Secretary-Treasurer reported that the following contributions had been received during the year 1933.

Campaign Collections	$230.20
Alta. Athletic Association	10.00
U.F.A. (per Mrs. Bacon)	4.80

$61.54 had been spent on gruerries, shoes, boots, overcoats, underwear and other garments mostly for children in need, including $9.00 for special relief case.

$20.00 towards Christmas Parcels and $15.00 towards upkeep of cot in crippled children's hospital, Calgary.

A vote of thanks was given to those members who collected for annual membership and donations, also to those who helped with the packing of the Christmas Chest which is annually sent to Calgary clothing and toys distributed during the year.

Mrs. Ramsay, the President, Mrs. Wilmarth was much regretted and hopes for a speedy recovery were expressed in the report.

The retiring officers consented to carry on another year with the exception of the Secretary-treasurer, the filling of this office being left over until the next meeting.

Co-operative Commonwealth Federation Principles

Ruminations of a Commonplace Common-sense Farmer on the meaning and practical putting into operation of the C. C. F. Philosophy.

(Continued from last week.)

Regarding our farms, at present no one having any regard for his reputation, would say which manner of ownership our farms would come nearest the objective mentioned above. Now, when in doubt about whether a contemplated change would have the desired effect, the best thing to do is refrain from making the change until by experimentation it can be determined what method of procedure to follow. So, in our farm questions, since no one can say whether we should have private ownership of individual farms, or community farms, or state farms, or co-operative farms, but when run by individual farmer on his own farm he is the master of his own fate and in his own way, but being planning for the future goals, Honorable, experiments will be conducted with the view of discovering which method is most desirable to attain the end striven for, and when definitely proven, if a change in Government, and said that farms will themselves demand the change. It is altogether likely, though, that the individual farmer, though allowed to conduct his farming in his own way, will be held responsible for results achieved, always taking into consideration conditions over which he has no control, such as climatic conditions. To make up the his being held responsible the farmer will be guaranteed a sufficient price for his products.

(To be continued next week)

Town Council Hold Special Meeting

The first meeting of the new Council of the Town of Fort Saskatchewan as required by the Town Act was held on Monday the 19th. Instant at 4 p.m. Present Mayor Montgomery, Councillors, Magyar, Watt, Pelzer and Foster. The Secretary submitted a return showing results of the Municipal Election held on the 15th Instant, and reported that all new members of the Council had made and subscribed the Declaration of Office as called for by the Town Act.

The new members are Councillors, Pelzer, Foster and Watt. His Worship the Mayor extended a welcome to the new Councillors present.

The minutes of the last meeting were read and adopted. After consideration by the Council it was decided to hold the next meeting on the 26th, at 8 p.m., and the meeting adjourned.

...Let's Advertise Our Way Back to Prosperity.

School Board Welcomes New Members at Meeting

Minutes of the First Meeting of the new School Board held in the Secretary's office on Friday, Feb. 16, at 7:30 p.m.

Present — Mr. F. Atkinson, Dr. Turner and Mr. R. M. Ray.

It was moved by Dr Turner and adopted that Mr. F. Atkinson be elected Chairman for the coming year, and it was moved by Mr Ray and adopted that Mr. J. Ritchie continue as Secretary-Treasurer at same salary of $75.00 per year.

The Chairman, Mr Atkinson, extended a welcome to Mr Ray the new Trustee.

The minutes of the last meeting were read and adopted.

The Secretary reported that the newly elected member and the re-elected member, Dr Grunert, had signed the Declaration of Office as required by the School Ordinance.

Moved by Mr. Ray, and adopted, that the Board sanction holding the regular meeting on the first Monday of each month at 7:30 p.m. or the Council chamber.

The Principal, Mr. Anderson was present and discussed school matters with the Board. He also reported that the School piano required to be tuned, and this was authorized by the Board on the motion of Dr Turner, and the Secretary instructed to pay for same as soon as finished.

The following accounts were passed for payment on the motion of Dr Turner—Calgary Power Co., $6.30; F. W. Smith $8.00; J. Lalonde $8c.

Alberta Legislature News Week in Week

(By our own Correspondent)

Mr. Hewson who sub-served the debate last Friday, in a forceful speech he attacked the Government for the waste of extravagance and incompetence. He also stated that the Imperial Oil Co. grant even the Government because nothing had been done by them to rectify the increase in the price of gas used before used time and harvest time. He also claimed that the Government had failed in its duty to the farmers by not taking the part of the latter in the Mc-Millan Bill and had stood idly by while the farmers of the North Peace country were forced to have grades for their wheat than they were entitled to.

The Hon. Perren Baker followed him in a well reasoned speech dealing mainly with education. He showed the progress made in education in the Province. There are now more schools in operation than were in operation in 1921. He also showed that the Normal School at Edmonton was built in order to train sufficient teachers to take care of the needs of the schools throughout the Province when the loss to the teaching profession was 700 teachers per annum, during what is now considered the boom period. He also showed that Social Science was now taught in our schools from text books on Civics. He thought that as times and conditions change text books had to be re-written and that during the time text books are re-write some of the books used in schools now.

Mr. Duggan in a moderate speech also accused the Government of wastefulness and incompetence. He made comparisons between the Public Debt of Alberta and other Provinces stating that the per capita debt of Alberta, $197.00 was higher than that of any other Province. When the interjection was made that the telephone system was an asset he asked "Is that so?" He made a strong plea to the house to drop party politics and to form a Union Government. Before sitting down he moved a sub-amendment to Mr. Stewart's amendment to the Speech from the Throne. Mr. Duggan's amendment is a straight non-confidence vote.

Mr. White following spoke in his usual caustic manner. While he disagreed with the Government on some points he made his remarks plain on their policies.

Mr. Mayer, the leader of the Independents spoke in his usual clear, concise, brief manner. He recently joined the Government and said that he and his Government would support Mr. Duggan's non-confidence motion.

Other speakers in the debate were Andrews, U.F.A., Bowlen, Liberal, J. Irwin, Cons. of Calgary, who in a long speech pointed out how the chain stores were conducting their business along lines detrimental to the independent retail merchants.

W. H. Hess, the new members for Calgary made his maiden speech. He is a clear speaker with a pleasing voice.

Letter on one of Fertilizers

Early Ripening means Earlier Harvesting and Better Grades

Mr Nish Nakewatch, Chipman, Alberta used Elephant Brand Fertilizer, (see Fort Hardware Ad.) and he writes the following article in support of the use of it.

The fertilized wheat matured about 10 days earlier. Most of our wheat would have been frosted had it not been for fertilizer which would mean a difference of probably 4 grades or the difference between grades 1 & 4.

The extra-6 fallow grew on an increase of 10 & 15 bus. per acre over the unfertilized part. The spring plow-land gave me an increase of 12 bushels an acre over the unfertilized section."

Book Agent: "You ought to buy an encyclopedia, now that your boy is going to school."

Farmer: "Not on your life. Let him walk, the same as I did."

Prevention Of War

As this article is written flaring headlines in the daily newspapers tell of rioting in the streets of Paris and in many of the provincial cities and towns of France; of barricaded streets and buildings in Vienna and other Austrian centres of population where Government forces rushed and sent to put down an uprising on the part of Socialists in that country; of warlike preparations on the part of Russia in Siberia in anticipation of a struggle with Japan. In a word, reports from both Europe and Asia seem to indicate that just below the surface of things there is a seething volcano that may at any moment burst forth to spread death and destruction among the nations on a scale that will surpass the Great War of 1914-1918.

And while the front pages of the daily papers feature these alarming reports, inside pages in many of the larger papers are devoted to the presentations of hundreds of pictures of ruined towns in the devastated area, and with particular reference to the part taken in that grim struggle by the manhood of this Dominion. Many of these pictures are terrible, shocking, gruesome. They depict little or nothing of what used to be regarded as the pleasant and glory of war; instead, they reveal a life passed in the midst and hourly expectation of death, or mutilation worse than death, and in surroundings such as the meanest beast would not tolerate. These pictures illustrate modern war for the awful thing it is, and no doubt the object in presenting these pictures to the public at this time is to develop a horror of war and to strengthen the determination of the people of Canada to resist any future outbreak of hostilities with all the influence it is possible for them to exert.

Admitting the very worthy motive actuating the publication of these pictures, the question nonetheless does intrude itself as to whether such publications will serve the desired purpose. Many of them are so horrible, despite their gory and repulsive nature, may not have exactly the opposite of the desired effect with many persons. It is to be remembered that we are living in very difficult times; that thousands are in receipt of employment, living in idleness upon relief payments from the State; that, in particular, the youth of the country to a very great extent are unable to find avenues in which to employ their stored up energies and give full play to their initiative and ambitions. To many of these conditions of life, approaching almost to a conviction, that anything would be better than the deadening routine of a life of having nothing to do.

Faced at such a time with a pictorial review of all the activity, the excitement, the new experiences and thrills, and the adventure inseparable from war, is there not grave danger that, instead of shocking our youth with the horrors and sufferings of war, we may not actually develop in the minds of many the thought that they would not be averse to undergoing the hardships, sufferings and possible death inseparable from war in order to substitute for their present routine of idleness the experiences, excitements and adventures of war.

In all of us there is a longing for adventure. We all desire to visit foreign lands, to see and experience something new and different. Down through the centuries, and probably never more so than in this present age, men,—even women,—enjoy speed, action, thrills. Danger means nothing in these days to people desirous of establishing some new record; people are ready to risk their lives in almost every conceivable kind of an enterprise.

Is it wise, therefore, no matter how worthy the object may be in view, to present to the youth of Canada at a time when, temporarily at least, thousands of young men in their late teens and early twenties are at home ones, with nothing to do, daily innumerable pictures showing some of the greatest war of all times showing what their fathers and elder brothers experienced of action and adventure as well as of suffering and death.

There is no glory in war; there is no gain in war. Victor suffers almost as greatly as the vanquished. The last Great War has surely impressed that fact upon the nations. And the aftermath of war, the enormous financial and economic destruction and loss which inevitably follows all wars, brings sorrows, sufferings and ever accumulating losses almost as great as the toll of war itself. Indeed, war instead of solving problems only creates new and even greater ones, leading inevitably to another war. That is the basic reason of the unprecedented length of the present world peace, the apparent inevitability of another world war prevents any reason of confidence: rather every person and every nation is planning and preparing for themselves in the light of what may happen and the happening of which is beyond their own control.

The Canadian people do not want war. If the other nations of the world spend no more money or thought on armaments and preparation for war than Canada does, there would be little danger of another war afflicting this old world. The Canadian people are opposed to war, and are desirous of doing everything they can to prevent it. The question is: Are we going about our educational work of prevention in the right way? Neither, in our not a considerable degree of danger that, quite unintentionally, we are creating an impression in certain quarters that, after all, another war might not be wholly undesirable.

About a quarter-million sea-going passengers centre and depart from London in a year.

Buildings erected in Shanghai, China, last year are estimated to have cost over $60,000,000.

Criticize yourself to-day and others tomorrow.

Oh, well, some funders were on pleasure boat, says the Brandon Sun.

A Wife, Worn Out Woman Can't Make a Happy Home

There is no happiness in this home when the mother is sick and worried by the never ending household duties. She gets run down and insomnia nervous and backache, has dizziness spells of trouble, faint and dizzy can't sleep, and gets up in the morning feeling no rested as she went to bed, and is discouraged and disheartened.

Milburn's H. & N. Pills will soon overcome worry. It is not necessary to suffer, as they build up the nervous system and bring back the former health and vigor.

Will Attempt Daring Aeronautical Feat

British Pressfriend Declares Yankees To Make Drop From Stratosphere

I want to be the first man to drop from the stratosphere and I'm ready to gamble my life on a jump from a height of 12 miles."

John Tramon, the British parachutist who has survived more than 2,000 jumps, announced in these words the most daring aeronautical feat as yet planned by man. He is appealing to M. E. Ridge, youthful American who intends to ascend 12 miles by balloon, for passage in the open basket in order to make the jump.

Reports say he will have only a 50-50 chance of emerging alive from the drop, even if Ridge should pierce the stratosphere with his dancing passenger.

Tramon is tired of "experts" and considers that a healthy man can safely pass through the terrific first deal of a 30-mile drop if properly clothed and equipped with a special parachute of his invention. If Ridge accepts the offer, the feat will be attempted in England during 1934. Both distinguished scientists as Prof. J. H. B. Masterman, reputation authority, and Sir Robert Davis, are heartily supporting Ridge in his efforts to arrange for the 12-mile balloon ascent in an open basket. That is twice the height achieved so far in a sealed gondola.

"I've already been up to heights of more than four miles and my record delayed drop was from a height of three and a half miles," said Tramon.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile

—No Calomel necessary

Get your bile flowing freely and happy, gone days will be yours. Don't spend another penny for salts, calomel, nasty pills. Without bile, undigested food sours in bowels, gas bloats stomach, constipation and headaches follow. Your whole system is upset. Don't stay sick, sour, constipated. Don't dose with salts, calomel, purgative pills. Ask your druggist for Dr. Edwards' Olive Tablets. You will notice the difference in just a few days. Dr. Edwards' Olive Tablets are purely vegetable and mild in action. Know them by their olive color. 15c, 30c, 60c.

Wood St. Paul's Protected

No Renovation In London Cathedral Area Should Be Allowed

Excavation and operations in the subsoil within a defined area around St. Paul's Cathedral (London), will be controlled by Act of Parliament. The suggestion follows publication of the full report which is based upon investigations of Sir Alexander Gibb and Ralph Freeman, British engineers. The suggestion is that a "sacred zone" should be established around St. Paul's in which area "some control is essential, up to the point of prohibition in an extreme construction of all underground works." The report expresses the desirability of avoiding traffic vibrations in the vicinity of the cathedral, and urges that steps be devised to this end. Dangers to the immense and ancient fabric of St. Paul's Cathedral have been present for many years.

Indigestion, Gas

Mrs. Elizabeth Bryant of 122 S. Cascade St., Colorado Springs, Colo., writes: "I was in a terrible condition with indigestion and gas. At times I would have to get up in the night and walk around. I was so nervous I could not sleep. I had tried many things but got no relief. Then I started taking Adlerika and it relieved me at once. Now I sleep fine and feel like a new woman." Adlerika acts on BOTH upper and lower bowel. Relieves GAS, sour stomach and constipation in TWO hours. Thos. Bros. Drug Store, Dunbar, D. T.

The Hook Vine

"I don't want to eat this egg. It's not a nice egg," protested the six-year-old daughter of the house at the breakfast table.

"Mary," said her mother sternly, "you are always complaining of your food. But what is placed before you —every bite of it—without another word, or else I'll have to give you a good spanking."

All was quiet for some minutes. Then from the other end of the table sounded a mournful voice:

"Mother, dear, do I have to eat the flesh too?"

For economy and satisfaction, choose the tobacco that burns longer in your pipe and that you can cut coarse or flakey to suit your own particular taste.

Better Than Adrenalin

Invention Describes Electric Needle To Revive Person Apparently Dead

Electricity as a means of resuscitating apparently dead persons was described to physicians at Philadelphia by Dr. Albert S. Hyman, of New York, inventor, who asserted several experiments have been successful

Dr Hyman uses a slender golden needle charged with the amount of electricity produced by the normal beating heart. This is plunged directly into the heart, he said, in the same manner that the adrenalin has been injected for years.

Adrenalin, Dr. Hyman said, has been used with indifferent success, but the electrical invention has raised the probability of success to between 40 and 45 per cent. The instrument has proved successful in cases where death was caused by shock, in accident, child birth or operations while under ether, according to the inventor. In cases, however, where death was caused by constitutional deterioration the needle is ineffective.

Another Surgical Triumph

Man Recovers Sight After Astounding Operation On Eyes

Henry Watson, 29 years old and blind since he was two, looks unsteadily on a world he had seen but forgotten Behind his recovery was a triumph of modern surgery.

Watson lost his sight when disease attacked the cornens of his eye, the transparent shell that protects the exposed surface His case remained apparently hopeless until Dr. Tudor Thomas, noted Cardiff specialist, became interested in it. Dr. Thomas has eyes like Thomas peeled the diseased cornens, replacing them with healthy cornens from the eyes of two persons whose sight had ceased from other causes.

Widespread interest in the case brought many famous surgeons to see Watson while he lay in hospital.

A new television station is nearing completion in Turin, Italy.

VICKS

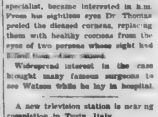
Ancient Stoles Found

Fashions First Known In England During Thirteenth Century

Skating in England was not heard of before the thirteenth century, and the stoles used were made of the leg bones of animals. Things of leather fastened them to the feet. The skater would then push himself over the ice by means of an iron shod pole. Some of these bone stoles have been discovered of recent years in Moorfields and in Finsbury. This probably means these places were at one time marshy fields, where the people of London foregathered in winter for skating.

Two-Hundred-Mile Shadow

The longest shadow in the world is that of El Tilton Peak on Tenerife, the largest of the Canary Islands. This peak rises abruptly 12,200 feet above the Atlantic and at sunrise and sunset it casts shadow more than 200 miles.



POULTICE with "MECCA"

Persistent Attempts Made By Man Are Slowly Unfolding the White Mystery of the Antarctic

The process attempts upon the white mystery of the Antarctic seem to be beginning in a lesser atmosphere of drama than that which met the first Byrd expedition. For the first are conditions have proved unusual. The Ellsworth expedition, when it finally reached the Bay of Whales, saw evidences of movement never before reported, in the solid shelf ice which surrounds and forms the bay. Chunks were seen to break off from this vast glacier, estimated to be several hundred feet thick, while the Ellsworth plane was wrecked in the moving bay before the encampment. That ended for this year Ellsworth's bold project for a transcontinental flight from the Ross to the Weddell Sea.

Now the Byrd expedition, successfully reaching Little America after it had been feared that the pack ice would bar the road entirely, has only narrowly missed destruction under a fall of the shelf or barrier ice such as Ellsworth reported. A near-disaster to Byrd's big plane on its first flight can scarcely have lessened the excitement. There are wonders of the real perils of Antarctic adventure, which, in this area at any rate, must be based upon the edge of a floating glacier, with solid land hundreds of miles away. The compensation is that if conditions are really changing in the Bay of Whales the explorers have more opportunity for unlocking the many still hidden secrets of that last unknown continent.

Something Admiral Byrd has already been able to contribute. By his flights from shipboard he was able to push back the white ocean on the coasts which conceals the actual land line through the thousands of miles of coast. Thus the Ross sea area and the region of William's discoveries below the tip of South America. No one has ever seen land in that section, or even knows whether there is a continent there or only, perhaps, scattered islands. Another task to be undertaken Lemaire Land, once thought to be a projection of the continent, to an archipelago; but what lies between the Lemaire land near the 80th meridian, and Marie Byrd Land, which seems to form the eastern shore of the Ross Sea between the 150th and 120th meridians, no one can tell. Wilkins took one bite, by aeroplane, out of this unknown quadrant, finding no land; Byrd has now taken another, with the same result. But his present purpose is to clear up the mystery as far as he can. Slowly, despite all the perils which it holds, the Antarctic Continent has been taking form upon our charts, and sooner or later its whole shape must be known.—New York Herald Tribune

Island Of Small Farmers

Coffee Is Chief Crop Of Haiti's Negro Republic

The negro republic of Haiti is a land of small farmers, only two per cent., it is estimated, of the agricultural production being the outcome of the plantation method. Coffee is the chief crop. It would scarcely be correct to say that the crop is cultivated, as it actually grows wild and is harvested rather than cultivated. In the absence of direct steamship communication between Canada and Haiti, many Canadian commodities reaching the merchant here their identity through the port of New York being shown on the returns as of U.S. origin.

Sportsman (at reception) — I should like to try my hand at big game

Mrs Greedy Yes, I suppose you don't it hard to hit those little birds.

There are approximately 170 farm growing or dealing with tree nursery stock, including fruit trees, in Canada

One Of Strange Hobbies

Some People Spend Much Time Making Small Books

Among the strangest of strange hobbies is the desire to make small books, but it is one on which people at various times have spent a great deal of thought and effort.

The world's smallest book was made in Holland in the year 1674, by someone named Carl Van Lange There are 40 pages in it, and each of them, including the margins all round the printed text, is only about seven-tenths of an inch long and three-tenths of an inch wide. Its title is "The Court of Pleasure," and the volume is beautifully bound in calf leather ornamented with gold-leaf, and provided with a gold clasp

512

WEARABLE AND SMART — ESPECIALLY FLATTERING TO THE WOMAN OF HEAVIER FIGURE

Charming day wear with most helpful slimming lines for matrons and figures of heavier build.

It's the most comfortable thing in the world to wear carried out as pictured in navy blue tussy ribbed crepe. Its only adornment is the green novelty buckle

Two tone crepe silks would also look well for this model. For instance, navy blue with the one-sided cover and bow of powder-blue in chiffon.

The fascinating printed crepes are also smart and suitable.

It's so easily made.

Style No. 512 is designed for sizes 36, 38, 40, 42, 44, 46 and 48 inches bust.

Size 38 requires 4¼ yards of 39-inch material.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Farm Rate Increase

Mechanical Power On The Farm Largely Responsible For Larger Mortgages

The increase in the use of Canadian farms, particularly in the spring wheat area, is attributable mainly to improvements in farm machinery and to the introduction of mechanical power According to figures of the Economics branch Dominion department of agriculture during the 30-year period from 1871 to 1901, there was practically no change in the average size of farms, the average being reported as slightly in excess of 97 acres for each census year From 1901 to 1931, the average expanded rapidly from 136.1 acres to 224.5 acres. Using Saskatchewan to illustrate the change in the spring wheat area, it will be found that the acreage per farm increased rapidly since 1911 with but a slight change from 326.1 acres to 336.2 acres per farm for the decade preceding that date. In 1931 the average size of farm in Saskatchewan was 466 acres. Acres of improved land increased from 63.5 to 143.9 acres, or nearly 300 per cent. There was approximately the same increase in the number of acres sown to wheat.

Producing Turkey Meat

Sixty-Four Pounds of Grain To Produce A 16-Pound Turkey

Experiments show that when turkeys are fed without free range, it takes five and a half pounds of mixed grain to produce one pound of flesh, but on at least 50 per cent. of the turkeys in Canada are fed with free range on these figures quoted by Mr. F. C. Elford, Dominion Poultry Husbandman. Figures obtained in the three prairie provinces, where 75 per cent. of Canada's turkeys are grown, show that 90 to 60 pounds of grain will produce a 16-pound turkey. But in order to be conservative, 64 pounds of grain ought to be allowed for the 16 pounds of turkey meat, or four pounds of feed to one pound of flesh. Turkeys brought to the farmer in average of nine cents per pound in 1933 (16 cents in 1931). At the 1927 average price a 36-pound turkey brought $1.44, paying a gross return of $5.50 per cut. for the grain and $1.66, 91 cents, and 86 cents for wheat, barley, and oats, an average for each of these per bushel of $1.09, 71 cents, and 67 cents.

Beauty Of Man's Supremacy

Insects Are The Most Prosperous Family Of Animals

Notwithstanding their remarkably interesting structures, transformations, and habits, insects as a group are the most dangerous of the animal kingdoms. They are, in fact, man's chief competitors for the supremacy of the earth. In the whole world over 350,000 different species of insects have been studied, and probably as many more distinct species await classification. Of these, the people want the same things for food, and they want to occupy the same places. — Dominion Entomological Branch.

Harbin, Manchukuo, now has nearly 300,000 Russians.

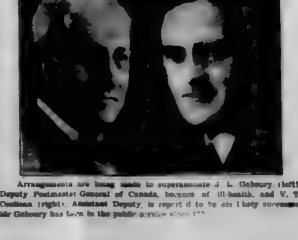
CHANGES IN THE POST OFFICE DEPARTMENT



Arrangements are being made to superannuate J. L. Gelbeury (left), Deputy Postmaster General of Canada, because of ill-health, and V. T. Cochran (right), Assistant Deputy, in regard to to ain likely successor. Mr Gelbeury has been in the public service since 1877.

Advance In Price Of Gold Results In Marked Stimulus To Gold Mining In Canada

The Praying Mantis

Insect May Be Used In West To Combat Hopper Menace

In the co-operative efforts of the Dominion and provincial departments of agriculture and the various municipalities and farming societies for the control of grasshoppers, no public means of exterminating the plague is overlooked. During last fall certain members of the staff of the Dominion parasite laboratory at Belleville, Ont collected egg masses of the praying mantis in the Belleville-Napanee-Picton area where this insect has been increasingly abundant during the past three years. The praying mantis feeds to a large extent on grasshoppers and the eggs of which were collected with the intention of investigating the possibility of colonizing the praying mantis at points in western Canada where grasshoppers are a serious pest. The praying mantis is remarkable for its prodigious appetite and for hunting its formidable fore-legs in a manner suggestive of hands folded in prayer—hence its name. However, the mantis preys on other insects and its devout attitudes merely covers its bloody intervals of voracity.

Newspaper In The Land

Thousand And Sent Forth Of Advertising Survey Shows

What is described as one of the most exhaustive surveys ever taken of any country in the matter of newspapers is that which has been undertaken by the Canadian Government through the Department of Commerce, 64 journals of all kinds being circulated in the Dominion. The survey was conducted by the trade commissioners' service, the advertising matter thrown into their yards.

That 56 per cent. of all vessels and 27 per cent. of the space would be for newspaper advertisements of special sales.

That illustrated newspaper advertising was preferred 9 to 1.

Both men and women packed newspapers first when asked what advertising medium they preferred.

The newspaper continues to be the cheapest and best form of publicity for all lines of business. Nothing began to approach it in reaching all the public, and no other medium is so inexpensive.

Gladness In The Home

In order to keep children off the streets in the poorest parts of London, England, and teach them some of the wonders of nature, eight beautiful gardens have been transformed from mere rubbish heaps in the slums by the directed efforts of the children, under a committee of gardenous horticulturists and others. It is now called the London Children's Garden Fund The gardens, in each case, are the property of the child to whom it belongs.

The recent rainfall in El Salvador was the heaviest in years and caused heavy damage to property and crops.

Cancer Is Curable

Dr. Greyhorse Says Cancer Is Curable If Taken In Time

With the United States paying $30 per ounce for gold, shipments of the precious metal from Canada are now going across the international boundary instead of the whole going to London, which was the destination for the bulk of the output since last May. With Ottawa diverting the stream of yellow metal from England to the United States, Canadian mining companies are obtaining the full advantage of the American gold price, less the mint charges, but plus the difference in exchange, which brings the return slightly above $35 per ounce.

Ore that could not be considered worth gold at $20.67 per ounce, becomes good gold mill at the current price with the result that producers are now taking huge tonnages of the material, formerly waste rock, to the mill and putting it through their mills at a profit. Low grade mines, that were first getting grasshoppers are a serious pest. The praying mantis is remarkable for its prodigious figure

WORLD HAPPENINGS BRIEFLY TOLD

The prime population of Canada at the beginning of the current year numbered 4,567.

The Prince of Wales has become chief patron of the Public Schools Shipboy Society, which last summer organized an expedition to northern Finland.

The "Winnie Mae," which Wiley Post twice has flown around the world, may be grounded for the first high-sponsored air race between England and Australia this fall, the globe-girdling flyer intended.

The estimated annual saving arising out of the reduction or cancellation of dependents' pensions caused by the pension review in 1932 and 1933 was $130,326. This information was given in the house of commons.

The Archbishop of Canterbury in the church assembly declared that $500,000 of the $800,000 sought from the public has already been raised towards the purchase price of the British broadcasting Official monopoly, the Cedar Stations.

Because another 1,000 "war widows" receiving pensions were married during the past year the treasury will be able to save $200,000 in the new budget. There remain 134,000 war widows who have not remarried.

Reduction of interest rates on western farm mortgages and provision for intermediate agricultural credits were advocated as preliminary steps for the rehabilitation of the western provinces by John M. Imrie, managing director of the Edmonton Journal, in an address.

A committee of seven members of the house of commons will inquire into the work of the Canadian Radio Broadcasting Commission this session, suggesting improvements. Premier R. B. Bennett gave notice of the government's intention to establish the committee.

Numbers Are Necessary

Reuse is an ancient principality in Thuringia, Germany whose forbears unexplained reason all the men of the noble families are called Heinrich or Henry To distinguish them selves they have to add numerals to their names All this is to explain why on the register of a Montreal hotel there appears the name "Prince Henry XXXIII of Reuss."

Safe Way To Reduce

20 lbs. Off—and She Feels Better

A woman who has found a sure safe way to lose fat in almost fresh dieting or dangerous drugs writes

"A year ago I was eating with rheumatism, and was fat too but I weighed 154 lbs and, as my height is only 5 feet 2 inches, you can judge my appearance I have taken Kruschen Salts regularly and not dieted, and now I weigh 115 lbs which is just nice and further I feel better in health and my rheumatism has vanished."—(Mrs.) D. N.

Unlike certain drastic drugs, Kruschen does not aim to reduce by rushing food through the body, its action in not confined to a single part of the system It has a tonic influence upon every gland of elimination, every gland, every nerve, every vein (testify. but merely it rids the system of all fat-forming food refuse, of all poisons and harmful acids which give rise to rheumatism, digestive disorders, and many other ills

TRIAL OFFER

If you have never tried Kruschen as a cure for overweight, you can obtain a bottle on trial for 1/- (or 25 cents). Just send a postal order for 1/- (or 25 cents) to-day to Dept. 1 Kruschen Salts, 4 Bow Lane, London, E.C.4, and you will receive a bottle by return. Don't forget to send for your bottle to-day. Kruschen Salts are sold by all chemists and stores throughout the world. Obtainable in Canada. They have tried Kruschen First, at our expense Kruschen Salts, 4 Bow Lane, London, E.C.4, England. Kruschen Salts, Manchester, Eng., Kruschen Salts, Montreal, Canada.

GUNPOWDER

(By Gordon H. Gunn, M.A.)

To the average person the term "explosives" suggests the idea of war, but no industry producing explosives could exist if it were dependent on wars for its business. Explosives play an important part in our modern civilization because they are used in many constructive purposes, rather than destructive One supplies of coal, iron and other metals are dependent upon the use of dynamite and gunpowder

To the chinese is given the credit of invention of black gunpowder which is a mixture of saltpetre, charcoal and sulphur They used it hundreds of years ago in making firecrackers It was first used in cannon by the Englishmen at the Battle of Crecy, in 1346. An historian of that period states that "The English guns made some like thunderings and caused much loss in men and horses." Many years passed before it was employed in blasting

The saltpetre, known chemically as potassium nitrate, is an oxidizing agent. How oxidizing agents are substances which furnish oxygen to other materials in a chemical reaction. Then, when the gunpowder is ignited combustion is supported by the oxygen liberated from the saltpetre, and does not come from the oxygen of the air When this very rapid chemical change takes place its gases, large volumes of gases such as carbon dioxide and nitrogen dioxide are produced, due to the combining of sulphur and charcoal (carbon) in the gunpowder with the oxygen supplied by the nitrate. As a result of this rapid chemical reaction very high temperatures are produced. The heat causes the gases to expand and thus they push the cannon ball out with great velocity.

In modern warfare the use of gunpowder is limited to bursting charges or shrapnel shell, to time fuses, and to priming charges for use with smokeless powder Due to its low cost it is still used extensively by sportsmen in hunting It is also in great demand for blasting purposes because of its cheapness and because it does not require a detonator It lacks the power possessed by modern high explosives but has the marked advantage of being less shattering than most explosives.

Could Ascend Eighteen Miles

Modern Stratosphere Expert Says Wood Height Is Practical

It is possible for man to ascend 18 miles into the air, Prof. Auguste Piccard, noted stratosphere pioneer, said.

"No more you pay, the higher you go," he said. "Only lack of money prevents ascent to 30,000 metres (approximately 18 miles), which is not difficult except that it would be necessary to sacrifice the instruments at the higher levels. Above 30,000 metres, the air is too light to support a ship."

SUNDAY SCHOOL LESSON

FEBRUARY 28

THE TWELVE SENT FORTH

Golden Text The harvest indeed is plenteous, but the laborers are few Pray ye therefore the Lord of the harvest, that he will forth laborers into his harvest Matthew 9 37 38.

Lesson Matthew 9 35 11:1

Devotional Reading Romans 10 9b 15.

Explanations And Comments.

The Twelve Sent Forth, 10:1-4. Jesus did not do the preaching by his disciples, and now he sent them out two by two as Mark tells us to help him this time of great need, and to gain training for their future work He gave them authority to cast out demons and cure the sick

Matthew now records the names of the Twelve In all the lists given (Mt. 10:2-4, Mk. 3:16-19 Lk 6:14-16, Acts 1:13) the disciples are arranged in three groups the first of the first group is always Peter that of the second Philip and that of the third James the son of Alphaeus. The order of the remaining three in each group varies in the different lists, save that Judas Iscariot is always the last one given

Simon, who is called Peter He received the name of Peter which means Rock or Stone when Bar-jonah confessed Jesus as the highest and noble the transformation of the character of Simon. (Simon — James Rainford)

Andrew, Peter's brother It was he who brought Peter to Jesus (John) naming the distinction of being the first missionary of the kingdom of Heaven "James the son of Zebedee Jesus called to energetic form of Thunder (John) the brother of James, who is called Peter He received the name of Peter which means Rock or Stone when Bar-jonah confessed Jesus as the highest and noble the transformation of the character of Simon. (Simon — James Rainford)

Andrew, Peter's brother It was he who brought Peter to Jesus (John) naming the distinction of being the first missionary of the kingdom of Heaven "James the son of Zebedee Jesus called to energetic form of Thunder (John) the brother of James, who is called Peter He received the name of Peter which means Rock or Stone when Bar-jonah confessed Jesus as the highest and noble the transformation of the character of Simon. (Simon — James Rainford)

Philip who would be shown the Father (Jn 14:8). Bartholomew (Nathanael) the favorite of Jesus and to guile Thomas "The Doubter," as he is often called Matthew the publican, and writer of the Gospel we are studying James the son of Alphaeus, who is called James the Less in Mark. Thaddeus, more noted for his name than his deeds (Lk. 6:16, Jn 14:22 Mk 3:18). Simon the Canaanean called also Simon Zelotes, or the Zealot. Judas Iscariot (literally, Man of Kerioth, a village near Hebron) who betrayed Jesus The Twelve who also betrayed him.

Bad Poor Many Homes

Officials of the Victorian Apiarists' Association say the Australian season for honey production has been worst since 1914. Reports from every district except Gippsland indicated there was an almost complete failure of the honey crop.

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Optician, Calgary

NO. 10—SENDING THE WHOLE CHILD TO SCHOOL

In years gone by the physical side of life was much more neglected than it is to-day In recent years we have given more attention to the value not only of life itself, but also of those things which make life worth living

Most modern school systems have developed a health program, including no their staff health officers to look after the physical well-being of the students

There are many physical defects which might retard the child in the school work but this article is intended to stress the prevalence of eyestrain and its attendant evils

About three people out of every ten glasses to-day for some purpose but it is estimated that seven out of ten should be wearing them This almost universal need for assistance in modern civilized life is largely due to the constant use of the eyes at close range and almost constant strain in "close" work, whether in books or buildings, printing on glossy paper and from high powered electric lights.

Modern life demands modern equipment and it is the constant use of the eyes for close work that has made scientific glass-fitting a great basic human need.

The strain of civilized life puts most heavily upon the eyes, the most delicate and the hardest worked of any of the organs of the body. This is especially true of school children because a child's eyes are immature; they are baby eyes until he reaches the age of proper development and too frequently he is required to do work which would mean a full load for mature eyes.

There are twenty-five million young people in the schools of this continent and it has been found by actual survey that twenty per cent. of them have eyes which are so completely out of focus that it is interfering with their progress in school and robbing them of their opportunity for proper preparation for life's work.

Millions of young people quit school earlier than they otherwise would, because of glasses and handicap, millions of them are retarded in school work, finally graduating with indifferent grades, poorly equipped for the battle of life These eyes become recruits in the great army of mentally unfit and rejected bodies, the cause of much of this world's misery. Retarded students retard the work of the entire class and indeed of the whole school, adding immensely to the work of the teacher as well as to the cost of operating schools, thus adding to the burden of the taxpayer The physically defective child is therefore a burden to the community

It is not the fault of school authorities that so many children are neglected on the physical side. The neglect is frequently due to lack of experience and lack of co-operation on the part of parents who are misinformed or prejudiced and who give too little attention to some of the physical needs of their children and the best of which is eyesight.

There is an intimate relation between eyestrain and inefficiency and physical ills All the physical activities of the body are made possible only through the expenditure of energy and the energy which is the vital motive power Where do we get this power? In a healthy normal individual it is automatically stored up during a night's sleep, sufficient for each day's use and any person who uses more nerve force each day than is stored up the night before is surely but surely facing nervous bankruptcy Nerve exhaustion is the cause of most of our physical ills and the eyes play a far greater part in this connection than is generally realized.

The examination of children's eyesight by school nurses or teacher is of limited value. At best they can only be expected to discover the worst cases of poor vision whereas a person might be able to read every letter on the test chart and yet be suffering from nervous exhaustion due to eyestrain. In such cases usually escape the notice of any but a skilful optometrist who knows what to look for and ask the right questions to get the answers.

(To Be Continued)

May Build More Planes

U.S. Secretary For War Submits Plan To Congress

A new five-year plan under which the United States Army Air Corps would be authorized to construct 1,000 aeroplanes and increase its personnel has been submitted to Congress by George Dern, secretary of war. The plan includes building up to the air corps a force comprising all military aviation activities and adequate to meet effectively the requirements of all military air and land operations.

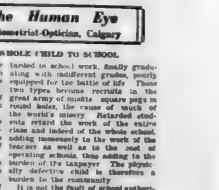
The general staff was said to have found that the existing air corps strength was below requirements, and that the percentage of types of aircraft should be revised. It believed also that 1,800 serviceable planes would not permit the necessary allotment to overseas possessions and at the same time permit the organization of an effective military air force unit within the United States.

Will Need To Be

We have it on the word of a New York scientist that man will be bigger and brainier 500,000 years from now, and as the main problems are being piled up for posterity as well need to be.

Kidney Troubles

Some poison to accumulate in the system and bring on persistent Backache, Lumbago, Rheumatism, or Sciatica. Take Gin Pills to restore the kidneys to a healthy condition and eliminate the poisons from your system.



W. N. U. 2054

PRISON REVOLT THREATS COME FROM KINGSTON

Ottawa. Communist agitators were at the bottom of recent threatened revolts at Kingston penitentiary, Minister of Justice Hugh Guthrie told the house of commons. It had become difficult to maintain order there because the Canadian Labor Defence League had attempted to create sympathy for the eight Toronto Reds sentenced to penitentiary more than a year ago, throughout different public channels.

Time after time we have had threatened revolts there," said the minister, referring to the stonewalled prison on Portsmouth bar "Every prisoner from Toronto has come there" said said "Boys, the newspapers are open you the churches are for you, everybody is for you. We will have another revolution and we'll all get out! A very serious situation has resulted."

Thousands of appeals and demands, referring to the Toronto Communists, had been received by him in connection with the case, Guthrie, most of them suggested or sponsored by the Canadian Labor Defence League and the Workers' Unity League

At the same time he announced a scheme of segregation would be introduced in a health program, including on their staff health officers to look after the physical well-being of the students

There are many physical defects which might retard the child in the school work but this article is intended to stress the prevalence of eyestrain and its attendant evils

Trade With Russia

Anglo-Russian Part To Stimulate Trade Between Countries.

London Increased purchases of all kinds of British goods by Russia it was learned in the house of an Anglo-Russian trade agreement.

The new pacts calls upon the Soviet Union to buy approximately as much as it sells to Great Britain.

This means an annual increase of about $20,000,000 in British exports based on figures of the last normal trading year 1932

The correction in the present trade balance which now heavily favors Russia will not be made immediately, however.

It is understood the Soviets will be permitted to sell about $1,000,000 worth of goods to Great Britain for every $1,000,000 worth bought. That ratio will be gradually corrected until Russia buys as much as it sells here

The balance will take the moderation the ultimate exports of each country such as tourist trad

To Assist Dairymen

Appeal To Government To Stop Price Cutting Of Creamery Butter

Edmonton An appeal to the provincial government to provide legislation to stop price cutting of cream in every butter was made by the closing session of the Canadian Association of dairy convention here The meeting elected T M Carlyle of Calgary president, and chose Calgary for the convention of 1935

The meeting also initiated a resolution carried by the provincial government asking for a federal marketing board and resolutions from both producers and manufacturers sections urging more stringent grading and marking of all butter sold at retail The proviso was added that marking be made not effective in Alberta until requested by a majority of the dairymen and the resolution requested enabling legislation from Dominion and provincial sources in this province

The W.C. Dairymen's association met

Long Deadlock Likely

Trade Situation At Standstill Between United Kingdom And France

London Indications were that a long commercial deadlock between the United Kingdom and France would result from the latest retaliatory measures between the two countries

With a 20 per cent increase in British duties on French goods in effect and trade talks at a standstill, British major advantages in French ports designated by France it was considered likely a period of time that it would be a long time before there was any decision made to ease the situation.

The British government meanwhile let it be known the Anglo-Russian trade agreement after months of painstaking negotiations is now completely drafted ready for signature after which it will be ratified by the British commons

The pact provides for establishment of normal commercial relations between Britain and Russia broken off since last April at the time of the celebrated espionage trials

Pronounced To Be Counterfeit

Prince George Note Has High Rank In Royal Navy

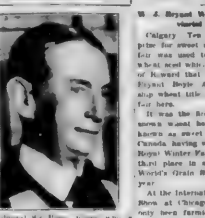
London The admiralty has announced promotion of Prince George, now on a tour of South Africa, to rank of commander in the royal navy.

It is a double promotion for the king's youngest son, who now bears a lieutenant for eight years Prince George is naval aide-de-camp to His Majesty.

Farm Loan Loss.

Winnipeg The Manitoba Farm Loans association sustained a total loss of $610.70 for the 12 month period ending April 30, 1933 according to the regular report tabled in the Manitoba legislature The percentage of loss was $234 177.

BLAMES LONDON TREATY



Admiral Sir Roger Keyes who was Naval Commander-in-chief of the North Portsmouth division and an election speech condemned the London Naval Treaty limiting the British navy.

Alberta Wheat Champion

W. J. Bryant Wins Honors at Provincial Seed Fair

Calgary Ten dollars won at first prize for sweet clover at last year's fair was used to purchase certified wheat seed with it produced a sample of Rudyard that won for William J. Bryant Boyle Alta., the champion crop wheat title at the Alberta seed fair here.

It was the first time Bryant had grown wheat but he is well known as sweet clover champion of Canada having won first prize at the Royal Winter Fair, Toronto. He took third place in sweet clover at the World's Grain Show at Regina last year.

At the International Hay and Grain Show at Chicago, Bryant who has only been farming for eight years, secured a second for sweet clover and a sixth for wheat His sweet clover took first place at the Alberta fair

Lethbridge growers took major honors In the first judging awards announced Hedington Brothers of Lethbridge placed first in the spring wheat section, registered or certified J. D. Morris, Hardisty, was second, and J. W. Sheaver of Morrin, third In the spring wheat class early varieties the Smith Farm, Limited Lethbridge placed second to F. J. Rock of Morrin while W. S Gillen, Lethbridge was second in the winter wheat section any hardy variety John A Reid of Moose Jaw first

Top award in the open oats class, no potato grain clubs only, Grande Prairie was first, Edson second and Brightview third

Quantity Kept Secret

U.S. Authorities Not Telling Amount Of Canadian Gold Received

New York Canadian gold is coming to the United States to gain the attractive price of $35 per fine ounce, but in most cases it remains a secret of the authorities

The price of $35 on delivery at the New York Federal bank, the United States mint office here, or the federal mints The seller pays freight and insurance, while the United States government deducts 1/4th of 1 per cent for handling costs and makes other discounts for assay charges.

The United States government pays by cheque 99 per cent at the time of delivery and the remainder after the assay is completed.

Cow Testing Service

Alberta Will Provide A Limited Service To Farmers

Edmonton.—Alberta starting April 1 will provide a limited cow testing service to farms pending milk samples to Edmonton for testing, it was announced at the convention of the Alberta Dairymen's association It was proposed to furnish monthly Loans application sample bottles and testimonials and transportation on samples sent by farmers under scheme The farmer would have to pay half way in keeping records of weighing and in submitting samples.

THE ASSASSINATION OF A KING

One of the most vivid assassination photographs ever made shows Mohammad Nadir Shah, King of Afghanistan, dying in the arms of a member of his staff after he had been shot in the gardens of Dilkusha Palace, Kabul, while addressing a gathering of students. The picture, made by a member of the king's entourage, was smuggled from Afghanistan through secret channels.

BRITAIN STANDS FOR JUSTICE OF AUSTRIA'S CAUSE

London.—The United Kingdom is in agreement with other nations, notably France and Italy, which hold that the integrity and independence of Austria must be maintained.

This was clearly set forth by Sir John Simon, secretary for foreign affairs, answering a question in the house of commons before eager listeners He said the British government recognized the justice of the Austrian stand that she cannot tolerate any interference in her internal affairs from any quarter."

At the same time the minister made it plain that Britain has assumed a "hands off" policy toward the entire Austro-German situation until the matter is given consideration by the League of Nations council. The United Kingdom would not interfere in the internal affairs of any nation, he said

Sir John was referring particularly to the Austrian declaration she will appeal to the League of Nations ags ast what she considers German interference in her domestic affairs Until the League has considered such an appeal the British government could not present its views on the situation, he added.

Photos Of Eclipse

Astronomers Conduct One Of The Most Interesting Expeditions In History

Long Caroline Island.—Scores of photographs which they believe will contribute greatly to further studies of sight were obtained by Japanese and United States scientists during a total solar eclipse.

Months of endless shore and careful preparations by scientists who journeyed to this lonely mid Pacific atoll attracted considerable confident they had conducted one of the most successful expeditions in the history of astronomy.

They were sought to determine which light of the sun's corona is direct or reflected and the angle of deflection of the light which bears on Professor Einstein's relativity theory

Long 150 natives equipped with smoke glasses which the scientists had taught them to make, took up positions on the beach at dawn to await the promised eclipse.

They clapped their hands as chalish glow as the sun slowly disappeared, but when darkness came and a fiery crown later leaped from a blackened disk they were silent and solemn

High Quality Seed

Certified Seed Improvers Standing Of Canada's Export Wheat

Calgary The Alberta seed fair unanimously passed a resolution declaring that the standing of the wheat to meet the provisions of the wheat reduction agreement it should not apply to wheat which a field inspector has certified as

The resolution declared the production of registered and certified seed improves and maintains the quality of Canadian export wheat and the producer should be encouraged to continue the production of high quality seed.

Visiting Western Cities

Sir Henry Drayton Conducting Sound Public Finance Campaign

Toronto Conducting a "national crusade in the interests of sound public finance, Sir Henry Drayton chairman of the Canadian section of economic committee of the council, left Toronto with R. B. Bennett, Toronto, and W. McL. Clark, secretary of the chamber. They opened the campaign at Brandon, February 16, and are visiting Winnipeg, Regina, Saskatoon, Edmonton, Calgary, Lethbridge, Vancouver, Victoria and Fort William before returning to Toronto early in March

Canadian Hen Too Prolific

Heavy Exports To Old Land Absorbing Surplus Production

The Canadian hen is altogether too prolific for the British farmer's taste and Canada's total of twenty-five millions eggs exported to the United Kingdom yearly, as well as the Dominion's expanding poultry supplies, are likely shortly to be contained by the British Government.

Though egg imports from Shetland and Belgium are already heavily reduced measures to restrict production, especially in Canada and Australia, threaten a disastrous fall in prices during the months from February to July. The British farmer consequently is alarmed and has brought the minister of agriculture to help him. More over, he has developed poultry rearing to such a point that he has now sixty million birds, or double what he pretended ten years ago.

On top of all this, he has to meet the competition of ten millions dollars worth of liquid eggs from China.

This Northern part of "the economics of necessity" in the world, which, as the Archbishop of York is apposed to-day in the nation's assistance on behalf of the unemployed says, is previously satisfy "because, while multitudes suffer from under nourishment, there is burned or thrown into the sea," receives further complaints from the plight of Dutch cattle producers.

Two hundred thousand animals are about to be slaughtered in the Netherlands at the rate of four thousand each week because they cannot be sold, either at home or abroad. The meat will be canned and given to the unemployed at a nominal price.

Control Of Weeds

Use Of Flaming Will Will Result Asked

Speaking at the World's Grain Conference at Regina on the necessity of weed control in the grain growing region, Mr. J. G. Rennie of the Agricultural Extension Department, International Harvester Company, said "I would ask the farming mill at the head of the list of weed control machines and there is much room for improvement in design and method of weed control machines. Cleanliness in sowing weed seed is probably responsible for more weed trouble than will be readily admitted. The careless attitude must be changed. The reclamer on the combine or separator, properly operated, followed by the fanning mill and the grader, would do much in controlling weeds." The bulletin "Weeds and Weed Seed," issued by the Dominion Department of Agriculture, discusses the matter of seed cleaning fully with illustrations.

Preparing Sheep Pelts

Department Of Agriculture Gives Information On Proper Work

The following directions for preparing lamb or sheep pelts are given by the Dominion Department of Agriculture in the bulletin on dressing and cutting lamb carcasses: Spread the pelt out flat and evenly, with the wool side down. Take a pound to a pound and a half of coarse salt and sprinkle it evenly over the pelt, exercising special care with the head and legs. Allow the pelt to remain in this position for at least twenty-four hours. The pelt may then be rolled, turning in the legs and sides inwards. Bring the head to about the point of the shoulder and the tail and rump to the arrive of the back, and roll both ends, making a tight compact pelt. The security with strong cord and store in a dry, cool place.

A boy in a Kansas school, asked for a composition on slang, wrote: "It hot if I don't quit using slang, you'll wind up on the noddle.

The Leather read it. "He says much like that," he explained, "and it's the skids for you."

A new anthology has just been published in England.

The National Government in the Mother Country has decided to send some of its most prominent leaders on a speaking campaign through England and Scotland. Above we see four of the cabinet members who are to tour the west of Scotland. Sir John Simon (left), Foreign Minister; Rt. Hon. Stanley Baldwin (top centre), Sir Godfrey Collins (lower centre), Secretary of State for Scotland, and Sir John Gilmour, Home Secretary.

Ship Farming For Bait

Has Proven The Most Effective Of All Measures Adopted

Where precipitation is less plentiful, the moisture stored in the fallow is too valuable for any of it to be wasted, Reed for producing a cover crop, and it is necessary to find other means of drift control. Of all measures adopted to meet this situation, strip farming has been of the most value. It should be stated frankly, however, says Mr. A. E. Palmer, Dominion Experimental Station, Lethbridge, Alberta, that although strip-ping is a most effective and practical method of controlling soil drift-ing, it is not entirely successful, and so must be accompanied by careful cultural practice. Strip farming, as the term implies, consists of strewing the field into alternating strips of crop and fallow. For convenience strips are laid out either directly north and south, or east and west, although in the more nearly at right angles to the direction of the most severe winds. The idea that strips are of value only where drifting winds come from but one direction does not seem to be correct, as they furnish check points for drifting winds striking them at any angle.

Inured To Cold

Proper Kind Of Clothing Will Afford Protection From Severest Weather

Captain Bob Bartlett, the veteran explorer, has never experienced frostbite during the greater part of a fifteen spent in the Arctic and sub-Arctic. He became accustomed to cold while out hunting on the ice floes off his native Newfoundland and Labrador and learned in a boy how to pursuit himself against the low temperatures which he later encountered on the journeys of which the most famous was that which ended trip with Peary to within a short distance of the North Pole. During the hazardous evening of the ice pack to Siberia after the Karluk sank in the polar ocean north of Bering Straits, Captain Bartlett kept himself from frostbitten. Given adequate clothing, he believes there is no reason for anyone being incommoded by cold weather no matter how low the temperature may fall.—New York Sun.

Women Under Good Navigators

Women interested in aviation should strive to become navigators rather than pilots, Ruth Nichols, famed American aviatrix, told a gathering at Swarthmore College. Feminine patience and attention to detail make women excellent navigators, Miss Nichols asserted. She added that men have the temperamental skill required for a successful pilot.

Sun Suspends Colors

Another Sun Monster Is Sighted In Region Of Equator

While "Amiable Amy" reportedly heads northward from its usual haunts around Victoria, B.C., another tropical "Mr. Cool Head and his brood amidships" disports itself in the Caribbean sea. There's an entry in the log of the liner Hanoverian to prove it.

Senior First Officer S. W. Mcughin admitted he made the entry in the log under the date of January 20. It read simply:

"Sighted sea monster headed S.W., 1:30 p.m."

Beside the entry Mcughin drew a sketch of the monster which was also seen by Senior Third Officer J. W. Conway.

Cultivating We Sight

Chinese Board Of Commerce Runs Exhibition Farming

At the instigation of the Kuomintang party, the Chinese board of commerce has planned a big exhibition of every material picture which may be termed "anti-war." The Kuomintang says "the nation's prime need to-day is the "cultivation of the spirit to fight Chinese Chinese." Accordingly the armies will have an exhibition entitled on all sorts of means developing spirit of fighting and their material woes or sorrow on the receipt of news that men have been killed battles, "tragic scenes of wounded soldiers" or any exposures showing the hardships or horrors of war.—Chinese Times Star.

Hamburg has started a campaign against tobacco.

Mink Rats In Scotland

Rewards Are Now Being Offered For Their Extermination

In 1937 six pairs of musk rats were purchased by Scotland from Canada and installed in a field near Perth, close to Brace, in Perthshire. Although part of this field was turned into a swamp by diverting into it the water of a burn (stream), the musk rats doubled these quarters and soon bit through the wire netting, and five pairs escaped. Later a male was found dead, so that the stock from which Scotland has since been populated by these animals was five females and four males. Eighty mink were killed by them during the year before operations were begun for their extermination. Rewards were paid in private, Scotland for 69 musk rats killed by them during the winter of 1937-38. Since October 1937 over 700 musk rats have been killed by the trappers employed by the Department of Agriculture for Scotland. We know, therefore, says the Scottish Journal of Agriculture, that the musk rats have been killed during the last three years, all descendants of the five rats that escaped in 1937.

Seems Funny Now

It is amusing to learn that the inhabitants of Gloucester Massachusetts, made great protests when that exclusive area was first lighted by gas. Many thought the new illuminant extremely vulgar, and at least one Peer, the Earl of Mansfield, refused to make the change from candles to gas. The street lamps were not good for valuable paintings, many of which lost some of their value.

Agricultural Notes

Many Items Of Interest To The Farmer Chronicled

Up to February 2, a total of 4,264 Canadian cattle were shipped to the United Kingdom this year.

During the week ended January 28, 926 cattle, 90 calves, 4,081 hogs and 2,279 sheep were shipped from western to eastern Canada.

For the week ending February 1, the total amount of hogs graded in Canada was 67,645 making 813,380 in all for the first five weeks of this year.

Of ten wheat in storage at Rotterdam, 90,000 tons is of Canadian origin, the largest quantity of Canadian wheat to be held on Continental European account for many years. The bulk of it is in transit.

Blister beetles of one species or another are to be found in every province of Canada.

The Canadian egg market as a whole continues to maintain a very favourable position as compared with a year ago. Egg and Poultry Market Review.

On the prairies, the army cutworm, in the larval stage, is among the best webworm are erroneously classed as true armyworms. These insects are quite distinct from cutworms in some marching habits and causes a large amount of damage to miscellaneous crops.

Onions pigs, rabbits, mice and other animals die quickly from the effects of sanitary, an normal disease very rare in Canada. Hogs, dogs, cats and carnivorous animals in general are less susceptible and may become infected only after repeated exposure.

Great Britian, with its herds, flocks, pastures, and institutions of animal research, offers a virgin field for exploration by the Dominion and Colonial animal husbandmen. Those who have not had the opportunity of visiting that Mecca of the livestock man have a great pleasure in store.—Professor Sinclair, Alberta University.

Eggs readily absorb odours and for that reason should not be stored in the same room used as fish, cheese, or onions. If a case or crate contains any eggs in placed in a cellar, the crate should rest on a shelf, on the ground from the floor with cement cement or mud.

An animal, to reach the age of about a year, the most possesses the character of lucrative motion. Young animals at very low quality of meat which is not appreciated by the public as it should be. It is distinguished from lamb by the colour of the meat and by the more carbonaceous flavour of the bone. Cuts of mutton are heavier than those of lamb.

Children With Red Hair

Research In London Shows Have Dirty Skin

There are many red-headed boys than red-headed girls, according to a report issued by the Medical Research Council, London. This conclusion having been arrived at by Miss E. M. Fleming, of the Medical Research Council staff, after a study ostensibly 14 years and taking in 2,219 boys and 2,073 girls. The report also mentions the follows facts:

The blue eyes of a baby may become brown, but brown eyes ever become blue again. Changes in eye and hair color are always to darker shades not lighter. Boys and girls are equal in number up to 11 years. Girls are taller than boys between 11 and 14. Afterwards boys become steadily taller than girls. Girls are darker than boys. The average head measurements are greater in boys than in girls at every age.

Checking War Talk

The Japanese government has made good its promise to check war talk. As its first move in pursuing a policy stated before the imperial diet on Jan. 23, the government prevented circulation of a pamphlet describing an allegedly impending naval conflict on the Pacific.

The proper temperature at which potatoes should be stored is 37 degrees F., for at this temperature the life processes of the tuber are at their minimum.

CROWN BRAND CORN SYRUP

A pure, wholesome, and economical table Syrup. Children love its delicious flavor.

Letter to the Editor

Editor of the Fort Record
Dear Sir—

Clean Speech

One of the most beautiful habits of the present age is the habit of reasoning. It is not confined to few, but I am sorry to say that it seems to be used in common conversation by the majority. Of course there are exceptions for which we may be thankful. Children should be taught in the home the evil of the habit and the disgusting influence on the life and character of all.

The good old days seem to be gone in which the first lessons taught was the Ten Commandments and the shorter Catechism. Today the Spiritual education of the children seems to left almost entirely to the church, which only meets on Sunday, the day which seems to have become a day of pleasure and sport, which has crowded out meditation and Bible study nearly altogether. People of today think the subject has fallen into the background as not being modern enough to suit the educated and advanced generation. As a result the children of today are not fortified by religious training, and their minds are not slow to learn to use the language they hear among many Children attend school five days in the week and the lessons taught on Sunday are forgotten and do not get root in the child's mind as it should. The Bible is not taught in the public schools. People should not expect the teachers to devote their time teaching the truth which should be taught in their home.

When the children are young their minds are plastic and impressionable and the things they hear, they soldom forget. How careful we should be that our speech should be clean and wholesome in their presence and at all times. You cannot blame the children for using profane language when they are hearing grown up conversing every day in defiance of the law. What is the use of making laws if they are not enforced. Something should be done at once. It is time this habit is put a stop too. Why try to teach the child in the home and have every good influence ruined by the profane language you can hear every day on the street. You can hear boys and girls of the town age using the most abominable language in the presence of mothers and children.

Yours Truly,
W. J. Williamson.

Taken From the Files

10 Years Ago Today

February 20th, 1915

Rev. Gerald McCuaig, B.A., has been appointed rector of St. George's Church.

250 cars of grain have been shipped from the local C.N.R. yards this year. This is 150 cars in excess of what was shipped last year.

Mrs. Bates entertained the choir of the Presbyterian Church on Wednesday evening for Mr. J. Dalgetty, who leaves early in March for Lloydminster.

The infant daughter of Mr. and Mrs. Geo. Kelly suffered severe accidental scalding burns which is slowly recovering.

Mrs. Gillespie is in Edmonton this week attending from the local Rebekah Order to the Alberta Grand Lodge now in session there.

LOCAL NEWS

Mrs. H. Strong, of Clyde, Alberta, is visiting her daughter, Mrs. F. W. Smith.

Mr. and Mrs. F. Mummy motored to Gadsby, on Sunday, when they visited over their new location.

East Clover Bar "Thrasher" club held the first dance of the season in Brenner hall, Friday, when music was supplied by Mr. Herbert Glasgow's orchestra.

Mr. and Mrs. Mark Lotzen entertained the members at their February meeting.

Members of the Gibbons Badminton Club were entertained by the Fort Badminton Club last Saturday in a number of friendly games.

During the evening some very snappy games were played after which light refreshments were served by the ladies of the local club.

It is expected that a number of Fort Saskatchewan players will invade Vegreville for a series of friendly games this Saturday.

Mr. James Hall, Saskatoon, Sask., is visiting his uncle and aunt, Mr. and Mrs. F. A. Sherman.

Good Hope NEWS

Messrs. Russell and Everett Henry, of Tofield, were visitors in the community over the week-end.

A concert will be held in the Good Hope school on Wednesday, March7, under the auspices of the U.F.A. Watch for further announcements.

Sun Life Assurance Company of Canada

THE report of the Company for 1933 is one of consistent and constructive progress. Its achievements enhance the impressive record of public service it has rendered during the sixty-three years of its existence.

In 1933, as in the preceding three years, people generally experienced exceptional anxiety, as the result of increased living costs, reduced or entirely cut off. At such a time the unfailing aid and security of life insurance proved of very great value.

In this service the Sun Life Company bore a worthy share. During the year it paid out (exclusive of policy loans) nearly $100,000,000 to policyholders and beneficiaries. Similarly, during the four years of depression it has paid out over $380,000,000.

Notwithstanding these substantial payments, the Company, during the same four-year period, increased its assets by $55,000,000—its insurance in force by over $307,000,000.

Sixty-third Annual Report—1933

ASSURANCES IN FORCE, December 31, 1933	$2,770,433,871
This large amount, the outstanding monies of nearly a million Sun Life policyholders, will become payable to them or their dependents when this organization is established for another hundred years.	
NEW ASSURANCES PAID FOR	216,567,462
INCOME	153,396,621
DISBURSEMENTS	127,306,502
EXCESS OF INCOME OVER DISBURSEMENTS	26,720,699
PAYMENTS TO POLICYHOLDERS AND BENEFICIARIES	
During the year 1933	97,447,809
Since Organization	888,178,695
ASSETS	454,346,695
Besides government, municipal, public utility and railway stocks, produced and bonds, and other sound assets.	
LIABILITIES	400,965,993
Almost nine-tenths of this sum represents the policy reserves, the amount set aside to guarantee the payment of all policy payments as they become due.	
PAID-UP CAPITAL ($2,000,000) and Reserves as at end of shareholders' investment	53,342,547
RESERVE for depreciation in investments and real estate	4,035,956
SURPLUS	5,951,752
	$54,380,255

The valuation of bonds and stocks has been made on the basis prescribed for all companies by the Insurance Department of the Dominion of Canada, and is in accordance with the basis authorized by the Government of Dominion of the valuation of policies of Canadian Life Policy liabilities have been valued by the full net level premium method, a standard otherwise existing than required under the stringent provisions of the Dominion Insurance Act.

FORT SASKATCHEWAN RECORD

Vol. 12 No. 48 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, FEB. 28th, 1934 $1.50 PER YEAR IN ADVANCE

Large Crowd Enjoys Comic Opera, Aladdin and Out

The Fort Saskatchewan Choral Club, under the able direction of Mr Hugh Watt, assisted by Miss A. West, and Mr. R. A. Porter, presented Aladdin and Out a Comic Opera in three acts at the Empress Theatre here on Thursday and Friday evenings of last week.

The opera was both well selected and well rendered. The principal characters are to be congratulated on the splendid execution of their respective parts and were enthusiastic ally supported by the choruses. The audience was carried from the Laundry University of Mrs Mustapha (Mrs. F Baker) to scenes in the Chinese court where the Emperor Winki-wum, (Mr W. F. Roberts) assisted by his faithful Prime Minister, Plaiman (Mr. F W Smith) was presiding, and then to Aladdin's (Mr M Roberts's) wonderful palace, prepared for his bride, Phalamir, (Miss C. Thorn), and which palace so mysterially disappeared when the lamp fell into the hands of a wicked magician but reappeared when Aladdin rubbed his lamp.

The costumes colorful and oriental showed themselves to be the result of careful planning and thought. These with the face-whitening lighting effects most ably arranged by Mr. R. L. Farnell and the scenery, the credit for which goes to Mr S. Truby were pleasing and fitting.

One must mention the music which was ably handled by Mrs. W. F. Calhoun with an addition of a string orchestra from Edmonton. This was an attraction which added much to the opera.

The fact that the cast played to a full house each evening is sufficient to show that the efforts of the Choral Club are appreciated by the public.

Councillors Elected

In the Municipal District of Clover Bar election held last Saturday, in division 4 and 5, Rudolph Berg was elected in Division 5 and A. E. Hoyer was re-elected in Division 4. This is Mr. Hoyer's second term of office.

WHEAT BOARD TRUST FUNDS

Administration of the balance of the money still remaining from the surplus funds of the Canadian Wheat Board to the credit of Alberta, has been placed in the hands of J. P. Percival, deputy provincial treasurer, and Andrew Rafn, farmer, Ben Assaud, Alberta's share is the final distribution of the Dominion fund was earmarked for the carrying on, under a board of trustees, of co-operative enterprises, mainly of an educational nature.

Fort Hockey Team Defeats Lamont In Fast Game

Lamont hockey team headed by the one time professional Jacques invaded the Fort Tuesday evening and met defeat in a very fast exhibition by a score of 6 to 2.

The visitors composed of four of the Brunderthum team and the rest part Jacques on defence were organized and out to win in each period. Edinburgh then brilliantly aided by clever rushing and had the largest crowd on their own each time he got the puck. With four of the Fort Juniors in Senior for the night the team played hard and fast.

Many in goal played a spanking game, kicking out the rubber at will. The weather being favorable a large crowd turned out and with the class of hockey dished up by the locals, more support should be in evidence at such games.

Cooney and Lentz scored for Lamont, while Fort Capt. Connelly Hutson, Francis Flintoft each got one and Roxbrugh two for the locals.

The game was handled very satisfactory by referee Diamond.

The line-ups were, Lamont: Anderson, Jacques, Buchanan, Farger Lentz, Walker, Cooney, Schoemota, Fort: Mann, Roxbrugh, Lamoureux Capt. F. Flintoft, Hutson, Farnell, Sherman, A. Flintoft and Connelly Chipman plays on the Fort line on Thursday night.

The Fort Senior Hockey team paid a visit to Chipman on Monday night and won a prominent victory by the score of 4 to 1.

The weather was ideal, we have had a fast clever brand of hockey was displayed. Pocock the Fort goalie was in fine form and turned back shots that ordinarily would have been scores.

Roxbrugh was the pick of either team displaying clever stick handling and accurate passing although not figuring on the scoring column. He was responsible for getting the puck within scoring range.

All four goals won were scored by Francis Flintoft who was playing a grand game and was the cause of many intense moments for the defending goalie.

Three cars accompanied the players down.

OIL AGENCY CHANGES HANDS

Jack R. Good & Son have taken over the Imperial Oil Agency in Fort Saskatchewan, commencing March 1st., and will handle a complete line of Gas, Oil and Greases."

Letter to the Editor

Fort Saskatchewan, Feb. 18 1934.
To the Editor of the Record,
Dear Sir:

Help the Song [illegible]

Now that Spring [illegible] nothing last there is still an [illegible] of the Winter season, before [illegible] bird, wren and other [illegible] with its open mouth would [illegible] to institute a campaign against the common house sparrow, which is the destruction of nest [illegible] other birds.

It was a sad day when the sparrow was brought here from [illegible]

If this seem rather [illegible] war on any members of [illegible] tered to the last of the sparrow [illegible] with which [illegible] to go [illegible] sparrow has remarkable [illegible] that they have not a friend [illegible] any. we would not say [illegible] this person [illegible] telling the truth.

It is said that the sparrow does a lot of destroying [illegible] pillars, etc., but the does [illegible] to grain fields and gardens is believed to far out weigh any good he does.

But we are mostly [illegible] with the most ways [illegible] ther and easily [illegible] bird.

Though he may, by [illegible] manner and being always [illegible] to relieve the monotony of mid-winter, he proceeds, with the advent of Spring, to make himself a general nuisance. He immediately and frequently appropriates the nests of our [illegible] birds, fighting them away, or destroys their eggs, and at times commits actual murder on their helpless young.

He has been observed keeping a pair of blue birds several days from their home in peace, if indeed their patience and persistence are not eventually worn out and they seek other quarters.

The sparrow is wonderfully prolific, several broods are reared in a season. We recall that some years ago, in the older Province of Ontario, a fraternal society organized a sparrow hunting match. They were caught in great numbers by the aid of lime and light to which they flew in the barns and other buildings. Some shooting was also indulged in, and as a result of this contest, and the hosts of the sparrow were very considerably thinned in the neighborhood.

May we not do well to try to greatly lessen in some way their number about town, in the interest before our migrant birds come again.

Will some person or persons who are known to be lovers and protectors of good and harmless birds let us know through the Record of some methods for getting rid of the sparrow, something they have already found effective, and so help in a good work.

Yours,
E. J. Hodgins.

New Implement Company Opens to Public Saturday

Attention is called to the advertisement of The Fort Implement Co. appearing in this issue. The proprietor, Mr R. A. Porter late of Edmonton, has been only a month with us and in that time has transformed the building, known as the Graham ware-house into a structure befitting our main street. The platform in front and main entrance have quite an imposing appearance. The interior is well laid out, and every facility has been provided for display of the fine stock of farming equipment, making it no venture to say, quite unnecessary for intending buyers to go to Edmonton for anything in the line of implements and repairs.

Mr and Mrs Porter have taken up residence in the Fort. Mr Porter has already made himself very popular in interesting himself in various activities in the Fort and the Record wishes him every success in his undertaking.

WILL PUBLISH ARTICLES ON DOUGLAS CREDIT SYSTEM

Commencing next week The Record will start a series of articles on the Douglas Credit Proposals, a question which is occupying considerable attention these days. The series will be in question and answer form and should prove interesting to our readers.

Good Hope NEWS

The Elks held their Junior U.F.A. meeting in the school on Wednesday, February 21st, with seven members present.

The minutes of the last meeting were read and adopted.

Mr. A. Macdonald gave a very interesting talk on first aid, with demonstrations for explanations. Mr. Macdonald is going to continue his talk on first aid at the next meeting.

It was decided to plan for a mock convention at the next meeting, which will be held in the school on Thursday, March 14th.

* * * * *

A basket social and concert will be held in the Good Hope school on Wednesday, March 7th, at 8 p.m.

Come and bring your friends, you will have a good time.

"Fresh from the Gardens"

The School Of Experience

People learn their most important and valuable lessons in the school of experience. It is a school that opens at birth and closes with death, and there are no vacation periods. We are passing through some super class at all times, and we are imbibing knowledge, learning something as a result. It may be that, like lessons learned in school and from books, we may for get some of the lessons of experience, for a time at any rate; even most frequently we may ignore and neglect the lessons which experience has taught us; but nevertheless they have left their imprint upon our minds and have influenced our lives for good or for evil, for woe.

It not infrequently happens that a short, sharp lesson is learned never to be forgotten from some one brief experience. Something enters our lives—it may be a great sorrow or a great joy, which then and there alters the whole course of our lives. On the other hand, it is often the case that in order that a lesson may be effectively learned, the experience which is teaching it may be greatly prolonged in order that it may be impressed upon us in the way that is necessary. And while individuals may learn a lesson from some experience very quickly, it is usually a much slower process for communities and nations to so learn and profit by experience

Consider the present economic upheaval throughout the world, now continuing into its 4th or ninth year. Some people, no doubt, learned valuable lessons from it during the first twelve-month of its duration: others have learned on the months and years have gone by. Communities and nations have learned some lessons, and some more, of course, learned more and faster than others. All are still learning; learning perhaps a little more thoroughly now than they were two and three years ago. But it is quite evident that the nations have not yet grasped, or at any rate accepted, the great truths which the Great Depression has been teaching any more than they grasped, or accepted, the great truths which the Great War should have impressed upon all mankind.

Possibly it is because man has not yet learned the lessons, or at least accepted the teachings of the existing depressed economic state, that the depression is so greatly prolonged and still continues. There are certain lessons which the nations of mankind must learn, and not only learn but put their learnings and knowledge into practical effect, before the depression will be overcome. The longer the depression continues the more forcibly it is teaching them lessons. They are lessons being learned through a bitter experience, but it is the stupidity and unwillingness of man to learn obvious lessons that is prolonging that bitter experience.

The four years of death, horror, suffering and destruction of the Great War, together with its aftermath of trouble and losses, of which the present economic recession and financial situation is a part, have not taught the nations the utter futility of war. Surely they appreciate the teachings of the Great War and its outcome, but they absolutely will not take the lesson to themselves with the result that the world is trembling to-day on the very brink of another terrible war.

But while the nations may thus be much slower than individuals to learn lessons they should learn and profit by, people in all countries are learning and in time their thoughts and their influence will direct the nations. It is, of course, much more difficult to bring a whole group or nation to accept a great truth on the account of experiences than it is to do so in the case of a few individuals to accept it. Individuals are now in ever increasing numbers learning valuable lessons as a result of the experiences through which they are passing. Lessons which will not be easily forgotten but which will have their impress on several generations to come. It will take time to translate their views into community and national life and action. That evolutionary process, nevertheless, is under way.

It is inevitable, too, that out of the experiences of a transition period such as the present, many ideas and theories will be advanced in all sincerity and seriousness as the solution of existing ills. It has always been so in all transition periods in the world's history, and it will probably continue to be so at all times of marked change. The mental processes of people are quickened by the experiences through which they are passing, but in numerous cases this merely results in the adoption of foolish or extreme ideas and theories, advanced as cure-alls for existing ills, and, generally speaking, insanity destructive the one of the other.

Clear thinking, therefore, is one of the most essential requirements in these times the present. Our experiences should teach us not to be too hasty. They should recall to us that we made great mistakes in the mounting days of prosperity, and they should put us on guard against committing other and equally great mistakes under the influence of a great depression which is moving to rash defeatist and far-reaching decisions beyond recall when we are either on the mountain peaks or at the bottom of the deep valleys.

In a word, in the school of experience we should learn that it is most important, vitally so, that we order and control our thinking powers, and apply them to the practical problems at hand in full realization of the fact that, while there is no short cut to betterment and perfection, betterment can be obtained by practical, united effort, while what may be regarded as an ideal will, if and when realized, prove to be but a stepping stone to a still nobler ideal.

A man thinks he is practicing economy when he denies himself something he can't raise the money to buy.

The Strong Men in a circus gets paid for carrying five or six people, while merchants "carry" hundreds and are often never paid.

Shortness of Breath Weak, Sinking Feelings

If going up stairs, climbing hills, walking too fast; if the least exertion causes you to stop to get your breath, or if you have tired, sinking feelings, it is time for you to stop and think as to the cause of your trouble.

What you should do is take a course of Milburn's H. & N. Pills. They tone up and strengthen the blood organs so as to prevent any harmful attacks of illness.

Ask your druggist for Milburn's H. & N. Pills.

Millions Made By Forgery

Bad Tobacco Has Done Much To Aid In Extortion

Between the scientist and the forger a relentless battle of wits is being waged. And although the reformed crook is fine telling the public that dishonesty does not pay, the forger is always one step ahead of the scientist. The Statistical Bureau of the League of Nations estimates that this form of crime accounts annually twenty million dollars a year. That is the sum which forgers manage unmercifully to amass at the expense of the public and the State

It is only of late years that science has been called upon in co-operation with the police in the detection of forgeries. This is specially true in England, for even to-day England has nothing to compare to the clumsily equipped laboratories which the French police have at their disposal in every important town

Until quite recently it was still possible to get away with the easiest and clumsiest form of forgery, which consists in rubbing or scraping out a figure or a name, polishing the roughened surface, and writing in a higher figure or a different name. To-day chemists have discovered that by exposing the paper to iodine vapor, the condensed iodine permeates the harrassed surface and forms a blot.

This simple but infallible test requires no special apparatus, and can easily be applied by anyone. In many foreign banks handling large amounts of "travellers' cheques," which are the forgers' happy hunting ground, counters are supplied with special iodine capsules which require only the heat of a match to give off sufficient vapour to test any cheque which they may have reason to suspect.

The activity of the forger is not confined to the "dud" cheque or banknote. The manufacture of spurious works of art and paintings that pass, until recently, probably the most lucrative branch of crooked skilfulness. But it is to this that chemistry has been called at last to have won the upper hand. It art experts when in doubt about the authenticity of a canvas misses his pot at their disposal since the discovery of the X-ray, there need never be another faked painting on the market.

Vanishing Fortunes

Americans Millionaires Reduced To Five Thousand Since 1929

Large American fortunes are disintegrating, remarks Mr. Samuel Crowther in the current Saturday Evening Post. The five thousand millionaires who today survive the thirty thousand of 1929 still have a good chance to lose their fortunes before they die, says the writer, who observes that: only one sizeable fortune, the Astor estate, is more than a hundred years old—the three really large ones, the Ford, Rockefeller and Mellon estates, being still in the first generation. To find any fortune going back more than three hundred years, he says, one must turn to the Orient. Even of the eight millionaires whose heir old their fortunes are; some go back more than a thousand years. They are Yamashita in gold, copper and precious jewels.—Toronto Globe.

THAT DEPRESSED FEELING IS LARGELY LIVER

Wake up your Liver Bile

—Without Calomel

Try the "Dodd's" way—get relief from constipation, sick headache, dizziness, and that "all-in" feeling. Take Dodd's Liver Pills and see how quickly your system is cleansed, your liver tones to healthy action, and your entire system is refreshed.

Dodd's Liver Pills are purely vegetable, and are guaranteed to be free from calomel or any other harmful drug. Take them as directed and see how quickly they relieve constipation, sick headache, biliousness, dizziness, and that "all-in" feeling. Dodd's Liver Pills are sold by druggists everywhere at 25c a box. Refuse substitutes. Insist on Dodd's Liver Pills.

Forces Need Inflation

Adoption of a modified system of credit similar to that used in the United States, said inflation, raising of commodity prices, state control of business from a modifying and regulating point of view, and class thinking as a means of returning Canada to an economic state of prosperity were advocated by Premier Brownlee in addressing a banquet of the Alberta provincial board of the Retail Merchants' Association.

It LASTS and LASTS

Construction Program

Proposed Building Undertakings Will Stimulate Industry

Canada's recovery efforts are to be strengthened in the early spring by a moderate programme of building and construction "moderate" compared with the gigantic United States plan "because we have not the resources"—Major L. L. Archibald, president of the Canadian Manufacturers' Association, said in addressing the Canadian Hardware convention and exposition delegates at Toronto.

Major Archibald said the proposed building programme throughout the country would stimulate industry. "It is obvious that such a programme will help your business and it will help ours," he said. "It will give work to many thousands and put money in circulation.

"We believe that our export trade will continue to increase in 1934. We have turned an adverse balance into a favorable balance of very large proportions. Canadian exporting firms are putting forth extraordinary efforts to maintain and extend the markets for their goods in other countries. If their hopes are realized they will bring much business and, consequently, much employment to Canada during this year."

Apple Surprise Pudding

3 tablespoons Benson's Corn Starch
1 cup water
1 well-beaten egg
6 medium-sized apples, sliced thin
1 tablespoon sugar
½ teaspoon ground cinnamon
½ teaspoon salt
1½ cups Crown Brand Corn Syrup
1 cup raisins
½ teaspoon ground cloves
1 tablespoon butter.

Cook Corn Starch blended with salt and water in a double boiler with Corn Syrup until thick, or for about 20 minutes. Add well-beaten egg. Place sliced apples in pudding dish, cover with raisins and sprinkle with sugar well mixed with spices. Dot over with butter. Pour the hot sauce over all and bake in a moderate oven until apples are tender when pricked with a fork. Serve hot or cold with lemon or maple sauce, or garnish with whipped cream.

Service For Visitors

Police Interpreters Now Stationed On Streets In Paris

Police interpreters speaking four languages are now being used by the Paris police department in order to assist visitors They are stationed at central points in Paris and are maintaining a regular daily service. Each wears a badge bearing the colors of the nation whose language he speaks. Jean Chiappe, recently dismissed Prefect of Police, has maintained a school of foreign languages at the Prefecture of Police where members of the force have been eligible to attend.

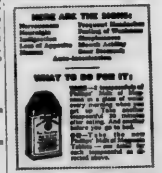
Auto designers must expect a year of big winds

Majority Would Not Work

New York city authorities the other day began an experiment to see just what percentage of street beggars are really "deserving cases." They arrested 62 panhandlers on the streets, investigated them, and offered jobs to those who wanted them. Seven of the 62 were delighted to get the jobs. The other 55 being men who preferred begging to working, immediately were sent to jail.

Those who think only of themselves have but little or nothing to think about.

12 Past 45 and "Low" and Upset Look for Acid Stomach



If you have Acid Stomach, don't worry about it. Follow the simple directions given above. This small dosage of Phillips' Milk of Magnesia acts at once to neutralize the acids that cause headache, stomach pains and other distress. Try it. You'll feel like a new person.

But—be careful you get genuine Phillips' Milk of Magnesia, or Phillips' Milk of Magnesia Tablets when your trade mark—"Dr." and "Phillips."

19 Years Ago Today

Wednesday, March 4th, 1915

W. J. Foster will shortly have a brick veneer construction on Gertrude Street.

The Grand Challenge Cup was at Vegreville by Atkinson's rink is on view at the Drug Store, while the Winter's Trophy was at Edmonton by Bowden's rink is in Gordon & Fisher's window.

Mrs. Turner is making arrangements to have a cook book printed in aid of the Fort Saskatchewan Patriotic Work Society.

The following names have been sent to the Militia Department as officers of the local cadet corps: Bertrand, captain; Gentzey Barker, 1st lieutenant; Edward White, 2nd lieutenant.

In Shipment Brand Fertilizers Marketed In The Dell?

Here and there throughout the country we have come across farmers who expressed the opinion that the use of this fertilizer was harmful to the soil, or on the other hand, that if the use of fertilizer was once commenced, it would have to be kept up or else the soil would fail to produce any crop.

Both of these questions were dealt with very adequately by the John Russell, Director of the Rothamstead Experimental Station, England, the oldest Experimental Station in the World. Sir John was the first point out by stating that the continuous use of Superphosphate on one field for the last 90 years has failed to show any harmful effects. He also showed that his work at Rothamstead that on a field which had been fertilized over 70 years and then had the applications of Fertilizer stopped, the yields gradually decreased over a period of 5 or 6 years from the level at which they had been maintained from the use of fertilizer until they reached the level of the yields on the plots which had never received any fertilizer, following which they remained constant at that point.

On another field the Rothamstead records of 14 years show an average yield of 12 bushels of wheat per acre on unfertilized soil and an average of 35 bushels per acre where a heavy application of fertilizer was carried out.

Josephburg News

The Josephburg Victoria U. F. A. local met on Thursday, February 22. It was a well attended meeting with an increase of four new members. The discussions on acreage reduction were very interesting.

The next meeting will be held on Wednesday, March 28th.

YPRES VALLEY

The Ladies Aid held their meeting on Wednesday a the home of Mrs. Latimer, Mrs. Bromly, President in the chair.

The ladies are planning a social for the future.

Mr. Dave Gunn has removed from Lamont, B.C.

Eight rinks took on all night session of bridge at the home of Mr. Joe Irwin. They played for eleven hours, with a break at midnight for refreshments which were however served by females.

Willie: "I think Uncle Jack is going to take us for a drive."

Mother: "You'd better go upstairs and wash your face."

Willie: "Reckn't we better find out for sure, mother?"

OBITUARY

CARL HAINE

Carl Haine of Josephburg, Alberta, passed away at his late home on the 26th February, 1934, aged 39 years. He is survived by his wife, five sons, Jack of Mannville, Alta., Glen and Archie of Fort Saskatchewan, and Alvin and Leonard of Lamont, and three daughters, Mrs. A. Underschultz and Mrs. E. Rooney of Fort Saskatchewan and Mrs. Wenger, Wagner of Edmonton. The late Carl Haine had been a resident of the Josephburg district for the past 21 years. The funeral service was held on Thursday afternoon at 2:00 p.m. at Josephburg Reformed Church. Rev. Wiebe officiated and interment took place in the Josephburg cemetery. Steward & McBride, funeral service.

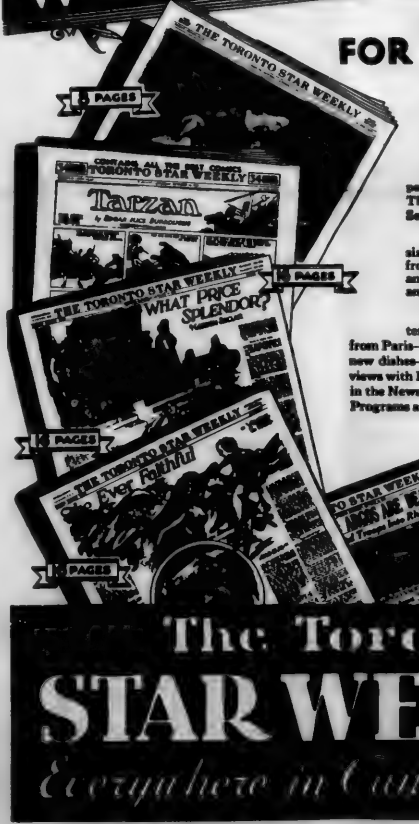
Next April several thousand Manitoba women will exercise their newly won right to vote in civic elections.

CANADA'S GREATEST WEEKLY NEWSPAPER

Produced in Canada

FOR CANADIANS

by Canadians



Canadian scenes — painted specially for The Star Weekly by leading Canadian artists —reproduced in their true colors—worthy of frames. Photographic reproductions in sepia — pictures of famous scenes and famous people. News of the world told by the camera. That's The Star Weekly Rotogravure Picture Section. 8 pages every week.

34 Colored Comics and Cut-outs — 16 Full-sized Newspaper Pages. Famous characters from the land of laughter who perform queer antics and tell new jokes. Lots of fun for old and young.

Stories by famous writers—Romance—Mystery — Adventure and Humor. Fashion News from Paris—Patterns for the Home Costumer. Cookery — new dishes—new Suggestions for Entertaining. Interviews with Famous People—stories about people who figure in the News. News of the Movies and Movie Stars—Radio Programs and Radio Performers — Advance news and reviews of the Theatre — Music. And special articles on timely subjects by Star Weekly Staff Writers. 2 sections—32 pages.

News of Sport—and General News of World Interest — 8 pages.

COLDS are DANGEROUS
Soothe and relieve them, build up resistance with SCOTT'S EMULSION
SCOTT'S EMULSION

WORLD HAPPENINGS BRIEFLY TOLD

Alarmed by a rapid increase in the use of opium throughout Manchuria, the Manchukuo government is opening a chain of clinics in Mukden, Changchun, Kirin, Harbin, Antung, Chengchiatun and Jehol City, where drug addicts may receive treatment free.

Outside the United Kingdom, Tur-nips consumed more ten per capita than any city in the world, C. E. Lough, member of a firm of British tax merchants states. In per capita consumption, he added, Canada stands third among countries.

Over 10 per cent of the male population are more or less color-blind, according to the conclusions reached by a committee which has been investigating color-vision requirements in the Royal navy.

A hollow statue of Mussolini is to be erected atop one of Rome's seven hills, and travelers will carry visitors to a platform in the head, where they will be permitted to "see the world through Mussolini's eyes."

Two air mail extensions in the North West Territories will be inaugurated during the winter, with Cooperstand and Chesterfield Inlet established as the new receiving postal stations.

Lord Willingdon, viceroy of India and former Governor-General of Canada, is to be in London in the spring. He is going home on personal leave, which will probably be of the usual duration of four months.

A Perley pioneer holding title to land in Calgary recently, has left the residue of his estate, $125,000, to the City of Calgary hospitals.

Almost all commodities moving out of Vancouver to world markets during the first nine months of 1933 show an increase over the corresponding period of 1932, according to a report issued by Port Superintendent H. J. Burns, of the harbor board.

Dr. Donald John Arvesen, a native of Cobourg, Ont., who became one of Great Britain's most noted brain and nerve specialists, died suddenly at a meeting of the Medical Society of London, England.

Pest in Fraser Valley

Second Lodge Pierces Pesthole Unearthed Second Season

Farmers of the Fraser Valley, British Columbia, have an unusual source of income in their pest fields. The pest is out in the summer and stack-like piles of pea vines are allowed to dry in the sun. Later it is removed to the threshing barns and when in ripe condition it is treated by machinery for poultry litter, for horticultural and nursery purposes and for mulching in building re-quirements. There are several large pest fields in the lower Fraser Valley, one in Surrey, one in Burnaby one in Pitt Meadows and another in Lulu Island.

MINARD'S KING OF PAIN LINIMENT

Grasshopper Destruction

Severe Outbreak Next Year Seems Almost Inevitable

There seems to be a rather widespread belief that, in spite of the fact that grasshoppers were very abundant during the summer and fall of 1933, no severe outbreak will occur in the spring of 1934. The actual facts however lend practically no support for such an expectation. To understand the situation some knowledge of the life history and development of grasshoppers and of the nature and cause of the recurrent outbreaks is necessary.

Life History and Development.

Grasshoppers of economic importance in the Great Plains all pass the winter in the egg stage in the soil. The eggs are deposited by the adult or winged grasshoppers during August and September. The adults live and continue to deposit eggs as long as warm, open weather occurs, gradually dying off until the coming of snow and severe cold finds the last survivors. The eggs are very well protected against premature hatching. Indeed it has been found that a period of 30 days with the temperature continuously above 80 degrees Fahrenheit in the soil would be required to cause hatching in the fall. The eggs are also able to survive extreme cold and, as long as they remain undisturbed in their natural position in the upper layer of soil, our severe winters have no effect upon them. When the soil dries and warms up, hatching occurs more easily but usually does not begin in the Prairie Provinces until at least the middle of May. The young commence the latter part of that month and early in June although often after over a considerable period, the hatching of these eggs is usually complete by the latter part of June. The young hoppers do not develop rapidly, beginning about the middle or latter part of July. The adult grasshoppers may then move to other localities if feeble, in which they continue their feeding until ready for depositing eggs.

There are in this country many species of grasshoppers, which are of little if any economic importance here, which vary greatly in their life habits. For example, some of these other forms hatch from the eggs during September and pass the winter in a part-grown condition. Other species winter as well-grown nymphs and still others in the adult stages. All of these types are of comparatively little, if any, importance.

Natural Resources Commission

Saskatchewan And Alberta Seeking Compensation For Alienation

Saskatchewan and Alberta will urge upon Premier R. B. Bennett the immediate establishment of a natural resources commission to determine the compensation coming to the provinces for the alienation of lands since 1930.

Mr. Justice Hyndman has been named as the Saskatchewan member of the commission while Alberta will be represented by Mr. Justice Tweedie.

Announcement that the two provinces would make joint representations for such a move was made by Hon. M. A. McPherson, Attorney-General and Provincial Treasurer for Saskatchewan.

He stated that the commission would jointly consider all the claims and would adjudicate on the position of both provinces. The Dominion government, he believed would likely appoint a representative for each province, while the two provinces and the federal government would likely agree upon a chairman.

Floods For Stronger Navy

Britain Before Safety Line Opinion Of Lord Beatty

Lord Beatty, former chief of the naval staff, made a plea for a stronger British navy in which he urged Great Britain to adopt a shipbuilding programme for unemployment rel of

Speaking at the Navy league dinner, he declared that Britain must never again bind herself to "such an unsafe basis" as existed after the London naval treaty expires in 1936.

"It is not parity with the United States that I covet all," he maintained, "if she wants as many as we do.

"But the acceptance of 5:5 to do the work of 70 was a course not only unsafe blunder it is a matter of interest and grave concern that the government of the United States may to-day, 1937,000, a day of cost, increase over the 1914 numbers, and that Japan had 80,000 in 1921 and has probably a greater number today.

"Our personnel has been reduced to 90,000, a decrease of 30 per cent. on 1914 numbers.

Prince Of Wales' Height

Second In Commonwealth Set Somewhat Above Five Feet Six Inches

The height of the Prince of Wales was recorded on the occasion of his visit to Roskilde Cathedral, the Westminster Abbey of Denmark. Within the cathedral is a pillar against which, from time to time, royal Danish boys have stood and had their height marked. The Prince's line was 5ft. 7 in. from the floor. The mark in the cathedral includes those of Peter the Great, 6 ft. 11 in. the present King Christian of Denmark, 6ft. 7 in.; and Tsar Alexander III. of Russia, 6 ft. 2 in. The Prince placed flowers on the tomb of his great-grandparents, King Christian IX. and Queen Louise, the parents of Queen Alexandra.

Whose Your Daughter Comes to Womanhood

Give Her Lydia E. Pinkham's Vegetable Compound

Most girls in their teens need a tonic and nerve system. Give your daughter Lydia E. Pinkham's Vegetable Compound for her to build up her health at this time. Also useful for her mother at the "middle age" period. Pinkham's Compound helps Nature.

SUNDAY SCHOOL LESSON

NOVEMBER 5

PAUL IN JERUSALEM

Golden Text: Where the spirit of the Lord is, there is liberty.—2 Corinthians 3:17.

Lesson: Acts 21:1-23.

Devotional Reading: Romans 8:1-11.

Explanations and Comments

Trouble Makers Come To Antioch From Jerusalem, verse 1. Jewish synagogues were composed of Jews and proselytes to the latter being Gentiles who had received the Jewish religion and circumcision. Other Gentiles who attended the synagogue services were called "God-fearing" or "devout," but were not in full fellowship with the rest because they had not been circumcised. We have seen how Paul and Barnabas preached to the Gentiles and founded flourishing churches among them (note at Pisidian Antioch, Lystra, Iconium and Derbe on his first missionary journey) and how they reported to the Church at Antioch of Syria, the church which had sent them on their mission. Later, certain Judaizers (verse 1) came into the Gentiles' The church at Antioch, itself composed largely of Gentiles, rejoiced over the good news, and did not realize the far-reaching effects of the new departure. When the report reached the Church at Jerusalem, however, it was not so welcomed in fact, it aroused violent opposition among Christian members of that church upon their own responsibility went from Jerusalem to Antioch and declared that Gentile converts must first become Jewish proselytes before they could become Christians must be circumcised after the manner of Moses (verse 1).

In order to be saved.

The Committee Send From Antioch To The Mother Church In Jerusalem, verses 2, 3. The visiting Jews aroused much discussion and dissension in the church at Antioch. Paul and Barnabas opposed them vigorously. Finally it was decided to send a delegation to Jerusalem and settle the vexed question with the apostles and elders there. Naturally, Paul and Barnabas were appointed among the delegates.

They started out happily, being escorted some little distance by fellow-members of the church and journeyed southward through Phoenicia and Samaria. Everywhere they brought joy to the hearts of the brethren. As they declared that the Gentiles were turning to the Lord (verse 3).

The Arguments For And Against Christian Liberty, verses 4-21. When they were honorably received by the mother church. They gave an account of what had taken place in the newly founded Gentile churches. Then certain Pharisees arose and said, "It is needful to circumcise them and to charge them to keep the law of Moses."

No great a matter, which involved the question whether the gospel was for all the Gentiles or only for the few who should first become Jews, had not been settled aforehand. A ministry of apostles and elders was called to consider the question. After much moderate discussion, Peter rose up and said, "Brethren, ye know that a good while ago God made choice among you, that by my mouth the Gentiles should hear the word of the Gospel and believe." He was referring to the time not long after the conversion of Paul when he had gone down to Joppa and had had taken his vision on the housetop, and then had come with the Levite Cornelius and after preaching to him and his household had baptized them; for, as he said, "Of a truth I perceive that God is no respecter of persons, but in every nation he that feareth Him, and worketh righteousness, is acceptable to Him." Peter had had to justify his conduct to the other brethren at Jerusalem, and when they heard the circumstances they had glorified God, saying, "Then to the Gentiles also hath God granted repentance unto life."

Preventative Remedies

English Surgeon Discovers Cancer Cure

The cure for cancer, in the opinion of Dr. H. Beckwith Whitehouse, eminent English surgeon and gynecologist, will likely be preventative.

"We shall probably find some chemical or animal substance to strengthen our natural resistance to cancer and, in that way, prevent it," he said in addressing a gathering of physicians at the Academy of Medicine at Toronto.

Later in an interview, Dr. Whitehouse said cancer could not be attributed to any medicine or the irritation from the stem of a pipe or cigarette. Cancer, he said, is no way hereditary.

"It is very possible that cancer is caused by an organism," he said. "It may be an organism too small to be seen yet by the microscope. One thing in this connection is interesting. We have established beyond very much doubt that there is no cancer beaver. We have kept lots of every cancer rats for years, and we find cancer cases do develop again and again in certain beasts."

Armament Dispute

Discords Issue Between British And German Foreign Ministers

The government has caused a white paper which it was learned authoritatively was framed with the approval of the national government, setting forth the stand of the British government in the dispute on disarmament negotiations between Sir John Simon, Secretary of State for Foreign Affairs, and Konstantin von Neurath, the German Foreign Minister.

The document merely put into permanent and official form previously published reports regarding the disarmament bureau meetings in Geneva on October 14 and an exchange of telegrams between Sir John and Baron von Neurath concerning Germany's withdrawal from the arms parley.

The main point at issue between the British and German foreign ministers was whether Sir John had actually interpreted Anglo-German conversations in London, October 6, to American delegates and others.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED
Wake up your Liver Bile
—No Calomel necessary
Do you go to bed feeling all right, then wake up next morning sour, sunk, headachy, constipated, bilious, "all in the dumps"? Your trouble is due to lack of bile from your liver. Your liver should pour out two pints of liquid bile into your bowels daily.
You need Carter's Little Liver Pills. Purely vegetable. Make bowels move freely. Ask for Carter's Little Liver Pills. Refuse substitutes. 25c at all druggists.

Isle Will Be Stopped

Under New Code U.S. Gangsters Cannot Buy Machine Guns

Small arms manufacturers in United States have agreed to accept on an experimental basis to their NRA code a provision forbidding sale of machine guns and sub-machine guns except to governments, banks, corporations with private police departments, and foreign purchasers. As a result, as soon as the code goes into effect, the hitherto almost unrestricted sale of machine and sub-machine guns to gangsters will come to an abrupt halt, except when the arms are bootlegged into underworld channels.

ZIG-ZAG CIGARETTE PAPERS 5c

Interesting Data On Population Relative To Wheat Production And World Market For Grain

Some very interesting data on world population, relative to wheat production, and the world market for wheat, are to be found in a recent study by Prof Werner Hamkhausen, of Bonn Poppelsdorf, Germany, says the Winnipeg Free Press. The study, which is issued by the International Institute of Agriculture at Rome, reveals the fact that while population and per hundred sum of the race while production goes on unchecked, or at least the "slowing down" is not yet hardly noticeable.

The extent to which the slowing up of the natural growth of population has entered into the present wheat problem is examined and found to be considerable. A man, together with the drop in per capita consumption in many countries, of the accumulation of huge stocks of wheat on the world market and the heavy decline in prices. Extension of acres and technical progress in wheat production is found to have outstripped the natural growth of population and possibilities of production have proved to be in advance of marketing facilities.

The whole present generation of farmers have grown up in the belief that a continuous increase in wheat lation and along with it a continuous expansion of trade, and a "normal phenomenon" of increased consumption, states Prof. Henkhausen. He says men believed that unless new areas were brought under cultivation there would be a shortage in the world's food supply, whole countries and immense continental areas were opened up with that idea in view of the extension of production with increasing yield capacity in anticipation that the consumers, for whose benefit this machinery was being set up, would come into existence of themselves.

The findings of eminent statisticians appear to dismiss this belief. Recent investigations reveal that there is now in view a stationary condition of world population of peoples. This is not confirmed in a superficial survey of population development in a great many countries and nations should bear the word of the Gospel and believe." He was referring to the time not long after the conversion of Paul when he had gone down to Joppa and had had taken his vision on the housetop, and then had come with the Levite Cornelius and after preaching to him and his household had baptized them; for, as he said, "Of a truth I perceive that God is no respecter of persons, but in every nation he that feareth Him, and worketh righteousness, is acceptable to Him." Peter had had to justify his conduct to the other brethren at Jerusalem, and when they heard the circumstances they had glorified God, saying, "Then to the Gentiles also hath God granted repentance unto life."

Preventative Remedies

English Surgeon Discovers Cancer Cure

The cure for cancer, in the opinion of Dr. H. Beckwith Whitehouse, eminent English surgeon and gynecologist, will likely be preventative.

"We shall probably find some chemical or animal substance to strengthen our natural resistance to cancer and, in that way, prevent it," he said in addressing a gathering of physicians at the Academy of Medicine at Toronto.

Later in an interview, Dr. Whitehouse said cancer could not be attributed to any medicine or the irritation from the stem of a pipe or cigarette. Cancer, he said, is no way hereditary.

"It is very possible that cancer is caused by an organism," he said. "It may be an organism too small to be seen yet by the microscope. One thing in this connection is interesting. We have established beyond very much doubt that there is no cancer beaver. We have kept lots of every cancer rats for years, and we find cancer cases do develop again and again in certain beasts."

Best Lamb In World

Canadian People Listening To Appreciative Home Purchasers

Canadian farmers are producers of the best lamb in the world, according to the Dominion Department of Agriculture, yet we as a people are only recently coming to appreciate this fact now per capita consumption is just over seven pounds. In 1932 some 80,000 more lambs were slaughtered in Canada than during the previous year. Fully 85 per cent of our lamb crop is now being grown lamb produced on fine, nutritious pasture from the Rockies to the Atlantic east and west.

The surplus of grass-grown lambs is put into store for consumption during the winter and early spring months. This supply is now being augmented from weekly slaughterings of grain-fed lambs produced mainly on the prairie and feet hills country and finished in Ontario. The sheep industry is being gradually but steadily organized so that a regular and steady supply of choice product is available to the housewife at all times. More lamb is being eaten each year and per capita consumption increased there will be a corresponding increase in production to meet the demand.

The present is an opportune time to suggest the advisability of a slight adjustment in the family budget so as to include more lamb from week to week. It is one of the healthiest meats for a growing family and may be served but we cold. Legs, roasts and chops provide a variety of cuts from which to select. Being a choice Canadian product that has little export outlet, increased purchases of lamb will tend to release more bacon for export as provided for under the Ottawa Conference Agreement.

Grain Feeding Is Expensive

Should Not Be Used For Low Grade Animals

In all grain feeding it must be kept in mind that the right time to feed is an expensive one and can under no circumstances be used in the feeding of animals that are going to deliverably two months. Most only must the animals be of approved types, but experience has clearly proven that certain kinds of farm animals greatly excel others in their ability to utilize the feeds provided. Especially is that true in connection with the feeding of grains. Poultry would probably head the list as this regard with the pig standing a close second in its ability to manufacture feed grains into meat economically. The dairy cow because of her ability to produce in a short time enormous quantities of milk during a long lactation period, would rank third, followed by beef cattle and sheep.—Professor A M Shaw, University of Saskatchewan.

Illiterate Ignorance

The Brockville Recorder and Times says: "As an example of what some Americans do not know about Canada may we cite a letter appearing in the New York Times in which the writer referred in grief over what Canada has to the course of reconstruction a canal from Georgian Bay to Hudson Bay which will materially shorten the voyage of United States vessels bound for Europe."

RUSSIAN ACTRESS JOINS MOVIE STAR FIRMAMENT

Here is a study of Anna Sten, Russian actress, who has broken into the Movie News Headlines with her picture, "Nana." Critics hail her as one of the brightest of the new others because of her spectacular getting in "Nana."

Progress Made By West In Last Decade Has Been Mainspring Of Canadian Achievement

All-Canadian Route Best

Shipping Goods Through P.E. Ports Means Money Loss

Not only is there no advantage to the grain-grower by shipping through United States ports, but when that is done there is a direct loss to Canadian elevators, Canadian railways, to the employees of both to the ports of Canada and to the thousands of men engaged in the handling of Canadian traffic in these ports. There is also another serious loss to this country because an investment amounting to billions of dollars has been made in Canada in the transportation systems, canals, elevators and port equipment none of which will be used if the old order of using United States ports for Canadian grain shipments is restored.

SCOTTS EMULSION

Fate Of Forest-Denuded Countries

The Nations Made Treeless Go Dying Nations

A treeless nation is a dead nation.

Where the forests of a country are neglected the mental and moral health of the inhabitant begin to decline.

Nations made treeless by the hand of man are dying nations which once were great and which no longer count, and are those the forests of which have been ruthlessly exterminated.

No matter what political calamities the overtaken and submerged peoples whose governments foster and care for forests have potency remains, their vigor still endures their racial resurrection is certain.

Take a map of the world and trace the boundaries of those countries which he pointed Jesus out to them are the lands of the most advanced. Where the forests have been ruthlessly cut down, and are those of which Jesus was doing. When you was free he had been the first to recognize Jesus the Son of God, the living One, but in his imprisonment he grew doubtful, for to that caged eagle Jesus seemed too gentle and meat in his thoughts with men. However in his depressed state of mind, he may have thought that Jesus was indifferent as he often might behold his scenic. Evidently he began to fear that he had misjudged Jesus, for when he pointed Jesus out to them as the Lamb of God that should take away the sins of the world. "It is a terrible moment when a man's prepared soul is brought to say cause to see quite sure that his message was unprepared." (George Clark Peck).

John sent his disciples to Jesus with the question, "Art thou he that cometh or look we for another?" Jesus sent them back, where to your sir? John seems to mean, for he had pointed him out. (Mt. 3 16) that "Even now the ax doth at the root of the trees. A tree bringeth not forth fire, whose fan is in his hand, will thoroughly cleanse his threshing-floor, and will gather the wheat into the garner, but the chaff he will burn up with unquenchable fire."

John's disciples found Jesus busy with the very work that had disappointed John. The sick were coming to Jesus and he encouraged their coming to the poor he preached the gospel but uttered no word about the law or the sin. Jesus stopped his work long enough to answer John's messengers, bidding them to go to John and tell him what they saw and heard: the deeds of mercy to blind, the lame and deaf, the lepers and the dead and the poor and a fulfilment of the prophecy as to the Messiah in Isaiah 26 5 6, 61 1. Tell your story over again and in terms of these prophetic lists. Let him study the two types and draw his own conclusions. It was not the revelations to John to contain his Messianic idea, for he took his own ground that, after all, love was the chief Messianic current." (A. B. Bruce).

Empire Settlement

Establishment Of Separate Village Communities in Rhodesias

Empire settlement by establishment of separate village communities in the Dominions is the basis of a scheme contained in a report issued in London by the Empire development and research committee headed by Sir Henry Page Wrought. The committee has been examining the question unofficially for two years.

The plan contained in the report would create entirely new units of settlers in the Dominions to distinguish remote from settled areas. Railways would be built to reach the new settlements.

Devotional Reading Revelation 1 12-18

Explanations and Comments

The Testimony of Jesus' Works.

1 2-6 Jesus' reply was imprisoned by Herod (Mt. 14 3-5) and his disciples came and told him what Jesus was doing. When John was free he had been the first to recognize Jesus for the Lamb of God, the living One, but in his imprisonment he grew doubtful, for to that caged eagle Jesus seemed too gentle and meat in his thoughts with men. However in his depressed state of mind, he may have thought that Jesus was indifferent as he often might behold his scenic. Evidently he began to fear that he had misjudged Jesus, for when he pointed Jesus out to them as the Lamb of God that should take away the sins of the world. "It is a terrible moment when a man's prepared soul is brought to say cause to see quite sure that his message was unprepared." (George Clark Peck).

John sent his disciples to Jesus with the question, "Art thou he that cometh or look we for another?" Jesus sent them back, where to your sir? John seems to mean, for he had pointed him out. (Mt. 3 16) that "Even now the ax doth at the root of the trees. A tree bringeth not forth fire, whose fan is in his hand, will thoroughly cleanse his threshing-floor, and will gather the wheat into the garner, but the chaff he will burn up with unquenchable fire."

John's disciples found Jesus busy with the very work that had disappointed John. The sick were coming to Jesus and he encouraged their coming to the poor he preached the gospel but uttered no word about the law or the sin. Jesus stopped his work long enough to answer John's messengers, bidding them to go to John and tell him what they saw and heard: the deeds of mercy to blind, the lame and deaf, the lepers and the dead and the poor and a fulfilment of the prophecy as to the Messiah in Isaiah 26 5 6, 61 1. Tell your story over again and in terms of these prophetic lists. Let him study the two types and draw his own conclusions. It was not the revelations to John to contain his Messianic idea, for he took his own ground that, after all, love was the chief Messianic current." (A. B. Bruce).

Marvels of the Human Eye

By F. M. CROWE, Optometrist-Opticians, Calgary

No. 11—THE EYE IN ITS RELATION TO HEALTH

The eyes are large [illegible] health and efficiency. Since Nature allots such ample organs to proper share of our total nerve energy, it follows that if defective eyes use too much, other organs suffer a shortage, causing them too weak to carry on their functions properly. Hence we often suffer ills in other organs when the primary cause is to be found in the eyes.

The eye is the most wonderful of the five special senses, extremely sensitive and delicate and very easily thrown out of adjustment by over-work or abuse. A friendly or look is given rest but the eye which has shared the general fatigue of the body is often required to go on working long after the work of the day is abandoned. Do not imagine that these work like reading, is the only time when the eyes work. Quite frequently work requires the use of extra nerve energy but the eyes are willing and using nerve power every moment they are open.

The possibility of conserving human nerve energy by correcting eye defects is greater than by any other means. These defects are usually due to the eyeball being imperfectly shaped and the muscles are invariably found constantly trying to overcome these defects in the interests of better vision. Too mounting strain can only be relieved by wearing correcting lenses. It is not good for even normal eyes to concentrate too long on reading or writing. Make it a habit to "look off" periodically for a few seconds and thus allow the muscles to relax and restore their nerve force. Visual shadows and glassy pauses are such as possible. Do not permit the light to glare into the eyes but rather on the book. Reading lying down is injurious. Hold the head erect with your work fourteen or sixteen inches from the eyes. It is harmful to continue at close work if the eyes smart, water, ache or blur, as these are some of nature's warnings that there is trouble ahead. Have your eyes examined by an expert and know their condition.

LYDIA E. PINKHAM'S TABLETS FOR WOMEN

They relieve and prevent periodic pain and associated headaches. Yes, they've been just a pain killer but a modern medicine which acts upon the CAUSE of your troubles. Thus almost one brings permanent relief. Sold by all druggists.

Little Journeys In Science

THE SCIENTIFIC SPIRIT

(By Gordon S. Ouest, M.A.)

How a backwoods doctor over a hundred years ago made discoveries which are accepted today as fundamental in the study of the human stomach, is an interesting page in the history of medicine. Dr. William Beaumont, self-taught from books available in small villages, proved that the true scientific spirit is as likely to flourish in the lumberman as in the university. When the war of 1812 broke out he joined the American army as a surgeon, and was stationed on the island of Mackinac at the head of Lake Michigan.

It was there that an accidental gunpowder accident started her on his scientific career. Alexis St. Martin, a Canadian coureur du bois, came to the post with a frightful gun wound in his abdomen. The wounded man recovered under the doctor's care, but there remained an opening in his left side which resembled a window, and through which food or drink could be put in this manner through his stomach. Dr. Beaumont at once seized the opportunity to study food after it had been chewed and swallowed.

He hired St. Martin to submit to observation, and "cost the poor fellow now with him from one post to another, forever peering into the window", and making the most ingenious experiments with every kind of food available. Dr. Beaumont possessed that tremendous desire to know about things, out of which true greatness, in science springs. The data and observations on the Gastric Juices and the Physiology of Digestion."

This book made Dr. Beaumont's name famous in the world of medicine, and his unusual patient immortal. To-day text-books on physiology quote the original statements of this backwoods doctor, and many of his observations are held as the last which have yet been made on the human stomach.

DENICOTEA CIGARETTE HOLDER

DENICOTEA Cigarette Holder filters out nicotine, tars and impurities and makes any cigarette milder and cooler.

Audience Was Satisfied

Did Not Know Chrism Used Record Instead Of Singing

A record writer says his funniest experience at a banquet was when Chrism was called on to sing at one. "Chrism declined," he said, "but the chairman was insistent. Chrism agreed to sing. He went behind a screen and played one of his gramophone records. The audience was spell-bound. Chrism was enjoying a quiet chat with a friend, and at the end of the song he stepped in front of the screen, bowed with a low, self-complacent the chrism of applause. He explained that his voice was not in good fettle that evening. The audience never knew the trick he had played."

ANDREWS LIVER SALT

GERMANY BACKS BRITISH PLAN FOR DISARMAMENT

Berlin Chancellor Adolf Hitler will join forces with Great Britain in a supreme effort to start a new movement for disarmament it was reported here

The chancellor, according to well-informed persons, approved a British memorandum "in principle," following a long and cordial conversation with Sir Joseph Ball, chief of British Intelligence, who flew to Berlin from London and met in his headquarters with Hon. Hoover over in his depressed state of mind, he may have thought that Jesus was indifferent as he often might behold his scenic. Evidently he began to fear that he had misjudged Jesus, for when he pointed Jesus out to them as the Lamb of God that should take away the sins of the world. "It is a terrible moment when a man's prepared soul is brought to say cause to see quite sure that his message was unprepared." (George Clark Peck).

John sent his disciples to Jesus with the question, "Art thou he that cometh or look we for another?" Jesus sent them back, where to your sir? John seems to mean, for he had pointed him out. (Mt. 3 16) that "Even now the ax doth at the root of the trees. A tree bringeth not forth fire, whose fan is in his hand, will thoroughly cleanse his threshing-floor, and will gather the wheat into the garner, but the chaff he will burn up with unquenchable fire."

John's disciples found Jesus busy with the very work that had disappointed John. The sick were coming to Jesus and he encouraged their coming to the poor he preached the gospel but uttered no word about the law or the sin. Jesus stopped his work long enough to answer John's messengers, bidding them to go to John and tell him what they saw and heard: the deeds of mercy to blind, the lame and deaf, the lepers and the dead and the poor and a fulfilment of the prophecy as to the Messiah in Isaiah 26 5 6, 61 1. Tell your story over again and in terms of these prophetic lists. Let him study the two types and draw his own conclusions. It was not the revelations to John to contain his Messianic idea, for he took his own ground that, after all, love was the chief Messianic current." (A. B. Bruce).

Empire Settlement

Establishment Of Separate Village Communities in Rhodesias

Empire settlement by establishment of separate village communities in the Dominions is the basis of a scheme contained in a report issued in London by the Empire development and research committee headed by Sir Henry Page Wrought. The committee has been examining the question unofficially for two years.

The plan contained in the report would create entirely new units of settlers in the Dominions to distinguish remote from settled areas. Railways would be built to reach the new settlements.

Given New Constitution

Self-Government For Ceylon With Reservations

London.—Constitutional government in Ceylon stood trial in the house of commons, emerging battered but still holding the field after the whole question of British government in the colonial empire had been thrashed out in debate.

A novel experiment in colonial autonomy, Ceylon was given a new constitution in July, 1931, getting self-government with safeguards for minorities along the lines proposed for India. In the house, Mr. Henry Page-Croft (Conservative), sharply attacked the scheme and demanded a parliamentary committee be appointed to inquire on the spot into its working.

Sir Stanley's motion was finally talked out.

So far from the Ceylon constitution breaking down, it was working smoothly satisfactorily and with goodwill, asserted Malcolm Macdonald, acting colonial secretary.

Mr. Churchill would like to see in a possible front with London and Berlin against Paris on the question of armaments.

Conversations between the chancellor and Capt. Eden will continue, and it is understood that they will touch on the British proposal of postponing any action on air forces for two years.

This angle may prove a stumbling block to the general negotiations between the British arms expert and Hitler

Thirty-Hour Week Bill

Arbitrary Ruling Could Not Be Applied To U.S. Industry

Washington.—Hugh S. Johnson, who has asked a lot of questions of other persons during the last few months, answered a few himself, during the course of which he told a house of representatives committee that he thought an arbitrary 30-hour week could not be applied to industry in the United States.

He went to the labor committee early in its hearing and sat by while Gerard Swope, president of General Electric company, and other views against Chairman William Connery's 30-hour work week bill. Both he and Swope took the attitude that hour reduction should come through the more flexible operations of N.R.A. codes.

"I think something has got to be done very promptly to shorten hours and raise wages," Johnson said, however. "and it is my intention to do so."

He explained that further shortening of hours should be in proportion to the return of business, "not in one bit, but in two or three bites."

Countess Bruney

Passing Of Second Wife Of Earl Bruney In London

London.—The famous voyages on the yacht Sunbeam by the first Earl Brassey were recalled by the sudden death in London of the second Countess Brassey, second wife of the earl who died in 1918. She was 79.

Lady Brassey, five years after her marriage, accompanied Lord Brassey on the Sunbeam to Australia in 1886 on his appointment as governor of Victoria, and they returned on the yacht in 1900. She was a stepmother of Lady Willoughby, wife of the former governor-general of Canada.

New Territorial Force For Eire

Dublin, Irish Free State.—The ministry of defence announced a new territorial force would be established and its members would wear uniforms similar to those of the famous "Irish brigade" which Roger Casement, later hanged for treason, obtained to form in Germany for the 1916 Irish rebellion.

Food Shortage In Ontario

Toronto. The Ontario department of agriculture report livestock in most counties of the province suffering as a result of a serious food shortage. Feed grains are particularly short, although supplies of hay and other roughage are adequate in most sections.

Premier Meets Opposition

In a recent speech at Ottawa, Dr. R. H. Hoyle head of the physics department, National Research Canada referred to a good newspaper as a "monument [illegible]" a world-embracing education. He added "Anyone who has observed the press over a period of years will have seen a growth in idealism, accuracy, honor, truth and fairness."

Land Settlement Plan

Movement To Assist Settlers To Take Up Land In Saskatchewan

Regina.—The Saskatchewan government will shortly launch a large land settlement scheme, acting in co-operation with the railway companies and the cities

Through arrangements with the railway companies, settlers are buying up raw land and will be allowed a four-year period free of the payment of principal or interest. Partially improved land will be subject to a two-year term clear of payment. Concessions have been granted on passenger rates by the railroads.

Unanimous endorsation was accorded to the plan by the mayors of Regina, Saskatoon, North Battleford, Moose Jaw, Swift Current, Prince Albert and Weyburn.

Regina has already taken steps to come into line with the proposal. Applications from relief recipients to come under the scheme are now being received by officials of the Regina relief board to be submitted to the government for approval when that stage of the plan is reached

Socialist Paper Seized

Chancellor Dollfuss Organizing New Hope For Austrian Working Class

Vienna.—Chancellor Engelbert Dollfuss took his first step toward organizing a new life for the Austrian working class by placing the director of the official news agency in charge of the seized Socialist party publishing house.

Through the former official Socialist organ, the Arbeiter Zeitung, remodeled in conformity with the spirit of the new times, the government will endeavor to make it clear to workers "the government's Christian conviction makes it as a matter of principle the friend and protector of the working class."

Discipline In Jails

Hon. G. L. McPherson Defends Administration Of Alberta Institutions

Edmonton.—Defending the administration in provincial jails, Hon G. L. McPherson, minister of public works, declared here in the Alberta legislature that there was a great need for strict discipline in the institutions.

His statement [illegible] in answer to a series of articles purportedly written by an ex-prisoner and appearing in an Edmonton newspaper.

"I do not uphold brutal treatment, nor is it sanctioned in these institutions, but there is the greatest necessity for the strictest form of discipline otherwise there would be riots, outbreaks, bloodshed and death, asserted the minister.

Answering "black-hole" allegations, he said that between April 1, 1931, and March 1, 1932, only 31 out of 3,665 prisoners passing through Fort Saskatchewan jail, named in the articles, received punishment in the form of solitary confinement for an average of 2½ days each.

Moccasin Telegraph

Recorded Indian Used To Strike To Protect Family

Winnipeg.—"The moccasin telegraph" is overt, but not always accurate The central figure in a distorted story of death by torture was revealed as a kindly Indian who intended on being tied to a stake to avoid the risk of harming his family in sudden fit of insanity "His torturers" were neighboring braves who slept by his side and brought him food and drink

The story of Gaagnas, the Chippewa, was told by Sergeant Percy Rose of the Royal Canadian Mounted Police Early in December he was sent into the Lac Du Bonnet country of northern Saskatchewan to investigate vague rumors a demented Indian had been tied to his shed and left to die in a convalescence of "wetego" or witchcraft death. That story had spread all through the north The sergeant found the Indian died of natural causes.

B.C. Loggers Get Sympathy

Vancouver Mayor Approves Request For Permission To Hold Tag Day

Vancouver.—"In with the strike", declared Mayor L. D Taylor in placing his approval on a request of striking Britisa Columbia loggers for permission to hold a tag day in Vancouver

"The industry has been taking advantage of an unemployment situation to have this work done cheaply," said his worship "It is nothing more nor less than a racket and the sooner it is stopped the better

Japanese Air Disaster

Tokyo.—Two naval planes crashed into a mountainside in a heavy fog near Hojo, killing five Japanese flyers, the newspaper Asahi reported here. The brought to 13 the number of fatalities in a recent series of army and navy air disasters.

NEW CHAPTER IS OPENED IN THE STAVINSKY CASE

Paris.—The staying of a process at judge and a police announcement that Serge Stavisky may have been an international spy opened new chapters in the sensational $40,000,000 Stavisky pawnshop bond swindle.

The body of Judge Albert Prince, who had worked on several financial scandals and was to have been a witness in the Stavisky investigation, was found, mutilated, on a railroad track near Dijon. He was bound and a bloody knife was found nearby

Authorities revealed they were probing the possibility that "Stavisky Alias" might have acted as an international spy selling secret information to Germany and using forged papers.

Stavisky was the founder of the Bayonne municipal pawnshop whose record colleges led to accusations of irregularities in connection with it among high-placed officials, to the downfall of two French cabinets, and riots that cost hundreds of casualties.

Stavisky, the friend of many authorities, was found dead when police closed in upon him in his Chamonix retreat.

Police declared that Judge Prince, of the court of appeals, had been trapped by a faked telephone call and his mother was ill in Dijon, that he left Paris in answer to the message, and that he was slain en route under mysterious circumstances.

Drive Against Bootleggers

U.S. Government Brings New Weapon To Bear On Illicit Trading

Washington.—Urged on by President Roosevelt, the administration has undertaken an intensive drive against high liquor prices and bootleggers throughout the United States.

The government has found a new weapon to bear on the bootlegger, one designed specifically to wreck his modernized system of pouring the illicit product into legal channels. Treasury officials said this was the new stamp tax, which became effective a fortnight ago.

Under this law, every beer or container must bear a stamp. Behind the stamp is an elaborate inspection system and the purpose is that if it is not used or is illegally used a long prison sentence awaits the offender

A State Of Mind

Psychology Rather Than Revolution The World's Ill

Washington — The opinion that psychology rather than revolution is the best instrument of adjustment to new conditions throughout the world was expressed by Dr. Bert Cronkie, editor of the Farm Journal.

Addressing a luncheon in his honor at the National Press club following a tour of Italy, Russia Germany and Great Britain, he said he was unable to "congratulate your lungers on what they are trying to do to speed up these adjustments."

Streamline Steam Locomotive

Ottawa — A new model for a streamline steam locomotive has been made at the National Research laboratories It has been so designed as to reduce the air resistance 35 per cent and to lift smoke from the side's rear of the cab. Particulars of the new locomotive were contained in report of the National Research council tabled in the house of commons.

Provincial Franchise Reform

Quebec — Another six months hest be a measure proposing women be given the right to vote in provincial elections was given in the Quebec legislative assembly by a vote of 39 to 25

Toronto Daylight Saving

Toronto. — Daylight saving time from April 30 to September 30 was recommended for Toronto by the board of control.

HEINKEWER TROOPS FOR VIENNA FIRING LINE

Truckloads of steel-helmeted and heavily-armed Heinkewer troops are shown speeding through Vienna on the way to battle against Socialists entrenched at strategic points in the city. Use of artillery became necessary when the troops found Socialists [illegible] and with machine guns, grenades and rifles.

Back To The Land

Disappearance Of Cities As We Know Them Is Predicted

The disappearance of cities, as we know them to-day, is one of the revolutionary forecasts and social changes predicted by some who are convinced that radical readjustment of business structure is necessary. The new idea is to take the city to the country and individuals have over that to a considerable extent on this continent. It is found that those in circumstances to do so have established rural residences equipped with all the conveniences of the city. One of the chief advantages of this is that there is escape from the unequal distribution of air, sunlight and recreational liberty that the nearly city exposure regardless of the effect thereon is void it.

The general theory connected with the impending changes is that of back-to-the-land. It seems to have been demonstrated that there cannot be tremendous concentrations of people in cities without these periodic unemployment crises such as we now suffer withstanding. Recognition of this new principle has been made by a number of governments. In Canada, the prevailing idea is co-operation with the federal administration, provide money grants to those who are willing to go from the cities and locate on the land. In the United States the somewhat elaborate federal scheme is being developed that would place tenants on 1,000,000 farms in the neighborhood of industries that would give them part-time jobs. Henry Ford, the famous manufacturer, is being entertained the idea that industry of the future must be closely linked with land propounds such as no one has undertaken. He believes that the artisan of the future will live on the land.

As explained in human trends that would decentralize the cities and soother their populations far out into our rural areas, is of such importance that it is difficult to picture its details. The economists and sociologists who profess to have studied it approved of the idea, but do not hesitate to assert that it is coming and that some of the opportunity countries have pressed forward by governments, such as in the United States, are forerunners of the idea of social state.

Over a long period of history people have deserted the land and congregated in cities. The back-to-the-land movement in some circles to be inevitable, may be quite an interesting. Movements of that nature occupy over a long period of time, and that they are absent, imperceptible until they have proceeded a long way toward realization. Woodstock Sentinel Review.

Spurs To Achievement

Blue Ribbon Personal Blessings Are Only Relative Things

Dead persons have a compensating heaven of eye, and most of them are unconcerned by modern fame. The movie audience was startled by a dead man who looks into a great gruffaw at his most tragic moment of an evening film. He had lip-read the remark of the star who played the hero role, and the remark was not at all in keeping with the scene.

Blandness are only relative things. Blindness produced a lifting, the loss of legs a Henley, consumption a Stevenson, eye-sirens a Milestone, Edison, creator of the phonograph, was nearly deaf. The majority of men are color-blind. Such being has some sense few in his makeup.

But no individual should let physical things keep him. It makes him seem brave; better fighters if they are not perfect physical specimens. Such can say with the hopeless cripple Henley

"In the full clutch of circumstance,
I have not winced nor cried aloud."

Blindnings often are spurs to achievement.

Use Your Brain

Hands are used by the women of Piccaninnie, Dutch Guinea, to carry everything from milk bottles to cotton. Their eyes on to using their hands is so strong that they even carry letters in this manner, weighted down by a brick.

W. N. U. 2035

Forecasts Revolution In Auto Design

(Left) A. Layton-Frost in his modern Sun York studio. (Center) Design of Layton-Frost for a completely aero-dynamic sedan. (Right) The history of the automobile's development, from the old Stanley to the new aero-dynamic sedan, as envisioned by Layton-Frost.

Important changes in automobile design of the near future are foreseen by A. Layton-Frost, famous industrial engineer-designer. Aero-dynamic science and scientific streamlining are superseding the primitive auto designing which was based on the old horse-and-carriage tradition. Future design is to be entirely functional—i.e.—efficiency rather than pretentiousness will rule. With the application of aero-dynamic science, automobiles will experience great increases in economy, comfort and safety, Mr. Layton-Frost declares. The new appearance is already being reflected in cars with rounded noses, wide fronts, tapering rears, rounder interiors and all-in-one-piece construction.

Mustard Cab Horse Attracts Many Tourists

Old George Clown Tobacco Set in No Consistency

If George Penn any station over the same location as a crowded him as Montreal's tobacco-chewing cab horse, he hides it well. Upon hailing a cab in downtown Montreal, the visitor stumps in his harness, long jaw champing rhythmically on a chunk of cudgeing, waiting for a fare.

Admiring looks from visiting tourists and local admirers have fallen to arouse any semblance of pride in George's bearing. There is not a hint of the tobacco connoisseur about George. His jagged, dark stained teeth will munch through cigar butts, the best chewing plug or even a handful of pipe tobacco with equal facility. His diet also includes apples and sugar. One connoisseur addressed horse has apples. George has been known to sight her from afar and start across Dominion Square, nab and all, to meet her.

Tourists not other cabmen on the rank for the "fifth cigarette in the afternoon." George bits his drooping eyelids, receives the tobacco tribute with an appreciative neigh and applies command down the street with his fore, stopping dutifully at red traffic lights and proceeding with the flow of the usual traffic control. He never has to guide the horse where traffic lights are concerned. George, 13 years old, remembers many back when they had no such things.

"It's a genuine antique, sir."

"But you are eating a horrid price for it."

"Well, sir, look how wages and the cost of materials have gone up!"

Smothering Manure

Londoners Complain That Bus Conveyors Have Lost Individuality

The new movements everywhere for mass regulation and control from bacon imports to motorbuses, are bound to have an effect upon national manners. Standardization is no vice if what is standardized is itself admirable. The danger lies when the regulations themselves are undesirable. Several Londoners have been recently complaining about the queer manners of bus conductors under the new regime. Bus conductors, individually considered, deserve the highest praise . . . The remark of the conductor who, when a coveted bus skidded and spun completely around in a crowded thoroughfare . . . steamed panic among his passengers by shouting: "Don't you 'op off, 'cause the Mulberry Bush!" is typical of his calling. But recently conductors have been trained to shout loudly and mechanically: "Hurry up, please! Hurry along there!" to passengers who, hastened together, find further haste impossible. Restrained purred calls that cannot be obeyed . . . should be revised.—London Time and Tide.

The Making Of Race

Many Workers And Various Machines Required For Process

When cheese were first worn, thousands of years ago, it was the custom for a man to take a cheese and give it to his neighbor as a pledge to seal a bargain or close a deal. Heels and about cheese were not invented till the Middle Century. They were originally intended for riding, as they gave a firmer hold of the stirrup. To-day, it takes eighty workspeople to make a shoe, 150 kinds of machines are employed in the various operations, and 600 processes have to be gone through before the boot or shoe is ready to be worn.

A man in North Wales has been fined for shooting ducks from an aeroplane.

What the average schoolboy wants is history that will repeat itself, says the Ottawa Journal.

The Theatre At Home

Television Has Failed Play Will Never Be As Satisfactory As Used Thing

It seems quite obvious that the days of perfected television are far distant. But enough progress has been made toward them for some theatrical managers and film owners to wonder—then world what will be the effect on their business when it comes? Will the finally established mediums of entertainment? The English impresario, Mr. Sidney Carroll has raised the question whether television will not actually bring in an end to the operation of theatres and theatre-going are known to-day. Even people in the vicinity of large cities are now using their cars for week-end visits to the country instead of entertainments on the wall of their own living room will they still feel a desire to go out to some public place of entertainment?

Most observers seem to think that they will. More than 2,000 years ago someone pointed out that men and women are gregarious, and like to take their amusement in the company of their fellows, and Mr. Carroll is a great safeguard to the prospects of both cinemas and theatres. Moreover, one of the pleasures that many people derive from going to see a play or a film as the fun of dressing up for it. Sitting by the fireside certainly does not give the same sense of social occasion as does an evening at His Majesty's or a first night just west of Broadway.

Further, a televisioned play or film can never be quite so entertaining as the real thing. The atmosphere of the place, one of the best things in the world; but it is not an atmosphere well suited to losing oneself in another world, even when the coffee cools! Address Standard Brands Ltd., Fraser Ave. & Liberty St., Toronto, Ont. Say Rolling Pebbles "Why Use Yeast Bread to Better Health."

Cause Loss To Farmers

Effective Method Of Controlling Mustard Weed Is Sought

Many farmers believe that mustard does not reduce the yields of grain. However, experiments conducted on the Central Experimental Farm, at Ottawa, showed a reduction of 38.1 bushels per acre, or 27 per cent. in the yield of oats on land heavily infested with mustard as compared with adjoining land containing no mustard. Field Husbandry experiments are being conducted in order to learn the most effective and least expensive methods of controlling this weed which is causing so great a loss to many farmers.

Business-Like Marketing

Dependable Support Of Million Food Producers In Canada

One million Canadians, free, white and of adult age, cannot all be wrong. A million men make a mighty army, especially when they are engaged in a just cause. A million men, all primary producers of foodstuffs, also united in co-operation in the Dominion's governance of its auxiliary legislation. Following the lines of the British Marketing Act, which legislation, confirmed with legislation by the various provinces, will result in orderly, I-advise-this marketing.—Country Life in B.C.

Potting Plants

Best Time To Start Some Plants In The Early Spring

In the care and culture of house plants the Horticultural Division of the Dominion Department of Agriculture says the best time to shift plants is in the early spring. Geraniums, begonias, coleus and similar plants that have become unshapely should be cut back at this time. Plants rarely need re-potting during the winter months. Over-potting is to be avoided. Flowering plants may be re-potted to flower freely. A piece of inverted crock over the drainage hole with a small amount of gravel, broken crock, or cinders is essential. Care or other materials in place of pots are not recommended, but when used should have an inch or two of water in the soil half inch at the bottom. When repotting it is well to remove a portion of the old soil and roots. Plants or cuttings should be firmly set, care being exercised that the roots are not injured. When completed, the soil should be one-half inch below the rim.

Auto Fuel From Refuse

In test runs between Rome and Cutrie, Italy, recently, an automobile using fuel made from vegetable refuse attained a speed of 45 miles an hour. Fuel costs were about one-twentieth those when ordinary gasoline was used. The car was fitted with a new device which produces gas from any kind of charcoal, including that made from the refuse.

Tommy came home from school the other day and said: "Mother, we've got a poor teacher. Why, she doesn't even know a bear."

"Oh!" said mother. "What makes you think that, Tommy?"

"Well, I did a drawing of a bear and she asked me what it was."

OCCASIONAL WIFE

BRNA SOMS WEBSTER

Author of "Javotte," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Avis is attracted and Camilla's mother likewise. Camilla decides she must leave the home of her adopted parents immediately and go to live with Peter, because she is the girl he loves. Peter has no home. They decide to take an apartment. Sherman and Weeks, an advertising agency, where Camilla has submitted some of her work, send for her and tell her they have a new account which requires unusual treatment of layout. Camilla's surprise she learns that the account is that of her foster father's company, which has decided on an extensive campaign to bolster up lagging business. After a conference with Mr. Sherman, Camilla decides to attempt the work. With ideas running riot in her head she goes home and tells Peter that night. Early the next morning, armed with her samples she sets out for the agency. The critics were enthusiastic about her work, and Mr. Weeks offers her a salary of $50.00 a week to start and a prospect of having it doubled. She goes home to keep a dinner engagement with Peter and tell him the news.

CHAPTER XXXII

Peter detected her excitement as soon as she entered the room. "What's happened, darling? You look lovely. He took both her hands in his gravity, and peered at her his adorable little face with his gaze. "Camilla, I can't endure the sweet agony of living without you any longer."

Even Lo, agony is sweet?" she asked.

Yes, because I love every hour in the anticipation of seeing you again." She smiled into his eyes happily. Then our plan is a huge success. That is just the way I wanted it to be. Don't you see, dear, if I were with you always, there would be no sweet agony of anticipation? And then there would be tragic very tragic for us. Half of the joy of life is anticipation."

He sighed with resignation. "Why do I argue with you about coming to me when I know I can't take care of you?"

"We're not going to argue about it, Peter. That's all settled. Besides, tonight is a very special celebration. I can't wait another minute to tell you my secret. Let's go in and sit down where we can talk. Do you suppose we can get the same table we had on our wedding night? This occasion is almost as important."

"It must be important, if it makes you so beautiful." His eyes did not leave her face, as he tucked her hand into his arm and they entered through the gracious doorway of Baron Ostelago.

Camilla glanced up from the menu delightedly. "Here is the same special menu we had for our wedding dinner, Peter."

"Then that's what we're having. Okay?"

"It couldn't be better."

"Two special dinners," he said to the hovering waitress. "Now tell me," he turned to Camilla as the table was faced Camilla eagerly. "You have a position?"

"Oh, yes, but that isn't the best part of it," she exclaimed. "Let me begin at the very first and tell you everything!"

He bowed agreement. "Suspense, thrills and all. It promises to be dramatic."

It was, he had to admit when she had finished. His heart swelled with pride for her success and ached a little with regret—not because he envied her, but because with the exquisite and precious that he wanted to claim his right to take care of her and spare her all the sordid demands and sacrifices which even a promising a future involved.

He knew that this sudden achievement meant she would work with a golden light for her, like the varicolored spotlights on the stage enhance veiled costumes, worn properly and finely of makeup.

She had yet to learn that for every victory there is some defeat, for every joy a working girl and the wife of a heartaches, for every task achieved endless hours of toil and anxiety. He knew that Camilla would meet these challenges gallantly, of course. But he wished that he might spare her any of the disillusion and could sort out for her the sparkling grains of genuine worth, sparing her the bitter disappointment of apathetic substitutes which prevailed their majority in everything that belonged to life.

Camilla deserved to be treasured like a precious jewel, herself, yet she belonged to him and he could not lift a finger to protect her from the slightest need or anxiety. Rather, he had added to them. A fierce determination burned within him while he watched her happy face. He would give his soul to keep her happy like that, always, he thought.

o o o

Mrs. Hoyt accepted the news of Camilla's position and her departure from her home with resigned cheerfulness. She had not gained her objective, but in her way of thinking, Camilla would live to see the day when she would regret her rash determination to be independent and master of her own destiny.

In Mrs. Hoyt's past experience, youth profited by the wisdom of its elders or reaped the consequences of its folly. What here was a mind that

HERE'S THAT QUICK WAY TO STOP A COLD

Almost Instant Relief in This Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check an ordinary cold almost as fast as you caught it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer is the form of a cross, is on each tablet. They dissolve almost instantly. And thus work almost instantly when you take them. And for a gargle, Aspirin Tablets dissolve so completely they form no irritating particles. Get a box of 12 tablets or a bottle of 24 or 100 at any drug store.

SUN LIFE SHOWS ENCOURAGING REPORT

Behind the imposing figures which mark the annual reports of our great life insurance companies lie significant facts which may escape the notice of the casual reader. None of our great institutions are more cosmopolitan in character than those connected with insuring people's lives. Their business extends to a wide class of people. It is broadly based, the great majority of insured being those of limited income and of widely diversified occupations. The investments of insurance companies are equally diversified, both occupationally and territorially, and serve to stimulate business and provide employment. One cannot conceive of a curtailment of the functions of these companies that would not profoundly, and adversely affect the whole social structure.

A good illustration of this is revealed in the sixty-third report of the Sun Life Assurance Company of Canada printed in this paper last week. Here is an organization that, last year, paid out $160,000,000 in benefits of various kinds to its policyholders and their dependents. Thousands received cash payments from the company, notices to the effect that it does not charity but as right. Other thousands companies made similar payments in varying degrees. In these times when the most burning question of the day is how to preserve our economic equilibrium, often unconsidered and crying from the rooftops who have to those who have not, the Sun Life stand is a luminous example of how these insurance companies have evolved a systematic, safe and scientific way whereby a man may provide, at little inconvenience, during his productive and working years, for the future of his wife and family. Other companies have done likewise, but the Sun Life has always been in the forefront of this humane and beneficent movement, and its record is one of which it may well be proud.

CARD OF THANKS

Mrs. Carl Nanz and family wishes to thank their many friends and neighbors for their kindness and sympathy shown to them during their recent bereavement, also for the beautiful floral tributes received.

Committees Appointed At Town Council Meeting

A meeting of the Town Council of Fort Saskatchewan was held on Wednesday the 28th. February 1934, at 8.00 p.m.

Present Mayor Montgomery, Councillors Magee, Watt, Graham, Pettet, Gauf and Foster.

The minutes of the meeting held on the 19th. February were read and adopted.

The following are the Committees of the Town Council for the current year:—

Finance
Councillor Graham, Chairman, Magee and Pettet.

Fire, Water & Light
Councillor Gauf, Chairman, Graham and Magee.

Public Works
Councillor Foster, Chairman, Watt and Pettet.

Health & Relief
Councillor Magee, Chairman, Foster and Watt.

License & Police
Councillor Pettet, Chairman, Gauf and Foster.

Town Property
Councillor Watt, Chairman, Gauf and Graham.

Two applications for Old Age Pensions were approved by the Council.

The report of the Medical Health Officer, Dr. Henry submitted and filed. The applications for restaurant licenses for the current year from the Royal Cafe, City Cafe and Club Cafe were approved.

A By-Law was passed appointing the Secretary-Treasurer to be Assessor for 1934.

Josephburg News

The Junior U.F.A., Local No. 26 held their meeting at the home of Mr. Ed. Ashton on February 16th. The Roll Call was answered by "A memory of 1933".

Delegates for the Junior Conference in June were elected as follows: Earle Cranston, Esther Frey, Leona Heusig, Arnold Frey, Wilfrid Mann, and Carl. W. Unterschultz.

A mock council meeting is to be part of the next meeting's program. The Councillors elected are: Leona Heusig and Wilfrid Mann for Division 5; Hilda Frey and Rudolph Rippel for Division 4. These Councillors are to tell what they would do if elected Councillor.

A debate was held at this meeting. The subject under discussion was:—

Whether Old Maids or Bachelors are of more importance to the Community. The debaters were, Nora Ashton and Lorna Krebs versus Carl A. Unterschultz and Ernest A. Mohr. The girls, who upheld their cause won the debate.

The next meeting is to be held at the home of Mr. Griffin on March 2nd. The roll call is to be answered by "A Handy Thing in the Kitchen" by the girls, and "A Handy Thing Around the Farm", by the boys. ...

Mr. and Mrs. August Dorscheid and daughter are visiting relatives and friends here before leaving for Mr. Dorscheid's home in Germany, where they will take up residence.

Mrs. R. Thomas and daughter Jean of Edmonton spent several days with relatives here.

We are sorry to hear that Mr. William Thomas is a patient in the Lamont hospital.

Mr. Frank Becker Sr. is spending several days in Edmonton with relatives.

Mr. John Mohr Sr. was an Edmonton visitor for a couple of days last week.

Mr. Leon Krebs who has been a patient in the Lamont hospital returned home last week.

Sexsmith Bank Manager Transferred to The Fort

SEXSMITH.—Five and a half years ago Mr. Johnnie Dewar, accompanied by his recent bride, arrived from Sedalia, Alberta, to assume the position of manager of the Royal Bank.

The young couple quickly built up a large circle of friends through their genial dispositions and ability to adapt themselves to new conditions. That circle has gradually increased until at this time the Dewars enjoy the close friendship and affection of a large number throughout the entire district.

The news of their removal within a few days to Fort Saskatchewan has resolved more discussion during recent days than probably any other item. Expressions of regrets have poured in on them from every direction.

Mr. Dewar has proved a most enthusiastic and valuable member of the Sexsmith community. As a member, president and secretary-treasurer of the local branch of the Canadian Legion he has been an outstanding organization and great assistance. As the president of the Board of Trade his unselfish advice were most helpful and greatly appreciated. As a member of United church and the I.O.O.F. he was regarded as a valuable member. A sportsman clean cut, Mr. Dewar was a most active and enthusiastic curler and golfer. He served as manager of the local hockey and hockey clubs with great credit. As a referee in sporting events Mr. Dewar will long be remembered for his impartial and eminently fair decisions.

Mrs. Dewar will also be missed in many local circles, particularly in the Altar society and Women's Institutes in which she was a valuable worker.

Mr. and Mrs. Dewar, with their small daughter Donna and Son "J.D." depart to-day for their new home about the end of next week.

—Grande Prairie Herald.

ALBERTA DAIRY CONVENTION

Alberta dairymen held a very interesting convention during February.

The meeting made an appeal to the Dominion government to provide legislation to stop price cutting on creamery butter. It also urged the immediate formation of a federal marketing board or boards to stabilize prices of farm products to producers. Agreement between the producers' section and that of the manufacturers was reached on the question of compulsory grading and marking of all butter sold at retail.

A province was added that marking should not be made effective in Alberta until implemented in B.C. Approval was voted by the meeting to the resolution to ask the federal government to negotiate with New Zealand and Australia to end demoralizing imports of butter in winter.

The Value of Fertilizer

EARLY SEEDING USUALLY MEANS HIGHER GRADES

Late harvesting has a very bad effect on grain in seasons of bad weather. This foster claims, according to reports, causes a lot of grain to grade down. These reports state that there is too high a percentage of lower grades and not enough No. 1 northern. Practical experience of farmers all over the prairies, and particularly in northern sections, has shown that fertilizer has a marked effect in causing earlier ripening, thus making earlier harvesting possible. From this better grades usually result.

Read what others say about fertilizing ground:

Mr. Jacob C. Williams, Manson, Saskatchewan, writes: "I intend to use more fertilizer this year because I consider it is a good insurance against disease and early fall frosts, besides giving a good increase in yield".

State Medicine Report

Considered to be one of the most complete and exhaustive reports on the subject of health insurance ever presented in Canada, the findings of a joint legislative committee representing all parties investigating the question for two years, was tabled in the Alberta legislature recently.

Systems of medical administration and operation in various parts of the world were examined, and careful consideration given to the many phases of the extension of medical services, especially as they apply to the province of Alberta.

One of the important recommendations of the commission is that a fee-for-service medical plan be administered by a state board, be established for insurance carrier payment. It further recommends that local advisory committees be established for each unit.

FOILING THE CATS

Local boys will probably be interested in the device to foil cats and protect birds that a seven-year-old lad at a Blythwood, Ont., school, designed as part of the handiwork he built during the Christmas holidays. It is simple but effective. The birdhouse is suspended by a wire from the branch of a tree. Just above the wire, a few inches above the bird residence, is a round plate or pan, so fixed that it sits on a level, but when the cat, eyeing the board, jumps for this plate as a landing place, the plate slops sideways and the feline marauder falls to earth.

What About Social Credit, Canada?

This series is an explanation of the Douglas Social Credit Plan. Mr. Williams, (W.) a Social Credit reformer, is explaining the plan to his friend, Mr. Jones (J.). The scene is Mr. William's home, and the conversation takes place during an evening visit.

By following this series to the conclusion the reader will clearly understand the problem which faces Canada.

No. 1

J.—"Now, Williams, what's all this about the Social Credit plan of Major Douglas?"

W.—"Well, if we are going into the matter thoroughly—

J.—"That's how I want it explained."

W.—"Then we shall have to forget Social Credit for a while and go over some of the features of our economic system."

J.—"That's all right but tell me one thing first. What is this Major Douglas?"

W.—"He is a British engineer and financial expert (according to Vol. 2 of EUROPA) and here is a list of his achievements and positions:—Chief Engineer and Manager, Westinghouse Co., India, 1908-1910. Deputy Chief Electrification Engineer, Buenos Aires, Pacific Railway, 1911. Engineer P. O. Railway, London, 1912. Assistant Superintendent, Royal Aircraft Factory, 1917. He has given evidence before various economic commissions and is the author of several books on Social Credit which is an original contribution to economic thought. He has independent means from his inventions. He lives in London but at the moment is visiting New Zealand and Australia where Social Credit has become a live issue in politics."

J.—"Well, with such experience and solid practical achievements, his ideas should be worthy of investigation.

All right, go ahead. I'm really interested in economics but I don't mean to get anything practical out of the books I have read."

W.—"And some of them agree."

J.—"I've noticed that they do agree on one point. At least they did until recently. And that they were agreed that one country cannot do anything by itself. Of course, there are the Socialists who believe that each country could improve things by individual action, and by following the Socialist ideas of reconstruction and redistribution of income."

W.—"Well, Jones, that's the orthodox Socialist doctrine, but I want to go further back and approach the subject from a different angle."

J.—"That's all right with me, provided that you don't talk over my head."

W.—"I'm. I'll remember that You know, that is one of the difficulties in presenting this subject. Our economic system is, in detail, a very complex mechanism. It cannot be explained in a few words but the general methods and principles can be grasped by anybody or ordinary intelligence. But let's go over a few of the reasons given for the excess of the depression. What's your idea?"

J.—"Well, business would be better if taxes were not so high. I suppose if I were a farmer I should include the low level of commodity prices."

W.—"Of course there are many contributing factors, but one must not look at things from too narrowly personal point of view. Here, I'm not going to roam all over the world and cite the war, tariffs, war debts, reparations, and all those things that are advanced as causes of the depression. I hope you will agree to narrow the investigation to one critical factor."

J.—"And what's that?"

W.—"Finance."

J.—"Finance! How?

W.—"Well, look at it this way. There are only three factors in our economic system. These make division. First, let us look at Production. By that, I mean the growing, making, and manufacturing activity of a country. Here we can include the distribution system comprising railways, ships, etc. with their related services like telegraphs and telephones. Now if you examine the Production system as such you'll find very little wrong with it. That is to say, we are equipped to grow all agricultural products that can be grown here; We are equipped with factories and mines for the production of useful and necessary articles; and we have the railways and waterways to provide for distributing them."

J.—"Too many railways?"

W.—"Well, at least we have no reason to believe that we can budge in facilities in this line. Now then do you agree that, from the practical and technical side, production as such is in a satisfactory condition?"

J.—"Yes, I should be inclined to agree with you."

W.—"Fine! and now let us turn to the opposite side—Consumption."

(Continued next Week.)

A Toll Equal To War

Once a year for several years past with the approach of Spring which heralds, among other important happenings, the return of tens of thousands of motor cars and trucks to the highways of the country, attention has been directed in this column to the responsibility which rests upon the drivers of these cars and trucks to exercise due caution in their operation. Once again the attention of all motorists is drawn to this vitally important matter

With the invention of the motor car, a new machine of great utility, as well as a source of pleasure, was provided. It is a machine of great power, and with the passing of the years the power of the individual car or truck has steadily increased. In so far as the machine itself is concerned, and keeping pace with its increased power and speed, there has been consistent improvement in its strength and in the provision of mannikol safety devices. The modern car is, therefore, less liable to accident than its predecessor of fifteen, ten, even five years ago

Further, with the enormous increase in the number of cars and trucks in use, there has been a great improvement in highway construction and maintenance, calculated to decrease accidents. On the other hand, these better highways have made possible driving at greater speeds than were possible upon the old roads of bygone years and have encouraged the purchase of many more cars, both of which factors have resulted in greater density of traffic, and traffic moving much more rapidly.

Then, to a greater degree than ever before, the human factor, the man or the woman at the wheel, becomes the controller in the matter of accidents. Unfortunately, far too many drivers fail to appreciate the enormous power of the machine they are operating,—a power for destruction just as truly as a power for transportation. It is a power within the control of almost countless thousands of individuals which, improperly controlled, may mean death and injury not only to the careless and reckless motorist, but to others who are exercising every possible care and driving with the utmost caution and consideration for others.

"What war was that?" was the pointed question asked in the British House of Commons recently, during a debate on a measure dealing with the serious increase in the number of road accidents, when the Home Secretary submitted figures of "killed and injured" in road accidents in Great Britain in the eight years 1926-33. The figures were: Killed, 50,557; injured, 1,621,855. Furthermore, the detailed figures revealed an increase in the toll taken in each succeeding year.

Such was the record in a country noted for its good roads, for the excellence of the workmanship upon its cars, and for general observance of laws and regulations. It is a record which establishes how necessary it is that the motorist should exercise the greatest care at all times and under all circumstances in the operation of his or her car.

At this time, owing to prevailing economic conditions, many people are operating cars which, under other and better conditions which prevailed a few years ago, they should have replaced with new cars. They are still going well years time which in other years they would have replaced with new and stronger tires. Because of the necessity of keeping expenditures for repairs down to a minimum, many cars have not been overhauled as to bottom gears; brakes may not be in full working order; lamps may be defective; springs and belts and other accessories may be worn thin, ripe to the breaking point. Such cars, if operated at an under speed, may easily spell disaster not only for the driver and passengers, but for other motorists or pedestrians. All persons whose cars are not in absolutely first class condition are under the grave responsibility of driving with unusual care and observing every precaution. In fact, they owe a duty to themselves and to all other people not to operate their cars if they are in a condition dangerous to operate.

But whether a car is in first class shape or not, the oft-repeated and emphasized duty which devolves upon all motorists remains. That duty is to know and to observe the accepted regulations governing traffic upon the highways and to obey the laws enacted for the protection of all and in the common interest of all. Even if laws and regulations did not establish a code of conduct for both motorists and pedestrians, there is the courtesy of the road which should be maintained and observed. Men should conduct themselves as gentlemen and women should behave as ladies. Courtesy should prevail over recklessness.

Instead of the present appalling record of accidents; instead of that record mounting higher year after year, a change for the better,—a lower record,—can be and ought to be established in 1934. It lies in the power of the individual motorist to bring about such a desirable result, and the motorist, more than any other person, will benefit therefrom.

Made Many Enemies Friends

During the last five years between 500 and 600 enemy flights have been undertaken by the ambulance planes of the Red Cross Aerial Ambulance Service of Sweden, many under the most dangerous and difficult circumstances in a temperature of 60 degrees centigrade below zero, in the face of blizzards, in darkness and fogs with adventurous descents in unknown places.

A Silent Commander

No amount of "cutting" will let a film pass a German censor under a new name now in effect—once the film has been placed on the blacklist. The law, which virtually authorized the Propaganda Ministry to veto or censor a film before it is made, provided that Foreign films which in their original version seem derogatory to German interests may not be shown in Germany.

Health For Young Girls
Happiness For Tired Women

Thousands of women become tired out and run down, because thin and pale, and pestered with constant life a burden.

The whole outlook of life is changed when the nervous, dull headache, the sluggishness, the quality of dizziness, of weakness and discouragement, and the need of hospital hydrogen disappear with the use of Milburn's B. B. B. Pills. They tone it up, tone up, enrich the blood, and bring the health back to normal again.

VOLUNTEL TRAVELLERS

Introducing Anna and Tekla, little Lithuanian ladies unable to speak English and travelling all the way from Kovno to Western Canada. Tekla, the diminutive damsel with the doll is just three and a half years old, and her friend Anna turned five. Both came over aboard the Canadian Pacific liner Montclare in charge of steamship officials. Anna goes to join daddy at Nipawin, and Tekla continues on with dolly to her folks at Edmonton, Alta.

SHE LOST WEIGHT EACH WEEK

The Ideal Way To Reduce

A woman writes to tell how she is reducing excess fat and her way seems to be the ideal way.

"I am 49 years old, 5 ft. 5½ ins. in height, and was 198 lbs. when I started taking a level teaspoonful of Kruschen Salts every morning. I went slowly down in weight—some weeks 2 lbs., others just 1 lb., until I got down to 154 lbs. I have never felt better in my life than I do now, and I feel so much lighter and feel years younger." - (Mrs.) W. I.

The action of Kruschen Salts, taken regularly every morning, is to effect a natural clearance of undigested food substances and watery waste matter. It is that waste matter which is stored up in the form of ugly fat, if it is not regularly expelled.

FREE TRIAL OFFER

If you have never tried Kruschen—try it now! Get a bottle of Kruschen from any chemist in the British Empire (size of bottle depends on country) and if you do not find it the most pleasant, efficient and economical way of reducing excess fat that you have ever tried, return the empty bottle to us, and we will refund your money in full, including any postage you may have paid. Address: Kruschen Laboratories, 4 Stratford Place, London, W.1, England.

Citizen's Unreduced Dead

A total of 17,288 unclaimed bodies were found in the streets, crowds, and on the waterfront of Shanghai during 1933, according to the annual report of the Dung Jen Fu-An Tung Benevolent Society. The society, entirely financed by Chinese, dedicates itself to burying the city's unclaimed dead and to provide coffins for poor families as well as giving free medical service to paupers.

Japan now claims to lead the world in the export of cotton goods.

When Painting Was Crime

Considered Sign Of Worldliness In Early New England

Paint, now recognized as a protection and a beautifier, was considered a sign of worldliness and vanity in early New England. In 1630, a clergyman of Charlestown, Mass., was haled before the city council, charged with the serious crime of painting the interior of his home. During the next forty years there was not a painter in all New England.

Delicious Cream Cookies

1 cup blanch
4 beaten eggs
1 cup nut meats
½ cup chopped raisins
1 teaspoon vanilla
4 cups flour
2 cups brown sugar
½ cup sweet cream
½ cup Crown Brand Corn Syrup
1 teaspoon lemon essence
1 teaspoon salt
½ cup Benson's Corn Starch
4 teaspoons baking powder.

Cream the blanch with the sugar and then add the eggs and beat until light. Mix the cream with the corn syrup and add to the latter alternately with the dry ingredients sifted together and mixed with the nuts and raisins. Flavour and drop by spoonfuls on buttered baking pans and cook in a moderate oven (350 degrees).

Nothing Accomplished

Just thirty years ago Japan declared war on Russia. Now they are knocking the chips off each other's shoulders again, and should they come to blows there will be a like outcome. Yet of what avail will it be if one overcomes the other, except it bring joy and gold to the munition factories of other countries.

Too Much Uric Acid

is a very common cause of Rheumatism, Sciatica, Lumbago. Deranged kidneys allow an excessive amount of uric acid to accumulate. Take Gin Pills to give relief while they are restoring your kidneys to function normally.

His Master's Choice

That happy look on his Master's face! Sure thing, there's a reason for it. Rover knows what's back of it! It's the tobacco he uses for rolling his own! Imperial, easy-rolling Ogden's Fine Cut.

Ogden's cuts a leaner cigarette—richer, cooler and smoother. Rolls it easier too —particularly when a man uses "Chantecler" or "Vogue" Cigarette Papers.

Yes, sir, there's a mighty good reason for his Master's choice and of real reason for that cuts of consideration. Ogden's Fine Cut and the right paper—that makes perfection! Try this wise smoker's choice.

Canada Becoming An Important Radium Producer, With Steady Output From Great Bear Lake

Recently there was added after the initial discovery of radium ore at Great Bear Lake, Northwest Territories, Canada the distinction as important producer of radium, with only one other company controlling a steady production from its refinery at Port Hope, Ontario. Shipments of the ready cements to a few thousand milligrams. This company, which operates the Eldorado Point deposit at Great Bear Lake, has proved out its ability to continue to deliver a steady output of radium. The initial output has attracted the attention of the province of Ontario prospectors, several hundred claims staked for use in the vicinity of Lake Athabaska. Additional prospectors, radium will become available to fill the needs of the Dominion and of other British countries. In addition to radium, the ore yields a valuable by-product, pitchblende, which is used in the manufacture of uranium salts, which are employed in the manufacture of glass and porcelain, with the bulk of the present output going to the British Isles.

Contrary to a commonly prevalent belief, the Canadian government is in no way connected with the commercial production of radium. Network of the Federal Department of Mines in devising the methods used by Eldorado as a basis for the treatment of the ores, and in inspecting the area, being in the nature of services rendered to the mineral industry. Neither is any control exercised by the government as to the price of the radium. For a time, at least, radium production will be on a moderate scale and it is not expected that operations will result in any immediate large addition to the accidental world supply of the element.

The Agricultural Situation

Report Just Prepared Deals With Many Facts Of Interest To The Farmer

In order to direct the attention of farmers and others to the valuable information available in various government departments, ten committees, composed of officials of the Department of Agriculture and Trade and Commerce, have been at work for several weeks bringing together statistics and other information covering the entire agricultural situation. The completed report, which may be obtained from the Publications branch, Department of Agriculture, Ottawa, deals with supply and demand, competition and prices, movements to market and marketing, storage holdings and farm products, production and its share in every subject of importance, domestic and foreign.

Increase In Alcoholism

Deaths From Organic Heart Disease Are Steadily On The Increase

In view of the alarming increase in deaths in Ontario from organic heart disease in 1931 there were 6,670 such deaths recorded, as compared with 3,757 in 1923, a jump of 70 per cent. in ten years—Hon. Dr. J. M. Reid, minister of health, sounded what he termed "a solemn note of warning" to all young-old men and women of 50 and upwards, to "set their age."

"Above all," said he, "they should see that they have regular hours of rest, and that they submit themselves to periodical medical examinations, which, after all, is not only their best safeguard, but an essential duty also we owe to themselves, their families and their dependents."

A Slight Suggestion

Letters addressed to newspapers sometimes get to the wrong department. An instance in point is that of the lady who wrote the household editor, asking "How do I get green paint off my hands?"

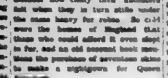
Unfortunately, her inquiry was sent to the advertising department. It, however, brought an immediate reply: "Why not use large space for a few days and offer it at a great reduction in price?"

W. N. U. 2000

Sales Of Other Trees

Fir Sales Final Were In England Low Counts For Wizards

The judge's column and the mayor's (tall cedar) motion of their times when the temperatures of low counts have interesting bulls in England which them not as ornament but a necessity. Even at corporations it was impossible to try to warm the Abbey, so the King and his august subjects were warmed indeed and modern sovereigns have come to remember how chilly their ancestors felt when they in turn stalls under the same heavy fur robes. So cold were the homes of England that the Queen has offered £1,000 to any one to fur, and an old seasoned boat made from the provisions of seventeen skins has been a sightseen for Queen Mary.



By Ruth Ingram

A SMART LITTLE TAILORED FROCK IN HERRING BONE WOOL FOR WEAR IN TOWN

If you want a conservative dress that is especially smart for school, college, office or every day wear, here's your pattern.

Herring bone silk in soft brown tones made the original. The shirtwaist collar finished with an orange crepe silk tie.

Similar schemes in crepe silk in navy with powder blue tie, black with beige or bright green, bright royal navy red with red and white print tie, etc., would be smart.

Lightweight woolens also make up most attractively in this model.

Choose ribbed or striped cottons, linen and tub silk for resort wear.

Style No. 550 is designed for sizes 14, 16, 18, 20 years. 36, 38 and 40 ins.

Size 16 requires 4 yards of 39-inch material with ¼ yard of 35-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Ideal For Young Cattle

Combination Of Oats And Barley Found Most Profitable Feed

In the feeding and management of beef cattle, particularly in times of low beef prices, one of the main objectives is to study the economical use of inexpensive home-grown feeds and pastures.

Canadian grown barley oats, wheat and corn are considered feeds for beef cattle. Barley is probably the most important of these grains. It is widely grown in Canada, is an excellent fattening feed and produces beef of a high quality with fat of a nice white color. In feeding trials conducted both in Canada and the United States, barley has been shown to be practically the equal of corn in the beef ration.

Oats have a tendency to produce growth rather than to fatten beef rapidly. This is due to the fact that they are higher in fibre, bulkier, and richer in protein than barley or corn. A combination of oats and barley is ideal for young cattle and for steers just starting on grain feed. At first the per centage of the two grains is almost equal, but as cattle approach a finish the proportion of barley should be raised.

Wheat is best when fed in a mixture. In fact, a mixture of the grains, if available, is best at all times. Although wheat is usually too high in price to be economical, its feeding value is as high as barley or corn, and it can be fed up to thirty-five per cent. of the grain ration.

Although corn is produced only to a limited extent in Canada, it is a good beef cattle feed and a small quantity should be included in the ration. Many feeding experiments have indicated that a variety of grains and roughages produces the best results. The grain mixture should be supplemented with protein feeds such as linseed oil cake, cottonseed meal, etc., when the quality of hay is inferior.

Good pastures alone will carry all classes of beef cattle, except those being given a high degree of finish for market. It is advisable in finishing beef on pasture to feed some grain if the cattle are of sufficiently good quality to warrant such extra gain. Experiments have shown that cattle finished on grass with grain as compared to those finished on grass alone have an extra day's higher dressing per centage and yield better finished, more attractive carcasses which command the highest price. Fewer cattle more highly finished by the use of Canadian coarse grains will go a long way to solving the question of higher prices for better cattle—A Division of Animal Husbandry, Central Experimental Farm, Ottawa.

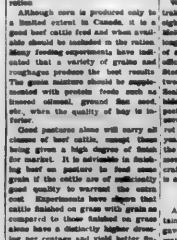
Our nearest fixed star, Alpha Centauri is about 25,000,000,000,000 miles away. Now any of 200 people who harbor any ideas about going places in rockets think again.



Separate Grading Of Garnet Wheat Is Sought By Vancouver Grain Exporters' Association

Canada's Trade With Brazil Has Improved

Wheat, Apples And Rubber Exported To Brazil Last Year

Canada's trade with Brazil took an upward turn in 1933 by more than $700,000, according to a statement from the Department of Trade and Commerce.

Canadian wheat re-entered the Brazilian market in 1933 after the absence of two years. In 1931 Canada shipped 559,000 bushels to that country, but did not export any more until 1933, when 182,000 bushels were sent. In 1932 Canada exported 370,970 bushels, valued at $176,713.

Canadian apples were introduced into Brazil last year, with shipments totalling 1,970 barrels, valued at $9,850.

Rubber tire castings to the extent of 77,000 were shipped to Brazil last year, as compared with 56,000 the preceding year, and 28,700 three years ago. Tires to the value of $1,000 were exported in 1933.

Searching For Rare Bird

Scientist Plans Taking Long Journey To Find Elusive Kagu

With the aim of capturing Australia's rarest bird, the night parrot, eight scientists recently set out from Melbourne, Australia, on one of the longest journeys ever made in search of a zoological specimen, reports an item in the Canadian National Steamships, whose vessels ply between Canada, Australia and New Zealand. This bird flies by night and hides by day, and the scientists expect to travel 6,000 miles before they secure a specimen. The night parrot was first found by white men 60 years ago. One of the members of the expedition has been admitted a member of a native tribe whose handicraft is trading animals and birds is almost uncanny.

Carried Out Instructions

An ambitious lady, about to entertain a Duchess for the first time, gave very careful instructions to the maid who was to open the door about the fashion in which the great lady was to be received.

"Remember, Mary," she said, "remember wherever you address the Duchess you must say 'Your Grace'."

When the great day arrived and the maid opened the door to the Duchess and the latter inquired if Mrs. was at home, the maid answered: "Yes, me lass she is, and say the Lord make us truly thankful for what we are about to receive."

Toronto's relief costs in 1934 it is estimated will reach $2,250,000.

ITALIANS ON THE AUSTRIAN BORDER

Believed to be a result of the trouble in Austria, Italian troops concentration on the Austrian border indicates that Italy is prepared to take a liquid should intervention in Austria become necessary. Here are two views of Italian troops manoeuvreing in the Alps near the Austrian frontier.

Separate Grading Of Garnet Wheat Is Sought By Vancouver Grain Exporters' Association

Representatives of the Canada Grain met to consider the separate grading of Garnet wheat now sought at Ottawa by the Vancouver Grain Exchange. Garnet wheat is a variety of hard wheat containing certain rust resistant characteristics making them Garnet wheat is produced in Alberta.

The matter was requested in a letter to Hon. H. H. Stevens, minister of trade and commerce. The farmer is particularly concerned because most of Canada's Garnet wheat is grown in Alberta and shipped through Vancouver.

The latter cited the spread at Vancouver of 9¼ cents to six cents between No. 1 Northern, which is not permitted to contain Garnet, and No. 2 Northern, which contains Garnet. It compared this spread with that of only three cents at Fort William, where Marquis wheat predominates.

The Vancouver exchange claims the very utmost request that he be given the opportunity of buying Garnet wheat separately in order that he may blend such types of wheat as may not particular requirements," the letter continued. "By proper pooling out that characteristic western Canada grade of wheat should be exactly the same whether the shipment be received from Montreal or Vancouver."

The exporters expressed the belief Garnet wheat would receive a premium in the open market price than the mixed shipments of Marquis and Garnet now going abroad. As No. 2 Northern is Canada's most used and best-known grade, the exporters claim the lack of uniformity of quality is a matter of national importance.

Shadow Was Reversed

Figures Covering Tourist Cars Last Year Are Interesting

During the past calendar year 2,286,416 tourist automobiles entered Canada, the period of 24 hours, 365,135 for a period not exceeding 60 days, and 233 for a period exceeding 60 days according to a statement issued by the Department of National Revenue. This showed a considerable falling-off as compared with 1932 when the total for a 24-hour period was 2,570,309, for under 60 days 2,982,987 and for over 60 days 530.

While the tourist traffic into Canada was falling off, Canadians were travelling by motor car in other countries more extensively than the year before. The total Canadian automobiles exported for touring purposes last year was 417,132. In 1932, the total was 376,527

Ontario headed the list of Canadian cars leaving the country for Canada with a total of 164,796, but was closely followed by British Columbia with 128,926.

Want Road Allowances Closed

Saskatchewan Stock Growers Wish On Provincial Treasurer

Saskatchewan stock growers and ranchers are making concessions from the provincial government to allow for the closing of certain road allowances in the range countries along the United States border.

They are also asking that the government levy a flat rate of taxation for school purposes. Where roads are to be closed, they are asking the government for some form of satisfactory crossing for road traffic.

A delegation representing the Saskatchewan Livestock Growers' Association waited on Premier Anderson to place the requests of the association before him. R. Gardhouse, head of the growers' association and W. Kerr, Maple Creek, head of the Stock Growers' Association, were spokesmen.

Discovery Unknown

Man, "Why do you weep over the sorrows of people in whom you have no interest when you go to the theatre?"

Woman: "I don't know. Why do you cheer wildly when a man with whom you are not acquainted slides to second base?"

AFTER 50
Scott's Emulsion is a great comfort. It enriches the blood. The emulsifying process makes it easy to digest.
SCOTT'S EMULSION

WORLD HAPPENINGS BRIEFLY TOLD

Responsibility for keeping peace in the Far East was placed squarely up to Japan by the Soviet newspaper Izvestia.

A total of 256 persons were killed and 2,697 injured in railway accidents for the year ended December 31 last, according to a return tabled in the house of commons.

To Jose de la Cierva, inventor of the autogiro, has been awarded the International Federations of Aviation trophy for the most outstanding aeronautical achievement in 1933.

John Ralphael Rogers, whose invention, now combined with those of Ottmer Horgenthaler to make the Horgenthaler Rentype machine, is used in New York at the age of 17. He had patented more than 100 devices on typesetting machines.

W J Walsh, who resigned as Newfoundland's minister of agriculture and mines, was freed of criminal charges that followed an investigation into the disappearance of part of the government's vast collection of world stamps.

A service of passenger aeroplanes linking with the great railway system covering the United Kingdom and Ireland will come into early operation, promoted jointly by an air company and the four chief railway groups.

Little Journeys in Science

HYDROGEN

(By Gordon H. Garod, M.S.)

Lightest of all gases, hydrogen was for many years used to fill the giant zeppelins. Nevertheless of the great airships which are rapidly becoming part of our modern travel system. Because it is highly inflammable, hydrogen is now being replaced by helium for purposes of safety.

Hydrogen is produced commercially by the electrolysis of water. An electric current is passed through water. Bubbles of hydrogen gas and of the constituent parts oxygen and oxygen. It is also obtained by passing steam over hot iron. The iron, being the affinity of oxygen forming iron oxide, and leaves the hydrogen to escape as a gas.

Bubbling hydrogen through water naturally or carrying salts such as cotton-seed oil, fish oils and animal fats produces a marked change in these substances. Colored and evil-smelling substances are destroyed and the oils and fats themselves are changed into more desirable solid fats. Fats made from vegetable oils are now produced in large quantities in this way and are widely used in cooking. This change in fats and oils is by no means "hydrogenation" and that is the chief industrial use of the gas. Large chemical and petroleum firms have hydrogenation plants for converting the waste animal fats into valuable solid fats. The hydrogenation of low grade oils, such as fish oil, produces solid fats used in the manufacture of soap and candles.

Another important modern use of hydrogen is in the manufacture of ammonia. This is then converted into nitric acid. Nitric acid is used in the production of high explosives. In Europe synthetic petroleum is made by heating hydrogen with powdered coal under pressure. A prominent production in this industry is on a very small scale.

Reading Clues Made By German Statistician

Professor Finds Of Stealth By Examining Postmen's Spoor

Dr Felix Bernstein, German mathematician and chief statistician, says he can examine a person's eyes and tell the subject approximately how many years he has to live, how long his working accidents or unexpected complications.

His theory of the "accommodating power" of the human eye rests on the premise that the lens of the eye gradually hardens from birth. Its "accommodating power" diminishes steadily and consistently until death from natural causes ends the life span.

Before he went to New York as visiting professor of mathematics at Columbia University, Dr. Bernstein said, he studied more than 1,000 individuals at his clinic in Gottingen during a three-year period, thus proving to his own satisfaction that his theory of life expectancy was correct.

Eye disorders and the mere fact that one wears glasses bear no relation at all to the agesg of the eye lenses, Dr. Bernstein declared and carry no weight in the calculation of life expectancy. Only the hardening of the lens which is itself inducive failing eyesight as the years fall away, is taken into account.

Destruction Of Game

Wolves In Northern British Columbia Cause Heavy Losses

Trappers of the Cassiar district in northern British Columbia have reported serious destruction of big game and other animals by wolves roaming in large numbers through the wild country They reported the travel season's fur catch on record and placed the blame on the extensive game destruction by wolves.

Partially eaten carcasses of moose and caribou have been discovered in many sections, and few calves have been seen.

The trappers say removal of the government bounty on wolves several years ago is responsible for the rapid increase in the number of wolves. A petition will be submitted to the British Columbia government asking the bounties be renewed.

"The movies have accomplished one good thing, anyhow."

"What is that?"

"Some and more people are having to pronounce film in one syllable."

SUNDAY SCHOOL LESSON

Taken from the Files

19 Years Ago Today

March 19th, 1925

Bernard Aitken drew the lucky hat winning the range that was given away by A. M. Cornfoden.

35 men have enlisted from the Port and surrounding district.

G. A. Barry is having an auction sale of his effects, after which he will be at a selection station in connection with the Anglican church in the north country.

THEY SEED FOR GERMINATION

Farmers would be well advised, with the approach of spring to have all seed intended for seeding tested for germination. Indications are that this advice is much more necessary than usual. Samples are reported to not only be of low germination, but are slow and irregular as well. This may seem a little unimportant to weak plants, pronounce to breed attack, weak, thin, ragged stands, and uneven ripening.

Letter to the Editor

Port Saskatchewan Record,
The Editor,
Dear Sir:—

Mr. Hodgson, in his very instructive letter dealing with the prevalence of House Sparrows in our town, has brought up an important subject. Most of us agree with him in deploring the necessity for destroying them, but it seems to be our plain duty to do so. They have invaded our country, and are keeping calamitous overture against our more valuable and beautiful native birds. To remain neutral in this war is to assist in their guilt, so without our help some of our most desirable native birds will be prevented from nesting in our town, and their number reduced. This is particularly true of the Bluebird, who likes the proximity of man, and will build under the eaves of houses in preference to almost any other locality, if not crowded from doing so. As Mr. Hodgson knows, he cannot successfully complete with the House Sparrow.

To illustrate what can be done by a campaign against the sparrows unknown, I would like to point out the success that has been achieved by the enterprising town of Camrose. Mr. F. T. Farley of that town is one of the foremost authorities on the birds of this province, and the author of a book on the subject. He has encouraging fun of the house sparrow, and some years ago enlisted the boys of Camrose in a war against this bird, with very beneficial results. The twenty two rifle is the means he recommends for their extermination. In the interests of safety, shells for this rifle can be obtained from up with the first of their friends, the native birds, and there are much fewer cats in Camrose than in any other similar community in Alberta. The people of that town have been educated to know that our birds, encouraged to nest there by the efforts of its citizens in building birds houses, and in destroying the swarms of house sparrows, which would have made this success impossible.

I would like to add a plea for the destruction of cats in all towns and cities, as they annually kill most of the young birds that are hatched in these communities. Traps are just as effective destroyers of mice as are cats, and we should prefer them, if we wish to save the feathered population that are so important to our well-being Here again Camrose has shown the way. Again the boys have taken up with the first of their friends, the native birds, and there are much fewer cats in Camrose than in any other similar community in Alberta. The people of that town have been educated to know that our birds, encouraged to nest there by the efforts of its citizens in building birds houses, and in destroying the swarms of house sparrows, which would have made this success impossible. Can we not emulate so good an example?

Yours truly,
C. H. Turner

Author of "Jeannie," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Wirth, another wealthy girl who is trying to win Peter. Sylvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the last of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Avis is stunned and Camilla's mother likewise. Camilla's mother likewise. Bowman and Weeks, an advertising agency where Camilla has submitted some of her work, send for her and tell her they have a new account which requires original treatment of practice art. Camilla's surprise she learns that the account is that of her foster father's company, which has decided on an extensive campaign to that inspiring gum. Camilla decides to attempt the work. With ideas running riot in her head she goes home and spends the night sketching. In the morning, armed with her samples she sets out for the agency. Ten cities were enthusiastic about her work, and Mr. Weeks offers her a salary of $50.00 a week to start and a prospect of having it doubled. She goes to keep a dinner engagement with Peter. She tells Peter of her good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household.

(Now Go On With The Story)

CHAPTER XXXIII

The task of selecting a suitable apartment was not so difficult as Camilla had anticipated. She found vacancies everywhere, and inducements in the way of reduced rates and added accommodations were offered by helpful landlords. She looked at several places, compared prices and possibilities. Rose had insisted that a kitchenette apartment at higher rent would be more economical than taking one room and boarding out. Rose was a marvelous cook and had scoffed at Camilla's objection. "I know no little about housework. Rose, I'm afraid you would have to do most of it for awhile."

"That's nothing! Housework for two? I wish that was all I ever had to think about. And you'll learn quick. I'll teach you to cook in no time."

Camilla was delighted with her final choice of an apartment. It seemed to her. She had ventured a little more than they had planned at first for rent, because of her unexpected good fortune in the position with Weeks and Bowman.

The apartment building was a large one, quite new and therefore more attractive, and a number of vacancies permitted the offer of a dual entrance suite at a sharp reduction

She thought, too, as her eyes took inventory of the neat, snug rooms the dishes ranged in the cupboard and the tiny porcelain sink in the kitchen, that it would be nice to have Peter over to dinner with them occasionally. And perhaps there would be times when Rose was away that she and Peter could play at keeping house alone.

For a moment she wished selfishly that it was Peter who would share the apartment with her instead of Rose, but resolutely dismissed that happy possibility like the good sportsman she had promised himself to be.

In the immediate [illegible] she noted the public telephone [illegible] Rose and was [illegible] her. [illegible] apartment to approve her [illegible] Rose had been informed [illegible] Camilla's new position and [illegible] congratulations. It will [illegible] okay with me. Just see [illegible] forget we're not the Dolly [illegible] maintaining residences on three continents. Go ahead and take it for a week and if we have to, we can look for a cheaper place later."

"But I want you to see it, Rose. It's a duck of a place. And I want to see you, because I have some good news for you, then I'd drive you home. I would have dinner with you somewhere, but I promised to be home tonight.

"To date is state of last time." Well would better make the most of it, my dear because housekeeping is just like everything else, a life better to anticipate than experience. It will be just as monotonous to pick up your own [illegible] carry it to the sink to wash [illegible] as it is to wash Dishes carry it to the remote regions of the kitchen and it wears a burnt offering for the [illegible]

Rose's pleasant philosophy and easy chatter rassled on when she inspected the apartment.

"Hot-cha!" was her surprised comment. "Ain't we grand, though? But can we afford it, that's the important question before the house of representatives. Have you balanced your budget both ways?"

Camilla's revelation that she would be able to contribute definitely to the arrangement, called for another "Hot-cha!" from Rose "You're a white old girl, and no kidding! You're sure will get wherever you want to go. I wish I were more like you." But her tone held more of admiration than envy.

"You can do anything I can, honey," the elder sister assured her, "and just as good, if not better, but you are going to begin that secretarial course."

Rose's dark eyes stone dreamily. "Gee! kid, you're a swell sister, all right. You know, I used to hate you almost when you came to see us with your swell clothes and your car and your grand manners, and I knew we looked like beggars to you, even when we thought we had things pretty nice ourselves. But even then, I couldn't hate you very much. I don't know why, now. It's because you really aren't a bit snooty—it was all my imagination and jealousy."

"I'm glad you didn't hate me, Rose." Camilla slipped an arm about Rose's shoulders, hungry for the family life that a stranger fate had snatched from her. I've always needed a sister like you, and I want to do something in return for all you are going to teach me."

"About what?"

"Well, you are going to teach me to cook, so I can take care of my Peter some day, for one thing. But more than that, I want to learn your viewpoint about life! You are a year younger than I, Rose, and you think you have missed a lot of things I've had. But somehow, you are the one who has lived and grown wise while I have skimmed the surface of superficial trifles. I want to learn how to live deeply and wisely, I believe that you can help me."

Rose was silent for a moment. That she had anything to offer the beautiful, talented girl whom fortune had smiled upon, was a surprise to her, but she said presently, with gay insouciance, "Well, if it's how to make three and three add seven, and how to turn the shirt of last season's dress into a blouse for your new suit, you want to learn, I can do all that. And I've seen Ma change a roast into stew, then hash and then tamales so often that I can do the trick like a magician, myself. Those may sound trivial, my dear, but they are really deep mysteries of my life."

"Any accomplishment that requires thought and skill is a mystery until it is done," Camilla agreed. "And those which seem the least important are the ones that make the world go 'round, I've discovered."

Later, when Camilla took her place at the Hoyt table for her last dinner as a member of the household, Mr. Hoyt looked at her keenly and remarked, "So, you're leaving us tomorrow. We're going to miss you greatly, Camilla."

"I shall miss both of you, too," Camilla replied honestly. "But I'll come back to see you sometimes. I'll be pretty busy, of course, and won't have much time for pleasure [illegible]."

"You're mighty lucky to be getting any kind of a position in such times as these."

"Oh, I don't know. I've heard so many people told that they are lucky to have work, even if it doesn't pay much. I can't see it. That isn't fair. If one has ambition and ability to work, why hasn't he a right to earn a decent living? It is only the misfits who are lucky to have jobs." [illegible]

"Not turning socialist, just because you are going to work, are you?" [illegible]

"Nothing like that I believe in the individual not the masses But even distinguished individuals are feeling this upheaval"

"They certainly are," Mr. Hoyt agreed, tiredly. He had given no hint to his wife of the condition of his affairs, but it was no betrayal to admit that he was involved in the general oppression. Neither did he know that in Camilla's inexperienced hands lay the fate of his future and his business Queer, those three whose lives had run in a close parallel for so long, and were so interdependent and so distant; yet not one knew the intimate thoughts and hopes and activities of the others.

(To Be Continued)

Corn Growing On Prairies

A new argument for corn growing on the prairies is found in the experience of last season that grasshoppers will not readily attack the leaves or stalks in many cases when wheat, oats and barley were stripped, the corn was untouched and provided feed for live stock.

"What's the matter, Oscar you look terrible"

"My wife's on a diet."

HERE ARE THE USUAL SIGNS OF ACID STOMACH

Heartburn · Feeling of Weakness
Headaches · Mouth Acidity
Nausea · Loss of Appetite
Indigestion · Coated Tongue
Nervousness · Sleeplessness
Acute Intoxication

WHAT TO DO FOR IT

Phillips' Milk of Magnesia

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. Take small dosage of Phillips' Milk of Magnesia Tablets and see how quickly you get relief from those acid stomach troubles. Get a bottle of Phillips' Milk of Magnesia Tablets—or, if you prefer, the regular liquid Phillips' Milk of Magnesia. Both are exactly alike in quality and action. Both are equally effective. Either form you get is the same. Both are prepared only by Phillips. Insist on genuine Phillips' Milk of Magnesia Tablets—or, if you prefer, the regular liquid. Both are sold by druggists everywhere. Any druggist will supply you. Adv.

DIG-TABS—The new Tablet form of Magnesia Tablets—are handy for special uses.

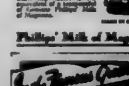
Phillips' Milk of Magnesia



Has a hundred uses. Always have a box in the kitchen.

Beecham's PILLS
The World Famous Remedy for LIVER & STOMACH TROUBLES

Here's Quickest, Simplest Way to Stop a Cold

1. Take 2 Aspirin Tablets. 2. Drink full glass of water. Repeat if necessary in 2 hours. 3. If throat is sore, crush and dissolve 2 Aspirin Tablets in a half glass of water and gargle according to directions at right.

Almost Instant Relief in this Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICK-EST, safest, surest way to treat a cold! For it will check an ordinary cold almost as fast as you can tell it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer in the form of a cross is on each tablet. They dissolve almost instantly. And they work almost instantly when you take them. And for a gargle, Aspirin Tablets dissolve so completely they leave no irritating particles. Get a box of 12 tablets or a bottle of 24 or 100 at any drug store.

DOES NOT HARM THE HEART

Blue Bread

Blue-Dyed Wheat Intended For Huge Emmett Loaf Time In France

France's blue-dyed wheat, intended for hogs, has found its way into some of the nation's bread, with the result that angry consumers are demanding investigation.

Authorities of the government announced 22 tons of flour had been ground from denatured wheat, intended solely for livestock, and sold to bakers of the Tarascon region.

No ill effects from the bread were reported, except by the housewives of the consumers, who concluded that, having paid the standard price for their bread, they had been cheated.

NERVOUS, SLEEPLESS

Mr. Wm. Deering of 6 Hamilton Road, Copenhagen, Ont., writes: "I was run down, nervous and sleepless. I became weak and suffered from pains in my back — in fact I was all in. Then I took Dr. Pierce's Golden Medical Discovery and in a wonderful change. I am now well and strong." Send 10c for trial package. Write Dr. Pierce's Clinic, Buffalo, N. Y.

A Huge Pendulum

An 85-foot pendulum believed to be one of the largest in the world, has been hung in the Frank Institute in Philadelphia to tell how the earth is rotating Made of vanadium steel, the pendulum itself is very light, but the bob at the end of it is said to weigh 1,000 pounds. The manner in which the pendulum swings indicates the earth's movement.

THE STAR WEEKLY BOOSTS CIRCULATION DURING PAST YEAR

The Star Weekly now has the highest circulation in its history and the largest circulation of any paper in Canada. During the last twelve months, its circulation has increased by 18,000 copies a week, showing that Canadian, whether town he good or bad, regard first class reading matter as a necessity.

In the Star Weekly, Canadians find news and features in which they are keenly interested, written from a Canadian viewpoint. The Star Weekly is produced in Canada, by Canadians, for Canadians. Both its reading matter and its pictures interest every member of the family from the youngest to the oldest. It is a cheery, youthful publication, astonishing and vig orous.

The Rotogravure section presents the world in pictures, including not only photographs but paintings of Canadian subjects done specially for The Star Weekly by leading Canadian artists.

Its sixteen full-size pages of carefully selected colored comics and cutouts is a feature in which the younger members of the family find unending pleasure, shared by adults.

There are also two magazine sections, crowded with articles, fiction and departments where the principle aim is to make the paper interesting and entertaining as well as informative. The fiction, by well known writers both of Canada and the world, is spirited and inspiring, with none of the slowness and meridiones which are distasteful to so many people. The movies and the radio have special departments, with the latest news and pictures of those two most popular arts. The Star Weekly Kitchen is a authoritative presentation of cooking for the homemaker and The Weekly Problems are up-to-date.

Looking over The Star Weekly, one cannot fail to be impressed by the tremendous quality's worth found in it, a week-end entertainment for the whole family at ten cents.

Your attention to the big Advertisement of the Toronto Star on page 6 of this issue. Many local news will be found there.

Mr. and Mrs. E. A. Wilmsroth left last week-end for the Coast, where they will spend the next three weeks.

Representatives of the Toronto Weekly Star canvassed the town Monday, in connection with their advertising campaign now appearing in The Record. Mr. J. Kirkland, subscription cover manager for this district, paid a visit to The Record, and stated that subscriptions were going good in the Fort.

Sample copies were given to the school children on Monday afternoon.

Andrew Jacobs and Smith's Drug Store will handle the Weeklies in the Fort.

Miss Fanny Poitet, daughter of Mr. and Mrs. H. C. Poitet, of the Fort Hotel, entertained a number of young people last Saturday evening.

Dancing and games were enjoyed until a late hour, when dainty refreshments were served by the hostess.

Alberta Legislature News Week to Week

(By our own Correspondent)

Edmonton, March 7th.—During the week the protracted debate on the speech from the throne came to an end. First the Conservative sub-amendment, then the Government motion went by the board on a division of 34 to 17 in favor of the government. Then the Liberal amendment, with its long list of charges, was defeated by a vote of 19 to 39. On this occasion both the Conservatives and Independents left the chamber before the division. Labor supported the government on both occasions.

The week has been an interesting one. Apart from the conclusion of the debate which had grown somewhat wearisome because of its length, plenty of fireworks have been interjected here and there.

One of the Liberal motions which were discussed during the week received substantial report. This was one calling for an investigation of the Douglas System. All sides of the house agreed with this after the premier had announced that long ago the government had decided to have such an investigation.

Before the debate on the address concluded Hon. George Hoadley, minister of Agriculture, delivered a spirited defence of his department. He disclosed in detail all the agricultural activities of the government, which he said were far worthy of commendation then criticism.

Mr. Reveal,s moved an amendment to the effect that the government should continue by negotiation with creditor interests and by necessary modifications of the administrative effort of the Act, the earliest boast to bring about such reduction of principal or interest or both as may be reasonably necessary in meritorious cases.

George MacLachlan, U.F.A. Pembina, pointed out that the opposition first condemned the government for extravagance and then by motions demanded expenditures according to several conflicting views. A. C. Buckley, U.F.A., Chinook, agreed that the house could not intelligently form a judgment on what particular highway work was needed. It was a matter for the department of highways.

Hon. Mr. McPherson dealt at length with the whole question of highway construction and said it was necessary to cut cur's cost according to the cloth. The debate dragged out at length and was finally disposed of as mentioned above.

The Parent-Teacher Association will hold a meeting on March 19th, in the Ypres Valley School. Dr. T. W. E. Henry will address the meeting "On the Influence of the Childs Health on his Progress in School." Everybody welcome. Admission free.

MARRIAGE

Miss Ethel Alice Kingsley and Mr. Stanley William McKee of Edmonton, were quietly married at the home of Rev. D. C. Ramsay on Saturday, March 3rd, 1934 at 9 o'clock p.m. Mr. and Mrs. McKee will reside in Fort Saskatchewan in the near future.

A number of employees of the Hudsons Bay Co., Edmonton motored to the Fort last Wednesday afternoon with the intention of bob-sled riding, unfortunately mild weather had ruined the bottom of the hill. The party not being able slide, adjourned to the Fort Hotel and the Fort Confectionery where they enjoyed themselves.

Coming Events

The St. George's W.A. will hold a dance on Easter Monday, April 2, Watch for further announcements.

The Fort Badminton Club will hold a dance on Friday, March 16th, in the Badminton Hall. Dancing 9 till 2. Refreshments. Peppy Pals Orchestra. Admission 50c each. Everyone come and have a good time.

The regular monthly meeting of the Women's Institute will be held in the Union Hall on Thursday, Mar. 8th, at 3 p.m. sharp.

Miss Romanchych of the Women's Bureau, Dept. of Agriculture, will give a talk on her work. The Vegreville W.I. will also be guests on that day. All members should make an effort to be present.

FORT SASKATCHEWAN RECORD

VOL. 18 No. 50 FORT SASKATCHEWAN, ALBERTA, WEDNESDAY, MAR 14th, 1934 $1.50 PER YEAR IN ADVANCE

Much Business Done At Municipal Meeting

The statutory meeting of the Council of the Municipal District of Clover Bar, 547, was held on the 13th instant, with all members in attendance. The returning officer's report was read, which showed that Messrs. Moyer and Berry were duly elected to the office of Councillor for Division four and five respectively.

Mr. H. B. Peters was unanimously elected as Reeve for the ensuing twelve months and Mr. E. Keith as Deputy reeve for the ensuing six months.

Messrs. Henderson & Kinnaird, Chartered Accountants, Edmonton, were appointed as auditors for the present year.

A resolution authorizing the borrowing of five thousand three hundred dollars, from the Royal Bank of Canada was passed.

The Secretary submitted an order from a Judge of the Juvenile Court, Edmonton, ordering a delinquent child of the District to be made a ward of the Department and that any expenses in connection with the child's care be charged to the municipal district. The Secretary advised that he had been summoned to appear when the case came up for hearing but no defence was put in as the case has been thoroughly investigated by the Reeve, Mr. Mann and himself and that there was no question as to the district's liability.

The Royal Alexandra Hospital advised that John Spencer a ward of the Department, was admitted to the Isolation Hospital suffering from tuberculosis and that it would be cheaper for the District to have him admitted to the Sanatorium at Calgary. The Council realized that they had no alternative in the matter and the Secretary was accordingly instructed to make application for his admission.

The request of Mr. M. Van Camp, Clover Bar, to lease the road allowance between Sections 1 and 12-53-21-4, was entrusted to Councillor Gunn for investigation.

The Council authorized the sale of Block "X", Ridgeway Park sub-division to Mr. C. E. Morris for $90.00 per acre, less the value of two lots in Block 1, Crescent View.

A number of applications for relief and hospitalization were dealt with.

Mr. Montgomery of the Royal Alexandra Hospital was in attendance to discuss the proposed agreement between municipal districts in the Edmonton District and Edmonton Hospitals. While the Council felt that the agreement would obviate the continual conflict between hospital authorities and municipal councils over indigent accounts, it was not by any means a permanent solution to the problem. It was felt, however, that it was a step in the right direction, and Mr. Keith was accordingly given instructions to support the agreement when it came up for consideration at a meeting of representatives of the municipal districts on Monday next.

The matter of purchasing a car of bridge and culvert lumber was left in the hands of the Reeve and Secretary.

With the reading of correspondence and the passing of paybooks and accounts the meeting adjourned.

From news advices it is shown that at the Imperial Conference England agreed to take 200 million pounds of hog products from Canada for five years, and all that Canada could ship during 1933 was 80 million pounds; less than one-third of her quota. There surely is big money in hogs at present grain prices and the market is secured.

A boy in Kansas school, asked for a composition on slang, wrote "I bet if I don't quit using slang, you'll soak me on the noddle."

The teacher read it. "One more crack like that," he exploded, "and it's the skids for you."

Women's Institute Hear Home Economics Course

The regular monthly meeting of the Fort Saskatchewan Women's Institute was held on Thursday, March 8th in the Union Hall.

The members were disappointed at the last moment Miss Romanchych was obliged to cancel her engagement to address the meeting as she had been given leave of absence and was leaving almost immediately for Europe. Mrs. E. Morton, President of the Vegreville W.I. who was to have accompanied Miss Romanchych on her visit to the Fort sent regrets. Her letter also gave, by request, many useful and practical ideas about serving lunch to children attending the Musical Festival.

The subject for the day was taken from the Home Economics Course and covered salads, salad dressings and cheese dishes and one of the latter was served during the tea hour. Charts showing the proper choice of foods also diet lists for both of those requiring special diet, were distributed to the members. "Know your Cans" was another division of the afternoons lesson and cans of different sizes and shapes (there are at least 27 different sized cans on the market) were used to demonstrate the necessity of being familiar with the amounts contained in cans of different trade names. A little manoeuvring "3 cans for 25 cents" or "Special 4 cans for 25 cents" does not mean a thing unless the customer knows the size of the cans and the amount in each.

A short paper was read on Canadian industries. This was prepared by Mrs. Walter Boyd, Mrs. Wm. Waskatenau, Constituency Chairman of that committee, and emphasized the duty of Canadian housewives to buy Canada and always Canadian goods where price and quality equal those of any other country.

The following Nursery Committee was appointed for the 1934 season, Mrs. Ed. Graham, Convener, Mrs. D. J. McLean and Mrs. A. H. Rogers.

Plans were discussed for a Card Party to be held in the Union Hall, Friday, April 13th. Any proceeds cleared from the Old Timers lecture Monday evening, March 19th will go towards the Cemetery Fund so it is hoped a large crowd will be in attendance.

Mrs. Ed. Graham and Mrs. J. E. Graham were hostesses during the tea hour.

Production Costs Adjustable Factor Farmers Follow Trend in Industry

Some farmers have certainly adjusted their production methods to meet low prices—in fact many farmers have. Many others, however, have not attached their difficulties to this way, but rather have imposed greater burdens on themselves by adjusting their living to depression conditions instead of making production carry its own load.

See Fort Hardware Advertisement.

IT PAYS TO ADVERTISE

Lamont Curlers Win Carscadden Cup

Two rinks from Lamont invaded the Fort last Thursday night and successfully defeated two local rinks to take the Carscadden Cup back to Lamont with them. Last year this cup went back and forth, so far this year this is the first time it has left home. If present weather conditions continue, it is likely that Lamont will hold the cup until next season.

The personal of the Lamont rinks were: E. Thomas skip, M. Pearce, C. Trudgeon, N. Buchanan; G. Strahn, skip, C. Lentz, E. McCartney and F. Trudgeon.

Fort: H. Thoms, skip, B. Anderson, A. Simmons, E. H. Anderson; F. Murray, skip, C. Ashton, Dr Calhoun, and A. Mans.

Local Trail Rangers Re-Organize

There was a well attended meeting of the Moosier group Trail Rangers, in the Sunday school room of the United Church on Wednesday night. Rev E. W. Hibbut, M.A., B.D., of Calgary, secretary of the Young People's Work Board and Boys' Work, was present and showed lantern slides on Trail Ranger work, and also explained The Four-fold Program of the work to the boys which was much appreciated.

The officers are as follows:—
Mentor, R. Poncsh.
Assistants, B. Williston and J. Connelly.
Chief Ranger, Omer Williston.
Sub-chief, Bobby Thorne.
Tally, Billy Copeland.
Cache, Bud Butler

Plans are being made for a Father and Son banquet to be held in the near future.

Mr. F. E. Murray to Leave This Week-end For Gadsby

The people of Fort Saskatchewan and surrounding district have learned with great regret of the removal of Mr. F. E. Murray and family to Gadsby next Monday.

They will be greatly missed from the business, social and religious life of the town.

Mr. Murray has been the efficient manager of The Royal Bank here for the past five years. He has been a splendid citizen during that time. For some years he was chairman of the Board of Stewards of the United Church and has taken a deep interest in the work of the church. He will also be greatly missed on the curling rink where he was an experienced exponent of the roaring game.

Mrs. Murray's departure will be deeply felt by the women's societies both of church and community.

With their son Jamie, they carry with them to their new home, the good wishes of a host of friends.

Josephburg News

The U.F.A. concert was a decided success. A large crowd was present despite the bad roads. After the concert a number of prettily decorated baskets were sold.

Mrs. Leslie Lott and family are visiting at her home in Good Hope.

Mr. and Mrs. Charles Thomas were Edmonton visitors last Thursday.

Mrs. T. Magee has returned home after her visit to Newbrook.

A very successful dance was held at the home of M. and Mrs. Sam Terrents last Friday.

Miss Verna Cripps has taken up work in Edmonton.

The Josephburg Junior U.F.A. held their meeting at the home of Mr. E. Griffin on March 2nd.

After the business part of the meeting was finised, Mr. Sterne of Edmonton, spoke to the Juniors on "Canada's Place in World Affairs". The Councillors then gave their ideas of what they would do if they were Councillors. When they had finished, a mock election was held. The Councillor elected for Division 4 was Hilda E. Frey, the one for Division 5, Wilfrid Mann.

The girls are now busy selling tickets for a hair pin cushion top and a doll Door-Stop, which are to be raffled off at the School when the plays are given.

The next meeting is to be held at the home of Mr. Jacob Hennig on March 16th. The roll call is to be answered by "A Superstition".

The Josephburg Reed Club held a meeting in the school on March 6th, to reorganize the club. There are now two clubs of wheat with ten enough to have the highest marks members, and cats with twelve members. The varieties of grain to be grown are Marquis wheat and Victory oats.

Mr. Hallman from the Department of Agriculture was out to the meeting and gave the boys a very interesting talk on seed growing. Seed growing please get in touch with the Secretary, R.R. Rippel at Earle Cranston, who was lucky case.

"SALADA" TEA

"Fresh from the Gardens"

The World's Great Handicap

In an address delivered recently at Walrose, Sask., Professor Swenson of the University of Saskatchewan, said he could see signs on the horizon of a return to economic sanity, but "woe is to the way". He said: "International fear, political fear, Imagined fear, fear of Japan, communist fear, life is overshadowed and overwhelmed with fear. The cheapness has arrived," he added, "to take place of leadership in our country, in overcoming these fears. On the Western plains there is no place for this fear."

Then in the United States there is the possibility that some of the most observant and canny writers of the day, pointing out that the economists seem pretty well agreed that the bottom of the depression has been reached and passed, and that business is fundamentally better all over the world, while of late many of the leaders in the money market of a rich nation on the way back to health; that while a great many medicines are being applied, some of which probably help the patient's recovery and some of which hurt, the important fact is that health is returning, and that the country can stand a considerable dose of patent medicine without permanent harm, and that when the country is really healthy it will throw the patent medicine bottles out of the window, discharge the most radical doctors, and go on its way

Bruce Barton, however, points to two very important things for people to remember and heed. It is, he says, vitally important to keep on operating. Whatever occurs again you are going to be the same man you were. On the other hand, they are not going to be so entirely different as some sentimentalistic people would have us believe. It is, he says, as we sighted for the return of the good old days. It is going to be something like that all the past was bad and must be dismissed. His advice is: "Keep moderate; keep flexible."

Most important, says Bruce Barton, "fight oil fear", and he urges that the words of Thoreau be placed where they can be seen every day: "Nothing is so much to be feared as fear. The sin that God hates is fear; His Chosen abhor it next to cowardice."

It is undeniably true that fear is the great obstacle to a return to more prosperous times throughout the world. It is fear that prevents great pharmaceutical companies from trying to improve upon the taxpayers of the nations the crushing burden of huge pensions, sacrifice, and the whole complicated paraphernalia of war establishments. It is fear that leads nations to erect hostile tariffs against the goods and products of other nations. It is fear that is keeping untold millions of money locked up instead of it circulating through all the channels of business and providing employment for the countless thousands at present unemployed. It is fear that is distorting the minds of people and making them the easy victims of others who preach the gospel of discontent and despair.

Fear never makes for progress. Being destructive of constructive thought and initiative, it acts as a brake on progress, preventing the launching of new enterprises, discouraging expansion and further development. Through the engendering of timidity and lack of self-confidence, fear leads men to withdraw into himself and behind isolation protective devices wherein he reviews but does nothing else. In a word, fear makes him a coward with a coward's outlook on life and its responsibilities.

It is the future of which most people appear to be fearful. They decline to recognize and accept the lessons and experiences of the past as having any bearing upon or influence over what should supervene in the present and the present. Instead, in their fear, they say present difficulties are different from anything ever before known, and consequently neither they nor any other person or persons know what to do or what ought to be done.

So, in their fear, they will not take advantage of what is, and only accomplish something but would inspire others to action, and the cumulative effect of which would be a solving of difficulties. Work would be provided for hundreds and thousands of people now idle if those who have reserves would take their courage in their hands and proceed to have this, that or the other little job done which demands attention. But, no, they will not venture even a small expenditure and thus by their refusal progress and help to perpetuate a condition of things which, if continued, will mean ruin.

When parents cease to overcome fear on the part of their children. They do it deliberately but passionately because they realize that the elementary fear is the greatest possible handicap in life. Wise leaders of the Canadian people in all walks of life should join forces in waging war on fear which now possesses so many, and they should join hands with those who are engaged in capitalizing fear as an agency in the advancement of the things of economic despair

---

Producing Poultry Meat

Experiments at the Central Experimental Farm, Ottawa, have shown that it takes 20½ pounds of mixed grain to grow Barred Rock cockerels to twenty-six weeks of age, weighing an average of 5.63 pounds. That is with a good class of Barred Rock cockerels, 4½ pounds of grain can be converted into one pound of meat. The lighter breeds consume in proportion of six pounds of feed for each pound of gain in meat.

Asparagus Takes Old Soldier

Have you ever wondered where the old automobile tire casings and inner tubes go? Asparagus is seeking rubber bands from Canada for the manufacture of soles from the rubber for cheap grades of canvas shoes and the ink with a good class of Barred Rock resembling pumice of the fabric of tires for the manufacture of sleeves for tiniest patients, states the International Trade Department of the Canadian National Railways. Japan is also a large importer of old tires.

Household Drudgery

The Bane of a Woman's Life

Nature intended women to be strong and healthy, instead of weak and sickly, but how can a woman have good health when she has to go through the drudgery of household duties without the aid of a strong and healthy nervous and invisible, but hot fleshes, faint and sleep spells, vertigoes of heads, aching and disturbing dreams, and can't sleep at night.

Women who are weak and run down will find in Milburn's N. & N. Pills a remedy to strengthen the nerves and make both the stomach and blood.

W. N. U. 2027

Hackable Lifeboat

Many Devices Used Make Them Expensive To Build

"Wonder-boats" in a description that has possibly not yet been applied to the craft of the Royal National Lifeboat Institution, yet it is not inappropriate. In the Institution's fleet are boats that can free themselves of water as rapidly as it comes on board. They can keep afloat when every one of the watertight compartments has been damaged and open to the sea.

If capsized they can right themselves and empty out all water in 20 seconds, and in the case of motor-propelled boats, continue running when the engine-room is flooded.

I was given three facts when I talked to Lieut.-Colonel C. H. Sutton-Pratte, secretary of the Royal National Lifeboat Institute, about the boats that during the last five days have saved many lives from the fury of the easterly gales, stated a London newspaper special correspondent. He also learned how it is that a boat full of water can immediately empty itself.

"On the bottom of most boats in our fleet," he was told, "are valves of the latest models," said Colonel Sutton-Pratte, "are relieving valves which open only when the water is to pass one way. As fast as the sea fills the cockpit of a lifeboat it is automatically emptied out of the boat or sides. That is perhaps not the most remarkable feature of lifeboat construction.

"Not many people know that a lifeboat can have itself brim-full of water in each side, and yet still be able to right herself. It is a thing to be said to the fact that a lifeboat is divided into from seven to fourteen watertight compartments, and from each of these air can be pumped. These air-cases make her practically unsinkable, and a boat can be kept afloat by her own air when each of the watertight compartments is open to the water. In view of these devices it is practically impossible for a lifeboat to capsize, and the whole complicated paraphernalia of war establishments. It is fear that leads nations to erect hostile tariffs against the goods and products of other nations. It is fear that is keeping untold millions of money locked up instead of it circulating through all the channels of business and providing employment for the countless thousands at present unemployed. It is fear that is distorting the minds of people and making them the easy victims of others who preach the gospel of discontent and despair.

Wireless Reader In Smithsonian Institute

Only Case Known To Science Of Sailmen Who Birds Were Lived

A wireless rooster recently received by the Smithsonian Institution is the first duplicated precedents established by the fowls that have been hatched without wings heretofore by living in grave into lusty adulthood among the customary appendages. In all other such cases known to science the wingless birds have died while young.

The present specimen was found in the flocks of Mrs. Otto Doering, of Mill City, Ore., and it is to the institutions. Its inheritor seems to be normal in most ways, but it is refused to make jumps like would and bother on ordinary chickens. It hesitates a long time, for instance, before jumping from a table to the floor to obtain food, even when it is very hungry.

Aerial Control Tests

½ cup sugar
½ teaspoon salt
2 egg yolks
½ cup mashed stewed apricots
½ teaspoon lemon juice
1 tablespoon Benson's Corn Starch
1 tablespoon melted butter
½ teaspoon vanilla
2 tablespoons water
2 egg whites

Mix and sift together the first quantity of sugar, the salt and corn starch, then gradually add hot milk and cook in double boiler until thickened. Add well beaten yolks and cook for a minute longer. Stir in the vanilla and cool. Force the apricots into previously baked tart shells and cover with meringue made by adding the cold second quantity of sugar and the lemon juice to the stiffly beaten whites of the eggs, and beating until the mixture holds its shape. Brown slightly in a rather hot oven.

Fruit For Livestock Areas

Forty-one varieties of fruit and vegetables have been supplied by growers of the Okanagan Valley to drought-stricken districts on the prairies. Twelve hundred boxes of McIntosh were taken from common storage at Penticton and shipped to Medicine Hat, Sask.

THE CANADA STARCH CO. LIMITED, MONTREAL

In Times Of Emergency

Central Bank May Not Have Exclusivity Of Finance Act

Present and future ministers of finance will have a fairly rigid currency body to "aid" them when the new Central Bank is established and operating. But those of them who are individuals may find, in succeeding of crisis, that the central bank will hamper them in working out the best solutions of emergency difficulties.

During the war, Sir Thomas White gave Canada's affairs a financial direction that was masterly. He sought and obtained advice from the best possible sources but having no permanent advisory body to bother him he was not tied down to the formality to their prejudices and run hopes.

Likewise, the Finance Act to-day has an elasticity about it that greatly helps the Minister of Finance in meeting the country's financial problems.

There is a classic story about the Westerner to whom Sir Sam Hughes offered a commission in the militia after asked the man if he wanted to join the infantry or the cavalry. The reply was "The infantry. When you get into trouble I don't want to be hampered with no horse."

In days to come many a finance minister, facing conditions such as those exist to-day, may wish that he were not hampered by "no horse."—Financial Post.

Act May Be Revised

Amendments Will Be Considered Session If Time Is Not Taken Up

Amendments of the Dominion Elections Act, which was passed by the House of Commons last session, will be considered by the Senate committee on privileges and elections during the present session, it was announced by Senator Gideon Robertson, minister of labor.

The committee will meet on Thursday, March 10, at 11 a.m., Senator Robertson said. Whether the amendments will be dealt with at this session depends on the time available, he added.

Migration To Old Country

Need To Be Healthy Sign Of Economic Conditions

Immigrants throughout the world are going back to the "Old Country", the International Labor office at Geneva reported, but said this was a healthy sign of economic conditions.

Migration figures indicate the return to more normal conditions, the report asserted, while the most reliable statistics show signs of improvement in different parts of the world.

The population of the Soviet Union is about 60 millions more than that of Continental United States.

How to Stop a Cold

Quick as You Caught It

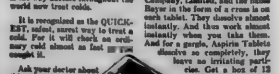
Take 2 Aspirin Tablets. Drink full glass of water. Repeat treatment in 2 hours. Repeat is rare, crush and dissolve 24 Aspirin Tablets in a half glass of water and gargle according to directions in box.

Almost Instant Relief in This Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will check an ordinary cold almost as fast as you caught it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin



is the trademark of The Bayer Company, Limited, and the name Bayer in the form of a cross is on each tablet. They dissolve almost instantly. And then work almost instantly when you take them. And for a purple, Aspirin Tablets dissolve so completely, they leave no irritating particles. Get a box of 12 tablets or bottle of 24 or 100 at any druggists.

Executive of Millers' Association Says Better Quality of Grain Is Grown In Southern Districts

A major matter for consideration in connection with Canada's wheat marketing problem is the question of grades, stated C. S. C. Short, honorary president of the Canadian National Millers' association, upon his return to Montreal from a visit to Western Canada.

For a long while, he said, "the northern farmer has been carrying the northern farmer on upon his back. Wheat from the northern territories of lesser quality should be graded on its merits and the southern farmer should receive for his superior quality a premium in price above that received by the farmer in northern areas."

Over-all average quality of Canadian wheat was materially reduced by the inclusion in the grades of northern areas, which primarily resulted, Mr. Short said, from the variety of lesser quality and earlier ripening wheats chosen, Canada Chronicle.

"Higher lower variety of grain will be seen in the future," he said, "in the dairy, the Argentine evidently intends to pasture, or they should be graded separately and sold on the relative values, in order that Canada's generally high standard quality grades shall not continue to be lowered but shall be rehabilitated to maintain their wide margin of world's superiority," Mr. Short said.

If such a method of grading were adopted and as a result the northern farmers discovered that the continuance of the growing of such wheats proved unremunerative, it would drive them into other and more remunerative types of farming, he said. Many are economically help to bring about desired reductions of wheat acreage, and, at the same time, automatically ensure the raising of the average level of the Canadian crop.

No Suitable Available

No Suitable Knowledge Of World Wheat Acreages

"At the outset, it should be stated that a complete enumeration of world wheat acreage is impossible, because no statistics are available for a few large producing areas and for many smaller countries", said Dr. T. W. Grimshaw, chief, Agricultural Statistics, Bureau of Statistics, in discussing trends in world wheat acreage at the World's Grain Conference. Chief of course, is an outstanding example of a country of which we have no reliable knowledge of crop acreages. By some authorities, China is ruled to be world's largest wheat-producing country, but since her yield per acre is rated very high by interested parties, it is probable that her wheat acreage is less than in Russia or the United States, but probably less. The other countries of possible importance in wheat-growing which have no reliable statistics that could be relied on are a group of States in the South American continent, Ecuador and those areas which in Europe, Albania, Montenegro, Andorra, Monaco, Liechtenstein and Afghanistan in Asia. The Food Research Institute estimates that the annual average acreage of the countries of the world for which no reliable statistics are available is about 45 per cent. of the wheat actually produced in the world.

Bridled Thousand Mile.

A bell and lantern buoy that drifted from its station at Cape Bruhat, Negro Province on November of 1926, has been found washed on Turks Island, according to word reaching the department of marine agency at St. John, New Brunswick. In five years the buoy drifted at least a thousand miles. It will be returned to Canada and replaced in service

National War Memorial

Canada's national war memorial, originally designed to be placed in Connaught Place in the capital, will cost slightly more than $340,000 and is still in the course of construction, the house of commons was informed.

Canadian Wheat Wanted

Millers Require Hard Canadian Wheat To Mix With Softer Grades

Speaking of the wheat situation from an importer's point of view, Mr. G. J. S. Broomhall, the international wheat trade expert, told the Regina conference that it might perhaps be emphasized that wheat growers are still in a favoured position, in that they can put on the market the most valued foodstuff of civilized man. And in this matter Canadians were particularly fortunate for they grew a wheat that is desired by millers in all countries. It was true that all millers do not, and indeed cannot, buy Canadian strong wheats, because many countries in Europe, and most notably Europe, had imposed such high duties and milling restrictions that Canadian and other overseas wheats are effectively excluded. But that did not alter the fact that millers want Canadian wheat, especially when they are compelled to mill a very high per centage of soft native wheat.

Jersey Cattle in Alberta

Province Ranks Fourth In Total Registration For Canada

Greatly growth in both and in production of Jersey cattle and milk in Alberta during the past year were reported to the annual meeting of the Southern Alberta Jersey Cattle Club by W. T. Hunter of Vernon, western field representative of the Canadian Jersey Cattle Club. He referred to a marked increase in demand for Jersey milk, not only in Western Canada, but also in the eastern provinces. During the past eighteen months Hunter said, 200 Jersey cows were located in Edmonton and Calgary districts, most of them from British Columbia Alberta now ranks fourth in the Dominion in total registration and second only cattle Ontario, Quebec and British Columbia leading in that order

Success With Clover

Young Saskatchewan Farmer Wins Seed Award

Louis Wendel, a young farmer living south of Neudorf, Sask., has achieved considerable success in growing sweet clover at the different grain shows during the past year. He obtained the following standings in this class of grain. At Regina World Grain show, 2nd prize; at Chicago, 7th prize, at Saskatoon, 1st prize and also special prize, which gave him permanent possession of same. At all these shows he had the highest standing of any entrant from Saskatchewan in this class of grain. At the present time he is specializing in the growing of barley and expects to come to the front in this class of grain in the near future.

CHARGING IS FOUND UNSAFE AS POWDER MUD WITH LUBRICANT PREVENTS HEAT IN PLAIN TUBES.

Can't you see that powdering the needle actually would be to the needle what a dry shave is to the face, but unlike the latter, you'd like? The ball may be in the cartridge, if you like your powder that way, but it's not necessary. Just use the powder you're used if you prefer it, and a very little goes still be the result. Order in only or powder. Price per box, $2.2 is assigned for sizes 16, 18, 20 years, 24, 26, 28 and 32 inches bust.

Size 24 requires 3½ yards of 36-inch material with ½ yard of 27-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Declares Present Is No Time For Canada To Embark On Scheme To Attract Immigrants

History Of Canadian Wool Grading

Principles Have Become General Among Sheep Raisers

The present-day high quality of Canadian wool is due in the main part to grading which was started by the Live Stock Branch of the Dominion Department of Agriculture in 1918. At that time the men taken in the grading, clearing, preparation for market, and marketing was such that Canadian wools were discredited not only in the home market but in foreign markets as well. Graded wool usually sold at higher values than ungraded, and on this account the efforts of the government officials were soon crowned with success. Grading became very popular in a short time and at first was performed locally, often at a number of points within a province. These graders were trained by men who had been having points for graded wools, but also proved as an economical means for farmers in ascertaining the relative market values of the various wool grades and the necessity of putting up the wool in proper shape for market.

When once the local organization work had been completed, and a Dominion-wide wool grading principle became general among sheep raisers, it was thought best to establish a co-operative marketing system for all the associations affiliated with it. The Dominion Live Stock Branch still assumes responsibility for the wool grade standards and provides official wool graders for the grading of co-operative shipments

Old Tradition Past

An ancient tradition of Scottish agriculture has been upset by an order from the Duke of Portland of Alberta Percheron horses Clydesdales are "the horses" of Scotland, but dockyard residents at Glasgow have tried out Percherons brought in from France and finding them more suitable for their special work, have placed the Canadian order.

FAMOUS RAILWAY DOG RETIRES!

Canadians who in their journeys through London have been in Euston Station, will remember "Victor", the famous dog that used to walk up passengers with a collecting box on his back. Victor, after collecting almost $12,000 for charity, during his six and one-half years in the station, has retired. His place has been taken by "Jack", a two-year-old surly coated retriever, that hopes to carry on the good work Our picture shows Victor (left), mournfully contemplating his retirement, while Jack happily looks forward to a busy future.

Declares Present Is No Time For Canada To Embark On Scheme To Attract Immigrants

There is no time for Canada to embark on a progressive scheme to attract immigrants, the house of commons was advised by Hon. Wesley Gordon, minister of immigration and colonization, in reply to James S. Woodsworth, leader of the C.C.F., and Hon. Charles Stewart, a former Liberal minister of immigration.

"I think the time will come," said Mr Gordon, "when this country will again be in sufficiently attractive as that many hundreds of thousands of people will come here from the United Kingdom." But present conditions did not warrant a lessening of the unemployment load.

The name of Brig.-Gen. W. L. Hornby, of Lethbridge, Alta., loomed large in the discussion when members of the department were under examination. He was given plan to bring settlers from Great Britain had been planned, before him by Brig.-Gen Hornby in the two discussions he had had with him, said the minister in reply to questions by Mr. Woodsworth for farmers in ascertaining the relative market values of the various wool grades and the necessity of putting up the wool in proper shape for market.

When once the local organization work had been completed, and a Dominion-wide wool grading principle became general among sheep raisers, it was thought best to establish a co-operative marketing system for all the associations affiliated with it. The Dominion Live Stock Branch still assumes responsibility for the wool grade standards and provides official wool graders for the grading of co-operative shipments

Assistance For The Blind

May Take Farm Along The Line Of Old Age Pensions

Hopes that, if Canada makes a speedy economic recovery, action may be taken soon to provide financial assistance to the blind along the line of old age pensions, was held out by Prime Minister R. B. Bennett in the house of commons.

During consideration of the miscellaneous estimates the discussion came over an item providing assistance to two blind institutions in Montreal. The prime minister said that some of the provisions of the contract legislation providing for their participation in a scheme which would give old age pensions to blind on reaching the age of 65. No uniformity had as yet been attained the prime minister said, but he understood efforts had been made to secure uniformity. The matter was receiving attention.

Trained For Health

C. J. Wright, 58-year-old grocer of Roswell, New Mexico, has demonstrated once more how to make a strenuous case of cancer disappear in 20 days, during which time he declared his stomach and other disorganized but his general health was improved 50% according to Wright says he is convinced that most bodily ailments can be cured by overeating

Entitled To Dessert

A baker at Neumiester is considering to obtain damages from a customer who used one of his plum puddings as a door mat. The baker had just boiled a marvellous pudding and put it on the doorstep to cool, when a short-sighted customer arrived Mistaking the plum pudding for a round door mat, he began to wipe his muddy boots on it when it began to

FREE TRIAL OFFER OF

KRUSCHEN

If you have never tried Kruschen try a new way suppose. We have arranged a good many special "GIANT" packages which cost a penny but you to prove our claims for yourself. Ask your druggist for the new GIANT 76c package.

This pounds of our regular 2/- bottle together with a penny bottle sufficient for three months' trial. Kruschen is sold by all chemists and stores throughout the world. If you have any difficulty in obtaining Kruschen, write to us and we will see that your druggist is supplied. Address: The Proprietors, Kruschen, Dept. 1, 10 Lombard Street, London, E.C.3. Kruschen is manufactured in Canada.

WORLD HAPPENINGS BRIEFLY TOLD

A maximum wage law for men in Manitoba is a possibility this year according to Premier Brookfield.

A further 20 per cent reduction in automobile insurance rates was announced in Montreal by H. N. Cowan, secretary of the Canadian Automobile Underwriters' association.

Mrs. Sara Jane Maida promised recently at a meeting of women representing all communities and faiths, reverence by the Women's Council at Bombay, India.

President Roosevelt, through his secretary of the treasury, asked the United States congress to let him retain a free hand over monetary policies for at least another year.

Payment of the loan to Manitoba of $3,964,120 which, granted a year ago, will expire on March 14, has been authorized, in an order-in-council tabled in the House of Commons. The renewal is for six months.

Raising of the educational requirements for nurses taking training courses in Alberta from grade eight to eleven was approved by the Alberta legislature, dealing with an act making this change.

A total of 438,845 pounds of butter was in cold storage March 1 in Winnipeg, as compared with 885,941 the same time last year, according to a report of the Dominion bureau of statistics.

The government could not state definitely at the moment whether or not a revision of the Dominion Campaign act would be made this session, Hon. C. H. Cahan, secretary of state, told the house of commons.

Will Use Hypnotism

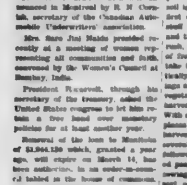
College Professor Has Idea It May Aid Students

Knowledge which could not be obtained otherwise without years of study may be acquired in a single semester if education by hypnotism can be be lated this semester at the College of the City of New York are announced, Dr. Ralph S. Wren said. Ten students will be used in the tests.

"Small grey bats will be suggested because Blindfold eyes," he said. "Only a few minutes will be required for their eyes to shut automatically. Yet they will not be asleep. They will be in a state of light hypnosis." When I begin to lecture in a show, soon tone, I shall try to evoke vision color vision in the students' minds. Students will be selected from from volunteers of the psychology class.

Canadian Hay in Britain

On the point of quality there seems to be no doubt that Canadian hay of good clover mixtures is the most acceptable on the United Kingdom market, says the Canadian trade commissioner. There is apparently some possibility that a demand for Canadian hay will develop in the United Kingdom about April or May this year.



W. N. U. 2007

Gardening

Starting The Seed Indoors Gives Gracous An Early Start

With flowers, variety and continuity of bloom are sought. In making the list care should be taken to secure a preponderance of favorite colors as well as varieties which will assure bloom every month from June until frost. There should be some for cutting, some for bouquets, some to brighten up shady corners, and others for window boxes, or tall screens. With a range of colors running the rainbow, with a season of bloom for annuals from May until November and with heights varying from an inch to over six feet, it is not at all difficult to plan a perfect Canadian flower garden.

Too many people are content with the sowing of vegetables. But that practice is gradually is disappearing. Many vegetables are best planted very early. Spinach, peas, lettuce and radish, for instance, cannot be grown in summer. Just as soon as the soil is fit to work in the time for the first of these. But with the tender vegetables, such as cucumbers, corn, and the started plants there is no rush, as long as there is a possibility of frost. Then, too, it is a big mistake to plant all at one time. Practically everywhere two or three plantings at intervals of ten days or many vegetables can be made and thus the harvest spread over a longer period. With some things, however, and some plants that do not possibly but the harvest may be extended by using several varieties. This course is best followed with peas. The early plantings of peas are the best plantings, but by sowing an early variety, a medium sort and a late cropper though all are planted on the same day there will be a difference of ten days to three weeks in maturity.

With many flowers and vegetables from two to three weeks can be saved if the seed is started indoors. Indeed, in districts where the growing season is rather short certain things must be grown in this way if bloom or maturity is to be guaranteed. Among the flowers that should be sown indoors are asters, calendula, cosmos, marigolds, stocks, and snapdragon, through with the possible exception of the petunia and most of the warmer sections of the Dominion, good results can also be secured from seed sown in the open ground. With vegetables there are peppers, tomatoes, cabbage, cauliflower, egg plants, brussels sprouts, celery, parsley and head lettuce. Naturally, when sown under glass in March, and not out as well started plants in May or June. Also all may be sown in the seed cover in the open ground after the spring frosts are over.

Experiment Was Successful

Scientists Hopeful Of Stopped Cause Of Unhappiness

Success in making frog tadpoles talk grow on the bodies of young salamanders (abnormal zoological cousins of the frog) was announced yesterday by Dr. D. Goldsmith, of Harvard University, to the American Society of Zoologists. The tadpoles were taken out of the frog embryos while they were very young, he said, and planted alongside salamander embryos of similar stages. There they grew until the gills of the salamanders began to disappear, a sign of approaching metamorphosis. Tadpole tails then appeared in skin and ultimately vanished, just as they do on maturing frogs.

Radio Hopes The Collapse

Cobourgians Suppose Voice Heard Is Also Heard At Montreal

Cobourgians have now come to the aid of the radio singer. It has always been difficult to get a really good reproduction of a colorature soprano voice on the radio. Strange things happen to such voices on the air. Then came the idea of muting the voice. A head of the transparent material was made, in which a singer can stand and sing her highest notes without fear of microphonic vibrations.

England's oldest working boat, timber has died at Bury St. Edmunds, aged 90. He had a curious claim, 150 years old, on which he pummelled the notes and top heather.

More Tobacco for the Money

and Poker Hands, too, with

TURRET FINE CUT!

You benefit in three ways when you smoke Turret Fine Cut—your money buys more tobacco, you enjoy greater pleasure from the milder, cooler cigarettes you roll and you get Poker Hands, too. The Poker Hands in every package add to the value. For them you can obtain—free—gifts worth many dollars.

Pay less and get better smokes with Turret Fine Cut. Start today!

Save Poker Hands to get Better Cigarette Papers FREE

Everybody agrees that "Vogue" and "Zeppelin" are the best papers—you can get 3 large books of either brand—free for only one complete set of Poker Hands, from your nearest Poker Hand Premium Store. Send for it now. P. O. Box 1500, Montreal, P.Q.

Little Journeys In Science

ELECTRIC FISH

(By Gordon H. Gunn, M.A.)

Fish which carry electric charges powerful enough to render their enemies unconscious are found in certain parts of the ocean and in some tropical rivers. These fish are equipped with "electric organs," resembling plates of a battery, which in some cases produce illumination and in others merely give the fish power to give off electric shocks. Lessons fish give off light in vast, compound into the neighborhood of Tyre and Sidon on the coast. There a Canaanitish woman came to him and, addressing him as "O Lord, Son of David," brought him to cure her daughter who was tormented with a demon. Mark calls her a Syrophoenician, a Phoenician of Syrian terms, Canaan and Phoenicia, were used to designate the coast lands of Tyre.

Jesus, from unwonted not a word, she continued to cry after him as persistently that the disciples urged him to send her away. They cared not whether or not her plea was granted provided they might be left in peace. They were thinking, not of her trouble, but of their own discomfort which her persistent entreaties occasioned.

It was not sent but unto the lost sheep of the house of Israel," was the final word. Lost here not literally neglected. It was likewise when said of the shepherds of Israel in his day. The diseased have yet not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, neither have ye brought back that which was driven away, neither have ye sought that which was lost; but with force and rigor have ye ruled over them." Jesus concentrated his efforts upon the neglected in his own land, leaving to his disciples the mission among those not of that fold. It was a wise limitation of his ministry.

The Thrupenny-Bit

Appeal For Small Coin Contribution Noted Minutes 500,000

The thrupenny-bit, that tiny silver coin corresponding to the Canadian nickel, but of a cent more in value in normal currency, has saved the foreign mission work of the Church of Scotland, according to the Rev. J. Miller Graham, convener of the Foreign Mission committee of Dumfermline and Kinross. The situation in regard to this branch of the church's work, said Mr. Graham, was saved by the ingenuity of the Moderator of the Church, who sent out an appeal for threepenny-bit collections. That appeal brought him about $50,000.

SUNDAY SCHOOL LESSON

MARCH 15

JESUS RESPONDS TO FAITH

Golden Text: "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." Matthew 7 7

Lesson: Matthew 15:35 16:12
Devotional Reading: Psalm 4.

Explanations and Comments

Faith Tested and Triumphant, 15 21-28. To escape the hostility of the Pharisees and of Herod, and to secure rest for himself and his disciples, Jesus left Galilee and went northward into the neighborhood of Tyre and Sidon on the coast. There a Canaanitish woman came to him and, addressing him as "O Lord, Son of David," brought him to cure her daughter who was tormented with a demon. Mark calls her a Syrophoenician, a Phoenician of Syrian terms, Canaan and Phoenicia, were used to designate the coast lands of Tyre.

Jesus, from unwonted not a word, she continued to cry after him as persistently that the disciples urged him to send her away. They cared not whether or not her plea was granted provided they might be left in peace. They were thinking, not of her trouble, but of their own discomfort which her persistent entreaties occasioned.

It was not sent but unto the lost sheep of the house of Israel," was the final word. Lost here not literally neglected. It was likewise when said of the shepherds of Israel in his day. "The diseased have yet not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, neither have ye brought back that which was driven away, neither have ye sought that which was lost; but with force and rigor have ye ruled over them." Jesus concentrated his efforts upon the neglected in his own land, leaving to his disciples the mission among those not of that fold. It was a wise limitation of his ministry.

Smiles At The Border

Canadians Find U.S. Immigration Officials Are More Friendly

Commuters from Canada to the United States will wonder what has come over Uncle Sam's immigration officials at border points. At Derby they have a cherry "Good morning!" for Windsor folk going over to their work. One official in an excess of cordiality, referred smilingly to "our cousins over the river." All the old frost manner cultivated by the immigration official has disappeared.

Of equal interest to the news that Uncle Sam has ordered it so. Through the proper channels the instruction has filtered down to the men at the gate "to wear a smile and extend the glad hand to visitors from Canada."

Optimists will see in this friendliness at the border a hint that there may be in the mind of Uncle Sam some thought of freer trade with Canada. —Toronto Globe.

A Canadian Gospel

A cash reporter who had had it drilled into him for Canada to be brief, wrote as follows: "While walking down Main St. with a friend this morning, Col. Joe Brown said: 'I feel that I am going to die' So he leaned against a telephone post and made good."

DENICOTEA CIGARETTE HOLDER

DENICOTEA Cigarette Holder absorbs the nicotine, purifies, cools and sweetens the smoke and keeps mouthpiece dry. Guaranteed to last for years.

Complete holder with refills, — $1.50 (postage or duty free). Refills only — 50 cents. Obtainable from Denicotea Dealers throughout Canada.

NO AGREEMENT TO CONTROL HOG PRICES IN CANADA

Ottawa.- There is no agreement among meat packing firms in control hog prices in Canada, J. S. McLean, president of Canada Packers, told the house business inquiry. No efforts are made to curb prices for the simple reason the purchase made more money on a rising market.

All day long, the Toronto head of the Canada-wide packing firm gave evidence before the committee investigating general labor conditions and business practices. His company will be investigated by auditors, the profits listed, salaries disclosed and the capitalization examined.

Canadian hog prices are dependent upon the English prices for bacon set weekly at a conference in London. the committee was told. When bacon prices advance, hog prices climb, although only 10 per cent. of Canada's pork production is exported to the United Kingdom market. Canadian packers are not informed in advance of Lie English bacon price and often make a wrong guess on the trend.

From his 20 years' experience in the meat packing industry, Mr. McLean said no changes in marketing practices would increase by one dollar prices to the farmers. He could not agree with Hon. H. H. Stevens, minister of trade and commerce, and R. J. Young, Liberal member for Weyburn, that the practice of setting arbitrary differentials for lower grade hogs worked against the farmer. Nor could he agree with suggestions that all hogs be graded in stock yards and buyers permitted to take their pick in contrast to the present system of buying a carlot of mixed grades and taxing the lower standards 50 cents to $2.50 a head.

The witness that has lifted hog prices in a year from $8.35 to $9.35 has been the steady outlet for bacon in the English market, Mr. McLean said. The reason Chicago prices were only about $4.00 was there was no foreign outlet for American bacon. And the same reason accounted for low prices for Canadian cattle—if a foreign market could be found for Canada's annual surplus of 500,000, prices would go up four or five cents a pound.

The packing official estimated the trade agreement negotiated between Canada and the United Kingdom at the Ottawa conference placed $32,000,000 in the pockets of Canadian farmers last year through substantial hog prices.

A conflicting picture of Canadian packers from a financial viewpoint was painted before the committee in the first place, Mr. McLean said, "a very large profit" had been made in recent months because of increasing hog prices. Later he told of the firm paying a woman employee $11.95 for a 54-hour week, over a six-month period. Last year the firm's children in support and was forced to apply to city of Toronto for relief.

Lord Aberdeen Dead

Came To Canada As Governor-General In 1893

Edinburgh.—The Marquess of Aberdeen and Temair, 87, former governor-general of Canada, died at his residence, the House of Cromar at Tarland, Aberdeenshire.

John Campbell Hamilton Gordon, first Marquess of Aberdeen (created 1916), was governor-general of the Dominion from 1893 to 1898. He is succeeded by his son, the Earl of Haddo.

His marriage with the former Ishbel Marjoribanks, who survives, was also held up as a remarkable example of complete felicity. She was an active partner in all his endeavors.

Before going to Canada, Lord Aberdeen had been lord high commissioner to the general assembly of the Church of Scotland and lord-lieutenant of Ireland. He returned to Ireland in 1905 and occupied the post again for 10 years.

Rumors Of Coup

Startling Disclosures Are Made In Divinsky Case

Paris.—Three startling disclosures involving secret symbols the murder of a prominent judge, and rumors of a coup d'etat were made by officials investigating the $40,000,000 pawnshop bond scandal of the late Serge Stavisky.

Members of a parliamentary committee quoted Jean Chiappe, former prefect of Paris police, as saying former interior minister Eugene Frot planned a coup to gain tax books and of the government during recent riots formed a bloody sequel to the Stavisky affair.

M. Frot categorically denied the allegations, which he described as pure romance.

Another development was that police, in their efforts to find a "ring of higher-ups" in the swindle, studied the mysterious symbols on a check used to facilitate Chiappe visits in his secret payroll.

The third was that police sought the double of Jules Albert Pierre, key man in the Stavisky investigation who was slain between here and Dijon recently, in the belief that a man closely resembling the murdered magistrate had arrived in Dijon instead of France.

Approves Sweepstakes For Hospital Purposes

Senate Passes Bill Which Now Goes To House Of Commons

Ottawa.—Legalization of sweepstakes for hospital purposes received the approval of the senate for the second time when the upper house of parliament passed Senator G. H. Barnard's bill on second reading. The vote was 46 to 23.

The measure now goes to committee of the whole in the senate, and then finally receives third reading in the house of commons. Last year the senate passed a similar bill introduced by Senator L. A. Taschereau of Quebec promoted for the legalization of sweepstakes. Mr. Bennett, however, is personally opposed to the move.

Grading Hogs And Eggs

Regulations To Be Studied By Commercial Committee

Ottawa.—The regulations for grading hogs and eggs will be studied by the commons committee on agriculture. P. R. Pichet Colas, Conservative member, brought the matter before the house in a resolution asking that the grading laws be amended.

Mr. Pichet explained that the committee accepted the amendment of Grote Stirling (Cons., Yale, B.C.) referring the question to the committee.

The government hog graders were often "pals" of the packers and favored them in grading, against the farmers in grading the animals brought to the abattoirs, Mr. Pichet declared. The egg graders were also frequently against the farmers

Parachute Saves Student

Young Canadian Pilot Had Narrow Escape In Scotland

Bishop Wakkum, England. — A young Canadian student pilot, W. S. Goode, 21-year-old resident of Sudbury, Ont., taking instructions under an Austrian pilot named Heil, fell out of the plane while Heil was making a slow roll 4,000 feet up. "His safety strap gave way as the plane was upside down.

"I fell at terrific speed, but managed afterwards to get some movements, but then I was able to pull the ripcord of my parachute. It was perfectly horrible until the chute opened, but it answered beautifully and I came down comfortably, just missing some tall trees." He was none the worse.

INDIAN APPOINTMENT

Sir James Grigg, K.C.B., chairman of the British Board of Inland Revenue for three years who has been appointed to be Finance Member of the Executive Council to the Viceroy of India.

Quota For Cattle

Western Livestock Producers Have Glimpse Ahead For Market

Calgary Canada's quota of 30,000 head of cattle for shipment to the United Kingdom will be announced long before the 26th months time limit expires, in the opinion of Jack Eyson, Western livestock supervisor.

First set at three months, the quota was extended to six, following protests of Western ranchmen. Up to the present the number of cattle shipped from Canada totals 5,000 head of which Western Canada sent 3,114 head. During the same period a year ago shipments from the Dominion aggregated 4 This year.

Mr. Eyson cost director noted for Canadian markets at the United Kingdom market is closed to the Dominion exporters.

Prince Albert National Park

Recommend That Province Of Saskatchewan Eliminate Union

Prince Albert. Recommendation that the province of Saskatchewan eliminate its sugar beet tax to affects Prince Albert national park as it is preferable the park be administered by the federal government," was sent in Regina after being approved by the local board of trade.

It arises from Saskatchewan's claim for compensation for alienation of land for the park. The Dominion contended before the pending commission in Ottawa by offering to hand the park over to the province

Fighting Insect Pests

British Guiana Starts Battle To Save Sugar Crop

Georgetown, British Guiana A grim battle between insects through which entomologists hope to eradicate the dread moth borer pest which annually destroys large sections of British Guiana's sugar crop, has been started here.

Thousands of parasites for which Dr. J. G. Myers visited his life through the jungles, mountains and rough waters, have been released on five British Guiana plantations, and the fight to protect the country's premier industry thousands of dollars yearly will be annihilated

Release of thousands of "Amazon flies" was the final phase of the isolation task undertaken by Dr. Myers and his assistants.

International Distrust

Many Feel Seize Munition Makers Responsible For War

Fort Myers, Fla. Charging that a small group of men were responsible for war through the manufacture of munitions and by fostering international distrust Henry Ford thinks United States Senator William Borah "had the right idea" in his attack on the $1,000,000,000 United States navy program and favors army and navy construction.

"The people in general don't want war," said Mr. Ford, "but it has been forced on them by scheming munition makers looking for enormous profits through the sale of arms

I do not pay much attention to the talk about war for I have found out that there is not much I can do about it as an individual Gathering war depends upon the people in the past they have followed the one makers. If we could get rid of the approximately 100 men responsible for wars in this world, the people would enjoy peace."

To Correct Abuses

Ward Investigation Of Livestock Industry In Ontario

Toronto. The agriculture committee of the Ontario legislature moved to correct alleged abuses in packing plants and stock yards. Without a dissenting voice, the committee passed a resolution asking the Stevens committee at Ottawa to thoroughly and immediately investigate the whole livestock industry of the province.

Numerous complaints were presented to the committee by drovers, including there there was no competition among buyers at the stockyards, the large firms having refused to bid against each other, that bids were not after the market closed, that the bulk of shipments went direct to the abattoirs without being subject to bidding, and that handling charges were so heavy the farmer's return dropped below cost.

Prince Albert National Park

Recommend That Province Of Saskatchewan Eliminate Union

Prince Albert. Recommendation that the province of Saskatchewan eliminate its sugar beet tax to affects Prince Albert national park as it is preferable the park be administered by the federal government," was sent in Regina after being approved by the local board of trade.

It arises from Saskatchewan's claim for compensation for alienation of land for the park. The Dominion contended before the pending commission in Ottawa by offering to hand the park over to the province

NEED A BETTER SYSTEM FOR HANDLING RELIEF

Ottawa.- Immediate action with a view to evolving a permanent system of handling unemployment relief and other pressing social problems is urged in a statement issued by the Canadian Council on Child and Family Welfare The statement is an analysis of relief conditions now existing and a series of suggestions for the evolution of permanent measures of social aid to those unable to support themselves

Any effective solution of a permanent character, the statement argument recognizes frankly that many people now out of work can never be absorbed again in gainful employment and that unemployment insurance is not only not a cure for the present condition, but will fall short of meeting the problem on a long-term basis

None-the-less, the council believes unemployment insurance should be initiated at the earliest possible moment. It should be on a contributory basis and be actuarially sound. At the same time the present Dominion, provincial, and municipal relief organizations should be re-cast on modified lines

Causes of dependency, other than unemployment, such as sickness accident, and old age should be tabulated and investigated by a contributory character provided for relief in such cases. Other causes of dependency which can not be worked into an actuarial system would have to be met by a permanent system of direct relief.

To avoid the debilitating effect of living on relief a program of relief work should be launched

Establishment of those of the unemployed with experience in agriculture on the land, is urged. The statement says the industrialization of the country in recent years and the retirement provided in cities have created a drift cityward and the establishment of a better equilibrium between urban and rural population demands careful attention.

Discover Arsenal

Illegal Distribution Of Arms And Ammunition In Montreal

Montreal.—A huge store of illegal distribution of arms and ammunition to criminal bands in Montreal was struck by provincial police on the important raid. They seized 38 loaded revolvers, 1,000 boxes of cartridges, five rifles three shotguns, 30 daggers, 35 blackjacks and a number of knives in a house in suburban Outremont.

Three months of careful investigation into underhand circulation of firearms in Montreal were climaxed by the raid, Chief Louis Jargaille of the detective department, provincial police said. The house searched to be a leading figure in Montreal underworld, was id the house at the time police descended upon it and four placed under arrest. His name was withheld pending arraignment

Treasury Bills Sold

Interest Rate Believed To Be Lowest

Ottawa. — Dominion of Canada treasury bills to the amount of $15,000,000 were sold by public tender at what was believed to be the lowest interest rate on record for Canadian short term financing. The bills were in two series. $2,500,000 for three months at an average cost to the government of 2.35 per cent., and $12,500,000 for eight months at an average cost of 2.12 per cent. Dated March 1, they mature June 1 and November 1.

Slump In Construction

Country Shows Loss Of 50% For Nearly Every Industry In Canada

Country Shows Loss of 50% for nearly every industry in Canada, except the building and construct on industry, Major L. L. Ashley, of Toronto, president of the Canadian Manufacturers' Association, told the Calgary Association of Sanitary and Heating Engineers.

THE HOME-COMING TO TRAGEDY

The sheaf of his father's tragic death is plainly mirrored on the face of Crown Prince (now King) Leopold of Belgium, (left), who is shown being greeted on his arrival in Brussels by Premier Count Broqueville. Leopold was vacationing in Switzerland when he received the news of the death of his father.

Takes Title From Montreal

Last Year Vancouver Was Canada's Leading Grain Port

The port of Vancouver ascended last year to wresting the title of "Canada's leading grain port" away from Montreal. Montreal held undisputed away until a few years ago. Practically all the grain from the great prairies in the west was sent by train or boat, and went to some west via Duluth and on to United States Atlantic ports, or sent through other eastern Canadian ports, the bulk passed through the Montreal elevators. Certainly Montreal had no other rival in Canada.

Of recent years, however, Vancouver has been developed as a grain port and favorable freight rates have been given by the railroads over the Rockies. The result has been the gradual advance of Vancouver in importance as a grain shipping port. In 1928 Vancouver shipped 168,044,000 bushels of grain overseas, a total slightly under the Montreal figures. Last year, with Depression shipments down, and added competition from new elevators in the East, Montreal shipped 84,913,676, while Vancouver handled 66,838,624 bushels.

Vancouver in this race has had the advantage of a growing trade in the Orient. But there has been development in the matter of shipments to Europe, to West Indies, India and Africa via the Panama Canal. The costs base to ship cargoes to Europe via the Panama Canal then it does to send it across the prairie—by rail to the head of the Great Lakes and all the way to Montreal or by water from the head of the lakes to Montreal. This was demonstrated last year when a total of 1,116 deep sea vessels entered the port of Vancouver, representing 13 different nationalities. British ships led with 641, United States ships totalled 332 Japanese 53, Norway 18, Netherland 20, Danish 37, German 42, French 21, Dutch 34, Italian 13, Belgian three, Panama four and Japo Mav one. There were also 1,053 foreign coastal vessels and 13,362 local coastal vessels passed through the First Narrows, making a total including deep sea and coastal ships, of 15,666.

Vancouver, of course, has things pretty much its own way on the Pacific coast as far as ports are concerned, but its prestige cannot be denied.—St. Thomas Times-Journal.

Just In Jest

Telephone Can Be Greatly Improved Opinion Of English Professor

Sir John Ambrose Fleming, a celebrated scientist, who has had a good deal to do with the development of telephones, is the inventor of the thermionic valve—which made wireless telephony possible. "It is a few years' time," he said the other day, "we shall probably chuckle over the introduction of what telephones were like in 1924. Everybody knows that the telephone is in its infancy; everybody knows it can be improved enormously, and that even will that improvement take? I am a scientist, not a prophet. The telephone may be a little later than you carry in your pocket. It may become more elaborate than it is to-day. I do not choose to prophesy. I'm certainly not going to tell you on when I was working now to improve the telephone."—Sir John Fleming is 63, and a very busy 63.

Talking No Chinese

Shortly with a menacing look in his eyes the bailiff approached the two Chinese constables.

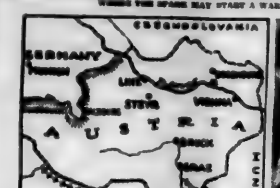
The men looked at him out of the corners of their eyes and then slowly edged away.

"I say, Bill," said the man with the large moustache, "how 'ard on your corset, perhaps it'll frighten 'im away."

"Yes, that's all very well," said Bill with a doubtful grimace, "only if it don't do the trick where'll I get the wind to run away with?"

An amendment was carried at Washington limiting to three years the period during which the dollar is to be demonetized. But if you jump off a wall you can't jump only half-way down.

WHERE THE SPARK MAY START A WAR IN EUROPE



The shaded portion of the above map shows where Austrian troops, regular army and Heimwehr, are massed near the Austro-German border in anticipation of an attempt at invasion by German Nazis from Munich and other points in Bavaria. Prince Rossi von Starhemberg (right) is looming as Austria's new "strong man", and it is rumored that he seeks a military dictatorship. Meanwhile Italian troops are ready at the border (marked with crosses) to aid Austria in the event the threatened German invasion materializes, as reports say. Premier Mussolini is believed to be in sympathy with Starhemberg's aims.

Held Longevity Record

Chinese Woman Is B.C. Lies Longer Than Men

Women live longer than men in British Columbia, as a general rule figures which definitely prove the truth of this proposition are contained in the last report of the vital statistics department in Victoria covering a twelve months period.

They show that although among all deaths there were but half as many more than twenty-five the longevity record goes to the female of the species by a large margin.

Four centenarians died during the year and all were women. Thirteen died between the ages of 95 and 99 years and eight of these were women. In the age group 90, 94 years—Norway 180, Switzerland 90, Danish 37, Germans 42, French 21, Dutch 34, Italian 13, Belgian three, Panama four and Japo Mav are. There were also 1,053 foreign coastal vessels and 13,362 local coastal vessels passed through the First Narrows, making a total including deep sea and coastal ships, of 15,666.

Vancouver, of course, has things pretty much its own way on the Pacific coast as far as ports are concerned, but its prestige cannot be denied.—St. Thomas Times-Journal.

As It Looks To Others

Chinese Never Apply For Help Until Forced To It

The fact listed among 58 Chinese in Windsor have gone on relief and registered for employment in "a war because it is claimed an unheard of thing. The Chinese are a very proud people, and for them to ask the municipality for help indicates that conditions in the village must have hit their particular industries exceedingly hard.

The Chinese, like the Scots, are very "clannish", and when a brother is in need the whole community comes to his aid. A Chinese may be without a dime in Vancouver, but if he wants to go to Halifax he will be passed on from village to town and to city without himself having a meal or sleeping out, and his fare paid all the way. If a man is out of a job his compatriots club together to keep him.

There is a marked family spirit among the Chinese throughout the world. They are an independent and well-behaved people. If they ever do get in trouble with the police it is usually because they have been having a little gamble among themselves, or engaging in a surreptitious puff at the opium pipe

Author who encouraged opium?—St. Thomas Times-Journal.

Why Alfalfa Prospered

Suggestion Of Seed Rapidly Secured Value Of Crop Grown Here

Prior to the introduction of alfalfa and crops by the Dominion Seed Branch and the sealing of the seed in metal to protect the inspection the conditions which hindered the growth of production, the name of the variety, the grade of the seed, and the signature of the producer, the exporter, alfalfa production in Canada was not at all general. Southern-grown seed was common for seeding northern areas, but as soon as winter hardy alfalfa seed of assured variety and quality was available the value of alfalfa rapidly increased and alfalfa has become one of Canada's major crops for hay production.

Loudest Loud Speaker

Used For Spreading Soviet Gospel From An Aeroplane

An American said to Bolshevik propagandists in the form of a loud speaker, which is said to be the world's loudest and is destined to spread the Soviet gospel from an aeroplane, was shipped from New York recently, following exhaustive tests. Actuated by compressed air, it gives the human voice a range of over to thirty miles, depending on altitude, wind, etc., and is to be used for the dissemination of news and governmental orders.

Learned How To Cook

A big, husky fellow walked into a Montreal public library and asked for a number of books on cooking. "Day after day he returned," said Miss A. Shadbolt, the librarian, "till he had compiled by submission everything we had in the way of cookery books. Then we got allergies he owned. A month later he appeared and proudly informed us he had learned a pastime as cook in a well known hotel."

As A Last Resort

Alberta's Wooded Soils

Use Of Legume Crops With Fertilizers Greatly Increased Yields

That satisfactory yields are possible on the wood soils of Alberta is indicated by experimental work with fertilizers and crop rotations conducted by the University of Alberta Hitherto these wooded soils have failed to produce satisfactory yields, especially with grain crops, by reason of their low, natural state of fertility but it has been demonstrated that the use of green manure legume crops with fertilizers gave increases in wheat yields, and generally where relatively large increases in yield were obtained by fertilizers, the nitrogen and phosphorus contents were reduced, an exception being the nitrogen content of clover which often increased with yield. Oat and barley crops were seriously below normal in protein content whether fertilized or not

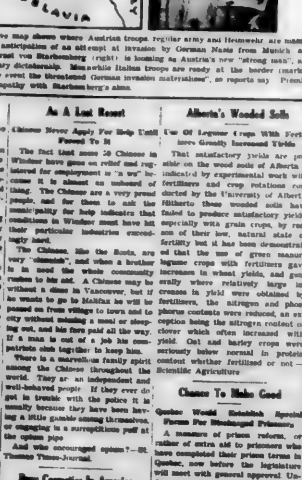
Chance To Make Good

Quebec Would Establish Special Farms For Discharged Prisoners

A measure of prison reform, or rather of aid to prisoners who have completed their prison terms in Quebec, now before the legislature will meet with general approval. Under it special farms will be established and maintained where such men may find steady work and earn an honest living under conditions which will enable them again into the city or town without any visible means of subsistence, and with the stigma of their prison record held over against them. There is need for such a movement, and it is a good thing to see the government taking the initiative in the important matter.—Montreal Star.

Football is, after all, not so much Quite as satisfactory fractures, contusions and abrasions can be gained in a basket ball or hockey game, so participants in winter sports can testify.

FANCIFUL FABLES



Making Stained Glass Windows

Method Similar To That Used By Craftsmen In Middle Ages

At work on the marvellous stained-glass windows for Liverpool Cathedral, Mr. J. H. Hogan has just shown the round his studios, and told us how a stained glass is made, writes a Tit-Bits man

"I think we can claim," he said, that the windows for the great cathedral space of Liverpool Cathedral will surpass in size and color any stained glass of the past."

And yet in the main the method of making these windows is much the same as that employed by the monks in the Middle Ages. The mediaeval craftsmen made glass, "pot-metal" as it is called, in red, blue, green, yellow, purple, brown, and white, the chief colors made in those days. Like the present workers, these men made glass that was colored all through—or white-coated with a color flashed.

It was known in the fourteenth century that oxide of silver will stain glass yellow and that by means of the application of hydrochloric acid and an clean oxide of silver glass and shave the white beneath So that the worker can have three tints on a single piece of glass if he wishes.

A stained-glass window is not a picture painted on glass." Mr Hogan explained "but art of as entirely different kind The artist produces the picture while assumes a thousand forms as the light changes The window is built up of jewel-like pieces of glass, provide the color for the man's palette For two hundred years the art of designing windows and of making colored glass was lost until the Whitefriars Glasworks in the middle of the last century rediscovered the secret, and it again became a living art These Glasworks have been perfecting methods of making glass for two hundred and fifty years"

It is surprising to learn that the glass for the Cathedral is made by a firm which was before entirely engaged to make a bottle But all hand-made glass, to use an Irishism, is blown from a glass. The cylinder that the man forms at the end of his blow-pipe is cut open from end to end with a diamond When the "mull," as called from its shape is placed on a well heated kiln with the split side uppermost, the heat of the kiln causes the glass to melt and the mull gradually collapses A man called a spreader helps by flattening out the mull with a flat iron, and then it is allowed to cool.

These pieces of colored glass that have been made to the designer's order are now ready to proceed to his workshops and form the medium in which he is going to work to build up his picture. There are few forms of art that call for such a variety of guile as those needed to create a stained-glass window. The choice of subject to be worked out and then its expression in such color and in such mixed pieces of glass between the leaden strips that the whole will be a kind of symphony in mosaics

A full-sized tinted drawing, approximately, one hundred feet high and thirty feet wide for the Liverpool windows, is prepared, and the pieces of colored glass laid on this drawing and cut to exactly the same jig-saw puzzle. When all the colored glass is in position, held by pins thrust through the design into the board beneath and divided into all the world like a bobbin-lace cushion), the strips of grooved lead are introduced lacing at the borders of a glass and soldered at the joints. The great window is made in sections that fit into grooves in the masonry of the Cathedral wall. Great bars of metal, called "saddle-bars," strengthen the windows.

Mr. Hogan's reputation as a designer is not confined to England. His huge window in St. Thomas's Church, New York, is said to be the finest stained glass in the Gothic style done in our time, and it rivals the most famous windows of the Sainte Chapelle of Paris.

More than 125 persons were killed by lightning in Ontario, Undoubtedly Mossy Station, in the last two years.

Railroads in Japan are carrying more passengers than a year ago.

A SIMPLE QUICK WAY TO RELIEVE ACID STOMACH

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. This small dosage of Phillips' Milk of Magnesia acts at once to neutralize the acids that cause heartache, stomach pains and other distress. Try it. You'll feel like a new person.

But—be careful you get genuine *Phillips' Milk of Magnesia*, or *Phillips' Milk of Magnesia Tablets* when you buy. Prices 25c and 50c. Sizes.

Phillips' Milk of Magnesia

OCCASIONAL WIFE

by
EMMA DODD WEBSTER

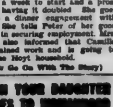
Author of "Javelin," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Ascutt, young and in love, marry secretly; Camilla's father refuses to speak until Peter is able to provide for her. Peter is a young, struggling sculptor trying for his first commission. A scholarship brewed and Camilla in the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Wentworth, a wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Malone, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret Camilla and Peter are left alone. Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. The latter is necessary for Camilla to announce before the party that she and Peter are married. Avis is stunned and Camilla's mother, Sylvia Norman and Weeks, an advertising agency, where Camilla has been assisted some of her work, send for her and tell her they have a new account which requires the most treatment of juvenile art. The Camilla's agency she learns that the account is that of her foster father's company, which decided on the extensive campaign to bolster up lagging business. After a conference with Mr. Norman Camilla decides to attempt the work. The critics were enthusiastic about her work and Mr. Weeks offers her a salary of $50.00 a week to start and a promise of having it doubled She goes to keep a dinner engagement with Peter. She tells Peter of her good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household.

(Now Go On With The Story)

WHEN YOUR DAUGHTER COMES TO WOMANHOOD



Most girls in their mid-teens suffer from functional disorders. Many have headaches, dizziness, a feeling of lassitude. For the most part they are due to constipation. Teach her how to avoid this handicap at this critical time. When she is a beauty, healthy and slender she will thank you.

CHAPTER XXXIV

Peter was taking the stairs two at a time intent upon returning to his work for the afternoon when he suddenly up to see a girl coming the hall across the hall from his own. In his new neighbor was a girl. His first impression was to ignore her, but curiosity prompted a second glance and he found himself face to face with Avis Worth He had not seen her since the Hoyt party at the club.

Hello, Peter, she greeted him easily as if she had been a tenant in Anna's Hall for a long time.

"Why how do you do, Miss Worth" he could not conceal his surprise "So you are the new neighbor"

Are you sorry" she laughed at his consternation

"Why no" he hastened to assure her What could be more pleasant than a friend for a neighbor? I'm afraid you won't find me very amusable I'm so busy these days I can't find time for anything except Camilla and my work" She noted an incredulous surprise at his remark. "I shou I think nothing would take the first place from a husband." She shrugged "But, there, all people aren't alike Love and marriage mean so little I some girls No wonder men can't understand them They don't all know that a man needs lots of love and sympathy and comforting to make him happy and keep him so," she observed wisely and with a tone of regret for all the wrecked marriages of such negligent women.

"What do you know about it?" Peter only seemed to be amused He did not attempt to defend Camilla.

"Some women are wives by instinct. They don't have to be married to understand men," she still maintained "Camilla is a wife in spite of rare wisdom. Then she roused suddenly and said brightly "But you haven't seen my place It is just the cutest and I'm rather proud of it," modestly. "Please tell me if it looks right." She had caught his hand out of its head him across the hall.

Peter drew away "I'm sorry, I'll have to censure the composure of wait-ing until later to see your place My model will be here any minute and I've got to get to work. I told you I can't be a good neighbor, even"

"Then do come over this evening," she urged hospitably. "Any time you have a minute to relax, drop in. You can't work every minute."

"But I might interrupt your work. I thought you came here for seclusion," he reminded her of a selfish assumption that whatever she desired was hers.

Avis rubbed the ring from his fingers, irresolutely

grateful for that. She is a good little sport When a thing has to be done, she believes in doing it right It has first point it is finished

Camilla, Camilla, she thought, does she never talk now of anything except Camilla and work? She experienced an incredible surprise at his remark. "I shou I think nothing would take the first place from a husband." She shrugged "But, there, all people aren't alike Love and marriage mean so little I some girls No wonder men can't understand them They don't all know that a man needs lots of love and sympathy and comforting to make him happy and keep him so," she observed wisely and with a tone of regret for all the wrecked marriages of such negligent women.

THE RHYMING OPTIMIST

By Alice Michaelis

THE SPELL

The driving rain has ceased with the dawn;
Is leaden-hued as day slips into night;
No bloom in all the scene to catch the eye,
Some slim Some dusky-brown, scarlet flames and white
That is the glowing hearthfire leap and dance
In such an hour at a dull day's close
A name dressed my ships afire in my heart,
And suddenly the world is touched with rose!

The old enchantment weaves its starry spell
In seasons when my spirit is most sore;
A dear, unspoken name and all is well
A name with power to make the past once more,
In moment that would else be wholly
A name which brings your fragrant presence near!

Bad Move Broad

"If everybody will eat three extra slices of bread at every meal, it will save the country from a disastrous overproduction of wheat." Dean Clark, secretary of the Society of Elevator Superintendents and Operators of North America, said at a convention in New York. Such a policy, he said, will increase wheat consumption 100,000,000 bushels a year.

"I don't know that it is so nice," he commented "There is no more eminent in the world for a supreme artist than a snake-charmer one who doesn't have to work, but sometimes a steady post for effect and a place to entertain. It would be just my luck to get such a neighbor when I am the busiest I'm afraid she's going to be a pest"

You don't sound very crazy about her," Sylvia ventured carelessly

She's nothing to me." Peter shrugged I said she was a friend She isn't even that merely a acquaintance One of the class at Hunt-tional. It's all the same to me If I never see her again. Fact is, I always made it a point to steer clear of her when I could Now she lives across the hall and suggests that I run in to have tea with her," he grimaced

Sylvia laughed with genuine amusement, knowing more about the situation than he was aware Almost, she was tempted to warn him of Camilla's intentions, for her sympathies really were with Peter But her youthfully acquired sophistication restrained that any woman could take care of himself. The chances were ninety-nine to one that any woman would get the best of an affair with Peter man. This happened to be a rare case in which she wished the man luck, chiefly because he was not the aggressor

Peter's prognostications proved correct after Avis becoming a nuisance. It was the second day after their first meeting in the hall, when he had made no attempt to respond to the hospitable suggestion to drop in any minute, that she knocked on his door about noon, and at his curt "Come in," opened it and stood in a fluffy, dressing gown of her. What' at work so early in the morning Then I guessed it right—you haven't had any breakfast and so invite you over to lunch-breakfast. "Silly has made hot biscuits that will melt in your mouth. Not a sin living could resist them"

She was gayly provocative and informal in scarlet satin pajamas-effect, well-veiled with gold drag-ons and Oriental characters that an Oriental ever would have recognized or deciphered. But they added their touch of subtle charm and mystery. Her long, narrowly plucked eyebrows that slanted downward at her temples contributed to that effect.

If one analyzed her features according to relation and measurement, they were not beautiful, but there was a striking sophistication and allure about her that were a combination of beauty culture, the result of much wealth and a selfish assumption that whatever she desired was hers.

Peter rubbed the ring from his fingers, irresolutely

Little Helps For This Week

"Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you, but rejoice inasmuch as you are partakers of Christ's sufferings." 1 Peter 4 12-13.

We take with esteem thankful-

Our burden up, her salt it lose,
And count it by that we up
Our cross of new, or find
Thee,
Whose will be done.
—J. G. Whittier.

Reserve every inward and outward trouble, every disappointment, temptation, darkness and desolation with both thy hands as a true opportunity and blessed occasion of dying to self, and entering into a closer fellowship with thy self-denying, suffering Saviour. Look at no inward or outward trouble with any other thought, and then every kind of trial and distress will become the blessed day of thy prosperity. That state is best which exercises the highest faith in, and fullest resignation to God.—Wm. Law

Medical Insurance Plan

Alberta Commission Investigating Possibilities Of State Medical Service

An ultimate $10,826,000 municipalized medical insurance scheme for the province is recommended in a report tabled in the Alberta legislature by a commission named in 1932 to investigate the possibilities of a general medical insurance plan.

For frontier districts the commission recommends a state subsidized doctor who would be assisted by a nurse. In some of these sections a nurse might suffice, the report says, with a travelling clinic available for minor surgery.

The body also reported that it is "of the opinion that the existing schedules of fees for surgical and specialized services is too high."

For the present the commission recommends an expansion of the Alberta public health programme, more especially in the control of tuberculosis, extension of public health nursing services, and the re-establishment of a travelling clinic service for those parts of the provinces where a similar service is not provided.

It also recommends that the minister of health be given statutory authority to constitute areas as full-time health districts, and to determine what proportion of the cost of administration shall be borne locally and what share by the province

The radio has a great advantage over the political meeting in that the audience of the audience can't interrupt the speaker's enthusiasm.

and
INCREASE YOUR PROFITS

Lower costs of growing a better oil grain are now possible. Farmers are now convinced of this and we reserve many letters daily—only showing how Fleischmann's Yeast Fertiliser has made farming profitable. Let us show you how little each of farmers are reducing operating costs and at the same time building up the fertility of their soil

A farmer writes:-

"I used your fertiliser this year on 140 acres of wheat and 70 acres of barley. The yield of the wheat was increased by about 10 bus. per acre and that of the barley by about 16 bus. The crop matured very evenly and from 9 to 10 days ever quicker in the length of time necessary to ripen over the unfertilized grain. I intend to fertilize about 200 acres in 1934.

PIONEER DAYS

Selected from over one hundred thousand original photographs negatives taken during the past sixty years there will be exhibited on Monday, March 19th, in the Empress Theatre, Fort Saskatchewan, a number of historic slides depicting the Pioneer days of the West.

The lectures will be given by Ernest Brown of Edmonton, who for thirty years has made a special study of Western Canadian History. The pictures as well as the lectures appeals to the more recent arrivals as well as the Oldtimers.

It is said that more than twenty-five thousand people have seen the pictures and lectures, wherever it has been lectured both by the public and the press. The department of Education recognizing the educational value to the children have given their approval for the attendance of the children during school hours, arrangements are being made accordingly with the School Trustees and the Principal.

If time can be arranged a free showing of suitable pictures will be given to Grades one to three. The afternoon showing is for Grades 4 to 8, of material helpfull in their school work, a small admission fee is charged. The evening lecture and pictures are entirely distinct and being for high school pupils and adults. After showing in Edmonton for three months, the pictures are on tour at the request of many people from outside points.

About four hundred pictures will be on display on the walls in addition to the pictures shown to illustrate the lecture. To appraise the present and anticipate the future, it is essential that we must know about the past. Every intelligent adult who is able to be present should not miss this opportunity to see the only collection of pictures in existence of "Pioneer Days".

Coming Events

The W.M.S. of the United Church will hold the annual meeting at the home of Mrs. C. Glover, Tuesday, March 20th at 2 p.m. Final donations for the Mission Box will be received on this date.

What About Social Credit, Canada?

This series is an explanation of the Douglas Social Credit Plan. Mr. Williams, (W.) a local Credit advocate, is explaining the plan to his friend, Mr. Jones (J.). The scene is Mr. Willem's home, and the conversation takes place during an evening visit.

By following this series the conclusion the reader will clearly understand the problems which faces Canada.

No. 2
(Continued from last week)

W.—"Now you agree that Prosperity is O.K. That is, that we can produce a large proportion of what we need, remembering that there are some commodities that Canada cannot produce. Against this we have a surplus of a good many things, such as wheat and oilseed, which we can exchange for imported articles other than lubber, tea or cotton. You are agreed on this?"

J.—"Yes. It should be obvious to me."

W.—"At the other end of the system is the consumer—the reason for all this production. Society, the only object of production is consumption. Now consider the Canadian consumer. Do you think he wants things like automobiles, washing machines, radios, pure food, decent clothes, and so on. That is, does he want, in short, a high level as his means allow?"

J.—"Sometimes higher!"

W.—"Yes, of course, sometimes higher. Anyway, what you say is an admission that there is a demand for these products."

J.—"Yes, of course. What are you driving at?"

W.—"Well I admit my last few questions may have seemed rather pointless but I wanted to distinguish the modern civilized Canadian from each people as are content with what Nature herself provides, and with little effort on the part of the individual."

J.—"Perhaps such peoples are as happy."

W.—"Yes, they may be. But we have to face the facts embodied in the desires of the modern Canadian citizen. Now then can we put O.K. on the side represented by the term Consumer, Jones?"

J.—"Yes, I think it is safe to say that in Canada, at least, the average man takes advantage of everything that is offered him without much effort him. That is, he buys all he can afford, and under the installment plan he is often induced by the future to obtain present satisfaction."

W.—"O.K. Now don't start a sermon until we put this straightened out."

J.—"Well, where are we now?"

W.—"We're ready to decide whether the trouble lies in the theory that Production and Consumption, so far as ability to produce and desire to consume go, are O.K. But present conditions show that there is something which comes between the ability to produce and the desire to consume. In other words people are prevented from taking anything like full advantage of the country's capacity to produce what he wants. Now then, what is the thing that prevents goods from the hand of Production to the hand of Consumption, if I may picture it that way."

J.—"Money".

W.—"Short and sweet. You said it. Money: or better still it includes all the various types of purchasing power included and if we say "money" then the bankers will be shouting "words of laughable balance called currency."

J.—"Steady now. You're beginning to talk like the bankers. I know I know "laughable" means something that can be touched or handled, but why apply that term to currency tokens?"

W.—"That's the trouble with this blessed subject. There are so many terms made use of that mean so many different things. By doing so we obey from the main subject and bamboozle the public. Now then, Jones, I'll explain that term before we go on. I use the word "tangible" to refer to money in the form of dollar bills, silver coins, which you can see and touch and hand to hand, and I mean by "intangible" those forms other forms of money like cheques and bills of exchange."

(Continued next Week.)

COMMISSIONERS TO VISIT LOCAL BROWNIES

At the regular meeting of the Brownies held last Monday at 4.15, an item of particular interest took place when Dr. Henry came to give them some instruction on First Aid work such as simple bandaging. They were also shown two types of arm slings, as well the transporting of injured persons, some Brownies acting as patients. At the conclusion of this lesson a hearty vote of thanks was moved by Dorothy Lamb, with hopes that this would not be the end of these very valuable instructions.

The Brownies are very busy fixing up their articles for the Handicraft Exhibition, which is expected to be held April 7th.

At the next meeting they will be visited by Mrs. Newson, Divisional Commissioner, who will present eight Brownies with three-year Service Stars and three with one-year Service Stars. They are four Brownies who have never missed a meeting since the Pack was organized.

See Smith's Drug Store Ad. for your favorite Magazines & Papers.

Mr. F. R. Redd left last week for Lethbridge, where he will visit with his son and daughter-in-law, Mr. and Mrs. Bert Redd.

Important Business Dealt With At Council Meeting

A regular meeting of the Council of the Town of Fort Saskatchewan was held on Wednesday the 14th March at 8 o'clock. Present Mayor Montgomery, Councillors Magar, Watt, Graham, Pottet and Foster.

The minutes of the last meeting held on the 19th February were read and adopted.

A letter was submitted from the Fort McMurray Asphaltum & Oil Co., Ltd, quiring particulars regarding the Alberta Asphalt Sands should same ever be required for sidewalks, crossings or street paving, which was filed. Report of the Medical Health Officer, Dr. Henry, was submitted. Communication from Secretary of Union of Alberta Municipalities advising that a convention would be held in Edmonton in June.

Councillor W. A. Graham was elected Deputy Mayor for the next 3 months.

A motion was passed re-appointing E. Denby, Chartered Accountant, as Auditor for the Town and School District for the current year at the same rate, $130.00 per annum. Mayor Montgomery opposed this resolution because he considered the remuneration too much.

A motion was passed that all men on relief would be required to report at the Town Hall at 9 a.m. daily, and that failing to do so, their relief would be cut off.

A By-law was passed providing for a tax to be known as the Business Tax for 1934. The question of Business tax arrears was discussed, and a committee appointed to take action in connection with same.

The following accounts were passed for payment:— Fort Hardware Co. $8.50; R. H. Carmichael—milk for relief $8.82; Hillcrest Hospital $68.80 Calgary Power Co., $117.60 streets, $2.05 Town Hall and $1.20 for Memorial Hall; Union of Alberta Municipalities fee for 1934, $10.00; Jones, Graham & O'Brien relief $56.09; T. J. Lalonde relief $70.00; R. Turner, labor $1.95.

Several complaints were received about dogs roaming at large during the night and barking. Owners who have not yet registered their dogs are requested to do so at the Town Hall.

GOOD FUR CATCHES

Freighters from the north land arriving in Edmonton recently speak of good catches of fur of fine quality around Fort Smith during the winter.

As a result trappers have been able to do better than for some time, it is reported.

LOCAL BROWNIES PRESENTED WITH STARS BY COMMISSIONER

Last Monday the Brownies were visited by Mrs. Purdee, Provincial Commissioner, Mrs. Newson, Divisional Commissioner, and Miss Berry, Divisional Secretary, all of Edmonton. After the meeting was opened and a few games played, the Brownies were inspected and presented with their Service Stars. The eight Brownies receiving three year stars were—Marie McLellan, Marie Grunert, Dorothy Lamb, Marjorie Smith, Faye Roberts, Isabella Cameron, Gwenyth Hallam, Wanda Kolterborn and the three Brownies who got one-year Stars were:—Violet Chesbrok, Betty Wall and Clint Chesbrok. There are nine others who will get Service Stars very soon.

After the presentation of the Stars Mrs. Purdee told them a story. This was followed by another game, shown them by Mrs. Newson.

Tea was served by the Brownies, which brought a very enjoyable meeting to a close.

Brownies were pleased to see some of the mothers present and hope more will come oftener.

In the burning of a trainload of automobiles at Detroit, quite a few pedestrians may have been saved.

Josephburg News

The Junior U F A. meeting was held in the school, on Wednesday, March 14th.

Mr. Macdonald continued his talk on First Aid, which proved very interesting.

After several discussions the meeting was adjourned on a motion of Norman Cripps.

The next meeting will be held in the school on Wednesday, March 28.

oooooo

Mr Art Havener is a patient in an Edmonton hospital.

oooooo

Messrs Dave Evanston and Norman Whitson were Edmonton visitors last week.

Monthly Meeting of Fort School Board Held

Minutes of the regular meeting of the Fort Saskatchewan School Board held in the Council Chambers on the 12th March, 1934.

Present, Mr. F. Atkinson, Chairman, and Trustees Dr. Calhoun, Dr. Turner and Mr. Ross.

The minutes of the last meeting held were read and adopted on the motion of Mr. Ross.

In the matter of the repairs said to be required to put the School house in order was considered by the Board and the Chairman finally asked Dr. Calhoun and Dr. Grunert to examine the place and if necessary have it put in order for the Monday following.

The Principal Mr. Anderson, was present and submitted attendance returns and monthly accounts were passed for payment on the motion of Dr. Calhoun: Alberta Pacific Grain Co., cord $69.35; Calgary Power Co., $2.38; A. M. Carmichael $1.95.

The meeting adjourned on the motion of Dr. Calhoun.

Co-operative Commonwealth Federation Principles

Resolutions of a Commonwealth Common-sense Farmer on the meaning and practical putting into operation of the C. C. F. Philosophy.

(Owing to lack of space these articles have been put aside, but will publish notice to the end this time. Continued from Feb. 21st. Issue.)

Number 8 in the C.C.F. Program reads:— "Publicly organized health hospital and medical service."

The value of health is becoming recognized more and more of outstanding importance. Not only the provision of adequate medical and hospital services to the sick but even o.' more importance, is what is commonly called preventive medicine or the maintaining of the people in a healthy condition by periodical examinations, inspections and the early correction of defects.

In a planned economy the wealth of the people would be considered of prime importance. Not only would the individual the duty of every citizen to keep himself in good health, but it would be considered the duty of the State to so plan and coordinate all its facilities for health services as to make full use of the doctors, surgeons, dentists, nurses, chiropodists and hospitals.

As the health of the citizens would be considered a public matter, all persons contributing towards the maintenance of health and the care of the sick would have to be considered "Civil Servants". As such they would have to receive adequate remuneration at all times in order to live on a proper standard and be free from worry. Not only would they be properly paid, but they would get time off in which they would be required to further train and equip themselves for their work. Provision would also have to be made for the proper recognition of skill and industry by promotions and other forms of honoring outstanding ability.

(Continued next week.)

Inspector Reviews Local Scout Troop

The 1st Fort Saskatchewan Troop of Boy Scouts were reviewed by "Mike" Foster recently and were found very good.

Mr Foster was well pleased at the result shewed by the Tenderfoot's and thought that the knot tying was good although a little more improvement could be obtained specially in the way of speed.

There was one thing he suggested that ought to be brought to the attention of the children that is, active support, one will be popular in the school of sport, fishing, hunting, gardening, blacksmithing, carpentry, etc, who could teach the boys, so that they could complete for the Proficiency Badges.

Mr. Foster found the general average good and as a whole the troop drove par.

In closing his address to the boys, he said," you have been in the Fort about 18 months and Masters I know, so give him your full support and help him make a first class troop.

Tourist—"How far to Pleasantville?"

Native—"12,000 billboards."

What About Social Credit, Canada?

By following this series to the conclusion the reader will clearly understand the problems which faces Canada.

(Continued from last week)

No. 3

J.—"But—"

W.—"Now, wait a minute. Don't let us stray away from our original subject. I probabe you we'll discuss this money angle thoroughly when we come to it."

J.—"All right. But I shall keep the question in my mind."

W.—"O.K. but let's get back to the main story. If consumers and producers, at least so far as desire and ability go, are O.K. then it is logical to say that the trouble must be in the third factor, Money. That is, unless you can find that it too, is irreproachable, in which case we shall have to search for our trouble in and have ever which man has no control. As an ordinary sane individual I take it that you would hardly want to go outside the economic system to find the cause of our trouble before you had thoroughly examined this third factor-Money."

J.—"Of course not. Let us investigate what you call "the money factor"."

W.—"Now we come to a very interesting subject—Money. The first thing is to define the word so that we know what we are talking about. What is money?"

J.—"Well, er—do you want a definition?"

W.—"No thanks. I'll give you one. Money is as money does. That is, anything that performs the functions of money IS money. Of course, if you really want it, no one will refuse philosophy—"

J.—"Don't bother!"

W.—"—yes could say that money was just as idea. But to stay on earth, let us take Professor Walker's definition of money. Money is any token which has reached such a degree of acceptability that no matter what it is made of, and no matter who people want it, no oneewill refuse it in exchange for his product." as a definition I find it satisfactory. What about you?"

J.—"Well, I suppose so. When you come to think of it, even through the ages have used all kinds of things as money. Beads, stones, playing cards, and I believe I read once where tobacco was used in some parts of the States as a medium of exchange."

W.—"Yes, and at one stage we chose metals for their convenience and durability but we passed on to a paper currency and today the great bulk of our money is neither paper nor metal."

J. "What is it then?"

W. "Bank credit drawn by cheque."

J.—"Oh yes, I forget that. But wait—those cheques—they're only paper documents representing real cash?"

W.—"Now, Jones, you don't seem to tell me that as a business man, constantly using the credit facilities of a banking institution, you think a bank lends money!" Do you ever take out the cash when you obtain a loan? Don't you transact all of your business by drawing on that account by cheque?"

J.—"Yes, but the bank must have money before they can lend it."

W.—"But I'm trying to tell you—banks don't lend money."

J.—"Well, what do they do?"

W.—"They lend credit which ents no money. It is created by a stroke of the pen, and costs them practically nothing."

J.—"Oh come now. What are you trying to put over. Is this some of your Social Credit ideas?"

W.—"Don't make me laugh. I'm still talking orthodox economics. We recognize it in the Social Credit analysis because it is a fact and every informed individual must realize it. But you still look incredulous."

J.—"Yes, I get a bet at all."

W.—"Well, I suppose I could spend a lot of time arguing on my own but I'm not going to. Instead I'm trying to convince you but I suspect if you don't believe me you'll believe the statements of leading bankers if a reply is desired.

Seasonable Goods

KIDDIES' FELT BERETS

—Kiddies' Felt Berets, chic and very becoming in Red, Green and Pearl Grey.
Special to sell at 35c

SILK SLIPS

—Splendid value in silk Slips, in White and Pink, lace trimmed, well finished and made in a fitted style.

THE CANADA STARCH CO. LIMITED, MONTREAL

Wheat Control Legislation

With the introduction of legislation in the House of Commons at Ottawa, and simultaneously in the legislatures of the three prairie provinces, whereby power is to be taken by the several governments to control the marketing of wheat, a complete reversal in the policy which has hitherto been one of the outstanding features of Canada's development will become effective. Time alone will reveal whether the policy now being adopted is wise or not, but unquestionably the several governments concerned are convinced that it is a necessary step to take at this particular period in our national and economic history.

From the earliest days of the opening of Western Canada to settlement, and following the construction of our first transcontinental railway, it has been the aim of all governments at Ottawa and only to encourage settlement, but through the provision of all necessary services to promote the production of the greatest possible volume of wheat. In the development of these policies the Federal government has been assisted and its efforts supplemented by the Provincial governments in the West. Production was encouraged in all possible ways and by every practicable means. A never ceasing battle against weeds, insect pests, rust, losses from hail, has been waged; new varieties of early ripening grain have been developed in order to increase the area capable of wheat production; the use of good clean seed has been stressed; the credit of the Dominion and the provinces has been utilized to make Western Canada a great, wheat producing country.

Since the legislation now before parliament and the legislatures, governments are to take control of wheat sales and marketing in order to restrict the volume of such sales, and in accordance with the farmers' quota each will be permitted to sell in the summer only, while the federal authorities will control the volume of sales and deliveries outside the provinces.

"Control or Marketing of Wheat Acts" of a uniform character submitted to the legislatures at Manitoba, Saskatchewan and Alberta provide for control by license or otherwise of the quantity of wheat which each owner or occupant of land may sell during any year. The Dominion legislation also provides that any wheat sold in the provinces shall be sold and delivered in accordance with the regulations made by the Provincial Houses, licenses as interprovincial board is also provided for which shall control anywhere in the Dominion, provide power to enter into contracts or agreements of any kind with respect to the purchase, sale, handling, transportation, storage and insurance of wheat and to determine what constitutes delivery or possession.

In a word, the provinces take absolute control over the marketing, purchase and sale, and the handling and transportation of all wheat within their respective provinces, while the Dominion takes control of the sale and deliveries of wheat outside the provinces whether within Canada or to other countries.

This, in substance, is the manner in which it is proposed to implement Canada's undertaking in the International Wheat Agreement negotiated at London last year, rather than to attempt to enforce a definite per centage reduction in the acreage sown to wheat and which might, or might not, accomplish upon climatic and other conditions, result in a lessened wheat production.

Unquestionably the administration of this new legislation will be difficult. It will call for great tact and discretion if almost universal criticism of and opposition to it is not to develop. Consideration must be given to those thousands of wheat farmers in the drought stricken areas of the West who have not enjoyed normal crops for several years and many of whom have had no crops at all. If crop conditions are favorable this year, are they must be allowed full opportunity to rehabilitate themselves. The needs of a farmer with a large family or young children are necessarily greater than those of a farmer having no family, or one whose children are now of adult age and can care for themselves. In fact, a hundred and one varying circumstances will arise demanding consideration. Hence, the task of issuing individual licenses, fixing the quantity of wheat which each farmer may sell will be a task in itself.

The new legislation is to be effective for one year only, although, of course, it may come up for review prior to the expiration. In view of present and world conditions this restrictive legislation may be necessary, but governments at all event appear to be convinced that it is necessary. Therefore, despite the many conflicting views which prevail, it would appear to be best that personality should be sunk and only agree to give it a fair trial, but that they should do what lies in their power to make the proposed system operate as efficiently and with as little friction as possible. Let us see what it can accomplish for our farmer producers in the crop year 1938-39.

Canada's New Fiber Markets

Four new markets were gained by Canadian flax in 1937 — France, Portugal, Salvador and Alsace. In 1938 Canadian flour was shipped to 79 external markets in all compared with 75 markets in 1932. The British Empire took 1,818,899 barrels of Canadian wheat flour in 1937 compared with 1,251,809 barrels taken by non-Empire countries.

May Melt Of Concrete

Possibly the largest relief map in Canada, the world exists in Nova Scotia. On the boundary of the two provinces of Nova Scotia and New Brunswick a relief map of Nova Scotia was sown with 75 markets in 1932. The British Empire took 1,818,899 barrels of flour long and 60 feet high. This relief map is built of concrete, is in sections and is colored and illuminated at night by fixed lights.

Soothing Sensation

Feet and Itchy Spells

Those feelings of faintness; those dizzy spells; those nervous, jumpy feelings; those sleepless nights; those over tired people. Does this to you, are you sure that alcohol has not got entirely. They reduce an abnormally combined condition of the nerves and other vital centers, and should be given immediate attention. These gathering in this way you will find in Milburn's K. and F. Pills. A remedy with which to recommend their health, build up their run down system, and bring back their lost vitality.

All your druggist for 25 cents. Manufactured by T. MILBURN & CO., LIMITED, TORONTO, ONT.

Alberta Telephones

Survey Plan To Deal With Rural Lines Is Proposed

Adoption of a survey plan in dealing with the rural telephone lines as final contract would be kept in operation for social service or other purposes, was recommended to the Alberta legislature by Premier Brownlee when speaking on the Duggan resolution demanding an inquiry by a house committee into the problems of the public utility, said to have an accrued loss of $10,000,000.

The premier also announced that the government has already taken steps to select a competent engineer to make a survey of the department with a view to supplying a house committee with required information.

EXCESS FAT DUE TO RHEUMATISM

One Remedy For The Two Troubles

Having rheumatism so badly that she could scarcely walk, this woman also found herself overweight. "I was getting my usual exercise. I started taking Kruschen, and presto! The first thing I noticed was the tonic effect it had; the stiffness left my joints—but another thing—I lost the wretched fat! I am a woman of 56, and when I tell you I do exactly the same work as I used to, and that my age never causes difficulty, I think you will understand why I swear by Kruschen." (Signed) Mrs. M. E.

The six Salts of Kruschen assist the natural organs to throw off each day the waste matter which causes the system. Then, little by little, that ugly fat goes—slowly, but surely. Your skin clears, your eyes sparkle and headaches disappear. You feel wonderfully youthful and energetic once so than ever before in your life.

PRICE TRIAL OFFER

If you have never tried Kruschen—try it now at our expense. We have arranged a great Price Trial Offer. Simply send 10c (stamps or coin) with your name and address to Dept. "KRUSCHEN," Box 1000, Montreal, and we will send you a generous trial bottle sufficient for about four weeks' treatment. Then, if you like it, go to the best, and there, if not entirely convinced that Kruschen is the finest health aid you have ever used, you have lost nothing. Today is the day. Your druggist is authorized to refund your money if you are not entirely satisfied. Kruschen Salts have helped literally tens of our regular customers to better health. Why not you? Obtainable from all druggists throughout the Dominion.

Russia's Grain Supply

Government Starts Campaign To Avoid Famine In Future

The Soviet government has instituted a campaign to encourage Soviet Russia adequate grain supplies this year and avoid future threats of famine, according to reports. Soviet officials throughout the union have been ordered carefully to select grain seeds and test for germination and plant purity. The land, poor land has been blamed for huge crop failures, resulting in famine threats in the past. Each farmer should be able to produce plenty.

Jumpy Nerves

Yield to the soothing action of this medicine. You will soon be bossed . . . sleep better . . . feel calm and restful. Then you will soon watch living again. Don't delay any longer. Begin taking it today.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND

Put Bootleggers To Work

So many bootleggers have been arrested in Finland as the result of new legislation that special barracks for some of them have been built in the Suhero district of central Finland. It will hold 200. The commander of bootleggers are to be employed in road-making and ready land. The Finnish government recently banned alcoholic drinking that 130,000 gallons of contraband liquor had been seized in the first 11 months of 1938.

Little Journeys In Science

CARBON DIOXIDE

(By Gordon H. Grant, M.A.)

Carbon dioxide is the gas produced whenever carbon or any of the substances that contain it are completely burnt in oxygen—air. It is also formed in certain processes such as fermentation and the decay of organic matter. Large quantities also escape from volcanoes and crevices in the earth. It is present in the open air to the extent of about three parts in 10,000. This relatively small amount is essential to the life of all plants and hence it indirectly serves to supply us with our food.

One of the essentials of the life process in animals is the absorption of the oxygen taken in by the lungs, with the food which has been assimilated. This reaction liberates the heat which keeps the body warm. The products of this body combustion, carbon dioxide and water vapor, are exhaled with our breath.

At first thought it would seem that the constant production of this great amount of carbon dioxide must fill the atmosphere with the gas. The fact is, however, that when pure air in the country is analyzed, it is never found to contain more than three or four parts in 10,000. This is because most plants reverse the process which takes place in animals; they take carbon dioxide from the air and give off oxygen.

Carbon dioxide is without color or odor and is about 1.5 times as heavy as air. At ordinary temperatures and pressures it is easily absorbed by one volume of gas but under pressure much more will dissolve, a property used in preparing effervescing soft drinks.

It is well known that carbon dioxide escapes through openings in the earth's crust. In a cave in Naples, enough carbon dioxide issues from the cracks in its floor to form a layer from two to three feet deep along the bottom. If a man and a small dog are taken into the cave, while the dog quickly becomes unconscious, and soon dies if not rescued, the man, whose head is well above the layer of carbon dioxide, feels no bad effects. This cave, because of its fatal effect on dogs, is called "the cave of the dog."

New Motto For Legion

Legacy From Former Corps Commander, Sir Arthur Currie

Terming it a legacy to the organization from the former corps commander, Sir Arthur Currie, the Dominion executive council of the Canadian Legion, at its opening session at Ottawa, adopted as its motto seven words from the last message of Sir Arthur, one which he prepared for the Remembrance Day observance in Toronto last November. The legion's new motto, which will appear on all official stationery, and will also be used on memorial occasions, is "They served till death: why not we?"

The council also adopted a new empire trade slogan for the Legion, adopting the phrase which is now in use by the Australian Returned Soldiers' League, "Wherever you trade, empire trade first." A special design, embodying this slogan, with the Union Jack and the Canadian Legion crest, will be created, to be used as a means of promoting empire trade.

Pecan Nut Loaf

2 tablespoons Crown Brand Corn Syrup
1 cup milk
1 pound dates
1 cups white sugar
1 teaspoon Maizola
3 cups pecan meats
Powdered sugar

Cook the syrup, sugar, Maizola and milk to the soft ball stage or 240 degrees on the thermometer. It is best to use a deep skillet or saucepan, as the mixture boils high.

Add the stoned dates and stir until they are well smoked.

Stir in the nuts, slightly more or less than the given quantity, remove from fire and beat until still. Pour in wet napkin and roll into shape. When cold, slice and roll in powdered sugar.

There are 320,000,000 spinsters in the world—6,000,000 in Britain, 6,000,000 in France, 11,000,000 in the United States, and 34,000,000 in Germany.

PATENTS

A list of Patents granted to Canadians and Patent Solicitors may be seen at the Patent Office Library, Ottawa.

I LOATHED SCRUBBING TOILET BOWLS UNTIL I USED

It flushes off stains without harming enamel or plumbing . . .

HOW to get rid of those ugly toilet-bowl stains! It's easy—with Gillett's Pure Flake Lye. Once a week pour this powerful cleanser and disinfectant—full strength—down toilet bowls and drains. It flushes off stains without scrubbing. Cannot harm enamel or plumbing. Kills germs and destroys all odors as it cleans!

There's no need to slave over unpleasant cleaning jobs. Let Gillett's Lye work for you—it's quick, thorough and absolutely dependable. Ask your grocer for a tin—today.

Never dissolve lye in hot water. The action of the lye will do it.

USE IN SEPTIC TANK—Used for sanitation of the Gillett's Lye Booklet. Gives full directions for cleaning sink drains and toilet bowls; also for various cleaning of other cleaning tasks. Also contains full directions for making soap. Write to Standard Brands Limited, Fraser Avenue and Liberty Street, Toronto, Ontario.

GILLETT'S LYE EATS DIRT

Classed as "beasts of burden," oxen are exempt from the titles known in England.

More than 6,000,000 tons of salt are produced annually in the United States.

MINARD'S LINIMENT

Immense Mineral Wealth Is Revealed By Development Work In The North-West Territories

Owing to the evidences that there will be greatly increased activity in the Great Bear Lake mining field, in 1934, Hon. Thomas G. Murphy, Minister of the Interior, has directed that the Dominion Recorder's office at Cameron Bay be raised to the status of a Mining Recorder's office and that all the records relating to the Great Bear Lake field be transferred from Fort Smith to Cameron Bay as soon as possible. The general increase in mining and prospecting activity will be greatly accelerated this year because of the organization of the mercantorium on representation work, and the change at Cameron Bay is to facilitate all lines of activity by having the records immediately available in connection with prospectors in the centre of the field, instead of necessitating a trip to Fort Smith.

Until the mining properties in the Northwest Territories are developing to the bypoint of the reports received by them, Mr. Murphy, from officers in the field during the year 1933, with the trend of operations in the past year, also during the development of present holdings toward a production basis. Great Bear Lake is still by far the most important mining field in the Northwest Territories and development during 1933 while not spectacular was of great significance. Eldorado Gold Mines Limited, operated Rix wells on the Mackenzie river 83 miles below Norman and produced under 2,500 tons of petroleum and gasolene, of which about 50 per cent. was shipped to Great Bear lake.

Diamond drilling work, which was carried on by the twenty most active companies in the district continues to indicate the persistence and richness of this field. Several of the earliest claims staked have reached the production stage and notwithstanding the great situation which developed work received during the past year more fifty tons of pitchblende and some concentrate shipped and to reduction plants at Trail, British Columbia, and Port Hope, Ontario. Considerable underground mine opening for treatment, since 1931, high grade radium and silver ore and in December, 1932, transported by plane the first high grade radium concentrate obtained from its Smythe mill. Shipment of concentrates to the Trail plant of the same will be increased as soon as water transport becomes available this year. Although it is hardly four years since the discovery of radium-bearing ore at Great Bear Lake, Canada has already become an important producer of radium for the element and as production increases the Great Bear Lake area will be the source of ore from which the wheels of Canada and the British Empire can be supplied with radium.

While the discovery and development of the radium and silver bearing ore at Great Bear lake has occupied public attention, silver is the predominating mineral found in this field. Numerous veins containing high grade silver have been located on several large properties and development of these holdings has proved that several of them will be producers and shippers during 1934.

Hundreds of men were employed on the various claims undergoing exploration and development and the activity in mine equipment being raised to a very high standard. One mill has been handing over 50 tons of ore per day since early in December while a ten-ton pilot mill which was erected last year is being replaced this year by a twenty-five-ton mill. Plans have been prepared for a fifty-ton mill to be erected on another property this summer.

Work already accomplished on the different properties and plans underway indicate that 1934 will be one of the most important years in the development of the Great Bear Lake mining area. In other parts of the Northwest Territories exploration and prospecting work will continue to be carried on in the hope of further adding to the known mineral wealth of the Dominion.

Plans For Ambitious Air Project To Be Launched In 1935 For A Rapid Trans-Canada Service

Area Of British Columbia

New Figures Published By Leeds Member Enforced Associate

Exact area of British Columbia is 366,255 square miles. This figure is published by Hon. A. Wells Gray, minister of lands, on the strength of a detailed computations made by the surveys branch.

The 1937 Year Book, last official statement having the authority of the government, gave an area of 354,000. The figure most commonly used by department officials in recent statements has been 372,000. The Encyclopaedia Britannica gives only 359,555 square miles.

But the new figure is about as accurate as it is ever likely to be, despite the fact that there is an area of 75,000 square miles in the watershed of the province, bounded by meridian, and parallels of latitude that has not one mile of survey into and has not a single survey monument in it.

Of the 366,264 square miles now known to constitute the area of the province, the report gives 4,976 square miles to be covered by water in rivers and lakes.

Attention is drawn to the fact that, despite the presence of several legislation, British Columbia's total population amounts to less than two to a square mile for every man, woman and child in British Columbia there is half a square mile of land.

No Job For Women

Only Men Should Pilot Commercial Planes Says Women Aviator

Antonie Stransman, one of the first German women flyers, who arrived in New York recently, admits regretfully that women must confine their exploits to the field of amateur aviation.

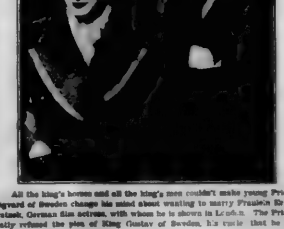
"The day of experimental flying is past," she said. "It is time for women to admit that commercial aviation is a man's job. Passengers have more confidence in male pilots. Women are not found at the controls of locomotives and they should not seek to pilot the great commercial planes."

Miss Stransman has taken out her first airtransportation papers and hopes to live in New York. She will continue to fly, but only for her own amusement.

The longest aqueduct in the world is the Vyrnwy, in England. It is 1,173 miles long and serves 326 Italian towns.

South Africa may reduce its tax on excess profits of gold mines.

DEFIED A RING FOR LOVE



All the king's horses and all the king's men couldn't make young Prince Sigvard of Sweden change his mind about wanting to marry Fraulein Erika Patzek, German film actress, with whom he is shown in London. The Prince flatly refused the plea of King Gustav of Sweden, his uncle that he reconsider the matter.

South Africa may reduce its tax on excess profits of gold mines.

Plans For Ambitious Air Project To Be Launched In 1935 For A Rapid Trans-Canada Service

From Halifax to Vancouver in 30 hours, from Toronto to Montreal in six hours, and from Toronto to Vancouver in a trifle more than 14 hours are the aims, but as a day-to-day performance—is the ambitious project scheduled to be launched in 1935 by Canadian Airways in collaboration with other Canadian companies and the Dominion government.

The companies will be armed with a fleet of airplanes capable of sustained cruising speed of 200 miles per hour as soon as the government believes economic conditions adequately recovered to warrant extension of air mail contracts.

By next year, under unemployment relief work carried on by single men in government camps, four new flying fields will dot the islands from coast to coast all as part of carefully planned preparations designed to give Canada as modern a commercial airways service as is enjoyed by any country.

When the service is launched Halifax will be but a matter of four hours from Montreal and 11½ hours from Toronto.

Airliners will shoot from Toronto via North Bay, to Winnipeg in a trifle more than six hours; on to Medicine Hat in another three and one-half hours, and on through the Crows Nest Pass and on to Vancouver in less than five hours more. Intermediate services will include Hamilton, Kenilworth, Prince Albert, Battleford and other points north of the projected main route within a few hours of it, and of those within less than an hour of connections.

England Wants More Cattle

Market For Two-Thrift Animals At Spring And Autumn Sales

To avoid any misapprehension on the part of Canadian exporters of "store" cattle, says the Canadian trade commissioner, it should be explained that "stores" as applied to the British farmers' needs, are two-teeth or two-year-old animals, preferably the former. Unfinished beasts of this age are considered as being stores and never will be. Feeders will not buy them. They are always sold at the autumn sales. Even two-year-olds may be too badly built to find buyers other than the butchers, but there is no call for the two-year ones and always for the two-teeth animals at the spring and autumn store cattle sales. The season for the best trade in store cattle are take April, May, June, September, October and early November.

Farm Tractor And Autos

Statistics Show A Motor Vehicle For Every Two Farms

The introduction of the tractor some twenty odd years ago marked the beginning of the most rapid expansion in size of farm, particularly on the plains of the West where such power could be used to advantage. In 1921 there were 47,435 tractors on farms and 165,389 in 1931. Along with this increase in use of tractors came increased dependence upon trucks and automobiles. In 1921 there were 157,022 such vehicles on the 711,000 farms, or about one to every four farms. In 1931, with trucks recorded separately at 68,682, and automobiles numbering 374,274, there was a motor vehicle for every two farms. Actually 303,261 farms reported trucks and 46,926 reported trucks.

Official Stamp For Beef

The two first grades of beef have been designated by the Dominion government as "Beef" which is "Choice" and "Blue" which is "Good." These official stamps appear on every cut at end of the edible tab, according to grade. The ink is the product of Lac Dominion of Chemistry, Dominion Department of Agriculture, and is perfectly harmless.

WORLD HAPPENINGS BRIEFLY TOLD

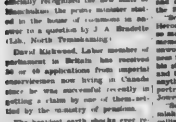
British Columbia will consider a minimum wage for domestic help at Mayor Cleverdon's Pearson minister of labor, has announced.

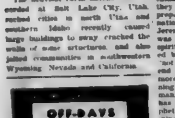
Closing of government houses in the western provinces in a temporary economy move was suggested in the Alberta legislature by D M Duggan, Conservative leader.

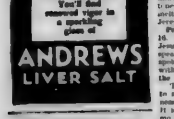
The Canadian government has not officially recognized the new state of Manchukuo, the prime minister stated in the house of commons in answer to a question by J A Brandette (Lib., North Timiskaming).

Duval Richwood, Labor member of parliament in Britain has received 50 or 60 applications from imperial conservatives now living in Canada since he was successful recently in getting a claim by one of them settled by the country of pension.

The heaviest earth shocks ever recorded at Salt Lake City, Utah, rocked cities in north Utha and southern Idaho recently caused large buildings to sway crushed the walls of some structures and also jolted communities in southwestern Wyoming Nevada and California.







Cook fish, meat and vegetables in Cleanser. You will be delighted with their new flavor —and no sticky mess. At dealers or write—

Lectures on first aid in gas production are being given in Glasgow, Scotland.

Spain exports a larger orange crop than last year.

MARCH 25

CONFESSING AND FULFILLING (Christ)

Golden Text Then are the Christ, the Son of the living God" Matthew 16 16

Lesson Matthew 16 13 17 27

Devotional Reading Isaiah 53 7-12

Explanations And Comments

Peter's Opinion about Jesus. 16 13, 14 Jesus had his disciples had journeyed almost to Caesarea Philippi when he suddenly turned to them and asked "Who do men say that the Son of man is"

Some say Elijah, and others Jeremiah, or one of the prophets" In calling Jesus one of the prophets they gave him high tribute for the prophets were the greatest men their nation had ever seen Elijah and Jeremiah were very unlike Elijah was a bold fearless leader whose spirit blazed against those who halted between two opinions. Jeremiah, sad and gentle, wept certainly to the end of the day than Elijah may, for more so that he yet at the beginning certainly a most shrinking timid man. The world needs both It has been called in the young Prophet men saw something that rekindled their love for them Those of the great Elijah men of the stirring accents of the stiff griefer Jeremiah."

Peter's Opinion about Jesus. 16:15, 16. "But who my ye that I am?" Jesus further questioned. And Peter, speaking out for himself alone or spokesman for the group, answered with conviction. "Thou are Lor Christ the Son of the living God."

"In fact, the call of Christ is a call to suffering very like the cheerfulness of the soldier of the trenches. If in a call to a life of external turmoil and internal peace. 'I came not to bring peace but a sword'. 'Take up your cross and follow me'. 'Ye shall be hated' 'He that would save his life shall lose it' It is a call to take risks, to risk poverty unpopularity, humiliation, death It is a call to follow the way of the cross. But the way of the cross is also the way of peace, the peace of God that passeth all understanding It is a way that overthrows from all cares, and anxieties, and fears; but not a way of escape from the world" (Donald Hankey).

For what shall a man be profited if he shall gain the whole world, and forfeit his life? or what shall a man give in exchange for his life" Recall that cartoon during the War in England's great comic paper which represented the King of Belgium being addressed by Death and an awful figure. The King had lost many towns and much wealth So you have lost everything" the sneering figure said. "Not my soul!" came the noble reply. "Not my soul!"

Saved Many Ships

Woman Was Shortsweather In Wales For 75 Years

On the eve of her hundredth birthday, Mrs. Jane Ellen Jones, harbormaster at Pridmlellyn, Wales, for 75 years, has died. She lived in an era 300 years old, when front door was washed by high tide, and there at one time she conducted a girls' school, teaching art, needlework, domestic science and music. The inn also served as a lighthouse for she put lamps in the windows as a guide to ships. It is asserted in Wales that in this way Mrs. Jones saved many vessels from disaster.

Colonization Finance Corporation

Provincial Problem Of Agriculture Reviewed At Annual Conference

Farm managers of the Colonization Finance Corporation and Western managers and inspectors of associated companies were present in Winnipeg recently for the purpose of discussing practical problems of agriculture as they affect the Province. The Provincial Executive of the Canadian Colonization Association was also in attendance at the meeting which was presided over by D. Howard Hunter of St. Louis Mo., President of the rural organization, and various problems of farm management were discussed. Moisture conservation and soil drifting in areas subject to drought, problems of crop rotation and cropping methods to meet the changed conditions, methods for controlling couch grass, general problems in the control of wild oats, ways of controlling summer fallow, land utilization investing the better use of land, cooperative plans and practices and better use of crop land were all important subjects. A consideration of the water supply, a consideration of the general situation regarding farm labor and the better prospects of cutting operating costs and a review of new interesting regarding the handling of sweet clover. R. F. Todd, secretary of the Canadian Council of Agriculture, and Colonel the Canadian Meat Packers, Toronto outlined fully ways of co-operation by farmers to take advantage of the opportunities at present offered in the British market for the bacon type of hog acceptable here.

At the beginning of an organized farm management program such as the Colonization Finance Corporation has been carrying out for the past four years, dates from a meeting of the Dominion Mortgage and Investment Association held in Montreal in March 1929. Two years of land settlement work on the part of the Canadian Colonization Association, a subsidiary of the Canadian Pacific Railway, had previously convinced that more extensive supervision of their farm management problems was necessary. The new policy was inspired by a greater than this organization on individual lending companies and their executive staffs. Supervision could best be done by point effort.

During the year the farm management department operated in a very limited manner having only 25 012 acres under its control. Columbia and the supervision of the chief farm management assistant by two zone managers. Zones were established that year with headquarters at Winnipeg, Brandon and Dauphin In 1931, the staff of the Colonization Finance Corporation was increased to 30 zone managers, supervising 430 farms containing 109,150 acres, situated entirely in Manitoba, with additional zone headquarters being established at Portage la Prairie, Moosomin and Dauphin.

Early in the spring of 1932 operations were extended to Saskatchewan adding that year 9 zone managers were opened in Biche, Man., and Orthon Weyburn, Indian Head, Canora and Melfort, bringing the total staff of zone managers 39 with 4 assistants. Zones were established that year with headquarters at Winnipeg, Brandon and Dauphin In 1931, the staff of the Colonization Finance Corporation was increased to 30 zone managers, supervising 430 farms containing 109,150 acres, situated entirely in Manitoba, with additional zone headquarters being established at Portage la Prairie, Moosomin and Dauphin.

Early in the spring of 1932 operations were extended to Saskatchewan adding that year 9 zone managers were opened in Biche, Man., and Orthon Weyburn, Indian Head, Canora and Melfort, bringing the total staff of zone managers 39 with 4 assistants. Zones were established that year with headquarters at Winnipeg, Brandon and Dauphin In 1931, the staff of the Colonization Finance Corporation was increased to 30 zone managers, supervising 430 farms containing 109,150 acres, situated entirely in Manitoba, with additional zone headquarters being established at Portage la Prairie, Moosomin and Dauphin.

Of the 430 farms, about 75 per cent are operated by the owners, either as mortgagors or purchasers under agreements, and only 25 per cent. by tenants. The membership of the Colonization Finance Corporation is of general interest since the leading life insurance trust and loan companies and the Canadian Pacific Railway, the following being zone members companies: Canada Life Assurance Company Toronto; and Canadian Pacific Railway Company; Life Assurance Company Toronto; Imperial Life Assurance Company Toronto Ont Mutual Life Assurance Company of Canada Waterloo Ont National Trust Company Limited Toronto; Ont North American Life Assurance Company Toronto; Sun Life Assurance Company Toronto; Royal Trust Company Montreal Que Union Trust Company Limited Toronto Ont and Western Homes Limited Winnipeg Man.

The farms in with the Colonization Finance Corporation understand that it is built on the economics of seven weeds and the restoration of soil fertility often through the use of sweet clover making possible the keeping of more and better cattle, the improving of the roots of summerfallow. It is always kept in mind that practically every farm is a unit project in any system of farming in Western Canada

Constant and effective effort has been continued by the farm managers to provide an opportunity for success on all farms and to improve the quality of all products This has been stressed far more than an attempt to increase livestock through the use of pure-bred sires, and heifers show a marked increase in livestock on a large per centage of the equipped farms. A special effort is under way to improve the quality of the hog production on the farms The aim is to improve the quality and increase the production of hogs to take advantage of marketing opportunities available in the United market under the ottawa agreement By the plan adopted it is expected that a continuous flow of the right type of hogs, which bring the highest price on the British market, will be stimulated and maintained throughout the year.

The zone managers who work with the chief farm manager, Mr Reichwald, are located at the following points R. W Gowland and C. R. Hamilton, Assiniboia, Winnipeg; H Jones Portage la Prairie Man.; A R Juniec, Dauphin Man; W. J. Kent, Birtle, Man; H. Reames, Brandon, Man A J Clark and M. L. Herper assistant Dauphin; Man; W J McLeod and K McLean assistant Moosomin Sask; J A Gilbertew, Sask W. Harkness, Weyburn, Sask.; S B Longman Indian Head, Sask.; M B Somerville, Yorkton, Sask.; O Winkler, Canora, Sask Louis L. Lang, Melfort, Ont. first vice-president of the Mutual Life Assurance Company of Canada and president of the Lang Tanning Company, was elected to the presidency of the Colonization Finance Corporation upon Mr Bowman's death in 1932 and was recently re-elected J. F Weston managing director of the Imperial Life Assurance Company is vice-president and T O F Herger of Winnipeg, Man., has served as general manager of the organization since its inception.

Members of the executive committee include W Hastie, Toronto, assistant general manager of the Canada Life Assurance Company. J. E Cork, Confederation Life Association; A F Fergurgeal, assistant general manager of the Mutual Life Assurance Company, and J C Breckenridge Toronto, general superintendent of the National Trust Co.

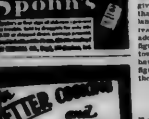
McGill University Benefactor

Montreal Man Leaves Large Sum To Eastern Institution

McGill University will benefit considerably, probably to the extent of more than $100,000 under the will of the late Dr. Joan Bowring Lawford, a native of Montreal, who practiced opthalmic surgery in Harley street.

The estate has been probated at $218,000. The McGill medical faculty will get $5,000 to be expended on a library and museum. Another $50,000 goes to the London Opthalmic hospital and $25,000 to the British National Blind Library.

Ultimate residue is to be divided between McGill and St. Thomas hospital, London.



Swollen Joints

often are a warning that your kidneys are overworked and need attention. Don't suffer needless pain. Take Gin Pills to obtain relief and assist your kidneys to function properly.

Canada Gets New Fruit

Cross Between Orange And Grapefruit Has Intriguing Flavor

"Should the name of ugli fruit be changed to a more beautiful name?" That is the question bothering certain importers in Montreal at the moment Meantime a shipment of ugli fruit has landed at Halifax from British Honduras and Jamaica aboard the Canadian National steamship Lady Rodney. Agent Thibeart and rushed to the Montreal market. It is a cross between an orange and a grapefruit, importers explain They predict a great future for it on the Canadian market, because of its especially intriguing flavor

Conserving Corn Light

Rainy Chinooks that cut down heating bills this winter entirely eliminated lighting expenses for R. H Bower of Windsor Park, Alberta. In Mr Bowse's back yard, a windpower lighting plant made from the charging unit of an automobile provides enough current to keep two storage batteries charged for home lighting

GRANTING TITLES IS APPROVED BY VOTE IN HOUSE

Ottawa. — With three members jumping party lines, the House of Commons declared its approval on titles for Canadians

By a vote of 113 to 94, Conservatives defeated a motion to restrain the prime minister from making further recommendations to the king for titles and honors.

Lining up with the Liberals, Progressives and United Farmers in support of the non-titles motion sponsored by Humphry J Mitchell, Labor member for East Hamilton were two Ontario Conservatives, George Spotton, North Huron, and J. D Colman, North Renfrew. On the other hand Sir Eugene Fiset Liberal Rimouski, former deputy minister of national defence joined the government forces.

In the biggest vote of the session, with pairs unrecognized the government set back the motion, which in the smallest magic by since it came into office in 1930 Conservatives have a working majority of 30 over all parties in the house with one VACANCY

Premier R B Bennett defended titles on the ground they were recommended by the state of public services rendered to the country or humanity Rt Hon Mackenzie King, leader of the Liberals said Canadians generally opposed titles because they established class distinctions that were foreign to a democratic state

Emergency Wheat Control

Manitoba Legislature Introduces Measure To Implement Lon-don Agreement

Winnipeg Legislation to implement the London agreement on wheat was introduced in the Manitoba legislature by Premier John Bracken. The measure is identical in essentials to legislation brought down recently in Alberta and Saskatchewan assemblies.

The bill provides for the setting up of emergency wheat control boards with power to license or register into the sale and purchase of wheat during the crop year August 1 to July 31, 1933.

Immediately following the premier's address, his measure for the bill was approved, the measure received first reading.

Start Daring Journey

Mountaineers Plan To Cross Coast Range On Skis

Williams Lake, B.C.—Headed by two well known Englishmen Alpinists, Sir Norman J. Watson and Wing Commander E. B. Beaumna, a party of daring mountaineers left here on March 13 for Tatla lake, from where they will trek into the wilderness in an attempt to cross the towering coast range mountains.

The men arrived here from Vancouver by train. They planned to travel by auto truck to Tatla lake and there expected the 100-mile journey would occupy at least two days. The skiers were equipped to clear the snow-bound roads to permit passage on the trucks.

Travelling Medical Clinic

Winnipeg. Travelling medical clinics to treat children in unorganized territory of Manitoba are to be initiated this year in co-operation with the work of the public health nurses, Hon. R. A. Hoey, minister of health, told the Manitoba legislature in discussing appropriation for the department of health and public welfare.

Asks Protection For Grouses

Victoria. G. H. Chataway, on behalf of the Sidecut Ranchers' Association, charged that "dumping" of low grade Alberta beef in British Columbia had depressed the prices of B. C. beef below the figures profitable to the growers. Mr. Chataway proposed a tax of five cents a pound on all beef, mutton, pork, veal and lamb not raised in British Columbia.

Four-Point Arms Plan

Premier To Make Proposal On Disarmament Question

Paris. Premier will propose a four-point arms convention to begin in the recess British disarmament plan

A note now being drafted by the foreign affairs committee, it was learned on reliable authority, will accept an arms treaty providing that

First German storm troopers be included in any count of the reserve soldiers

Second, France will not be asked to disarm immediately if the result is granted the right to rearm

Third, security guarantees will be given that the convention be ratified simultaneously by many countries are signed specific pledges

Fourth, that in those restrictions the price limits, it was said that France would be unable to increase the effectiveness of her army offers to [illegible] the land of the British Empire.

The stubborn Premier was in an especially hopeful mood [illegible] reports to the last French note

French officials said the German reply had "changed nothing" in the situation.

The chamber of deputies foreign affairs committee told Premier Daladier that the forthcoming note must leave the door open for disarmament

Rescue U.S. Seamen

British Vessel Succeeds In Saving Lives Of Men Aboard Gunboat

Hong Kong China The 167 men aboard the United States gunboat Fulton when flames enveloped her in a raging storm were brought safely to this port.

Three of the crew were injured during the storm, one of them a gunner had a broken arm, and the third a broken leg Their names were not available. The gunboat was on duty against pirates.

Their rescue by H.M.S. Wishart and the British steamer Tuiman, was the first international seamanship, the survivors related.

Commander Todd of the Wishart brought the small gunboat in the rebel ship at great risk in a heavy sea.

The mishap occurred about 80 miles southeast of Hong Kong, while the Fulton was en route to Foochow, China.

The Fulton was abandoned at 10 p.m. still burning furiously.

No Grant Sought

Ottawa.—A grant of $4,000 to the United Maritime Fishermen voted in the House of Commons brought forth protests from two members (Ind., Comox-Alberni) who wanted to know why no such grant was paid to any of the British Columbia fishermen's associations. The reply from Hon. Alfred Duranleau, acting minister of fisheries, was that no provincial organization had sought such a grant.

Work For School Graduates

Moose Jaw.—A resolution by the collegiate board of the city of Edmonton, asking the government to provide a system of public works for graduating high school students, was endorsed by the collegiate board. The board also decided to ask teachers and students for ideas as to what class of works might be undertaken for the benefit of the youth of the city.

Bear Hostings Legislation

Ottawa.—An amendment to the criminal code which would permit race meetings to be held for 16 days consecutively, on such days as racing is legal, instead of having, as at present, at least 30 days intervening between each seven-day period, was given first reading in the house of commons.

Will Stand By Pledges

Victoria.—"This government will not hesitate to be responsible for everything it does and for everything it has pledged itself to, including 'work and wages'," declared Premier T. D. Pattullo in the British Columbia legislature.

NEW APPOINTMENT

Lord Justice Maugham, formerly Hon Mr Justice Maugham of the Chancery Division, who succeeds Lord Justice Lawrence, retired as the new Lord Justice of Appeal in Law Courts

St. Lawrence Route

November Asks For Information Regarding Navigation Conditions And Costs

Ottawa. Details of a report detailed information respecting navigation conditions grain rates elevator services grain handling facilities and navigation aids from the head of the lakes to the sea will be sought from the government by motion of an order for a return to the house by Hon. Archibald Blair, Saskatchewan.

In notice of motion Senator Gillis asks for information with respect to the indebtedness of various companies and details of their financial condition, the number and status of grain elevators from the head of the lakes to and including Quebec dredging costs and details from Montreal to the Gulf of St Lawrence the number and kind of lives brothers operating from the head of the lakes to Sydney N.S. details of all casualties and fatalities on the St Lawrence during the fiscal year 1933-34, the value and operating costs of St. Lawrence river navigation aids in the last 10 years, and wheat freight rates from various points in the prairie provinces in 1928.

Wheat Exports Down

Shipping Decrease Shown For Week Ending March 9

Ottawa. — Export clearances of wheat from Canada for the week ending March 9 totalled 1,910,000 bushels. It was stated in a report issued by the Dominion Bureau of Statistics. Shipments revealed a decrease of more than 1,500,000 bushels when compared with 3,363,083 bushels exported the previous week and a drop of more than 1,000,000 bushels compared with 3,104,411 bushels during the corresponding week of last year.

British-American Trade

Ten More In Made To Increase Business Between The Two Countries

London Richard Washburn Child, President Roosevelt's newly appointed "European trade ambassador" will be received cordially in highest government circles, it was learned here and commercial interests use he has a troubled visit here a new move to increase British-American business

Pending the outcome of the conversations no will have here, British trade leaders and American interests believe an immediate increase in commerce between the two countries depends largely on stabilization of foreign exchange and easier methods for the sale of British goods in the United States

The British government through Sir Hilton as to the various fields Mr Child will explore and explains that a new trade horizon has been brought into view by President Roosevelt's declaration on tariffs and kindred subjects recently

There is also an indication that the government here intends to rely more on the future on bi-lateral negotiations with other countries for an upturn in British foreign trade

Restores Minimum Wage

Thousands Of Employees In Ford Plants Will Benefit

Detroit The five-dollar-a-day minimum wage with which Henry Ford startled industry in 1914 has come back He announced that the minimum has been restored effective March 13

Forty-seven thousand of the 70,000 men employed in the Ford empire throughout the United States benefit by the increase They had been receiving $4 and $4 65 a day and it was estimated monthly-ally that the raise would add approximately $6,000,000 to the Ford company's annual payroll

Ernest Windsor, Ont Restoration of the $5-a-day minimum wage for factory employees in the main units of the Ford Motor Company of Canada, Limited, was announced by Wallace R Campbell, president

Not Taking Over Park

Prince Albert The province of Saskatchewan has no intention of taking over Prince Albert national park, says a letter from Premier J. W. G. Anderson to the local board of trade. The board recently recommended administration of the park remain with the Dominion government.

Shortage Of Farm Land

Saskatoon A shortage of land for settlement by unemployed Saskatoon families was seen here as a steady stream of family heads registered for assistance under the Saskatchewan land settlement scheme Already 375 families have registered

BELGIAN RULERS AT SOLEMN TE DEUM

The first photograph of King Leopold III and Queen Astrid of Belgium since their accession to the throne shown the royal couple leaving the Cathedral of Saint Gudule in Brussels after a solemn Te Deum in their honor Queen Astrid wears mourning in tribute to the memory of the late King Albert.

ST. LAWRENCE PACT REJECTED BY U. S. SENATE

Washington — The St. Lawrence waterway treaty negotiated by the governments of ex-president Herbert Hoover and Prime Minister R. B Bennett in its present form, was a dead issue so far as the United States senate was concerned Not so at the White House where even as President Roosevelt admitted the rejection of his request for ratification he intimated he would reintroduce the measure at some form

The administration's attitude was expressed as being "as sure as death" as St. Lawrence matters would be hunt Mr Roosevelt himself expressed apprehension that failure of the senate to ratify would place the treaty entirely under Canadian control

The certainty of a channel capable of carrying ocean going freighters from the head of the great lakes to the Atlantic was echoed by Senator Robert LaFollette Progressive-Republican of Wisconsin, one of the leading advocates of the treaty in the senate After defeat of the measure by a vote of 46 for, 43 against, falling 18 short of the necessary two-thirds LaFollette said "progress continues" in just the beginning of the fight"

Senator LaFollette represents the attitude of members from the lake states other than Illinois which has a special interest in Lake Michigan and the diversion of water from the lake for use in the Chicago drainage canal

Representing the Illinois attitude, Senator J. Hamilton Lewis Democrat, a leader against ratification, said the treaty was defeated because it "violated American rights" and that Canada proposed to send a new treaty to the senate will be of no avail unless it renounces the claim to Lake Michigan as an international lake and admits the amount of diversion to Chicago is to be determined by congress and the state of Illinois

With these reservations, he said, the treaty would be approved

Maids' Parade

Mrs. Member Would Use Domestic Methods To Curb Bootlegging

Victoria. Bringing the question of women, or the use of housewife whips by a few hefty provincial policemen would have saved the government in Canada's 1917 election, T. F Leary (Lib. Kaslo-Slocan), said in the British Columbia legislature, replying to the 1932 Liberal budget speech debate.

"Industry in the Kootenay," he said "is facing a serious situation because of Doukhobor competition. Originally they came into the province to confine themselves to farming and were a self-contained community

"Now they have gone afield and are in ruthless competition with business men of many years standing They are neither built for that sort of the law Their standard of living is low and they wish to drag us down to that standard The time when one showdown should be called for The patience of people in the Kootenays has about reached the limit and the sooner something is done about this unfair competition the sooner we may be in a position to consider other matters of importance of an economic recovery plan submitted to the government"

Discussion On Seed Grading

Ottawa. The advantages of disadvantages to the farmer of hog grading were debated in the agricultural committee of the commons In every pig market in Canada except Montreal the trading in hogs is done on the basis of the grading by official graders.

More Pay For Teachers

Winnipeg With the passing of the Winnipeg school board budget for 1934, teachers to-day were assured of a 10 per cent. salary increase effective next October 1

Have Strange Characteristics

Scientists Find Fish Like Brown Of Isle Of Tibet

Most anglers know that if they catch a trout and want to return it to the water alive they must wet their hands before touching the fish or it will soon die but they do not know why.

The reasons for this technique and explanations for many strange characteristics of both fresh and salt water fishes have been found by a young Harvard scientist, Dr Associ Hoyo of the Harvard Fatigue Laboratory who has finished a series of investigations into the "breathing" and "drinking" mechanisms of fishes.

The fundamental cause of death of a fish from handling is that its gills or combs are ruffled and the protective surface is broken. In salt water the fish then dies of thirst; in fresh water it literally drowns to death.

Dr Hoyo has found that these phenomena are closely associated with the salt concentration of the blood of fishes and the apparatus which enables a fish to get fresh water for drinking from the ocean, or salt from lakes for its blood, also enables some fish to live in either fresh or salt water yet keep their blood in a proper and concentration.

Scientists have established the interesting fact that the salt concentration in the blood of fishes which live in either fresh or salt water is about the same as the per centage of salt in the blood of man, as well as most vertebrate animals. But salt is readily available to man; he takes what he wants or feels he needs and the kidneys and perspiration help hold the correct balance.

Members of the Harvard Fatigue Laboratory staff found in connection with these facts that workers in the intense heat of the Boulder Dam construction project lost too much salt in perspiration, suffered seriously from the effects of salt deficiency in their blood, and that they were able to work much more happily, efficiently and safely if a small amount of salt was put in their drinking water.

But what of fish? Dr Hoyo found that the problem of some fish living in drinking and breathing water which contained about three times as much salt as they could possibly stand. On the other hand, there is not enough salt in fresh water to keep the blood of perch, trout and pickerel at the necessary concentration. Although they get a little in their natural foods.

Dr. Hoyo found that the fresh water fish has a tremendously efficient and versatile kidney which carefully saves every bit of salt that comes in and passes it along to the blood to keep the concentration up.

In the case of the sea fish, however, the problem is more complicated; that of getting rid of the excess salt in sea water which the fish must swallow in order to live, and at the same time getting enough fresh water to drink.

Make Good Pioneers

Cochrane Finns Old Home Round Best Type Of Settler

"The best type of settler in the Dominions is from the Old Kent Road." This is not idle praise. Cockney quickness, adaptability, and optimistic, humorous courage supply the stuff of which the finest pioneers are made, and the Cockney is endowed with a resilience, a superb indifference to misfortune, which makes him able to face difficulties and problems which would utterly defeat the apparently sturdier rustic. London Evening News.

A Fair Exchange

A young wife said to her husband the other day "I've decided to give you a manicure set, a lovely razor hone and a bench-rug for our wedding anniversary, dear."

Then she looked at him affectionately. "And what," she asked, "do you thing of giving me?"

"I thought," he answered, rather coyly, "of giving you a safety razor."

Two glimpses of H.R.H. Prince George, youngest son of the King and Queen, as he starts his tour of South Africa. On the left he is shown with General Smuts after climbing to the top of Table Mountain. As he strides along the top of the mountain he is literally walking above the clouds. At the right Prince George is dancing at the civic reception in his honor at Cape Town.

Canadian Turkeys Win Prize

Birds Shipped To British Market Give Good Satisfaction

Canada's experiments in the shipment of turkeys to the British markets are resulting in much praise being given to the Canadian birds and the methods by which they are prepared for shipment. After being plucked and dressed the Canadian birds are sent to England chilled-not frozen. Each bird is graded by inspectors of the Canadian Department of Agriculture, and the colour of the leg attached to the bird indicates the grade. Comparatively few turkeys ranking lower than first grade are exported.

The impression created by this careful handling and grading is indicated in a letter from a Mr. A. M. Watt, of Leeds, England, to the "Meat Trades Journal", of London. The letter reads in part: "May I through the Journal congratulate the Canadian authorities on the soundness of the turkeys they sent for our Christmas trade. The Canadians have got the right mode of preparation and grading. Each turkey was exactly as represented: the first grade ones were perfect specimens, and gave the utmost satisfaction to the purchaser."

Cane Saves An Hour

Calgary Rube Steele Names Of Fifty Old-Timers

The ceremony of placing the "Memorial Cane" on the table as a mace was first observed at this year's annual meeting of the Southern Alberta Pioneers and Old-Timers' Association held in Calgary. It was performed by the donor, John Hoyes.

Many years ago, when the late Joseph Hamilton Ross was Speaker of the Territorial Assembly, Speaker I. Bevin presented him with a cane as a token of appreciation for his services. On Christmas Day, 1934, after he had been studied about carrying a cane, Mr. Bannerman passed with Hayes and the late George Murdoch, all members then in the Moose Creek district, in deciding to induce pioneers who came to Calgary before 1885 to put upon the cane a fervent burning in name and date of his arrival.

In all there are 50 names on the cane, which repose in the Calgary museum except on one evening in the year when it is served as the mace at the old-timers' meeting.

Made Of Good Stuff

The padding of Balliol College, Oxford, is very famous. An undergraduate has been fined for throwing a pinafore of it through the window. The plate broke, but the pinafore apparently made of sterner stuff, fervently they picked it up—unbroken.

Remarkable Cereal

Soya Bean Unknown To Western World Few Years Ago

It is said that the soya bean can be used in twenty different kinds of food, fourteen different articles of manufacture as well as several kinds of feed for live stock.

Dr J B Phillips, of the chemical department of McGill University, recently lectured at Montreal and expressed the amazing developments of the soya bean in the United States and some sections of Europe. According to Dr Phillips it is the oldest crop known to man. Apparently known to the Chinese for thousands of years before the birth of Christ, the residential nations learned nothing of the soya bean until the Russians came into contact with it in the Russo-Japanese war in 1906 the Russians brought some to that country. In 1907 Great Britain began importing them, and from then on the westerners have been learning more about this remarkable cereal. In 1931 the United States produced 2,000,000,000 pounds of soya beans. Manchuria leads the world with a crop of 12,500 000 000 pounds in 1931, while Japan and Korea each had 1,-000,000 000 pounds. The crop seems to be just in its initial stage in Canada. It has a yield of about 30 bushels to the acre and a bushel scales 54 to 60 pounds.

According to Dr Phillips soya beans have many excellent commodities and conveniences for agriculture and industry. They are a good, healthful food, are in crop rotation, provide hay and forage in large quantities, while flour made from the soya bean is ideal to mix with other flours in the manufacture of bread, macaroni, sausages, cocoa, chocolates, baby foods and various kinds of cakes and pastry foods. The oil from the soya bean is admirably suited to the manufacture of oleomargarine, lard substitutes, cooking oil, mayonnaise, sardine packing, paints, varnishes, lacquers, linoleum, oil cloth, printers' ink, core oil, soap and candles, while soya meal is also is used to make soya cheese, milk, soup, curds, pasta, spices, manure, fertilizers, cosmetics, for making coated papers, glue, plastics, mining, roofing and miscellaneous articles. Soya beans are particularly good for feed, the protein of the bean is practically devoid of starch, and heat higher per centages of lecithin, which is found in the human brain, and is also a valuable egg substitute, and moistener, which aids in digestion, more than any other flours. Soya beans also have a high content of important enzymes and vitamins, in the latter particularly those known as "A", "B" and "D". The protein in soya beans resembles that in meat, and is much more powerful and is soya flour than in any other.

Canadian agriculture is on the watch for speculation. This may be one of the crops that will help to take up the slack occasioned by the decline in demand for wheat.—Barrie Canadian Observer.

Increase In Hog Industry

Higher Price Will Encourage Producers To Stimulate Output

Indications, according to latest information from the Ottawa Department of Agriculture, are that Canadian hog producers are making efforts to stimulate output as a result of the recent sharp price advance, which reflected heavier shipments of Canadian selects to the British market.

The decline in the swine population of Canada, which began in 1931, continued during 1933, but production intentions for the December-May period of 1933-1934 show an increase of 8.5 per cent over the same period of a year ago, according to the latest government report.

The number of hogs on farms at Dec. 1 in Canada was estimated at 3,387,300 head, compared with 3,686,700 on June 1 of the same year, a decrease of 5.5 per cent., and compared with 4,125,300 head at Dec. 1, 1932, a decrease of 18.9 per cent. The period between June and December usually is featured by a decline in population.

For the spring and summer months, there are indications of re-stocking operations, compared with the same months of 1933, but it is probable there will be an increase in supply in the fall of 1934 and winter months of 1934-1935. The present high prices would tend to increase late production, according to the government report.

Wheat Crop Estimate

Harvesting Cost

The use of the combine-harvester has reduced the cost of harvesting, by the elimination of labour charges, from 15.1 cents per bushel to 7.3 cents, according to experiments conducted at the Dominion Experimental Station at Swift Current, Sask.

Enjoyed Mild Winter

Average Temperature In Vancouver Was Around 43.6 Degrees

Vancouver this season has enjoyed the mildest winter in 35 years, according to Mr. E. H. Sherman of the Dominion Meteorological Bureau. Since October Vancouver has experienced 130 hours of sunshine. The nearest approach to this record in the last 35 years was in 1925-26 when 97 hours and 48 minutes of sunshine were registered.

In the three-month period there were only 13 occasions when the thermometer dropped to 32 degrees or lower. The average temperature for the 1933-34 winter was 42.2 degrees, while for this year it was 43.6 degrees.

Know What He Needed

Smith entered a big London store and made his way to the gardening department. "I want three lawn mowers," he said.

The assistant stared hard at him. "Three, sir?" he echoed. "You must have a very big estate."

"Nothing of the kind," snapped Smith grimly. "I have two neighbors."

New York's famous Broadway is approximately 15½ miles long.

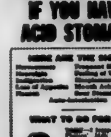
SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young struggling sculptor, trying to win a competition for a scholarship abroad and Camilla has adopted dancing as a worthy career. Finally She is not to inherit money when she comes of age and so by studying commercial art in the hope of landing an agency job Others in the story are Avis Werth, another wealthy girl who is trying to win Peter Sylvia Todd, Peter's model, and Guy Matisse, his former protege, with whom he has quarrelled. At a party at an exclusive Park Peter entertains Camilla's guests with impersonations When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand When they awaken it is early morning and Avis and another they are standing near them The latter is persuaded by Camilla to announce before the party that she and Peter are married Bowman and Wenkin, an advertising agency, whom Camilla has submitted some of her work, send for her and tell her they have a new account which requires unusual treatment of feminine art. To Camilla's surprise she learns that the account is that of her father's company which has decided on an extensive campaign to bolster up lagging business After a conference with

HOW TO FIND OUT IF YOU HAVE ACID STOMACH



WHAT TO DO FOR IT:

Mr. Bowman, Camilla decides to attempt a bluff. The next morning she telephones almost her own and Mr Wenkin offers her a salary of $50 00 a week to start and a prospect of having it doubled She goes to keep a dinner engagement with Peter She tells Peter of her good fortune in securing employment Mrs Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household Avis Werth rents a studio on the same floor as Peter and invites him to have lunch there

(Now Go On With The Story)

CHAPTER XXXV

After all what was the harm in accepting Avis friendly hospitality? He had managed it so that Peter could not possibly object to his doing so. Modern was for time and he had time about to run to the corner drug store for something to eat, anyway

In one condition, he warned her, severely

"Don't know what you are going to say old ambitious tant I don't encourage you to linger after the lunch has been eaten," he said All right, but you know it really isn't polite for a guest to eat and run away Only a gentleman would understand the urgency of the situation."

And you would be generous of course"

"You know it Because I am anxious as you are for Peter to interfere with your exhibit entry"

"You can't be one-half as anxious," he scoffed not taking her seriously in the least

"Oh, can't I" she said gently Well, that's just why I am looking out for your welfare, so that you will have as little of your precious time taken from your work as you can at the same time Ready" Don't bother to take off your sculpting jacket I like the splotches of clay on your left cheek with the smudge of clay on your left ear."

She took his hand like a delighted child who has persuaded the boy next door to play house with her on her side of the bridge. It was the first time Peter had seen her recently, so he had to inspect and comment before he sampled Tilly's culinary delicacies. His beauty-loving eyes roamed from floor to walls and ceiling and above with admiration. They delighted in the rich blend of Chinese blues, in the comfort of the deep, deep upholstery, draped windows hangings, polished brass and fragrant flowers in profusion.

"Say, this makes my place look like a barn!" he exclaimed.

"Do you like it?" anxiously.

"Rather!" Peter's mind was lapsing try with an appreciative touch. "Where'd you get this — it's beauty!"

"In Paris. Yes, it's a genuine Cobbin."

"Aren't you afraid to keep it here?"

She shrugged and sank into a deep divan, languidly.

"Oh, those things never bother me. I think it is silly to have beautiful things stored away in vaults and safes. I wear my jewels and live with my treasures and enjoy them while I can. Now wouldn't it be stupid to decorate this place with poor imitations or live with bare walls around me, while I sit here and boast to you, I have a marvelous Cobbin stored in the vault, and a Balsam room, and some priceless pieces of carved ivory that I discovered in Peking?" she indicated the objects for Peter's inspection.

"I couldn't agree with you about that!" he declared with enthusiasm. "If I ever should possess anything beautiful I would want it where I could look at around where I can enjoy it all the time."

"Like your wife?" Avis wondered. She said, "But I promised not to keep you long from your work," and led him across the room to a table arranged for two in the window alcove.

"It would be easy enough to forget work in a place like this. I'd like to browse around and ask questions all day. It's perfect," he continued to admire.

"There will be lots of time for you to browse around when your piece is finished and you are waiting for the verdict of the judges. That will be better for you than walking the floor in suspense." She glanced around the room. "But don't you notice what is missing?"

He looked about, dubiously "If there is a missing something it can't be more than a, p — e."

And you a sculptor she chided "That's right," he glance surveyed the room again. "You don't support the proletarian, evidently

That is just what I want to do But I purposely omitted the sculpture because I would love to do me something very special when you have time"

"Does that remind you of another?" she ventured

Several perhaps She smiled and tapped a bronze lamp going Tilly appeared promptly with a steaming tray.

To Peter whose acquaintance for weeks he had distinguished only by hasty smiles from coffee and heavy pastries the iced cakes and cream dreamed raw threads and fruits weight biscuits with grape jelly were nectar and ambrosia He ate hungrily and chattered amiably He marked a score on her merits at last

She would not be ashamed as to run a good start by mentioning The way to make a man believe he wanted a thing, very much is to let it become a pleasant and voluntary habit with him. In other words, to make Peter believe he needed her companionship and the comfort of her solicitous concern for his welfare more than anything else was to allow him to develop a casual habit of accepting them She would force them upon him gradually while she made him believe he sought them without being aggressive easily naturally.

It was she, even who suggested early, when he had three ample invitee to the food and was smoking leisurely in a deep armchair that it about time you went back to your work, old ambitious"

"Did the whistle blow" he asked with amused surprise I didn't hear it But you are just right about my getting back to work You almost made me forget that tissue walls for you and opportunity Knock."

"Your contentions are all punished," Avis laughed.

"The food has gone to my head," he apologized. "But seriously that's the first decent meal I've had for a week I hope I didn't act the glutton."

Avis was clever. She did not repeat the same strategem too often Sometimes, in order to just a cup of coffee, handed in to him at the right moment without personal interruption, or an iced drink in the evening when he had stopped work for the day, followed by a friendly goodnight.

For contrast, there were several days at a time when her door was closed and her rooms devoid of human sounds while she filled social engagements or remained assiduously at home But she was never absent from the studio long enough to allow Peter a growing sense of loneliness to merge into forgetfulness. She dabbled with her painting, entertained or just amused herself, striving for patience and a friendly indifference toward Peter at the same time that she displayed an impatience interest in his work and progress.

So subtle was the effect upon Peter that he soon forgot his aversion to an importunate neighbor, dropped his antagonism toward the Avis Werth of the past whom he concluded he had judged too severely, and became so accustomed to her friendly concern for him that he relaxed into its pleasant comfort as he sank wearily and gratefully into one of her cushioned chairs and sipped a refreshing drink at the end of an arduous day

Verdigris green is the latest color for women's wear in London.

Now! Ease Sore Throat Instantly!

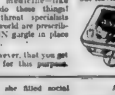
Remember: Only Medicine Helps Sore Throat

Modern medical science now throws the entire spotlight on the throat. A way that eases the pain, reasons and irritation in as little as five or three minutes!

It requires medicine—like ASPIRIN—to do these things! That is why throat specialists throughout the world are prescribing this ANTISEPTIC gargle in place of old-time ways.

Be careful, however, that you get Aspirin Tablets for this purpose.

Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer on the form of a cross is on each tablet. They dissolve completely enough to gargle without leaving irritating particles.



An Old Landmark

Moss' Royal's conservatory, looks out into resting place for thousands of tourists at Montreal, since it was built 27 years ago is to be demolished. A new modern structure has already been erected nearby.

YOUR LIVER'S MAKING YOU FEEL OUT OF SORTS

Wake up your Liver Bile

—No Calomel needed

Why let that bile poison, sour on the stomach? Why let it make you feel sick and miserable? Why not get at the cause of your trouble? Your liver should pour out two pints of liquid bile into your bowels every day to digest your food and help get rid of waste. If this bile is not flowing freely, your food just decays in the bowels. Gas bloats up your stomach. You get constipated. Your whole system is poisoned and you feel sour, sunk and the world looks punk.

Carter's Little Liver Pills were made to relieve this condition. They should help bring you more bile to digest your food and get rid of waste. Ask for Carter's Little Liver Pills. Use only as directed. 25c at all druggists.

An Optimist

An optimist is one who hops out of bed on a cold morning, saying: "Well old bed I'll be back to you in seventeen hours."

A pessimist is one who hops to bed, saying "Shucks up again in seven hours!"

There are No Strings To This Seed Deal!

An impression has been circulated that you can buy more and better Garden and Field Seeds for less money than you can from old established sources.

You positively cannot if you make your deal with me from a selection of over 1,000 varieties of the finest strains of Government Tested Seeds.

DON'T BUY ANOTHER PACKET, POUND, OR BUSHEL OF SEED TILL YOU HAVE SEEN MY.

Use my catalogue, advertisement or price list you please in making up your list of requirements. I guarantee to fill it at same prices for same quantities. In several cases you may find my prices less, in which case you have the benefit of the difference.

3c, 4c (and up). SUPER-size packets, but I'll sell you any quantity from 1 cent's worth to whatever will need a notice.

And in the bargain, I will hand you "MERCHANTS' NEW WAY COUPON" worth 25c in FREE Seeds.

This is an advertisement, but there is no advertisement equal to a delighted customer.

Let me assure your delight with the greatest food bargain and service you ever received.

"COME UP AND SEE ME SOME TIME"

Some weeks ago an editorial appeared in The Review Herald, under the heading "New Style in Movie Queens," referring to Mae West. Miss West now this complimentary reference to her undisputed ability and favors the Herald's editor with a personal letter of appreciation in which she says, in closing, "I'm glad to know you think I'm 'doin' fine'.

And since Miss West may favor Western Canadians with a visit at some future date, obviously the editor's rejoinder should be "Come up and see me some time."

—Vegreville Review.

The Observer has no wish to interfere with Herb. McCrea's little —ah—private arrangements, but in the event that she comes up to see him some time, and he needs help, would it not be a good idea to call a special session of the Alberta Press Association?

—Vegreville Observer.

He—"What are all those men doing in circle with their heads together? It is a football team?"

She—"No my dear, just a bunch of Scotchmen lighting a cigarette."

Guide: "This, sir, is the boasting tower of Pisa."

Tourist: "Final Let me think. No, that does not sound like the contractor's name who built my garage, but it look like his work."

A right example is the best legacy.

19 Years Ago

Thursday, March 25th, 1915

Several baseball games between the boys of the fire hall school and room 4 have already been played.

Albert Nelson, Redt. Nelson, James Kinsey, R. Kinsey, and James Forbes left this week for Peace River.

At the Orange Grand Lodge meeting recently held at Red Deer, Mr. G. F. Montgomery of the Fort, was re-elected Grand Treasurer.

Miss Annie Libbey, who has been attending the "First Aid" lectures in Edmonton, passed a most successful examination last Friday.

St. Patrick's concert held in Simmons Hall was a decided success. Mr. W. G. Shore made an ideal chairman, having, as he admitted himself "Almost the literary stone."

LOCAL NEWS

The Fort Badminton Club held a delightful dance in the Badminton Hall last Friday evening.

A large crowd enjoyed dancing a program consisting of modern and old-time dances. The music being supplied by the Poppy Pals Orchestra.

At midnight refreshments were served by the Badminton members.

Extra Special Sale Prices on Bunbury hardshare & Brushers, get our prices, at Carscadden Hardware.

Miss Helen Pocock, Miss Jessie McKay, Jack McNeil and Bob Stout, all of Okotoks, Alberta, spent the past week-end with friends in the Fort.

While here Miss Margaret Kelterborn entertained the visitors and a number of Fort young people at a delightful birthday party in honor of Jack McNeil.

The Illustrated lecture, "Pioneer Days", presented by Ernest Brown, under the auspices of His Excellency the Lieut.-Governor, and the Fort Saskatchewan Women's Institute was enjoyed by a fair gathering last Monday evening in the Empress Theatre.

Mr. Brown has the only collection of original photographs in existence of Pioneer Days of Alberta, and a large number were shown on Monday evening to a very appreciative audience.

Due to some misunderstanding only a few children saw this collection of pictures. This was unfortunate as this might be the only opportunity of seeing this fine collection of pictures on display.

Last Wednesday, a black and brown marked Caterpillar about an inch long was brought into the Record Office by Phyllis Spollin. The Caterpillar was quite alive.

Miss Joanne Ashton of Vermilion, Alberta, spent the week-end with Mr. and Mrs. Cecil Ashton.

The night of the Fort Band dance someone kindly brought cambwines to an Aberhart booster, if they will call at the Record Office or let the paper know we will deliver same.

Canadian butter found a ready outlet on the Scottish market last year, although the season was far advanced before the Canadian butter made its appearance.

FORT SASKATCHEWAN RECORD

VOL. 12 No. FORT SASKATCHEWAN, ALBERTA WEDNESDAY, MAR. 28th, 1934 $1.50 PER YEAR IN ADVANCE

Carters Beat Lament Win Carscadden Cup

Two rinks from the Fort motored to Lament last Friday and defeated the Lamentites to bring back the Carscadden cup.

Due to weather conditions only one sheet of ice was in use. The Fort rink won by a total of seven points.

After the games lunch was served to the visitors at the Club.

Tonight (Wednesday), two rinks from Lament will again invade the Fort in an attempt to lift the much coveted Carscadden cup.

The personnel of the rinks were: A. M. Carscadden, skip, Cecil Ashton, Henry Dennis and E. H. Anderson.

Jack Wright, skip, R. H. Bray, W. A Anderson and Ralph Pocock.

Inglewood Badminton Club Entertained by Local Players

Some twenty-five members of the Inglewood Badminton Club, Edmonton, were entertained by the local Badminton Club last Wednesday evening.

During the evening many fine games were played which gave the local players an opportunity of witnessing some fine Badminton.

Much amusement was created, when Mr. B. Haddow, City Engineer, Mr. J. D. McLean, Mr. A. Spiller, Edmonton and Dr. T. W. E. Henry paired up and fought a game of speed and strategy to end about 13 points all.

A fine lunch was provided by the ladies of the Fort Badminton club, after which the visiting players made ready for home.

The evening was voted a huge success and Inglewood before going home invited the Fort Badminton to a return visit this Friday, which the executive on behalf of the local club were very pleased to accept.

FIRE SIREN AND GAOL SIREN TO BE TRIED-OUT SATURDAY

Warden McLees wishes it to be known that they will be testing the Fire Siren and the Gaol Siren at 1:15 next Saturday afternoon. Therefore, when the Siren is heard, the Townspeople will know that there is no occasion for alarm.

Fort Badminton Club Holds Fine Tournament

The Fort Saskatchewan Badminton Club held a lovely and interesting tournament in the hall Monday and Tuesday. In the Ladies doubles event Mrs. Henry and Miss Sharp captured the honors quite easily. The runners-up were Mrs. Lenker and Miss A. Dickson.

The Men's doubles proved a very competitive affair, but after some hard games Tom Holt and Stan Hambly eventually were winners.

Mr. S. Thorne and Jack Wood were the runners-up in the Men's doubles event.

The mixed doubles proved to be the most interesting, owing to the scarcity of men in the club each team had to play twice. In the semi-finals Mrs. Calhoun and Stan Hambly were to play Mrs. Thorne and Tom Hambly, owing to the impossibility of this arrangement, the games were defaulted to Mrs. Walton and Herb. Holt.

Wednesday evening the club spent in dancing, after which they adjourned to the Fort Hotel where they enjoyed a buffet luncheon.

Bill Gauf left with his team mates for Winnipeg, where they will play for the Western Canada and Dominion Junior Finals. Bill plays defence on the E.A.C. team.

BORN

Born to Mr. and Mrs. A. G. Lemon of R.R. 1. Fort Saskatchewan on March 24th, at the Hillcrest hospital, a son.

Josephburg News

The Josephburg Baseball Club held their annual meeting of the season on March 19th.

It was decided that the club would have a new recreation grounds, but as to its whereabout remains to be settled.

The election of a Captain and Secretary-treasurer for the current season was inforced. Ernest A. Mohr was elected captain and Clarence Cranston for secretary treasurer The election of a manager was left until a later date.

The Club are planning on holding an entertainment and box social on May 4th, at Josephburg school.

ENTERTAINMENT

The members of the Junior U.F.A. are very busy putting the final touches on their studies of four short plays, to be presented at the Josephburg school on Friday, April 6th. The emotion, from gay to grave, from the tense to the sublime.

A Wedding Rehearsal (Farce)
His First Dress Suit (Farce).
Quality (Irish Style) Comedy.
Michael (Drama, adapted from Tolstoi).

We are enjoying your C.C.F. and Social Credit columns. Concerning the latter, a certain friend was saying only today that there was only one criticism to be directed against it—that the installments were too brief.

* * * * *

We are sorry to hear that Mrs. Gus Deos is a patient in the Lament hospital.

The Reformed Church will hold Service on Good Friday at 11 a.m.

Easter Sunday service will be held at 10:45. No Sunday School. Holy Communion. Special Easter music.

Respected Old-Timer Passes Away Suddenly

The funeral services of Thomas William Moore of Fort Saskatchewan, who passed away in an Edmonton hospital on Saturday, March 17 years, was held on Monday afternoon at 2:30, from the Fort Methodist-cheran United Church. The Rev. D. C. Ramsay officiating.

Mrs. F. H. Barber and Mrs. C. Glover sang a duet.

Interment took place in the Fort Saskatchewan cemetery.

The late Mr. Moore was born in New Liberty, West Virginia in 1856. In 1880 he married Hallena Nan of South Dakota, living there eleven years. In 1915 he, his wife and family moved to Pleasant View, Alberta.

Mr. Moore was highly respected by all who knew him and will be much missed by his family and many friends in the neighborhood in which he lived. He always took an active part in community work and was the life of the Pleasant View U.F.A., of which he was president for some years. When there was sickness in the community he was the first man to lend a helping hand.

The pallbearers were Messrs. T. Wall, J. Mohr, G. Cranston, A. Underschultz, E. Barclay and R. Reeds. Beautiful floral tributes were received from: The family; Mr. and Mrs. Milligan and family; Mr. and Mrs. W. Bennett; Mr. and Mrs. Shackleton and family; Mr. and Mrs. Wilfor and Lily and Mr. and Mrs. Wall and Mrs. Ed. Mason and family; Mr. and Mrs. J. T. Krebs; Mr. and Mrs. J. A. Allen; Mr. and Mrs. E. Sherriere and family; Mr. and Mrs. T. Wall and family; Mr. and Mrs. R. Hewsie; Mr. and Mrs. Ed. Barclay and family; Patrician Hills U.F.A. and U.F.W.A.; Wesley and Nettie Stud; Thorne Bros.; Mr. and Mrs. John Mohr and family; Pleasant View U.F.A.; Mr. and Mrs. H. F. Kingsley, Gloria and Frank; Mrs. Breckenridge and family; Mrs. A. Jones and family; Mr. and Mrs. W. Moodie and family; Mr. and Mrs. E. L. Underschultz and family; Mr. and Mrs. Fred Simmons and family; Mr. and Mrs. Thomas Cranston and family; Frank Irwin; Mr. and Mrs. A. H. Moore. He is survived by two sons, Rinton and Thomas, both of Fort Saskatchewan; one daughter, Mrs. James Milligan of Bon Accord; one brother, Rinton of Abbington, Ill., and one sister, Mrs. A. Lundgreen of Axtell, Nebraska.

Local C.C.F. Group Hold Telephone Bridge

On Wednesday evening March 21st, the "Happy Hearts" group of the C.C.F. held a very successful "Telephone Bridge" for the purpose of raising funds to...

The following were present and invited their names for the occasion, the raising funds to...

Mrs. Pettet as hostess... assisted by Fanny Pettet, Jean Rodgers and Edna Sherman. Mrs. Jackson was assisted by Helen Jackson, Margaret Glover and Una Williamson. Mrs. G. Cranston was assisted by Mrs. Stan Dennis, Evelyn Cranston, Ardath Robinson and Helen...

Ladies' first was... by Rita Sherman, Ladies' consolation, Mrs. J. Taylor Gents first Mr Sherman and Gents consolation, Stanley Dennis.

The prizes were donated by Mrs. Pettet Mrs. Logan Gibson and Mr. Stanley Dennis.

The "Happy Hearts" group would like to thank all those who attended and made this affair a success, also wishes to thank Mrs. Geo. Cranston, Mrs. H. Pettet, Mrs. Jackson and Mrs. Logan O'Brien.

What About Social Credit, Canada?

(Continued from last week)

No. 6

W.—"Well, here is some more evidence that supports my contention that banks do not lend money. Listen to what the Right Honorable Reginald McKenna, Chairman of the Midland Bank, England, says: "I am afraid that the ordinary citizen will not like to be told that the banks can, and do, create and destroy money. The amount of money in existence rests only with the action of the banks in increasing and decreasing deposits. Every loan, overdraft, or bank purchase creates a deposit, and every repayment of a loan, overdraft, or bank sale destroys a deposit." J. M. Keynes says, "There can be no doubt that all deposits are created by the banks." Hartley Wichers (and you can't accuse him of being unorthodox in financial matters) says: "A credit in the Bank of England's books is regarded by the financial community as "cash" and this pleasant fiction has given the banks the power of creating cash by a stroke of the pen and to any extent that it pleases, subject only to its own view as to what is prudent and sound business."

You may not consider Professor Soddy is an authority in this line but at least he is worthy of being heard, says: "Is it possible in these days of debasin' in physical miracles really to enslave instructions which physical force and money and do not lend it, but create it? And when it is repaid them, de-create it? And who have achieved the physically impossible miracle thereby, not only getting something for nothing, but also of getting perpetual interest from it!" Of course Professor Soddy is a physicist of Oxford University, and not a banker.

J.—"If this is true, how long has it been generally known?"

W.—"It has never been generally known. Students of finance and banking have known it and accepted it as a commonplace fact for years, as witness this extract from H. D. McLeod's book, The Theory and Practice of Banking, which was written years ago and used as a text book for young bankers. He wrote: "The essential and distinctive feature of a bank and a banker is to create, and issue credit payable on demand, and this credit is intended to be put into circulation and serve all the purposes of money. A bank therefore is not an office for the borrowing and lending of money, but it is a manufactory of credit. In the language of banking, a [illegible] and an issue are the same thing." And here is another paragraph from the same book: "It is commonly supposed that a banker's profit consists in the difference between the interest he pays for the money he borrows, and the interest he charges for the money he lends. The fact is that a banker's profit consists exclusively in the profits he can make by creating and issuing credit in excess of the specie he holds in reserve. A bank which issues credit only in exchange for money, never made and can by no possibility make, profits. It only begins to make profits when it creates and issues credit in exchange for debts payable at a future time."

J.—"Well are you sure that you have accepted by orthodox authorities?"

W.—"That is just what I have been quoting—orthodox authorities and practical bankers. I have personally refrained from quoting Major Douglas or any Social Credit writer. But listen—you know the MacMillan Commission. Not the Canadian Commission but the larger body that sat in London a couple of years ago." Well, it had bank directors and prominent financial experts among its members. Listen to their report. "It is not unnatural to think of the deposits of a bank as being created by public, through the deposit of cash representing either savings or amounts which are not for the time being required to meet expenditure. But the bulk of the deposits arise out of the actions of the banks themselves, for by granting loans, allowing money to be drawn on an overdraft, or purchasing securities a bank creates a credit in its books, which is the equivalent of a deposit."

J.—"Well, for Pete's sake! I thought that a bank was a place where people took any spare cash and left it on deposit in a savings account and then the bank used those deposits to lend to producers to finance their operations. The difference between what the bank paid as interest on the savings deposits and what it received from the borrower, I took to be the source of the profit. This is certainly a revelation to me. But that is all about the British system. Are you sure that Canadian banking is like that?"

W.—"I have been wondering if you would ask that, and that is why I have been digging around these shelves looking for this little book. It was written by Professor MacGibbon of the University of Alberta in 1924, in 1924. He says: "As a matter of fact, banks do not lend money to their customers but a substitution, but the bank's own credit." Now I admit that I have not quoted so many authorities in Canada. The reason is that there have been fewer books published in Canada on the subject of banking."

An Exhibition Of Childhood

London is to witness a most unique exhibition when, on April 19, will open a display of relics of "Children throughout the Ages", acclaimed to be the most comprehensive portrayal of child life from the centuries ever presented to the public. The event derives significance as much from the historic value of the various exhibits, as from the purpose to which the proceeds are to be devoted. The beneficiary will be one of London's most deserving charities.

The relics to be displayed fruit child life with the dim mists ages of the past, the oldest exhibit being a Chinese doll said to date from 500 B.C. From that far distance down the years, the varying fancies of children, the toys which brought them pleasure, the garments they wore, the furniture which decked their nurseries and playrooms, all will be traceable in the range of exhibits from the pre-Christian era down to the end of the reign of Queen Victoria.

Queen Elizabeth's christening robe, her cap and mittens, a portrait of her as a baby (by Hilliard), will be on show. A short verse by Charles I, as a child of two, his boyhood's brocade coat, will find prominent place in the display beside Oliver Cromwell's christening robe. Here then that historic enmity which ended so tragically for the monarch is made to symbolize the transitory nature of human passions and, transformed, serves the charitable purposes of to-day. Napoleon, too, will be represented, not in a manifestation of childish desire but rather in evidence of that ruthless which great and lowly have in common — not which is, of course, as old as childhood is. The present given by the Emperor Napoleon to his infant son the King of Rome has been obtained as an exhibit.

Perambulators and cradles and such adjuncts of childhood that clustered in the seventeenth century have been collected to augment the display. Children's furniture from the sixteenth to the nineteenth centuries will be shown, as well as a display of British and foreign children's clothes, hats, shoes and gloves of the same period; samplers, cards and jig-saw puzzles, playbooks and house books. A series of rooms is being arranged to depict child scenes of bygone days with inevitable wax figures in the fabulous Tussaud tradition. There will be portrayed in similar fashion a Kate Greenaway room, a Victorian Sunday, the ancient nursery and the modern crèche.

The British royal family, as might without liberty is the object, is accordingly honored (warmly) in the exhibition. Queen Mary is ... playthings of her own childhood, and toys which enthralled the young Prince of Wales, his brothers and sisters. Two gold rattles given by Edward VII. to the Prince of Wales also have been offered and consideration is interest will attach to an exhibit of the immature efforts of the Prince and his brother, the Duke of York, as artists. It is said these efforts are just as atrocious in result and effect as any of long established fame.

Perhaps one of the most interesting of the relics to be exhibited, however, has no connection whatever with the childhood of the great or the near-great. It is a pewter feeding bottle, believed to date back to about 1750. It was discovered in possession of a former who was using it to feed his bonbs. Probably no more fitting place could be found for the memento of a bygone period and a long-forgotten childhood than alongside the relics of regal youth and palace nightmare. It is a striking reminder of the strange democracy of the very young, that constant symbol of the "great levellers"—childhood and death—and it is to be hoped that as such, in these transitional days, it will be interpreted by those privileged to patronize the exhibition.

* * * * *

There is a lovely moral lesson, too, in the story recently told by one of the better known theatrical journals. It happened that a shabbily dressed, middle-aged figure woman entered the classic portals of a large uptown bank in New York, and told the uniformed guard she desired to open an account. She was shown to the new accounts department where from the silence of the bank were more heard upon the approaching lunch hour than upon more business, particularly business which came in such incongruous garb. As it happened, lunch was, and the woman was left to the manager.

After stating her mission, the old lady noted to see a statement of the bank's financial position, much to the surprise of the manager who was accustomed to having the institution's financial status treated with extreme reticence by small depositors. However, he presented the requisitional statement, conveyed courteously some startlingly intelligent and pertinent question, which satisfactorily resolved, brought the information the lady wished to have upon an account. She gave him the necessary information, and casually, for he expected a small initial sum, he asked: "How much do you wish to deposit?"

"Thirty-seven thousand dollars," replied the old lady, equally casually, as she proceeded to count out the money in bills of various denominations.

Harry Lauder's New Monologue

London (Ont.) Mr. Harry Lauder's new monologue at Strathcona, Scotland, is receiving its finishing touches, and will be ready for occupancy in a few weeks. He had given the planning his close attention, and the building contractor many historic as well as unique features.

Busy Days—Sleepless Nights Break the Nervous System

Also when nerves lose sight of their duties as checking halts. Their work is to tell when the stomach organs that contribute to them nerves are right. They are internals and nervous, rush and vent out, and everything feels dull and gloomy.

Dr. Chase's Nerve Food is the remedy that is needed to restore them the blessing of good health. They bring back the normal refreshing sleep, tone up the nerves, and impart that sense of buoyancy to life which is health. That is the reason for increasing sale of Dr. Chase's Nerve Food.

Strange Accidents At Sea

Officers Give Accounts Of Two Unusual Collisions

Recalling strange accidents at sea, officers of the steamer Empress of Saint John, gave first-hand accounts of two unusual collisions.

Chief Engineer David Thomson was with the Victorian when that ship carried troops across the English Channel in war days. Traveling without lights, the troop-carriers proceeded at full speed over courses ordered clear by the admiralty. A steady tramp returning from the bombs had not heard the warning and unwittingly crossed the troopship's track.

"It was the first time an iron ship was cut in two," said Thomson. "We struck the big trawler broadside, plowed right through the hull and out the other side. From the port I got a fleeting glance of the stern half sinking.

Only four of the crew of 19 were rescued, and one died soon after. "The confused survivors wouldn't believe it. They couldn't understand why we had not foundered also."

Capt. Will Masson told how the steamship Montgarth, homeward bound during the war, met a strange and white under his command in 1918. A crash occurred which the Montgarth's bow. Realizing its way through poor visibility one night a few days out from the Tyne mouth. Capt. Masson, who was in charge of the ship proceeding into his own, heard loose orders in a foreign language, and watched the unknown vessel back away into the mist.

The Montgarth sinking, its crew jumped into the sea. Capt. Masson and a few others were rescued from a life-raft the following evening, but other members of the crew were never found and the ship which left them helpless was never identified.

British Flight Squadron

Suggestion Is Made That A Visit To Canada Should Be Undertaken

A suggestion was made in the House of Commons that the United Kingdom send to Canada detachments or flights of airplanes to participate in the Dominion celebrations. The journey would be most a naval aircraft carrier.

Discussion of the proposal arose during the debate on the air estimates when Oliver F. Stanstead, Saddleton Conservative, said that the Royal Air Force carrier, told the house Canada had never seen a squadron of British planes, although every year squadrons of machines from the United States made exhibition flights to Canada's air pageants.

Sir Samuel Hoare, who was in Ottawa early this year and heard hope expressed that the Royal Air Force would "show the flag" in Canada. He asked that the air ministry consider the matter.

Sir Philip Sassoon, minister for air, described the suggestion as "very interesting."

Progress For Perak

Mechanization Of Old Handicraft Industries Looks Like Success

And now the stock of Perak has evolved a two-year plant! Progress is to make its debut through the mechanization of the ancient handicraft industries that have created so many delights for collectors. Great carpet and rug factories will rear their looms where peasants have been labored after the traditions and the patterns of the centuries.

Gone will be the features that made engraving—modeling a delight to times with incessant permitting it. No longer will variations in color lend of the enhancement some native dye mixture, or irregularities in pattern betray the advent of a new native weaver. The loss of individual beauty which machine type has begun with machine dyes and chemical washes will reach their climax in a uniformity that matches the loud American "refinement." Such progress in Perak may seem to progress at all. Who will want a genuine oriental rug if it differs not a whit from the machine-made product of the century?

While commencing for a new building in Kenilworth, Bedgerth, workmen recently found an experiment in which the lay-type sections could be removed for cleaning.

More Tobacco for Your Money and POKER HANDS too— with TURRET FINE CUT

When you "roll your own" with Turret Fine Cut you pay less per cigarette because you get more tobacco for your money—and more enjoyment, too, in these milder, cooler, more fragrant smokes. In addition, every package contains Poker Hands that you can exchange for valuable, practical and handsome free gifts. Start smoking Turret Fine Cut today. You can't get Turret's extra value and quality unless you ask for Turret.

Passenger Train Pooling

Expected To Effect Big Saving Under Arrangement

The passenger train pooling arranged for in the Montreal-Toronto, Ottawa-Toronto and Montreal-Quebec services, as extended and effective from March 11, will produce a total saving of approximately 1,000,000 train miles per annum, divided about evenly between the C.N.R. and C.P.R. and on the basis of a conservative estimate will represent a saving to each company of six proximately $500,000 per annum. This information was given in the House of Commons by Hon. R. J. Manion, minister of railways and canals, based on a telegram from Chairman C. P. Fullerton, of the C.N.R. board of trustees.

New Television Machine

Will Be Ready For Demonstration At Chicago Show

The world's largest television machine, being built at the Station Steel Works, Fort Erie, N.Y., will be ready for demonstrations at the re-opening of the Century of Progress Exhibition at Chicago on May 1. The builder of the machine, U. A. Sataborie, of Chicago, said the machine would have a 30-foot screen and its transmitter would weigh more than 5,000 pounds. It would have a definition necessary large to handle an entire scene at one time.

We're clipping nobody, says the Brandon Sun. We met 68 Christmas cards and only received 41.

High Broadcasting Station

To spread Hungarian culture throughout the world and make it possible for nationals residing in other countries to keep in easy contact with the fatherland, Hungary will erect the highest radio broadcasting station in the world. It will be on an island south of Budapest. A radio work steel tower will rise 953 feet, and a telescopic shaft on top will make the total height 1,082 feet.

Has Plan For Laying Foundation Of New Municipalities In The West On A Village System

Noting the recent proposal of a British settlement company to locate thousands of families on an organized land in Canada within the next few years, James H. Ramage farmer of Courtenay, Sask., outlines a plan for laying the foundation of new municipalities on a village system.

"Under the present arrangement municipal offices, churches, stores, schools and other social conveniences are widely scattered," Mr. Ramage pointed out. "My idea is to have a main street through the centre of every township, extending if necessary or possible throughout the length of the province.

"The advantage is in having such utilities as roads, electric power lines, telephone systems, water works and other public services joined together in the most useful and economical manner," continued Mr. Ramage.

"The main street would do away with the necessity of further expensive railway development, since it would become an all-season transportation artery used by trucks and buses," explained Mr. Ramage. "As the farms are situated now the farmer, in order to keep in several miles from a highway of any kind and seldom is he on a direct route to his shipping point on the railroad. The highway system is so diverted in direction and development is slow. There are too many roads and not enough good roads."

The farm homes would all face the "main street." It is pointed out. Where about 75 families occupy a settled township there would be 300 or more, Mr. Ramage thinks. Saskatchewan with 2,709 townships might support 2,040,000 persons per township and have a population of 11,080,000. Alberta, Manitoba and the Peace River district in the Northwest Territories could support correspondingly large populations, said Mr. Ramage.

The 36,864 acres in a township would be divided up as follows: Forestry work, 120 acres; gardens, 640 acres; buildings, 120 acres; shelter belts of trees, 1,600; farming, 21,040 acres. "This distribution would reduce the wheat acreage as suggested by Messrs. Bennett and others," said Mr. Ramage.

The Ships Of Mercy

Hostels Are Fulfilling Colorful Fictions Out Of Business

Soviet Russia's war on private enterprise is driving the colorful Invectchiks, or sleigh drivers, out of business. The visitor only a few are to be found in Moscow, where once they were popular transportation guides of gay parties who took midnight rides to dream where gypsies played. The gay parties are gone and the merry drivers and their horses are public conveyors of the older days. It is planned to replace them with motorized taxis, but so far there are only 500 cabs for the 2,500,000 residents of Moscow, and those who ride in them must use the crowded street cars.

Men Of British Wit

Once in a while you hear a popular song that really is good. But most of them are just fair to middling.

San Francisco has as aerial "Black Maria." We understand that the machine was given by a society devoted to the uplift of the criminal classes.

Following an explosion in a kitchen a newly-engaged maid was thrown through a window into the garden of a Shoreham house. Unfortunately it was not her evening out.

Discussing the Irish deadlock a political writer suggests that both sides should get together. The idea of one side getting together seems to have been overlooked.—London Punch.

The number of logs graded in Canada during 1933 was 3,171,984.

W. N. U. 2089

The Hog Marketing Outlook

Highly Favorable Canadian Export Prospects

The consumption of pig products in Canada during 1933 reached the highest point in the history of the industry at 317 pounds per capita. This statement appears in the Agriculture Situation bulletin just issued by the department of agriculture at Ottawa, in which the following summary of the hog situation appears:

"Briefly summarizing the situation it would appear that the hog outlook is favorable to the producer While it is likely that there will be some temporary price declines during the present year, the trend is upward. Market supply prospects are for a moderate increase during the first half of the year, followed by a fairly substantial increase. At present prices such as ruled during the early part of the year, there should be greater interest in the raising of feed grains and a falling off in the number of unbalanced pigs offered. Prospects for export appear to be satisfactory, and the restrictions existing on exports from foreign countries selling to the British market are working quite favorably to Canada, especially as regards prices. Despite the present favourable export outlook, improvement in breeding, feeding, selection and packing as to secure a large per centage top grades of bacon is much more desirable than a marked increase in the number produced.

It is quite safe to forecast a substantial improvement in the quality of the 1934 production, as a result of improvement in type of sow and sire used as foundation stock, and of better feeding practices than in any previous period in the history of the industry in Canada. This is highly favourable to Canadian export prospects."

Bonds Pocket Diary

Diaries for the blind are now published in the finest type in history, and blind persons are now able to carry a Braille pocket diary. The diaries, which are being made in London at the headquarters of the National Institute for the Blind, are on the loose-leaf principle to allow a change to other requirements by means of a small Braille writing frame.

Collection Has No Equal

British Museum Specimens Of Every Living Insect On Earth

The building of a permanent home in South Kensington for one of the most precious scientific possessions of the Empire is about to be begun. The vast unrivalled Entomological Collection of the Natural History Museum is to be housed, after years of exile in other departments, in a building six floors in height and a hundred and forty feet in length, adjoining the western ends of the present Museum block. The final plans for at least one half of this block are about to be completed and confirmed, and work on the structure will next many begin in the new year. The collection has no equal abroad. It is an all but complete catalogue and encyclopaedia of every living insect on the earth and the completeness are filled in year by year. Its specimens, their tens of thousands, are stands in from which the insect world is named, and scientists who discover new species from all parts of the globe send to the experts in charge for information. One of the most needed benefits of the Museum's new home will never be open to the general public will be the new ease with consumers with which the experts of the Imperial Institute of Entomology will be able to plan their war against our continual enemies locusts, flies, mosquitoes and all the insect plagues which eat up the crops and imperil the prosperity of an Empire which girdles the world

Menace Of Low Grade Seed

Growers Taught The Value Of Producing Only High Grade Product

Low grade seed is a menace to the reputation of Canada as the export of seed and a drag in the domestic market. The marketing of seeds in general in the last three or four years has been attended by many difficulties and comparatively low prices to growers, but has at least taught the value of producing a high grade product. No. 1 seed has almost always sold at a profitable price, while low grade seed has been unsaleable or sold at a loss to the grower. It should be the practice of every grower, advises The Agricultural Situation bulletin, to save only from clean fields, so that it may be cleaned to grade No. 1.

No Bonus At All

The little guests at a party were being arranged in a group for a world-wide reputation. In '74, and little fellow who appeared rather owed the photographer spoke to him thus:

"Cheer up, Benny," he said. "Smile at this little girl over here."

"Why should I?" he asked indignantly "She's my sister"

Recent Studies Go To Show That British Columbia Salmon Livers Are Rich In Vitamin A

Demand For Farm Horses

Questions With Interest In The Use Of Horses

The horse breeding industry is making a steady advance. This is particularly true in regard to farm horses, sixteen hundred of which were supplied to the Western provinces from the prairies in 1933.

According to the new publication "The Agricultural Situation" just issued by the department of agriculture at Ottawa, greater activity was shown among breeders of purebred draught horses, as the number of registrations of Clydesdales, Percherons and Belgians was almost double that of 1932. With the depletion of grade farm horses a greater demand is said in the pamphlet to be developing for young purebred stock as foundation breeding animals. With the Dominion-wide interest in the use of horses as a factor in successful agriculture in Canada, there is an increasing activity among farmers and breeders in the production of more and better horses for both farm work and breeding purposes. This situation promises a keener demand and better prices, which is bound to result in a general forward movement in the horse breeding industry.

Going Ahead With Work

Reclamation Project Of Stutsh Government Receives Huge Sum

In parliament the number of waterways announced that the government intended to proceed with the Quebec fine reclamation scheme, which, when completed, would many million gallons.

Up to January 1, this year, 380,000,000 gallons had been spent. On the other hand, it is estimated that the reclamation will give work to 2,800 laborers for ten years, which fact alone in view of the unemployment situation, the government deems sufficient reason for its continuance

Famous Student Scientist

Sir Charles Sherrington, P.R.S., the celebrated scientist, whose remarkable discoveries regarding the nervous system have given him a world-wide reputation, is 74, and covered with British and foreign decorations and honors. He started his professional life in St. Thomas's hospital. He is considered the most famous British medical scientist. As a recreation he writes poetry, and has published a volume of verse

DESIGN FOR PALACE OF THE SOVIETS STOLEN?

Sergei Melnikov

Zorach's Model

While the accusation of William Zorach, American sculptor, that the design for the Palace of the Soviets, to be constructed at Moscow, is an adaptation of a design he entered in a world-wide competition, goes unanswered, plans are being rushed by Soviet authorities to begin work on the gigantic memorial to Nicholai Lenin. The huge building, to face the Red Square, will rise 1,300 feet taller than the Empire State Building in New York. It is in the form of a telescope, each section of which will be surrounded by columns, giving the effect of pyramided ray wheels. On top of the huge shaft a statue of Lenin will stand in characteristic speaking pose.

A Very Ancient Sport

Ski Matches Were Favorite Sport In Middle Ages

An exhibition of skis in Berlin has shown that skiing is one of the most ancient sports in the world.

Drawings of skiers found in Sweden, thought to be of about 2,000 years ago, show skiers in pursuit of animals. With the Danes skiing was necessary rather than sport, as these early skiers. Some years ago there were found in a peat bog wooden skis, dating about 1,000 B.C.

In the Middle Ages ski matches were a favorite form of entertainment in Scandinavia. Then ski-ing dropped out of fashion until nearly the end of the last century. To-day its devotees are numbered by the hundred thousand.

Curing Pork

Important facts to remember in curing pork and other meats are that meats which are allowed to freeze on the surface before the animal heat has escaped from the interior will not have as pleasant a flavour as they would have if cooled off gradually. Meat cannot be taken out when the temperature falls below 36 degrees Fahrenheit. Dry curing meat therefore is carried on in a room, the temperature of which does not long remain below 36 degrees. — Dominion Department of Agriculture.

Women Study Prospecting

Class Conducted At University Of Manitoba Is Interesting

Keen wakening their field of interest and activity women of Winnipeg have entered the prospecting field. Even women prospectors are embryonic attended the first short course for miners conducted by Dr. C. H. Mcarnal of the geology department University of Manitoba and still more registered for the second section.

The first seven finished the initial lessons and received certificates from the department of mines. At present their knowledge is academic but there can been some talk of an expedition in the spring to practical land.

One woman prospector is actually doing location work in Manitoba. She is Miss Kathleen Rew, former graduate of Toronto University who is located at North Lake. Miss Rew is a prospector in the real sense of the word, driving a team of horses, wearing hob-nailed boots and well equipped to care for herself in the wilds.

Little Journeys in Science

SNOW

(By Gordon S. Hoard, M.A.)

Snow no common in Canada in southern found south of 36 deg north latitude except in regions modified by high altitudes. Snow consists of particles of frozen moisture which result when the air is cooled below the dew point, giving a chance of condensation of the moisture in its descent. They are larger in mild weather than when it is very cold.

Snowflakes assume a great variety of beautiful forms and over a thousand different types have been observed They are seen to the best advantage under the microscope when they are collected on a black surface. The finest forms are found in the polar regions where the air is at the most common. Some come as hexagonal plates and others as bear great prisms.

The "snow line" is the edge of the area of perpetual snow above which the ground is covered with snow all the time. The latitude regulates the altitude of the snow line. For example in the Pyrenees, in lat. 42 deg N. it is 17,000 feet; in the Rocky Mountains, Lat. 45 deg N., 12,000 feet; in Norway, Lat. 70 deg N., 3,000 feet. Generally that side of a mountain range which is exposed to the prevalent wind has a lower snow line than the opposite side. In the polar regions the snow line approaches the level of the sea

Snow is a non-conductor and thus it forms a protective covering for mother earth, keeping the temperature of the ground from dropping to an extent that would destroy seeds and plants. The snow melting on the mountains furnishes water for irrigating arid lands, and supplies the rivers with water in the summer (Here are given a large number of the best and snow "The first mention of "real snow" was made by the great writer Aristotle, who discovered the points of it on high mountain tops. In the Arctic regions it is very abundant and is due to very small vegetable organisms.

Newest Dental Chair

Patient Hears Music And Forgets About Being Afraid

A dental chair which fix inventor believes will the patient will climb into without dread was recently installed in connection with the Chicago Dental Society's clinic convention

Dr. Isaac Knowles of Minneapolis said its development was due to experiment which revealed to him that many people are afraid of the dentist chair, largely because they are afraid that mental shrinking with which most people regard their session in dentist chairs.

Applying this, he has worked out a plan whereby a wire connection brings music from a cabinet through the dentist chair's head piece to amplifiers which press against the patient's mastoid bones. The patient chooses the music through the bones and the conductive area he tuned so low that the music is inaudible in the room.

He said children became so completely interested in the music that frequently they have forgotten their teeth were being worked upon.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED
Wake up your Liver Bile
No Calomel Necessary
Get one to feel healthy and happy, you need about 2 pints of bile flowing freely into your bowels daily. If this bile is not flowing freely, your food does not digest. It just decays in the bowels. Then gas bloats up your stomach, you get constipated, you have headaches, your skin looks sallow and pimply, you feel sour, sunk and the world looks punk.
Laxatives only move the bowels. They cannot make bile flow freely. Only one thing can do that. That is the famous liver stimulant known as Carter's Little Liver Pills. Ask for them by name. Refuse substitutes. Only 25c.
CARTER'S LITTLE LIVER PILLS

SUNDAY SCHOOL LESSON

APRIL 7

THE RESURRECTION

Lesson Text II Luke 24:1-12. Memorize together with Christ were the things that are above where Christ is, seated on the right hand of God. Colossians 3:1.

Lesson John 20:1-16

Devotional Reading Ephesians 1:15-23.

Explanations and Comments

Mary Magdalene at the Tomb of Christ, verses 1, 2 On Sunday, the first day of the week, Mary Magdalene came early while it was still dark to the Lord's sepulchre. It is said Magdala had been had on Friday. It is called Magdalene from the village of Magdala north of Tiberias. It was my home now Mark 16:9 there were others with her on the way but Mark verse indicates, and they had come to embalm the body Jesus (Mt. 28:1 Mk. 16:1 Lk. 24:1 Joh. 20:1) A stone had been placed over the entrance of the tomb (Mt. 27:60; and sealed (Mt. 27:66). They found the stone removed.

Jesus Reveals Himself to Mary Magdalene, verses 14-16 John is our chief source for this first revelation that his Lord had risen. Mary went straight to Peter and John and told it. for she thought the tomb had been stealing But she did not understand the Prophecies concerning him. The Prophecies (Ps. 16:10, Isa. 53:10, Jon. 2:1 Hos. 6:2) spoke of his resurrection, but after it. Mary's eyes were opened were with tears "Woman, why weepest thou, whom seekest thou" Jesus questioned

They were the first words that Risen Lord It is no easy to imagine that the first utterance of the conqueror of death would have been different to a woman's sorrow. Even his apostles, some great declaration of victory. No, it is an inquiry concerning a woman's sorrow, and a woman's quest. It is as if our Lord was declaring that his own pain and grief forever past, he still cares forever for the griefs and struggles of mankind than anything else." (R. C. Gillie.)

Mary, said Jesus and Rabboni, Master, she cried. Rabboni was the Aramaic form for Rabbi There is much just in a name when pronounced by a person capable of feeling deeply. There may be more expressed in a name than could be expressed in volumes, just as there may be more in a moment than can be expressed in a lifetime. So it was when Jesus called Mary by name, and she called him Master (Edward Everett Hale, Jr.).

"Touch me not," said Jesus as Mary would have grasped his feet in adoration. "The words were spoken to teach Mary that there was a far higher way of touching Christ than with the hand of flesh. Lo! true way to lay hold of Christ was by the grasp of faith" (Augustine) "For I am not yet ascended unto the Father," he added. The old, familiar days when she was to be permanently after his ascension a new and spiritual communion would be established between him and his followers. "But go" you have gained long enough at the empty tomb and make known the wonderful fact that its Occupant has risen."

Proves The Workmanship

Three Men Can Lift Perfectly Balanced Bridge Span

There is another example of the excellence of British bridge building in Middlesbrough in the north of England. This is a link in the new road between Yorkshire and Durham. It crosses the river Tees and has to allow large ships to pass up to Stockton. So the bridge span can be to 120 feet above the water level when fully raised. It is the lifting of this span that proves the workmanship, for it weighs 2,600 tons. And it is not the balance proved so perfect that three men working by hand-power on ordinary hand-pulleys lifted this centre span to the top of the towers easily. Of course, the process of raising the span is to be achieved by electrical machinery, the manual labor is only an emergency measure, an a motor engine also can lift the 2,600 tons of steel.

Weight Of Million In Gold

The weight of a million dollars in gold would depend upon the fineness of the gold and weather it were in form of gold coin or raw gold. A million dollars in United States gold coins would weigh 53.85 ounces as there are 23.8 grains of pure-imthe fine gold to the dollar. At the present R.F.C. gold price it takes about 39,000 ounces of newly mined gold to be worth a million dollars.

What Motorists Pay in Taxes

Automobilists Contribute More Than 17 Per Cent. To Revenue

More than 27 per cent. of the total revenues collected by the governments of the different provinces of Canada is contributed by owners of automobiles in the form of taxes on gasoline and license fees This information is disclosed in a report just issued by the Canadian government bureau of statistics

The report states that the total amount paid by automobile owners to the provincial treasuries in the fiscal year 1932-33 was $40,400,436, of which gasoline taxes accounted for $24,946,200 and $30,584,173 was in license fees

In the province of Ontario 35.9 per cent. of the total government revenue is paid by motorists; in Quebec, 32 per cent.; in Nova Scotia, 27.2 per cent.; in New Brunswick, 27.3 per cent.; in Alberta, 24.1 per cent., in Prince Edward Island, 22.7 per cent.; in Saskatchewan, 19.8 per cent.; in British Columbia, 17 per cent and in Manitoba, 13.65 per cent

Economic Survey Of Land

Saskatchewan To Take Inventory Of All Land Resources

Plans for the conduct of a land economic survey to accumulate facts upon which to base future agricultural development of Saskatchewan was announced by Hon. J. F. Bryant, K.C., minister of public works.

"We propose taking an inventory," he said, "of all land resources on a block of land and, in order to lubricate the crop areas and their hauls, and to classify soils on the basis of their agricultural values."

Occupied farm lands which are used for purposes for which they are not physically or economically adapted, and are no longer capable of yielding a reasonable return, he said, must be classified and used for the purpose for which they are best adapted, according to a carefully planned programme of land utilization.

"I have heard of only one man who was not spoiled by being lionized," remarked a wit.

"And who was he?" asked the "fool."

"The Prophet Daniel, sir," was the response.

Will Take Another Year

Grand Boulder Track Sold Back At Handsome Price

Thwarted in an attempt to cross the mighty Mackenzie river Canada's roaring rainbow bend will have to await another winter chart of their destined permanent home. Word has been received by Hon. T. O. Murphy, minister of the interior, of the difficulties encountered by the family band of reindeer herders, engaged in the year-long task of moving the animals from the western shores of Alaska to an area in the Northwest Territories, where they will provide food and clothing for Canadian Eskimos.

Purchased from intruders in Alaska some years ago, the herd was started on its long trek. Each summer the progress was interrupted for the long grazing season and the animals were allowed to rest until the young calves grew strong enough to travel. The plans thus called for the crossing of the Mackenzie river from the coming grounds south and east of Aklavik, Yukon, to the centre of the domestic zone for the mail trapper, Tom Johnson, two years ago and in a deepening need in Col. Conrad Lindberg's flight to the Orient by way of Northern Canada.

The Mackenzie river is 70 miles wide and the hardest planned to cross on ice. Little success ahead of the ice proper of the river, but ahead on water fodder for the animals. So it was planned to make the crossing in a rush, driving the reindeer safely and they will the eastern shore was reached, where they would find food and rest.

Last summer, the Arctic division of Canada was assailed by high winds and continually severe blizzards. When Andrew Taylor, superintendent, edged his charges out over the ice, he found wide stretches of it swept bare of snow and the herd members could not travel on glazed ice, long detours from the planned route had to be made.

Then a heavy storm in the form of a heavy blizzard after they had been 45 hours out on the ice, and in the midst of it the deer stampeded and began a dash toward their trail towards their former grazing grounds near Shingle Point.

Taylor could only round up the stragglers and abandon the attempt to cross the mile stream. Next year, when the ice is safer, another route, believed to be more feasible, will be mapped out and another attempt to cross the river will be made in their permanent range of hilltop spruce miles on the east side of the Mackenzie delta.

Additionally, the arrival of the herd this year, a representative of the interior department had gone from Aklavik to ground ground to make preparations for receiving the herd and its drivers. When the animals did not arrive, he made the return journey, because of darkness. He then settled the department.

A Valuable Industry

Canada's 1932 Fish Catch Had Commercial Value Of $36,000,000

The herring in the cabot Canadian fish so far as quantity caught is concerned, leading all species in 1932 with 1,822,272 cwt., but it ranked only fourth in marketed value at $1,473,355. Salmon led in value with 1,351,064 cwt. at $9,667,201. Cod, with a comparatively low catch of 893,698 cwt. was second in value at $4,768,311. Cod with a catch of 81,-698,941 cwt. was Listed in marketed values at $2,193,571. The marketed value of the total catch of fish in Canada in 1932 was $36,897,000 compared with $44,677,000 in 1931, and $47,504,000 in 1930. The cost laborer accounted for $31,765,000 of the 1932 total. St. Thomas Times-Journal.

Cotton and linen textiles do not usually shrink after the third laundering, and most shrinkage occurs in the first washing.

Earth has no joy like that of a fat woman who has just found a dress-making frock that is big enough.

Below, German troops haven't forgotten the goose-step as they stride past the National Memorial in Berlin in honor of the German war dead on National Heroes Memorial Day

Bad Variety Of Beans

Expert Quota For Coming Crop Year Explained By Premier

What Goodenough Says

Acres ago, during the age of reptiles, horned dinosaurs the most bizarre of all the cretaceous period, roamed and grazed over the present site of Lethbridge, Alberta. And, according to Dr. Richard S. Lull, Director of Peabody Museum of Natural History at Yale University, they were as many as 27 different varieties.

With the exception of a single species discovered in Western Asia, remains of these gigantic beasts have been found only in North America. Sally River Valley in Alberta was a particular stamping ground of the dinosaur.

The curator and all other plant-loving dreamers were grieved to learn recently that with only one exception of the name type found in other areas, Dr. Lull claims.

Extra many their roaming and lumbering over the foothills, the dinosaurs also spent a little of their time in family quarrels, judging from the many vicious specimens of fossil bones that bear distinctive all over their bodies and skulls which are sometimes backward extension of the skull.

The spine and skull have run riot, in the styracosaurus specimens of Sally River. He might with a well-developed nose, horn and neck shields, this dinosaur grew eight feet long and weighed a ton. Like the rest of the mantle. There is another born growing out of the nose.

The confinement developed its own peculiarities. It had a long head horn and short bone horns, a short deep mandible, a toothless beak and a backward extension of the skull.

Bison Arctic Out

New Brunswick Student Gets Skin With Wings Wing Spread

Flying down from the Arctic in search of food, a huge Arctic owl with a wing spread of five feet fell prey to a 22 rifle in the hands of a high school student at Saint John, New Brunswick. Verdun Wilmot was on the road field of Courtenay Bay when he brought down the big bird. He had to finish the job by using his rifle as a club.

Arctic owls are fast for south only in exceptionally severe winters when the northern source of rabbit is hard to get.

Coffee is a native plant of Abyssinia.

The Wheat Quota

Expert Quota For Coming Crop Year Explained By Premier

Canada's wheat export quota for the 1934-35 crop year under the world wheat agreement as explained by premier Bennett in the House of Commons, is expected to work out at slightly less than 270,000,000 bushels. The figure is arrived at by taking 20,000,000 acres as the average acreage sown to wheat in the three years 1881, 31-32, and 27.31 as the average yield per acre recently for the 10 years ended with 1933.

From the total yield under those figures 15 per cent. is subtracted as indicative of the reduction undertaken seeding by acreage sown or restricted selling for export, and subtracted as representing the normal domestic requirements.

The quota for the 1933-34 crop year was fixed at 280,000,000 bushels. The exports for the crop year 1932-33 was 304,000,000 bushels with no quota in force.

A Home-Made Trumpet

Out of a piece of gas pipe, some plumbing brass, curtain rods and an old automobile horn, Herbert Allen, 17-year-old high school student of Seattle, made himself a trumpet.

Herbert, who used another trumpet only for a short time, says he is learning by his. He said he ground the valves "just right" by "trying the pitch" on his violin, and then bending the valves till they sounded the same

MacLeod's First Hotel

Is At Alberta Town Is Modelled Of Log Houses

The first hotel established in Macleod, Alta., was humorously described in an interview at Calgary with Van. Archdeacon Tims, of Canada Anglican missionary to the Blackfoot Indians and preacher of the first sermon delivered in Calgary Archdeacon Tims stayed at the hostelry on his way to the mission field in the spring of 1903.

The hotel consisted of one long room, which served as both bedroom and dining room as well as wash room, and was kept by a well-known character called "Auntie," dark-skinned but of beaming countenance, who claimed to be the first "white woman" in the west.

Cowels provided their own blankets and slept on the floor. The kitchen, which served also as "Auntie's" bedroom, was a lean-to at the back.

At 6 a.m. "Auntie" walked the length of the room with a brass, with which she awakened every sleeper, who was expected to be up and have his blankets rolled before he reached him again as she swept the floor before breakfast, which was served at a long table reaching down the centre of the room.

Weavers of Belgium are complaining against the dumping of Japanese goods into the country.

Professor—What is steam?
Student—Water in a high state of perspiration.

Gardening

Planting Shrubbery Just As Early As The Spring As Possible Is Advisable

With a few exceptions and these are mentioned in any good catalogue, shrubbery trees and ornamental vines are planted in the spring just as soon as possible The sooner their roots are covered with soil the better even if this means simply planting them temporarily in a shallow trench. Especially when near a new house where the earth is largely builders stuff thrown out of the cellar excavation, some good soil and a little fertilizer should be added and it is also important to water thoroughly for a week or two. With the larger shrubs and trees prune severely before planting The soil must be pressed thoroughly about the roots, and trees should be tied to a stout stake to prevent the wind working them loose

A good garden will save money, improve the health of the family and provide more real pleasure than any other acre on the farm For those who are planning to devote considerable ground to the growing of authorities advise selecting a piece of warm, rather light soil, handy to the buildings and laying it out in 100 foot rows for horse cultivation. This is about the right length for many kinds of vegetables for the average family, but much more than is required for lettuce, radish or parsley On the other hand those things which are to be grown for winter storage, like carrots, beets, potatoes white beans, cabbage and onions, will require several rows.

Even the most experienced gardening if clothed in trees and shrubbery, fulfills the real requirements of a home There are, too, practical advantages of such planting, especially in more open places, where trees are used to break the force of storms. Perpetual evergreens provide some protection against sweltering heat in summer Again flowers, whether grown in the garden proper or in a building add distinct value to that property when the time comes to dispose of it. Rules for successful gardening are simply The main object is to tie the dwelling to the ground, to make it appear as a natural development from it. Trees and shrubs should be set not directly against the corner of the house, but a little away from it, so that the lines of the building are softened and not sharply accentuated every where. Trees may be also used, like the Elm, Maple or Pine or some of the beautiful imported species such as Scirwoller Maple, with its bronze-purple foliage, the Japanese Walnut, the Kentucky Coffee Tree or the striking Lombardy Poplar. Against these stand the silver poplar, white frame, some of the smaller evergreens like Colorado Spruce, White Cedar and the pyramidal Arborvitae which is also found in Canada has obtained work and is going to leave the Hoyt household Avis

Too Much "Party" Last Night

YET—*The Morning No "Acid Headache"—No Upset Stomach*

Science says this is the QUICKEST, SUREST and EASIEST way to CORRECT FEELING THE EFFECTS of over-indulgence—the most powerful acid neutralizer known to science. *Just do this:*

TAKE—2 tablespoonfuls of Phillips Milk of Magnesia in a glass of water BEFORE bed. In the morning take 2 more tablespoonfuls with the juice of a WHOLE ORANGE. That's all! You'll feel great!

Or take the equivalent amount of Phillips' Milk of Magnesia tablets. Each tablet is equal to a teaspoonful of the liquid.

Get genuine Phillips' Milk of Magnesia in the original liquid form, or the new, marvelously convenient tablets. Be sure it's PHILLIPS'.

WIFE'S DELIGHT AT HUSBAND'S LOSS

30 Pounds of Fat!

Here is something all wives of fat men will be glad to know! It is the experience of a woman whose husband recently weighed 300 lbs. She writes:

"I really feel I must write and tell you that, after taking Kruschen Salts for nearly 3 months, my husband has got his weight down from 23st 8lbs. to 20st 10lbs. This has been achieved by nothing else but Kruschen. I am too happy also, and I started taking the Kruschen only three weeks ago. Already I have got down from 13st to 12st 8lbs. We are delighted."—(Mrs. C.)

Kruschen contains the cause of fat by assisting the internal organs to perform their functions properly—to throw off each day those waste products and poisons which if allowed to accumulate, will be converted by the body's chemistry into fatty tissue

OCCASIONAL WIFE

by
ERNA BOND WEBSTER

Author of "Juretta," "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young struggling sculptor trying for win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth an-ther wealthy girl who is trying to win Peter Dybin, Todd Forrest, model, and Geo Malone, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter overhears Camilla's parents with impersonations When the rest of the members of the party go to a cabaret Camilla continues the gaiety. Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. The

CHAPTER XXXVI

In the meantime, Camilla was absorbed with her new work. She loved both, by and far it. She stretched and planned at the office all day, was on the alert for new ideas and characteristics in her public contacts She visioned her Tiny Tots in their amusing exploits while she followed Rosie's patient instructions regarding her share of the household tasks, went to sleep with them in her thoughts.

Of course, she thought about Peter, too. The thoughts squeezed in deliciously with the morning postcards, coffee and the evening paper. Her attention, such as it was, thought of Camilla to passed to him with the big cream.

She saw him occasionally at first but not so often as formerly. It would not always be like that though. Each of them knew and each other with little words and waiting hearts that now the paramount issue for each of them, was to make a success of the business which would develop a greater future

Camilla believed that if she made good in the first months of the Whatsheart Cereal campaign, the future would smooth itself out into a permanent position and she might decide much more of herself and her time to Peter. The first month of the marriage plans had been that nothing should interfere with their individual ambitions Those terms were unequivocal. But the next month's plan, Camilla knew, was to write a book. Others had done it and the story are Avis Werth another wealthy girl who is trying to win Peter Dybin, Todd Forrest, model, and Geo Malone, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter overhears Camilla's parents with impersonations When the rest of the members of the party go to a cabaret Camilla continues the gaiety. Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. The

As if a chill had suddenly rolled into Peter's face and invites him to have lunch there He accepts reluctantly but is decidedly impressed with his visit.

(Next Week—Peter Visits Avis)

Constipation Relieved Naturally

Nothing is more distressing than constipation. Why suffer from it when you can relieve it naturally? Just drink a glass of Kellogg's All-Bran every day. Eat it with milk or cream, or sprinkle it over your cereal. Delicious! Two tablespoonfuls of All-Bran supply enough "bulk" for normal needs. Two tablespoonfuls daily usually relieve constipation. Get All-Bran today at your grocer's. Made by Kellogg in London, Ontario.

ALL-BRAN

"I WOULDN'T RISK FAILURES WITH SUPERIOR BAKING POWDER. LESS THAN ¼ CENTRE OF MAGIC BRAND IS CAKE, AND GRAND ALWAYS GIVES FINE RESULTS"

says MRS. JEANNE McKENZIE, whose cakes have won First Prize at two Canadian National Expositions, Toronto

MAGIC BAKING POWDER costs so little — and it MAGIC gives consistently better baking results! *Actually less than ½ worth of this fine-quality baking powder makes a good big cake. It doesn't pay to take chances with inferior baking powder. Bake with Magic and be sure!*

Prince Weds Commoner

Incumbent Of Swedish Throne Gives Up Royal Rights

A romance like a fairy tale of fiction came true with the wedding of Sigvard, Prince of Sweden, Duke of Uppland and grandson of the Swedish king to the beautiful Fraulein Erika Patzek, 22-year-old daughter of a Berlin industrialist

The 26-year-old prince like Lennart, his cousin — abandoned his princely rights for a romantic union with the German actress.

They were married in the large council chamber of Castaen hall, instead of in the small registry office, despite the fact a municipal election was being held in the building

The tendency to streamlining in automobiles has made it necessary to re-design even the incandescent lamp bulbs on headlights

HERE'S THAT QUICK WAY TO STOP A COLD

Take 2 Aspirin Tablets. Drink full glass of water. Repeat treatment in 2 hours.

If throat is sore, crumble and dissolve 2 Aspirin Tablets in a half glass of water and gargle according to directions in box.

Almost Instant Relief in This Way

The simple method pictured above is the way doctors throughout the world now treat colds.

It is recognized as the QUICKEST, safest, surest way to treat a cold. For it will end an ordinary cold almost as fast as you cough it.

Ask your doctor about this. And when you buy, see that you get Aspirin Tablets. Aspirin is the trademark of The Bayer Company, Limited, and the name Bayer in the form of a cross, is on each tablet. They dissolve almost instantly And then work almost instantly when you take them. Avoid the new treat colds.

Aspirin Tablets dissolve so completely they leave no irritating particles. Get a box of 12 tablets or a bottle of 24 or 100 at any drug store.

CHRISTIAN SCIENCE

Edmonton, Feb. 21, 1934

Editor, The Herald,
Mundare Hist.

Sir: The doctor's statements in favor of the Christian Science treatment in the first paragraph of your issue and finance of February 9th are appreciable.

The impression given in the following paragraphs that contain fib and wrong tendencies call for different treatment than Christian Science in existence, and requires correction. Christian Scientists have found Christian Science treatment quite effectual in dealing with them.

Of the comprehensive remedial effects of Christian Science, Mrs. Eddy writes in the Christian Science textbook, Science and Health with Key to the Scriptures: "Christian Science impresses the entire corporality,—mentality, mind and body,—and brings out the proof that Life is Continuous and harmonious. Science both neutralizes error and destroys it. Mankind is the better for this spiritual and profound psychology." (p. 107).

Sincerely yours,
JOHN A. C. FRASER,
Christian Science Committee on Publication.

Good Friday being a holiday, all stores in the Fort will close. However, they will remain open on Thursday and Saturday evenings. This will give the public an opportunity of stocking up for the holidays.

Badminton Club Entertained By Inglewood Club

Members of the Fort Badminton Club motored to Edmonton last Friday and spent a pleasant day as guests of the Inglewood Badminton Club.

Many games were played during the afternoon and at six o'clock light refreshments were served by the Inglewood ladies, after which Badminton was resumed until about 10.30 p.m.

The Inglewood Club has a very fine building having four courts, lockers, shower baths and club room, and a high ceiling. Inglewood players were found out that Fort players were having some difficulty with the high shots, so took great delight in giving a few tall ones every once in a while

Local players who attended the Inglewood Club had an excellent time, having had all the Badminton they could wish for and the Inglewood players were certainly very pleasant people.

LOCAL NEWS

Jack Geal installed a radio in his pool hall so as to hear the play by play broadcasts of the hockey games now been played at Winnipeg between St. Mick's and E.A.C.'s.

Those listening in to the game on Tuesday evening have come to the conclusion that the Edmonton boys were handed a raw deal. No doubt this accounts for St. Mick's popularity in the east.

******

Mr. and Mrs. W. Auzier of Edmonton were Easter guests at the home of Mrs. Auzier's parents, Mr. and Mrs. Jas. Ritchie. Miss Jean Ritchie also spend the week-end at her home.

******

Mr. and Mrs. Rose Banks of Edmonton spent Sunday with Mrs. Banks's parents, Mr. and Mrs. A. Shackleton.

Mr. Banks will shortly open a dray and livery at Vilna, Alberta. Vilna is some ninety miles from Edmonton and has an up-to-date hospital.

We hope that this venture will prove successful in every-way.

******

Owing to the large amount of membership this week some was left over until next week.

******

Misses Hattie and May Hopkins and Bob Hopkins of Edmonton paid a short visit at the home of Mr. and Mrs. Ed. Barnett.

Garnet Smith of Wolfvile, Sask., is a guest at the home of Mr. and Mrs. A. E. Atchison and Mr. and Mrs. Henry Dennis.

Josephburg News

The Josephburg Victoria U.F.A. local held their monthly meeting on March 29th, when it was decided to hold a bridge party on April 16th, at the home of Mr. and Mrs. R. Hoenig.

SIX GRANDCHILDREN SEE FUNERAL RITES

Six grandchildren were pallbearers at the funeral services Monday for Mrs. Sarah Ellen Pearce, 79, who died at the family residence, 10913 98 st., Thursday. Widow of the late Thomas G. Pearce, pioneer settler of Fort Saskatchewan district, who came from Parry Sound district in 1892. She was a life member of the Northern Alberta Pioneers' and Old-Timers' Association, as was her late husband.

The pallbearers were Clifford and Austin Teane, Bernie and Jeff Pearce, and Harry and Gilbert Pearce. Interment was made in the Beechmount cemetery.

There were many floral tributes to the memory of Mrs. Pearce. She is survived by seven sons and two daughters.

Funeral services were conducted by Rev. C. F. A. Clough and many old-timers attended.

Good Hope NEWS

A Junior U.F.A. meeting was held in the schoolhouse on Wednesday, March 28, 1934.

Verna Johnston being absent owing to illness, William Dodd acted as secretary for the meeting.

Eight members paid up, and more are expected

Verna Johnston and Velma Mayer are delegates to the Junior Conference.

Mr. Macdonald continued his talk on First Aid.

The next meeting will be held on April 11th, at Mrs. James Johnston's.

Mr. Leslie Johnston was an Edmonton visitor last Thursday.

******

The Senior U.F.A meeting was held in the schoolhouse on Monday, April 2nd.

Co-operative buying was discussed, and Mr. Gordon Moyer was appointed as delegate for the next meeting of the Executive, which is to be held at Bremner on April 16th, 1934.

A. Y. P. A. To Hold Dance Next Month

The regular meeting of the A.Y.P.A. was held at the Rectory on Tuesday evening and decided to hold the next meeting in the form of a Telephone Bridge at some of the members homes. It was also decided to hold a dance on May 4th.

Col. F. M. Rodger, the speaker of the evening gave a very interesting talk on his experiences in Ceylon and the Indian Frontier. Later everyone joined in a jolly sing-song, after which delicious refreshments were served.

HOME BURNS TO GROUND LAST SUNDAY

The farm home and furniture of L.J. Kevin, 12 miles north east of the Fort, was destroyed by fire while the owner was at church, Sunday. The fire broke out about 11:30 a.m., apparently from an overheated stovepipe, while the blaze was in the fields. Neighbors who were summoned were able to save a few pieces of furniture. Insurance of $900 was carried but the extent of the loss has not as yet been estimated.

19 Years Ago

What About Social Credit, Canada?

(Continued from last week)

No. 7

J.—"Well, if it is really true the banks create what they lend, why do they advertise for savings accounts why are they anxious to get money if they don't lend money?"

W.—"In answer to that I would say that it is best explained by an illustration You know if a bank is supposed to be able to pay out every or legal tender for all claims that is, if you have a cheque and instead of depositing it, you asked for cash, the theoretical rule is that the bank is obligated to pay you in cash (of course if everybody did that at the same time it would be absurd. That is what happened in England at the beginning of the war. People began drawing gold What happened? The government had to step in and declare a moratorium. It was arranged to print a paper money called Treasury Notes—and they were given out in place of gold.

Any bank would fail if all the people who had claims upon it presented those claims at the same time and demanded cash. That is why it makes me smile to read and to hear public men talking about the stability of the Canadian banks This is due to no merit of the banks it is due to the self-restraint of the Canadian people who trust them. If the trust is there the banks are safe.

But to get back to your question as to why they advertise for savings deposits. The reason is that the more money they have the larger the amount of business they can safely do in granting loans and allowing overdrafts. You know a bank considers it safe in normal times to lend up to eight or nine times the amount of its cash. That is, for every $100 you have with the bank they can lend $800 or $900."

J.—"Oh Yeah! Why not $2000 or $3000?"

W.—"Now don't be funny! It is not a joke: it is a fact. The limit is set, not by any legal enactment, but solely by experience of what they have found to be safe and practicable. The reason it is limited to eight or nine times is because by experience they have found that this ratio provides a safe margin in normal times. That is, out of very $100 that is loaned not more than $100 would be called for in actual cash and the rest would be deposited, thus the whole thing resolves itself into a book-keeping transaction."

J.—"That reminds me, I heard somebody once say that banking was only book-keeping."

W.—"Yes, that's right. But to get on with your question. You can see that if all the persons who receive cheques simply deposited them without ever demanding cash the banker could safely create and lend any amount. But the fact is that there are some transactions in which people will call for cash. For instance, most employers have to draw cash to pay their weekly wage bills. Now the more cash the bank has, the larger the amount of credit it can create on that base and the larger the amount it can lend. Incidentally, the more profits it will make.

Now to use a simple illustration. Let us think of Owen, the grocer. Why does he put more change in his till on Saturday morning than on any other morning? Because he anticipates a larger turnover and he expects to receive more bills in change. If he knew that every customer who bought goods would tender the exact amount he would not need to put in any change in the morning.

It is the same in banking. The cash is necessary for the "small change" transactions. The big cheques are to our cashed. Do you know how much business is done by this book-keep-

Go North, Young Man!

It may be that some natural law of compensation works in these things!

Just at a time when Western Canada was beginning to accustom itself to the new viewpoint that it cannot grow wheat to its heart's content, along comes a new realization of its potentialities in another direction that fans the flame of its optimism.

The realization is, of course, that in the great pre-Cambrian areas sweeping northward from the Ontario-Manitoba boundary lies wealth in mineral resources which, of itself is sufficient to guarantee a great and glorious future for this western country. Development which began in the rock formations of Ontario and which later spread through the same structures in Central and Northern Manitoba, shortly will become manifest in Northern Saskatchewan. This eventuality will compensate the prairie regions for the apparently finite glory of their wheat fields.

Youth has suffered as result of economic depression in these western provinces due to scarcity of employment and the narrow field of opportunity open to them in a period of financial stringency and industrial stagnation. Many have been unable to secure a foothold, and have now reached adulthood without attaining that independence without which the term is barren and comfortless. They feel circumstances over which they had no control, and concerning which they had no voice, have robbed them of a birthright and they are looking to the political leaders for assurance their claims are not being ignored. It is occupation they need, opportunity to take their place in the full, responsible citizenship of the country.

While agriculture will remain the great source of income of the prairie provinces, it is obvious that, under present world conditions, opportunities for youth in the path their pioneer fathers trod are singularly limited in scope and variety. Obviously then, the salvation lies elsewhere. Opportunities must be created and created now, only for the rising generation now clamoring for its place in the sun, but created also for a future influx of new population which is essential to the attainment of a balanced economic structure upon which future development of these provinces depends.

Immigration, at the moment, is an unpopular topic—and rightly so. Yet wider home markets must be created not only for the produce of the prairie farms, not only for consumers' goods from the industrial east, but also for the products of those countries of the world prepared to absorb our surplus agricultural production. Sooner or later, then, the problem of immigration must be tackled systematically and courageously. It will be necessary, therefore, to make immigrants pay their own way; youth and their own neighbors may find employment and thus be enabled to continue their share to the country's development.

Obviously, the one alternative to agriculture upon which Saskatchewan (yesterday) has depended in the past, is a parallel development of other great primary resources of which the potentialities already are known.

Saskatchewan (and we speak of Saskatchewan particularly because there the problem is acutest) has abundant deposits of lignite coal, commercial clays, sodium sulphate and other non-metallic minerals throughout its prairie lands. Oil and gas, which have proved so valuable to Alberta, is being avidly sought in different sections of the province. But away to the northeastern bite the great pre-Cambrian shield, world's greatest storehouse of precious metals. Its resources too are being tapped by prospector's pick and by diamond drill. Surely the rock formation from which Ontario is reaping plentiful harvest, merely the veins which have escaped pilot Manitoba through the difficult years, can be exploited in Saskatchewan's advantage and made to yield their just proportion to the economic life of the province!

These thoughts are inspired by a recent statement relative to the Flin Flon mine which straddles the northern Saskatchewan-Manitoba boundary. There, an investment of $20,000,000 is producing an annual income of $5,000,000 and maintaining a community of some 4,000 persons. The major portion of the Flin Flon ore body rests in Saskatchewan, and it is only a matter of time when similar developments must come in the confines of the latter province.

Reports from the Saskatchewan hinterland indicate abundance of mineral resources, and that they have not yet been brought into commercial production is nothing new in the history of mining. Even the great Flin Flon, discovered in 1915, remained undeveloped for a space of ten years thereafter, but, once the complexities of its ore were unravelled, development came quickly.

While agriculture has magnified, mineral production in Canada has continued to advance. In 1928, Canadian mines produced $259,000,000 as against $191,238,238 in 1923 and the augure for the future are extremely favorable.

Here then lies a fallow field for the activities of a revolving government and the energies of ambitious youth! Here lies the West's way out!

A Very Good Men

The Prince of Wales, who knows a thing or two, was asked what he thought of civilization. He said it was a good idea and he thought it would be a good thing if some one would start it. Those who have an impression that civilization exists had better read over the Sermon on the Mount, which furnishes a basis for civilization in the true.

Plenty Of Snow

If all the snow that blanketed Port Arthur, Ontario, between Oct. 15, 1927, and Feb. 20, 1928, were packed into cubes of one foot square and piled end to end the re would would start it. Those who have an impression that civilization exists had better read over the Sermon on the Mount, which furnishes a basis for civilization in the true.

Statistical estimate the snowfall in Port Arthur during that period of 69 inches or nearly 5,000,000 tons.

A Tired, Worn Out Woman Can't Make a Happy Home

There is no happiness in the home when the mother is sick and worried by the never ending household duties. She gets cross and nervous and cannot be comfortable, has shortness of breath, faint and dizzy, can't sleep, and gets up in the morning feeling as tired as she went to bed, and is discouraged and despondent.

Milburn's H. & N. Pills will soon convince women it is not necessary to suffer, as they build up the nervous system and bring back the former health and vigor.

Grim Battle For Life

Eskimos Massacred On Ice Floe For Month Before Being Rescued

Trapped on an ice floe in Amundsen gulf while attempting to cross the 150-mile stretch from their native village on the southern shore of Banks island to the mainland half a dozen Eskimos fought a grim battle for life early this winter as they drifted up and down the gulf for a whole month before they were finally able to land, when almost starved at the Fence Point post on the Arctic coastline.

The story of the near tragedy was brought down from the Arctic by Paley, Andrew and Jorgen Kleegaard-berg and their partner, J. P. Lyall, who operates a string of three trading posts on Victoria and King William islands in the Arctic ocean. The four traders arrived in Edmonton on their way to Vancouver for a brief holiday before returning to their posts on the ice-locked islands which are the northern-most points upon which human beings, either white or whole, live.

The three Kleegaeberg brothers, sons of the famous Capt Charles Kleegaeberg, senior was pioneer trader in the Arctic, who died in the summer of 1931 at Vancouver, were born in the north and have been operating their father's string of trading posts. With the exception of their school days spend at Vancouver and brief visits "outside" every few years, they have spent their lives in the Arctic.

Lyall is a personal friend and partner, went north with them for the first time from Vancouver three years ago.

DRIVES HIMSELF TO WORK AT 82

And Still Plays a Little Golf

How many of us, when we are 82, will be the equal in health and activity of this vigorous and exciting nonagenarian? It is better to say—

"I was born from Scotland on the 7th April, 1870. I am over 82 years old. I drive my Ford car on the public hills and rides to a factory, and can still play a little golf. I have taken the little dose of Kruschen Salts in my cup of coffee every morning for some years, and I reserve it to keeping me in good health and enabling me to keep on working at my business and to enjoy existence."—L. A.

Whether you are still in your 'teens or well past it is neither too early nor too late to start on the "little daily dose" of Kruschen. Any tasteless pouch of Kruschen Salts in your morning cup of tea or coffee! They restore normal circulations, and keep the blood-stream pure, free and rea.-sanel blood in spent coursing to every fibre of your being. Rheumatism, headaches, indigestion and biliousness all pass you by

Whole Wheat Rolls

½ cup milk
½ yeast cake
2 tablespoons lukewarm water
2 tablespoons Crown Brand Corn Syrup
½ teaspoon salt
½ cup flour
1 tablespoons Mazola
1 egg
1½ cups whole wheat flour.

Scald milk and when lukewarm stir in the yeast dissolved in the warm water. Beat in the white flour and let rise in a warm place until doubled in bulk. Fold down the dough and add the Mazola, beaten with the salted egg, the syrup, and the salt. Then beat in the whole wheat flour. Let rise again until double in bulk, then mix down and roll out. Cut into biscuits with a round cutter, spread two and a half inches in diameter. Let the biscuits rise until light on an oiled pan and then bake in a hot oven (400 deg.) about 20 minutes. Brush over with melted butter when done. The above quantities make 25 fair-sized rolls.

Just A Slow Table

Castles—I hear that old Monopoly was waylaid and killed last night.

Burke—Is that so? Did the criminals get away with much money?

Castles—No. The old man never survived. He died in a horizontal position.

DIXIE
PLUG SMOKING TOBACCO

Dixie Plug is the thrifty man's pipe tobacco, the smoke that gives more for the money. Cut this big plug the way you want it. Coarse or flake, long or short, to your taste and more economical as well.

World's Largest Telescope

Twenty Tons Of Glass Used In Making Large Lense

Twenty tons of molten glass, to form the world's largest telescopic "eye", were poured into a form at Corning, New York, recently, before a distinguished audience of scientists and thousands of laymen who tuned the hospitality of the famous glass works.

By nightfall the last ladle of brilliantly glowing glass was spread in the brick form which will stand for 30 months while the composition hardens. Ten hours more required to transfer the liquid glass from the furnace, where it has been heating since February 15, to the mould housed in a brick igloo.

If no scientists anticipate, the 200-inch mirror emerges from the annealing tank fourteen it seems day will enable man to gaze into unfathomed depths of the great void beyond the earth. The astronomical vistas of all steps of the experienced are no accounts as those already taken will be increased 30 times in volume.

More than 30 per cent. of the houses in Scotland have only two rooms.

The Ships As Prisons

When men in Spain mention in the future that they have been on a cruise they may be met with suspicious glances. Some of Spain's new prisons are floating ones. Because of the overcrowded conditions of old prisons following conference of the new Vagrancy Act, the government has chartered a few ships and put the superfluous prisoners in them.

Ask Mother—
She Knows

Mother took this medicine before and after the babies came. It gave her more strength and energy when she was nervous and rundown . . . kept her on the job all through the Change. No wonder she recommends it.

LYDIA E. PINKHAM'S
VEGETABLE COMPOUND

At Ursher Lake, Oregon, last winter the total snowfall was 870 inches, or more than 72 feet.

Union workers in Scotland are demanding higher wages.

Ease Pain, Headache in Few Minutes

1 PEG, I'M FRANTIC, THIS WORK MUST BE DONE - AND I'VE A SPLITTING HEADACHE

DON'T WORRY, GET SOME ASPIRIN TABLETS AND YOUR HEADACHE WILL BE GONE BEFORE YOU KNOW IT...

2 LATER

LOOK WHAT I'VE DONE, PEG... ASPIRIN SURE STOPPED THAT AWFUL HEADACHE IN A JIFFY... NEVER FELT BETTER!

I WISH IT WOULD! ASPIRIN IS THE QUICKEST SAFE RELIEF I'VE EVER KNOWN...

...for Quick Relief Say ASPIRIN—When You Buy

Now comes amazingly quick relief from headaches, rheumatism, neuritis, neuralgia ... the fastest safe relief, it is said, yet discovered.

These results are due to a scientific discovery by which an Aspirin Tablet begins to dissolve, or disintegrate, in the amazing space of two seconds after touching moist tongue. And hence to start "taking hold" of pain a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. And then is ready to go to work almost instantly.

When you buy, though, be on guard against substitutes. To be sure you get ASPIRIN'S quick relief, be sure the name Bayer in the form of a cross is on every tablet of Aspirin.

WHY ASPIRIN WORKS SO FAST

Drop an Aspirin Tablet in a glass of water. Note that BEFORE it touches bottom, it has started to disintegrate.

What it does in this glass it does in your stomach. Hence its fast action.

Genuine Aspirin Tablets are made in Canada

Bayer Tablets Aspirin (The Bayer Cross)

French Explorer Expects To Blaze New Trail Over Rockies With The Aid Of Five Tractors

The broad back of the Rocky Mountains where they roll from Red-fern Lake in the head of the Bulkley river in British Columbia, to due for a beating this summer.

C. H. Ramsay, French explorer, engineer and business man, plans to do it with an expedition equipped with five tractors.

Eldorado Hes are, far north of rail lines or highways, has been discovered by trappers and Indians, and then only an occasional that they be met at heart and knowledge of the wilds. Aeroplanes have droned over it, and the map-maker has put it on paper, but mostly the mountains have stood unbeaten.

It is gesture, this expedition of M Redmond, and an adventure it has the spirit that makes man fly over oceans of ice, to brave it all unarmed and unafraid from which it was before it was known. The gesture in this case is not in bringing some new area to light; though much knowledge will undoubtedly be gained, but in the manner of the doing.

One of man's most sturdy inventions has been chosen, the tractor, designed to conquer unwilling places. The surface of the Redmonds areas will be torn and their valleys and peaks echo to the clang of a work-a-day machine. True, they will stand no indomitable as of years when it is finished, and perhaps before the summer has passed may have flouted the effort; but may not consent to be man-ordered without claiming a toll of human victims—and therein lies the adventure.

The traveler will trend where ways can be found, and otherwise will swing across canyons, or be compelled to rapid detours. The expedition will really go from Redmonton to Telegraph Creek, B.C., 1,300 miles, but the actual mileage, the way across the Rockies. Already a contract has been made with an airways company to bring in supplies and mail by means of gasoline, and men are being sent out to cut trails in the lower forests of the region.

The size of the party is not definitely announced; but Redmond has seen with his own eyes, in the big game hunter, and plans to add British Columbia specimens to those she has brought down in many parts of the world. Redmond himself is primarily interested in exploration.

The five tractors will involve five drivers and two engineers to take care of them. Then there will be guides, horses, and men to drive them. For where the tractor cannot go, horses must help as cabins are strung and the machines transported through the air. Included in the equipment will be a 500-pound boat capable of lifting the 1,000-pound tractors. A rubber raft reinforced with logs will be used on rivers too rocky for mountains be crossed, but a way made over running country.

The party should amount to a caravan of men, machinery and beasts when it sets out from Edmonton early in July to pursue its way to Fort St John, B.C., and thence to Redfern.

For M and Mme. Redmond the expedition will be just the latest of many in various parts of the world. It was on a trip home from the South Seas that they learned of the advantages and big-game possibilities of British Columbia; and the Bahara in Africa, and various parts of Asia, have been explored by their travelers.

They both know British Columbia well. With a party which included do horns they staged a successful big-game hunt into the north of the province in 1922, getting as far as Redfern. In 1926 they hunted in more southern territory, that time with 37 horses to carry supplies.

Now the great broad back of a mountain range draws them and they have accepted the challenge.

Subscriber "Oh, Mr. Newrich, I just came to ask for a subscription towards a cot for the new hospital."

Newrich "A cot? Get a double bed and have it changed to one."

W. N. U. 2040

Farm Horse Prospects

Scarcity Of Horses In Canada Is Bound To Be Acute

There is today a very marked scarcity of big, sound, work horses, and owing to the slackening off in breeding and the natural mortality in aged horses, the scarcity is bound to be acute during the next two years. From a breeding standpoint the industry is suffering greatly from a lack of high quality stallions of the draught breeds. Statistical returns indicate a decrease of stallions amounting to 8,000 head between the years 1920 to 1932, a situation which does not lend itself to a rapid increase in the horse population. Stallion owners report that the breeding season of 1932 was the most unsatisfactory experienced for some years, mires being used to an increased extent. The prospects for 1934, says the Agricultural Situation bulletin, is considered to be even more favourable

Vegetable Gardener's Luck

Take A Little Precaution In Planting The Seeds

There is no trick in growing vegetables. Householders have been heard to say, "I have no luck with a garden," but failure is often traceable to carelessness. Very small seeds are sprouted, larger seeds are crowded together in the rows, weeds are allowed to smother the young tender plants, the seed-bed is hard and dry, drainage is bad, and a thousand and one other factors all of which are controllable, according to information from the Dominion Department of Agriculture. With regard to planting beans and peas should be 2 inches in the soil; beet, carrot, cucumber, salsafy, parsnip, radish, spinach, squash, and turnip, one inch; Brussels sprouts, cabbage, cauliflower, celeriac, lettuce, onion, pepper, and tomato, ½ inch; corn, 1 to 2 inches, and celery, ¼ inch.

Fortune In Paper Bag

A bedraggled old woman found lying on a sidewalk in San Francisco, Cal., clutching a paper bag in her hand, was taken to police headquarters, where it was discovered the paper bag contained $4,076 in bills. The woman said the money represented her life savings as a servant and that she was afraid of banks.

Combined Air And Ship Route Across The Atlantic To Be Put In Operation This Summer

Prospective Wheat Yield

Many Factors Appeared That May Seriously Affect Western Prospects

Several factors are apparent at the present time which may affect the prospective wheat yield this year. According to The Agricultural Situation bulletin, issued by the Dominion Department of Agriculture, drought over wide areas during the past five years has reduced reserve moisture and favourable conditions will have to be experienced throughout the growing season to offset the effects of climate during the preceding seasons. Due to the emphasis being laid upon early seeding and the ploughing of stubble land before seeding for purpose of insect control, some consequent reduction in acreage may be expected in the prairie provinces. Some reduction in average yield may be expected over large areas where grasshoppers and pale western cutworms will be present in outbreak numbers.

New Use For Honey

Manitoba Women Using Honey In The Place Of Sugar

Money is "in the news" this spring in much the same way that tomatoes were last fall. When the Beekeepers' convention was held in Winnipeg, a supply of honey to Manitoba house-wives was amply set forth.

Women in the country and in the city have proved that honey is a Manitoba product whose uses have only begun to be explored. Canning, preserving, pickling and baking are some being those with honey instead of sugar. Sugar, furthermore, has to be bought, but the honey can be home-produced.

A Useless Sacrifice

A resident of Bristol, Eng., was fined 10 shillings by a magistrate on a charge he used water for his goldfish bowl during a recent water shortage. The accused admitted the charge but declared that he reduced his own baths during the period lasting only four instead of the usual four so that his prized fish could have fresh water. Although he lectured sympathetically to the diary, the magistrate nevertheless ordered the fine paid

Transatlantic Service Will Make Possible Direct Crossing

A Canadian air-and-ship route across the Atlantic, which will cut eight hours off the present crossing between Britain and Canada, will be put in operation this summer.

The new trans-Atlantic mail service, combining the ship-to-shore method is being planned by a Canadian air transportation company now being formed, and the British Imperial Airways

A new route has been chosen by the Canadian and British companies, and the first stage will be by ship from England to Red Bay in the straits of Belle Isle, and thence by flying boat to Montreal.

The flying boats to be used for carrying the mail from the ship to the mainland will be housed in the Canadian company by the Imperial Airways.

It is estimated that the whole journey will occupy three days 22 hours, as against four days six hours, the best time Atlantic mail crossing so far achieved.

The promoter of a Direct Atlantic crossing has been successfully shelved by the British aviation authorities because no machine capable of achieving it has yet been constructed.

The present plan, however, is really intended to give the Imperial Airways a chance to prove its plan for a direct crossing, while in the meantime experiments are being carried out with machines which will be big enough for a direct crossing.

The appearance of a machine which would be capable of a direct Atlantic crossing with a load of mail is considered to be not far distant and the England-Australia air race is therefore to encourage the formation of new aeroplane which will go a long way towards filling the gap.

British air experts estimate that the machine which will win this race should be capable of a direct hop from England to Bagdad, a distance of 3,000 miles. A direct crossing of the Atlantic is only a little over 2,000 miles.

Members of this kind are already under construction by one big British company, and their performance during the England-Australia race will be carefully watched by those who are interested in the Atlantic air route

Demand Equals Supply

Prince George, B.C., Has No Beer Parlors And Is Satisfied

The Canadian National Railways magazine says the Prince George, British Columbia, board of trade has polled its members that a Los Angeles man wants a regular supply of bear grease for hair tonic He is not particular whether the grease comes from black, brown or grizzly bear. Then a resident of Prince George advertised in the Prince George Citizen: "You do not need to send your bear grease to California. Local market will absorb all you have." Possessors of bear grease are advised to hold their supplies for a rising market

Something We Would Miss

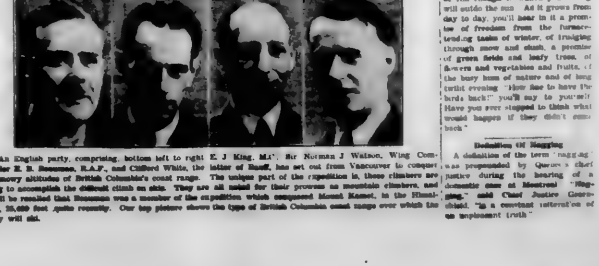
Spring And Summer We Would Be Lonesome Without Birds

Some morning soon the chorus will be full enough to waken you. Soon it will outdo the sun. As it grows from day to day, you'll hear in it a promise of freedom from the furnace-tending tasks of winter, of trudging through snow and mud, a promise of green fields and leafy trees, of flowers and vegetables and fruits, of the busy hum of nature and of long twilit evening. How fine to have the birds back!" you'll say to yourself! Have you ever stopped to think what would happen if they didn't come back."

Definition Of Begging

A definition of the term "begging" was propounded by Queen's chief justice during the hearing of a domestic case at Montreal "Begging," said Chief Justice Greenshield, "is a command intercession or an unpleasant truth"

BRITISH CLIMBERS START CLIMB OVER B.C. MOUNTAINS



An English party, comprising, bottom left to right E. J. King, M.C., Sir Norman J. Watson, Wing Commander E. R. Bennett, R.A.F., and Clifford White, the latter of Banff, has set out from Vancouver to conquer the snowy altitudes of British Columbia's coast range. The unique part of the expedition is, these climbers are going to accomplish the difficult climb on skis. They are all noted for their prowess as mountain climbers, and it will be remided that Bennett was a member of the expedition which conquered Mount Kamet, in the Himalayas, 25,689 feet Aptin recently. Our top picture shows the type of British Columbia coast range over which the party will ski.

"Umbrella" Plane Tested

New Type Marine Travels 185 Miles An Hour

A new type "umbrella" airplane which looks like a 100-foot disc and lands safely inside a 75-foot circle has been given successful tests at Curtis-Wright airport, Chicago.

The plane has a 12-foot circular "spring" instead of standard monoplane construction, with ailerons exercising almost half the circumference of the "umbrella." It is powered with a 135-horsepower motor. In the tests Sunda the plane dropped to earth at a 60-degree angle at a speed slower than a parachute. It gained speed on the take-off at 700 feet a minute and reached an airspeed of 185 miles an hour.

Dwight Morrow, the test pilot, said the plane was more stable than standard types of craft and that a novice could be taught to fly it in a few hours.

Statue To Be Dedicated

The statue of Livingstone, the African explorer and missionary, beside the Victoria Falls, in South Africa, is to be dedicated this year. It is being erected at the base of the falls, which he discovered, so that the spray will fall on his face. The figure is 10 feet tall, and the pedestal seven. It shows the explorer with a stick in one hand, Bible in the other, and field glasses slung at his side.

Flooding Lamb Safe

Plans are under way to build a bank side in Medicine Hat next fall City officials and members of the Chamber of Commerce are investigating the prospects for support, and it is believed that around 10,000 yards would be available.

Little Journeys In Science

NITROGEN

(By Gordon H Ward, M.S.)

Nitrogen is an odorless, tasteless, colorless gas which makes up four-fifths of the air we breathe.

While this is true it is also a fact that neither animals nor plants can use the free nitrogen of the atmosphere. Because the chemists of taking nitrogen directly from the air, which it comprises about four-fifths by volume

Nitrogen occurs in the air unbecause of with other gases and is therefore practically of little value to us. It is the chemical union of nitrogen with other elements that makes it valuable. Nitrogen is found in many compounds, but the most important of these are the nitrates and ammonia salts. Nitrates are found in large deposits in Chile, especially upon the Atacama desert. Ammonia salts are found in small quantities in the soil and in coal. Nitrogen is also found in the animal and vegetable kingdoms. Plants receive their supply necessary nitrogen compounds to be taken up by the roots from the soil. Animals receive their supply of nitrogen by eating plants or other animals that have eaten plants. Nitrogen is found in the protein of all living matter because it is an essential constituent of all protoplasm, which is the living substance of all plant and animal cells.

The principal source of nitrogen in use to-day is the nitrogen which occurs in the form of nitrates in the Chile deposits. Nitrates are found in large quantities in the soil and in coal. Nitrogen is also found in the animal and vegetable kingdoms. Plants receive their supply of

Fine Subway In London

Best Way To Get Places In The Shortest Time

The best way to see London is, as Sir Gladstone did in the days of Queen, from the top of a bus. This may account for the fact that even the Londoner as well as the visitor, makes like his passenger a poor companion with only 'Tis by "tube" or Underground Railway. London is always fascinating, even to a Londoner who likes to sail along watching the teeming life of the community. But if you want to get any place in the shortest time then the best way is to dive below

The "tube" companies have great faith in their transport, however, and are just now completing a three years program of development costing £55,000,000. Lines have been modernized, and some wonderful super-stations have been built; places as interesting to say night to be seen in London. You may stand on the hall, for instance, and watch an animated drama which moves crazily where every train is starting, stopping or moving. Go down below and you will find beautifully clean stations, each with a distinctively tasteful design of ghord the which is not only bright but enables the regular traveller to identify his station even if he cannot see the name from the carriage window. There is not a porter to be seen, nor a signal cabin. Every one of the hundreds of trains is controlled from a single room at St. James' Park station, near the Houses of Parliament. In the huge house of the day the trains run so close on each other's heels that one train is pulling out while the next is pulling in the other end, there being less than one minute between trains. Automatic control prevents accidents. There are 139 stations on the "tube" system.

The London subway service is probably the best in the world.—H. Thomas Tinee-Journal.

Canada Produces Quality Bacon

Government Is Taking Every Precaution To See That Exports Are Of High Grade

The superior quality of Canadian bacon has often occasioned comment by visitors travelling in this country and by the consumers of bacon in other lands. It has contributed to the rapid increase of Canadian bacon shipments to the British market, which in 1931 amounted to only 4,-760,000 pounds, and in 1933 reached a total of 70,000,000 pounds.

In order to ensure continuation of the quality which has made this rapid growth possible, the Canadian government department of agriculture has introduced regulations governing the grading, marketing and sale of bacon. Within a few days of the end of November each year,

Report of Women's Institute Cemetery Committee

With the coming of Spring this Committee is pleased to present their fifth annual report to the Women's Institute and to the general public.

In spite of a dry season in 1931 the Cemetery grounds continue to show evidence of but steady improvement. Lilies and honeysuckle shrubs have grown and bloomed luxuriously. The shrubs and flowers that were set between the shrubs are growing and blooming freely, while the spruce windbreak is also doing well. Two more shrubs will be sold at the request of Mr. G. T. Montgomery whose watchful oversight has been largely responsible for the success of the undertaking. Mr. J. D. McLean, Warden, has also been exceedingly helpful in sending tanks of water to tide over protracted dry spells.

Mr. W. Masters has been a faithful and painstaking caretaker and has done his utmost to keep everything in neat and tidy condition. Should funds be available it would be wise to have the caretaker commence work just as soon as the grass begins to grow. A power lawn mower would make it possible to cover all the ground lines to keep the grass down and the Committee for 1932-33 will investigate the feasibility of such a purchase.

The year starts with a small balance on hand which will shortly be augmented by the proceeds of a function advertised elsewhere in The Record and sponsored by the Women's Institute. Private subscriptions, however, will be welcomed.

The Committee is pleased to report a grant of $50 from the Town Council as well as a gift of $5.00 from the Partridge Hill U.F.W.A. Several who could not attend the card party sent their bit and so helped along. Mr. Montgomery also arranged for a sale of hay grown on the open land which netted $7.00.

The Committee for 1934-35 consists of Mrs. Ed. Graham, Mrs. J. D. McLean and Mrs. A. H. Rogers with Mrs. Wicks and Mrs. Westover members ex officio. Any donations should be sent to Mrs. E. Graham, Convener, and these will be acknowledged in The Record.

The financial statement of the year April 1932 to April 1934 is as follows:

Receipts—

Balance on hand 1932	$62.86
Mrs. Edith Atkinson (Warspite)	1.00
Dr. T.W.E. Henry	5.00
Harry Thorne	10.00
A. H. Rogers	10.00
Miss Rose White (Edmonton)	10.00
Mrs. Elsa Tees (Edmonton)	1.00
Mrs. E. H. Berkley	1.00
W. C. Tite (Tweedie)	5.00
G. Dow	5.00
Frank Stanley	5.00
Dick Meyer	1.00
Partridge Hill (Penhold)	5.00
Mrs. D. Shannon	5.00
Net Proceeds Card Party (Women's Institute)	14.00
Sale of hay	7.00
Grant from Town Council	50.00
Partridge Hill U.F.W.A.	5.00
	$192.00

Expenditure—

Printing reports, postage etc.	$2.50

LOCAL NEWS

Mr. H. Walton and son Bill spent last week-end with Mr. and Mrs. Walton at Beaty, Alberta.

Miss Vivian Hutton of Edmonton is spending the Easter holidays at her home here.

We have been asked to announce that all those interested in Golf to get in touch with Mr. H. Pentet of the Fort Hotel.

There has been several attempts to revive the golf club in the Fort, but so far nothing has been done. We hope for enough interest to get the club started again.

Messrs. S. Bennie, E. Flitcroft and F. Hollis represented the Fort at an important gathering of the I.O.O.F. at Wetaskiwin on Good Friday. When Grand Lodge officers were present and degree work exemplified. The Fort representatives joined the party from Edmonton which motored to Camrose, and proceeded on a special coach attached to the regular train.

A one day Convention of the Conservative Party of Alberta will be held in the MacDonald Hotel, Edmonton, Thursday, April 8th.

It is expected that a large number will attend and there will be several important resolutions to be brought before the convention.

Misses Lolita and Jean Foster are spending the Easter holidays with their parents, Mr. and Mrs. W. J. Foster, after which they will resume teaching at Millet.

Mr. and Mrs. Noel Bullock of Tofield are visiting at the home of Mr. and Mrs. J. T. Wallis.

Mr. and Mrs. Mel. Hall of Redwater, Alberta, are spending the Easter holidays with the latter's parents, Mr. and Mrs. Savage, Clyde.

Mrs. Alex. Smith and Miss A. Atkinson are holidaying at the Coast.

The Easter Monday dance sponsored by the St. George's W.A. was very successful.

A program consisting of modern and old-time dances were keenly enjoyed by the large gathering.

Fred Berry and his Orchestra supplied the music for dancing.

At midnight tasty refreshments were served by the ladies, after which dancing was resumed until the small hours.

CARD OF THANKS

We wish to express our thanks for the floral offerings and sympathy shown us in our bereavement.

MORE ABOUT DOUGLAS CREDIT

(Continued from page 1)

ing method in Canada, that is, what percentage of total business is done by cheques?"

J.—"I don't know. But in thinking about it I should imagine it is fairly high."

W.—"About ninety percent."

J.—"Banking must be pretty profitable as a game when played under such nice rules as these!"

W.—"Now, James, don't get ironical: There is nothing to take exception to in this matter we have been discussing. The banks serve a very useful purpose and our bankers are not greatly disturbed by criticism directed at their profits. What they do resent and fear is any criticism directed at the basic principles upon which credit is created and destroyed. One of these principles is the assumption of the ownership of this financial credit."

J.—"Well, I should say that they are right in that claim. Even if they 'create' it, as you call it, it must be theirs if they make it!"

Monthly Meeting of Fort School Board Held

A regular meeting of the Fort Saskatchewan School Board was held in the Council Chambers on Monday the 2nd of April at 7:30 p.m.

Present Mr. F. Atkinson, Chairman and Trustees, Kis. Calhoun, Dr. Turner and Mr. R. M. Ray.

The minutes of the last meeting held were read and adopted on the motion of Dr. Calhoun.

The Medical Health Officer, Dr. Henry, submitted an exhaustive report of result of the recent examination of the Public school children, together with a tabulated sheet of defects, and names of the children examined. All were examined, in his report the Doctor says, in part, that it is very regrettable that so many children have been overlooked and unmedicated, there being 97 in the former category, and 66 in the latter.

Dr. Calhoun reported that the School piano had been put in good condition by Mr. Young at a cost of $25.00.

Department of Education Inspector Robinson's reports of his recent inspection of the Public School rooms were considered by the Board and filed.

The attention of the Board was called to the unsatisfactory condition of the "Go Slowly" signs on the highway approaching the school, and instructions were given to have same attended to.

The following accounts were passed for payment: $25.00 to R. Young for repairs to School piano, putting in new bridge, tuning and adjusting action etc., $2.37 to Jones, Graham & O'Brien for cheesecloth; $16.50 F. W. Smith, footsteps etc., R. Buchanan, wood $4.00; Fort Hardware Co. $2.75.

Fort Hockey Club Makes Presentation to Bill Geaf

The Fort Saskatchewan Hockey Club held a banquet in the Fort Hotel on Monday evening in honor of Bill Geaf, a member of their team who played in Winnipeg with the Edmonton Athletic Club last week.

During the banquet, which was an enjoyable affair, a presentation of a hockey emblem in the form of a Welsh Charm, suitably engraved was made to Bill Geaf by the Honorary President, Warden J. D. McLean, on behalf of the Fort Hockey Club. Bill thanked the Club in a neat fitting manner.

Pete Meyer acted as Chairman for the occasion and the following spoke briefly: Mr. Jack Geaf, Fred Collins, F. A. Bowman, Jack Wright, Jos Latour, J. Scarbrugh and E. Pascoe.

A reduction of First Class freight rates from Fort William to Edmonton and Calgary, effective April 9, will be 4 cents per hundred according to rates supervisor.

Get your Gingham Dress at Jones, Graham & O'Brien's for the Gingham dance on April 20th.

Good Hope NEWS

Mr. Ernest Johnston was an Edmonton visitor last week.

Mr. and Mrs. Charlie Thomas were City visitors last Thursday.

Miss J. E. Webber has returned to her school, after spending her Easter holidays at her home.

Mrs. Nick Florko is visiting with her mother, Mrs. D. S. Whitson.

Miss Florence Webber is a visitor to the Meyer home this week.

Important Business Dealt With At Council Meeting

A regular meeting of the Council of the Town of Fort Saskatchewan was held in the Council Chambers on Wednesday the 4th. Instant at 8 p.m. Present Mayor Montgomery, Councillors Magee, West, Graham, Petrie, Gaaf and Foster.

The minutes of the last meeting held were read and adopted on the motion of Councillor Magee.

An application for relief was approved by the Council and recommended to the Provincial Relief Commission for the old age pension also received the approval of the Council The March report of the Medical Health Officer, Dr. Henry, was submitted, and filed.

A motion was passed instructing the Secretary-Treasurer to make arrangements immediately for sale of property under the Tax Recovery Act for the year 1934.

The following accounts were passed for payment: F. W. Smith, $1.95; A. M. Carscadden $6.50; Fort Hardware Co., $8.18; Workmen's Comp's Board, $17.66; Alberta Gov't Telephones $6.32; R. G. Fraser for Insurance $16.00; Jones, Graham & O'Brien relief $64.00 and J. T. Lalonde relief $50.00; J. Larose coal relief.

A check up of untagged dogs is being made. Applications for dog licenses for 1934 should be made at the Town Hall immediately.

It is expected that at the next meeting of the Council a day will be set aside for "clean up day". In the meantime much rubbish and refuse could be taken away and cleaning up carried out.

THE WINNIPEG KIDDIES

A real treat is in store for the people of Fort Saskatchewan and vicinity on Wednesday, April 18th, when the Winnipeg Kiddies World Famous Juvenile entertainers will present their entire new Revue "Varieties of 1934" at the Empress Theatre. Coming direct from record breaking engagements at Edmonton and Calgary The Winnipeg Kiddies come to Fort Saskatchewan with a wonderful reputation. Its a stage show deluxe and is great entertainment for old and young. Owing to train connections the show will start at 8 p.m. sharp. Popular prices will prevail. So don't miss the event of the season.

Fort Community Tennis Club Elects Officers at General Meeting on Monday

The annual meeting of the Fort Saskatchewan Tennis Club was held in the Town Hall on Tuesday night, April 10th, with a limited attendance.

It was decided that for this year one court be kept rendered, and the other be reclaimed.

At an executive meeting on Wednesday, April 11th, plans for a Club house will be drawn up and tenders will be called for, such plans and estimates to be submitted before a special meeting on April 19th, in the Town Hall.

As it was felt that play had been greatly improved last year as a result of inter-club competition, it was unanimously decided that this Club again join the District inter-Club tournaments.

Due to the contemplation of the erection of a Club house it would be necessary to raise the fees this week, making same $3.50 for adults and $2.50 for high school students, these fees to be paid by May 15th, if possible.

The Secretary was instructed to send a letter to the Fort Badminton Club extending the appreciation of the Fort Community Tennis Club for the use of the Badminton Hall last summer, when visitors from Edmonton were entertained there; and a letter to the Hon. President, Warden J. D. McLean thanking him for his kind assistance in the upkeep of the courts.

It was decided to hold a dance on May 24th in the Badminton Hall, other arrangements to be made later.

The following officers were chosen for the coming year.

Hon. President, Mr. J. D. McLean. President, Dr. T. W. E. Henry. Vice-Pres., Mrs. G. Hinds.
Sec.-Treas., Miss F. M. Fleming.
Executive, H Walton, A. Simmons, I. Hutton, Floyd Bubar and G. Neale.

Boy Scouts Display Bird Houses, Win Prizes

The Fort Saskatchewan Troop of Boy Scouts and Cub Troop held a Bird House building contest, with the following boys winning prizes, Scouts, Peter Jacobs, first; Hughie Watt, second; Alfred Jacobs, third; in the Cubs, Tommy Carscadden was first; A. Brownfield, second, and Glyn Roberts, third.

The boys took great interest in the contest, there being some twenty-two entries which were judged by Mr. J. O. Jones, Mr. A. H. Gibson and Dr. G. H Turner.

The winning models were on display in Jones, Graham & O'Brien's window last Friday and Saturday.

All the exhibits showed real talent and the work of the two first prizes was exceptionally good. A number of the bird houses will be hung on the trees in the grounds of the Boy Scouts just beside the Town Hall.

IT PAYS TO ADVERTISE

What About Social Credit, Canada?

(Continued from last week)

No. 6

W.—"No, the banks do NOT own the financial credit which they lend. It is something which belongs to the community for it has no real value except what it derives from the Real Credit of the community."

J.—"Say that again—slowly."

W.—"I suppose it is the two terms, Financial credit and Real Credit, that are confusing to you."

J.—"Yes, what do you mean when you talk of Real Credit?"

W.—"Now for the first time we are in the borders of the land of Social Credit. From now on you will be running into original ideas or don't let anything pass that looks doubtful. Real Credit has been defined as the "belief in the capacity of society with all its resources to deliver goods and services at a certain rate." Applying that to an individual unit it simply means that you look, at a factory, its mechanical equipment, its personnel, accessibility to raw materials, etc. and from these factors you can estimate the capacity of the plant to turn out its product. Now, in this case you are dealing with Real Wealth for I suppose that you realize that our Real Credit consists of goods and services and that money in any form is not Wealth. This other thing which I called Financial Credit is something quite different. It is only the shadow of the real thing and has no value in itself. At its best it would give a true image of this real credit I explained. Today it bears no relation to the community's Real Credit.

Financial Credit may be defined as the belief in the capacity of the person or the community credited to deliver money, where, when, and as required. That means that when a banker makes a loan he has faith in the ability of the borrower to repay that loan at the time specified. It means that when a person buys bonds of a municipality the person bell ves that at the time for the repayment of the bond he will receive his original amount of money, and, of course, in addition, he expects to be receiving interest in the meantime according to the contract.

Do you see how in both cases credit is just what the word means a belief in certain contingencies. In case of Real Credit it is concerned with goods and services that are useful to man. In the case of Financial Credit it is concerned with paper and ink, book-keeping, if you like, and which you can see is something that has no value in itself and would be useless but for the existence of other things."

The Western Economic Outlook

Writing in "Agricultural and Industrial Progress in Canada," Mr. John F. Bowsing, Industrial Commissioner Western Lines, Canadian Pacific Railway, declares that confidence in the outlook for 1924 hastens in the imminent feature of the Western situation. Signs are not lacking in many parts of Canada that we are slowly emerging from the depression of the past four years. Improvement appears to be more noticeable in the Eastern parts of Canada, where some acceleration is apparent in the manufacturing industries in the West where we depend almost entirely on agriculture recovery will necessarily be more slow in coming. As a matter of fact we cannot hope for any great degree of prosperity until agriculture has undergone. A good crop, fair prices for our wheat, and a market for our products are the needful factors. Mr. Bowsing says that improvement in trade, hopeful with the reclamation that an opening season will be brought back the more satisfactory feeling that it is possible to consider that a period of trade and financial expansion is, to a reasonable purpose, justified. Anticipated during the last few months, it is not difficult to venture the statement that every effort is being put forth to increase the volume of business throughout the West, by methods that are most likely to result favorably.

It is, of course, too early to state what programme of new development is likely though enquiries towards the end of last year appeared to indicate that some industrial expansion of note might take place during the present year and that there may be more normal available for building operations of all classes. In this relation, there should certainly be a distinct improvement over 1923 if necessary requirements are to be met in the construction of new and commercial buildings, quite apart from any factory expansion. Any programme of moderate size would mean improve the home lumber market, which has been nearly at a standstill for some time, though the export business has been showing important increases.

The lumbering industry is looking for a steady improvement, and activities in relation to development would show a confident outlook in this respect. In British Columbia, Manitoba and western Ontario work continues on an increasingly larger scale, which will bring some important properties into production during the present year.

The Western agricultural situation is a matter of constant study of ways and means to bring it to a more stabilized level but, in the meantime, the Western agriculturist is best on carrying on with ever-improving methods in the production of grain and livestock, having in view that ultimately his returns will justify confidence in Western Canada and its productivity. This is considered to be a reasonable attitude that will eventually realize greater value for farm products, more especially as the major effort is towards a higher standard that will meet export market requirements. This week is already showing results that further the belief that the current years is being followed.

In Alberta and to some extent in Saskatchewan and Manitoba, drilling for oil and gas is to be continued. The Alberta programme is to be of considerable size, according to present indications, the more northern field getting the larger share of the proposed operations.

The sulphate industry of Saskatchewan increased its production during 1923, and it is anticipated other deposits will be brought into production during the present year. The clay areas of southern Saskatchewan continue to cause interest, awaiting further development at such time that capital and growing markets are available.

The fishing industry of the inland lakes of the three Prairie Provinces is being fully investigated in order that the marketing of the products of those lakes may possibly be put on a better footing, and efforts are being made to expand the marketable areas for whitefish, as well as for other species of fish that are available in large quantities from the fresh water lakes of the West.

Fishermen Perish in Storm

Eight Hundred Lives Lost When Storm Lashes Chinese Coast

Eight hundred fishermen were drowned in China, when a storm off the coast of Kwangtung province sank 200 fishing junks.

A Chinese cordless cruiser rushed to the scene and picked up a number of survivors, the reports said.

Kwantung province, lashed by a storm which was reported to have destroyed a fishing fleet, is the northern-most sea coast province of China. It is now located the cities of Canton and Hong Kong, and the mouth of the northern border is the seaport of Swatow.

Tops Made By Prisoners

Many Danish Convicts Employed Trade After Their Release

Convicts in Denmark, land of Hans Christian Anderson, of fairy tale fame, have been put to making tops. They are allowed to keep their knives, tradition instead of helping in mass production. The tops are sold outside, and the men paid regular wages, part of which goes to the state for their keep, some to the Prisoners' Aid Society, a portion is deposited and a small amount to the prisoner. Trade practices or other defect in the present system of marketing the finished product should be accompanied by documentary proof. Opinions are valuable when based upon facts, but without them, are useless in a case of this kind.

It is expected that joint representations from the prairie provinces will be submitted to the Parliamentary Committee, Ottawa, very shortly. The Livestock Associations and the Livestock Pool, have been invited to present available data to Hon. Mr. Euckle to be incorporated in a joint statement on behalf of the three prairie provinces.

Evidence that the ousted of the Indies ocean once was a continental size, including America, has been found by an oceanographical expedition.

European Travel Costs Lower

Reduced Railway Fares to Well As Steam Rates

Contrary to a wide-spread impression, European travel costs this year, despite foreign exchange rates, are actually lower than they were in the peak travel year of 1920, according to the Cunard & American-Donaldson Lines.

This fact is revealed in the moderate tour costs of the big travel agencies and the reduced fares on railways, automobiles and hotels. Private automobiles can be hired at a much lower price, the costs being reduced by 44% in Paris and in Rome by 66%, with comparative reductions in other countries.

Hotel rates, too, are lower, less all over Europe than they were in 1920. In Paris the reduction is 33⅓%, in London 21%, in Nice 30%, in Genoa 35%, in Rome 38%, in Naples 60%, in Lucerne 23%, in Interlaken 40%, in Heidelberg 30%, in Cologne 35%, Amsterdam 41%, and in Brussels 23%.

Railway fares have been lowered in many countries. In Holland, for instance, the reduction has been as much as 22½, in France 20%, in Poland 30%, in Switzerland 20%.

Steam [illegible] ably in Amsterdam for instance, a taxi ride, regardless of the distance covered, costs only 37c, half as much as in 1923.

Organized sight-seeing tours in Europe are considerably cheaper. In Paris, they are 25%, in Nice 29%, in London 14%, in Brussels 22%, in Rome 20%, and in Heidelberg 37%, less than in 1923.

These reductions more than off-set any unfavourable effect of high exchange operating in some countries.

SHE LOST 32 lbs.

How Freaks No Longer Worried Her

"How did she lose that 32 lbs. of fat?" is what you will be asking her (of you know her).—

"About 18 months ago I weighed 196 lbs.—which I can assure you annoyed me very much. Everything seemed a worry to me, especially my clothes. Nothing would fit me comfortably, and walking was unbearable. I was advised by a friend to try Kruschen Salts, and I am very glad I did, too. During the first ten months I lost 28 lbs. of fat. Now, for the last 4 months my weight has been 164 lbs., and I feel much better in health. I have all my weight, thanks to a shilling bottle of Kruschen."—(Mrs.) M. F.

Kruschen contains those six mineral salts, [illegible] necessary to assist in the waters of other famous Kruschen Spas used by generations of fat people to reduce weight.

Kruschen helps blood, nerves, glands and body organs to function properly. You get gain new strength and energy—feel years younger—look better, work better.

To Assist Livestock Industry

Worst Reports On Detrimental Practices Of Livestock Buyers

To assist him in the presentation of the important information respecting the livestock industry to be submitted by joint representation of the government of the prairie provinces, Hon. W. C. Buckle, minister of agriculture for Saskatchewan, is desirous of having farmers interested in the production and marketing of livestock, to send any specific example of where the producer is not the recipient of full market value his hog livestock due to discriminate trade practices or other defect in the present system of marketing livestock. All statements should be accompanied by documentary proof. Opinions are valuable when based upon facts, but without them, are useless in a case of this kind.

It is expected that joint representations from the prairie provinces will be submitted to the Parliamentary Committee, Ottawa, very shortly. The Livestock Associations and the Livestock Pool, have been invited to present available data to Hon. Mr. Buckle to be incorporated in a joint statement on behalf of the three prairie provinces.

Evidence that the ousted of the Indies ocean once was a continental size, including America, has been found by an oceanographical expedition.

Wales Takes Canadian Steel

First Order Will Likely Be Followed By Others.

Canada for the first time in her industrial history, the Guardian says, is supplying South Wales with her steel in competition with the imports received from Belgium, Germany, France and Sweden.

The steamer Grey County recently arrived at Newport with 2,000 tons of Canadian steel billets and further cargoes of this product are expected.

"Although there is a heavy duty on foreign steel," the paper says, "South Wales still imports about 12,000 tons per week, which is used for conversion into tinplates. Chiefs recently gave an order for 1,000,000 boxes of Welsh tinplates and an endeavor is being made to create a reciprocal trade between South Wales and the Dominions."

Farmers of the Netherlands are welcoming the payments by the government from its agricultural crisis fund.

Of 16 swimmers, including nine women, who attempted to swim the English channel in the summer, only one, a woman, was successful.

Report Finding Of King Solomon's Mine

Rhodesian Prospector Refuses To Give Exact Location

Finding of King Solomon's mine, mostly for which has caused the death of thousands has been reported by a prospector in Broken Hill, Northern Rhodesia. He declares that he discovered it while following a wounded buck, but refuses to give the exact location except that it is in the centre of a mine concession. For more than 300 years men have been searching for the legendary mine. In Solomon's day it was said to be so fabulously rich in gold that silver became of little value in his court. The search has gradually narrowed down to an area of about 200,000 square miles. Arabs lurking of many natives in an effort to extract information about it and many Portuguese trapped hundreds of [illegible]

For the first 11 weeks of this year and last year (figures for the latter within brackets), the numbers of live stock shipped from Western to Eastern Canada were: Hogs, 57,205 (78,334); cattle, 15,554 (9,951); calves 146 (19); and sheep, 19,982 (21,480).

Quick Relief Now From Neuralgia

Real ASPIRIN Starts Taking Hold in Four Minutes

Now comes amazingly quick relief from headaches, rheumatism, neuralgia, ... the fastest safe relief, it is said, yet discovered.

These results are due to a principle discovery by which an Aspirin Tablet begins to dissolve, or disintegrate, in the amazing space of two seconds after touching moisture. And hence to start "taking hold" of pain a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. And then is ready to go to work almost instantly.

When you buy, though, be on guard against substitutes. To be sure you get ASPIRIN'S quick relief, be sure the name Bayer in the form of a cross is on every tablet of Aspirin.

A Complete Telephone Service Circling The Globe To Be Realised In The Near Future

Around the world telephone conversation, linking man's voices in every important capital and commercial city, is imminent, according to engineers who are observing the 50th anniversary of the first voice transmission on electric wires.

Already the earth is completely encircled by chains of telephone connection. From the United States men talk across the Pacific with Manila and across the Atlantic through Amsterdam, Berlin or Brussels to Manila again or other eastern oceanic points.

But working connections through Tokio and Shanghai to the United States and Oceania are still needed to provide the links between the last great centres of population.

The principal missing link between the United States and Tokio is rapidly being forged and probably will be into the chain before the end of the year, according to engineers Some authorities expect it within two or three months.

"Tests have been conducted between the United States and Japan for about a year indicating the prospect of regular service in the near future," Stanley Shoup, communication expert in the U.S. department of commerce stated

During the last 12 months the United States opened telephone communications either for regular or special occasions with Russia, Venezuela, Manila, Guatemala, Panama, Costa Rica and Honduras. Earlier it opened communications with virtually every nation in Europe and South America and even with South Africa.

In all, 52 nations are in telephone contact with each other, and every month sees more than 100,000 telephones, except Japan and China, is in part of some world-wide chain.

In addition to perfecting the connection between the United States and Japan, Japanese and Dutch engineers are perfecting the link between Tokio and Bandoeng in Java, which is the terminus of two chains to Europe and a junction between Europe, Australia and New Zealand. Manila and Bandoeng are connected already.

All this development has come since March 10, 1876, when Alexander Graham Bell conversed in Boston with a companion seated in another room a few feet away. Most of the American international telephone development has occurred since 1920, when only Cuba and Canada were linked with the United States.

It is estimated that 23,000,000 telephones are in operation throughout the world to-day, of which about 17,000,000 are in America. The telephone in the United States alone would reach 2,000 times around the world if stretched in a single length.

Ink "Cocoa" On Sails

Egypt Has New Way To Obtain Product From Sea

At Alexandria, in Egypt, they have just started a new way of obtaining ink. The cocoa, it is being "grown" on sails. The water is sprinkled from the sea into a large boat which is towed behind a steamer. The water is then sprayed on to the sails. The process does not [illegible] ... [illegible] ... [illegible] ...

CHILDREN'S COLDS

WORLD HAPPENINGS BRIEFLY TOLD

After up-ending 24 hours and 10 minutes operating continuously, P K Glover, the famous Rosstove swimmer came out of the water to claim his last Sunday a world's record.

Central collegiate orchestra, of Regina, directed by R. J. Staples, were adjudged the winners in the high school orchestras competition at Winnipeg.

Winnipeg on the Canadian government's new natural products marketing bill, said the bill is likely to become the principal issue in Dominion politics.

Electric bulbs giving light corresponding with the colors of the solar spectrum have been used with remarkable results in developing plant life in a laboratory of the Academy of Science in Paris, France.

Britain in getting Lee tea crusaders built. In 1933 the United Kingdom consumed 68,000,000 gallons, a new record, and the consumption was almost as great in winter months as in summer.

Sweden will not be able to reduce her defence armaments, whatever international agreements are made, said R. J. Sandler, Swedish minister of foreign affairs, in an address at Stockholm.

Dr. Jean F. Cuer, professor of German in the University of Alberta, will retire from that position at the end of the present academic year, it has been announced. He has reached the pension age. Dr. Francis Owen, associate professor in the department, will take over teaching of German.

Even Toys Are Speedier

Toy automobiles for the 1934 season have been streamlined like most of their full prototypes, and are speeded up, according to advance information from the toy association. The new models are guaranteed to travel 100 feet in a minute. The character cars will travel five miles without new winding.

Aid For Saskatchewan Horse Breeders

Federal-Provincial Premium Policy Of Assistance To Horse Breeding

The Hon W C Buchanan minister of agriculture for Saskatchewan has made an announcement that is of great interest to the horse breeders of Saskatchewan. He states that the Federal-Provincial Premium Policy of Assistance to Horse Breeding will be put into effect in Saskatchewan this year on a modified scale.

This provides for the payment of a premium to choice stand outstanding stallions that are approved by the federal-provincial board for this season. The premium will be calculated on mares proving to be in foal to these stallions at the rate of $4.00 for each to a maximum of fifty that is, not over fifty will be paid for the services of any one stallion.

The policy is designed to benefit the breeder, but the premium is payable to the stallion owner to allow him to reduce his service fee in order to enable breeders to make use of the services of a premium stallion at a moderate cost and thus raise a superior type of draft horse for the market. The premium is allotted equally between the Dominion Department of Agriculture, Ottawa, and the Saskatchewan Department of Agriculture, Regina.

The only stallions that are eligible for this premium are pure bred, registered animals that are free from unsoundness, of outstanding type, conformation and quality with true, straight action, approximately 1700 at age, and three-year-olds in ordinary breeding condition, must weigh 1600 pounds, four-year-olds must weigh 1750 pounds or over, and mature horses must weigh 1850 pounds or over.

No stallion will be considered for the premium unless he is enrolled and licensed for 1934 under the Provincial Horse Breeders' Act

Spring And Summer Cruises

Delightful Ocean Voyages Planned By The Cunard Line

In announcing a series of twenty spring and summer cruises to the Mediterranean from London and Liverpool the Cunard Line adds a new and greatly enlarged program to the more popular or fugitive parts. The idea of prolonging the call is to enable passengers to attend places of entertainment and sport. Capital Experience gained during the past two years proves that passengers prefer spending the day in shore excursions like to visit a theatre or attend some festivity taking place in the evening.

Two Itineraries have been arranged for the sake to stay late in such ports as Lisbon, Barcelona, Monte Carlo, Naples and Cannes, at all of which other attractive opportunities to take part in spirited night life.

The Itineraries will be made by the Samaria and Laconia. The first 35th Liverpool on March 28, calling among other ports at Lisbon and Vigo. As an illustration of how the new scheme will work out the ship will remain at Lisbon for 24 hours instead of the usual 8 and at Vigo for 15 hours instead of the usual 10. Similar hoodovers will be included at all other ports.

The cruises will range from 6 to 17 days and the rate will begin at 9 guineas. Laconia will sail from Liverpool and the Samaria from London.

During July three additional cruises will be made to the Norwegian Fjords, while two others will visit the principal northern capitals.

Trans-Atlantic passengers with any of these cruises may be booked through any of the Canadian offices of the Cunard Line.

Sailing Up The Pee

The teacher heard a child crying, and rushed out to the playground to find out the cause of the disturbance.

"What is the trouble?" she asked of little Jimmie, who stood calmly by, eating an orange.

"Billy took Fred's orange," explained the witness.

"And where is the orange?" asked the teacher.

"Oh, I have that," replied Jimmie. "You see, I am the buyer"

Warren Hastings was the first governor-general of India.

Little Journeys In Science

OCEAN DEPTHS

(By Gordon B. Greed, M.A.)

Much has been written about the conquering of Mount Everest and other great mountains, but few of us people have interested themselves in the other extremes in nature, the deepest depths of the ocean. Mount Everest in the Himalayas is some 29,000 feet high, but in the Swire Deep, off the island of Mindanao in the Philippines, the sea is 32,088 feet in depth. The average depth of the ocean is considered to be about 12,000 feet, or nearly two and a fourth miles.

Little sunlight goes down farther than 600 feet, and under 1,000 level there is utter darkness, and the water is at freezing point. Sound, as said at the surface, it would freeze. We plant life exists here, but there are many fish who depend for their food solely . . . particles that come down from the surface of the earth. These fish live where the pressure of the water is ten tons to the square inch. Because their tissues are so porous that they admit sufficient water to balance the pressure on the outside these fish are quite at home with that tremendous force pounding on them from all sides.

Fish living at these ocean depths have one peril that confronts no other living creature, the danger of falling upwards. If these fish rise too far above the bottom of the sea, the fact that the outside pressure diminishes, and they are forced towards the surface the bladder bursts and or the fish "explodes".

Given the usual severe storms do not disturb the water 10 a depth of more than 300 feet and so the deeps are always still, dark and cold. Strange fish creatures around in the depths and occasionally there seems to rest a dead whale or some other saturated object from the higher levels.

Let no one think that religion does not apply to private life; it applies to the way you do your most common work just as really as to what are sacred duties.

BIT COLOUR? HOW IS YOUR LIVER?

Wake up your Liver Bile —Without Calomel

Your liver's a very small organ, but it's one which can't pour out enough bile each day to digest out of bed, by tonight in your out in the liver pounds of liquid bile each day into your bowels. You don't completely digest such a condition, and it causes you to feel sluggish, constipated, and all thrown out of sorts. When your liver is normal your bowels should be thoroughly and you feel wonderful.

Carter's Little Liver Pills will move more bile to make you feel right. Ask for Carter's Little Liver Pills by name. Refuse substitutes. Sold at all druggists. 25c.

SUNDAY SCHOOL LESSON

APRIL 15

JESUS TEACHES FORGIVENESS

Golden Text "Forgive us our debts, as we also have forgiven our debtors." Matthew 6:12.

Lesson: Matthew 18:14-35.

Devotional Reading: 1 Corinthians 13:1-8.

Explanation And Comments

How To Treat Offenders, verses 15-18. Jesus advised his disciples first to tell the offender of his fault, then to rebuke him in the presence of two or three others, and then, if he still gave no heed to their words, to tell his offense to the church. "When two or three are gathered in my name," he said, "there am I in the midst of them."

Unlimited Forgiveness, verses 21, 22. Peter's question, "Lord how oft shall my brother sin against me, and I forgive him?" followed naturally "Until seven times?" Peter suggested.

Peter's heart glowed with complacency, for was he not ready to go much farther in forgiveness than was the ordinary man? Did not the Talmud say: "When a man sins against another, that other forgives him once; he forgives him a second time; he forgives him a third time, but the fourth time he does not forgive him?"

"No," answered Jesus, "I tell you not until seven times, but seventy times without number until seventy times seven." Thereupon was given the number of perfection. When love runs on through seven days, it begins again; the circle is complete; no expression could more forcibly convey the impression of ardent, ever-renewed, eternal intention than "seventy times seven." Marvin Vincent. Magnificent in word is love-ruling, there is no place for arithmetic in the grace of forgiveness, or, as Dr. Jowett poetically says, "Forgive to a number where the reckoning power of arithmetic returns with wearied wing."

"O man! forgive thy mortal foe,
Nor ever strive him blow for blow;
For all the scale on earth that live,
To be forgiven must forgive.
Forgive him seventy times and seven;
For all Lo blessed souls in heaven
Are both forgivers and forgiven."
—Tennyson.

Peter himself was an illustration of the grace of unwearied forgiveness. He sinned and sinned and sinned again. Dr. J. D. Jones fancies Peter after Christ's death saying to himself, "O to grace, how great a debtor, daily I'm constrained to be," and again and again taking himself as a text and preaching a sermon of comfort and hope to downcast and despairing souls.

During the month of February E. 178,381 lbs. of branded beef were sold in Canada.

Agricultural Notes

Many Items Of Interest To The Stockman Farmer

The haricot or French bean is a native of South America, and was seen by Columbus in Cuba.

Spinach thrives comparatively independently in Europe from Persia via the Moorish invasion of Spain.

Sugar is being made out of wood in a large-scale factory finished this year at Mannheim, Germany. At present the sugar is fed to livestock.

It was not until after the great war in the U.S. that the tomato reached the northern states, although well-known in the south.

In less 500 years in spreading the potato in Europe, and only five necessary crop between harvest and spring.

The number of producing maple trees on Eastern Canadian farms is estimated at over 70,000,000, of which 24,000,000 will probably be tapped.

Insect pests, notably the corn borer, influence the tonnage of sweet corn available for canning in Canada, but wherever this pest may reduce production in one area, the decrease may be replaced by increased plantings elsewhere.

DENICOTEA CIGARETTE HOLDER

DENICOTEA Cigarette Holder absorbs the nicotine, pyradine, ammonia and resinous and tarry substances found in tobacco smoke.

Complete holder with refills — $1.00 postpaid, or from your Druggist or Tobacconist. Dealers wanted everywhere.

MOVE TO BOOST AND STABILIZE WHEAT PRICES

Rome World wheat experts gathered here for conferences that may settle agricultural and economic history by boosting and stabilizing wheat prices throughout the international agreement and paved the way for other monetary efforts.

Minimum quotations for wheat exports were considered the chief topic for discussion during the meetings, but legislative measures to increase consumption of wheat and the control of all shipments also were important items on the agenda.

The permanent advisory commission on wheat questions signing an international wheat export limitation pact last year was represented as desirous of reaching a world agreement to raise the minimum export wheat price of at least 25 per cent, and expects said that a board of 30 or even 25 per cent would be more welcome.

The present world parity based on the average price of all parcels of imported wheat of all grades sold during the week at British ports, is a little more than 80 gold cents a bushel.

If the advisory commission agrees to recommend a minimum price to the governments and the nations agree, the minimum quotation will be about 30 gold cents.

A caveats by the Associated Press of the delegates assumed the following reaction to the plan:

Great Britain favors it as a means of aiding agricultural exporting countries, including Canada and Australia.

France was one of those formally proposing the measure.

Germany, author of the original proposals, will support it.

Argentine delegates were inclined to be skeptical regarding the practical possibilities of a minimum agreement in the belief that the control thereof will be difficult and evasive.

The United States wants an international agreement on the reduction of wheat acreage as a preliminary to the minimum export price agreement, her argument being that a minimum price accord otherwise would discourage an acreage reduction.

Canada and Australia are the only countries with historical wheat pools to equate the world export parity, and they favor a minimum quotation.

The French delegation suggested to the advisory commission that compensation in the way of increased exports of industrial and other products in return for a reduction of wheat acreage should be made immediately.

Italy, Hungary, its advocates contended, would get the support of other importing countries, including Germany, Italy and Great Britain.

Canada, the world's greatest wheat exporter, is known to be ready to keep her wheat acreage at the present wheat pact. Under her recent Natural Products Marketing Act, wheat boards are to be set up in the wheat growing provinces, acting with a federal board, to license and restrict sales so that Canada's exports abroad will not exceed the maximums she accepted for the crop year 1934-35. The maximum is expected to be around 360,000,000 bushels, compared with the maximum of 300,000,000 for the expiring crop year.

The selection of John I. McFarland as the chief Canadian representative to Rome was interpreted as signifying Canada may again take the initiative she showed last August. McFarland is in charge of Dominion stabilization arrangements for the Winnipeg market.

Girl Guides For Switzerland

Toronto. Girl Guide leaders of each of the Canadian provinces have been asked to recommend a first class Guide, aged 18, to the Canadian headquarters executive committee, for the selection of Canada's representative to the international encampment at the Guide chalet, Adelboden, Switzerland, next July

Appeals Will Be Allowed

Manitoba Government Amends Bill Has Been Altered

Winnipeg Premier John Bracken announced wheat control bill to pass safely through law amendments committee of the Manitoba legislature with one significant amendment. The bill now goes committee of the whole.

The section of the wheat bill governing orders of the wheat control board would be closed to appeal to the courts, the only change from the original.

On the motion of Premier Bracken it was provided that control bill affect the claims in Saskatchewan bill, providing for court action on the wheat board's decision only when a fiat has been obtained.

Bracken guarantee of a minimum price of wheat to the farmer while the world wheat agreement is in effect will be made a resolution to be moved in the legislature by Douglas Campbell, government member for Lakeside. Campbell suggested a price of a minimum of 65 to 70 cents per bushel, basis No. 1 Northern grade C I F Liverpool equivalent for 1935, as at Liverpool or 90 cents at Fort William.

Manitoba Beer Bill

Sale Of Beer By Case In Licensed Hotels

Winnipeg After three hours' debate, the bill to amend the Government Liquor Control Act to permit beer depots for the sale of beer by the case in licensed hotels was given second reading in the Manitoba legislature.

Party lines were split on the debate with Hon. W J Major, attorney-general, declaring widening of the beer selling facilities was necessary in the drive to eliminate bootlegging.

The vote on a motion by George Dinsdale (Cons. Brandon) to delete the clause providing beer depots from other minor amendments was defeated 30-10. There was no record-ed vote on third reading.

Volcano Active In Iceland

Main Of Ashes Over Eastern Part Of The Island

Reykjavik, Iceland Eruptions of the famous Skeidararjoekull Circle volcano grew in intensity and buried the island under ashes over the entire part of eastern Iceland.

The rumblings, which began some time ago, became louder and could be heard distinctly up to 150 miles away.

The centre of the explosions was located beneath the Grimsvotn Lake, Jokul glacier, which is north of the Skeidara river. The nearest village is 12 miles south of the glacier's edge.

Provincial Marketing Board

Alberta Bill To Give Effect To Dominion Marketing Act

Edmonton.—Implementing federal legislation, a bill to provide for the functioning of a provincial marketing board was introduced in the Alberta legislature by Premier J. E. Brownlee. It was given first reading.

The bill aims to give the provincial government power to bring into effect by proclamation any part of the Dominion Marketing Act.

Fortune Awaits Disposition

Will Covering Estate Of Fur Trader Lost Many Years Ago

Fort William A fortune reputed to amount to millions of dollars awaited disposition while apparent direct heirs in widely separated parts of Canada looked for investments.

The fortune consisted of the estate of James Hudson, accumulated 200 years ago in fur trading with the Indians on James Bay territory.

Claimants to the fortune include Moses Frost, 83, of Port Arthur and Mrs. John Perrow, Vancouver. They were grandson and granddaughter respectively of the trader. The fortune is now administered to be in chancery in England.

Delay in settlement of the estate was caused because the will, written on buckskin, was not found from Mr. Frost's mother in 1867.

Kitchener Boys' Band

Western Aggregation To Make Tour Of England And The Continent

Vancouver, B.C. — Arrangements have been completed for the Kitchener Boys' band of Vancouver to make several weeks in England on tour this summer, with the prospect that appearances on the continent will also be filed.

The band, which consist 45 members, will leave Vancouver on June 25 and play in Banff, Alta., Calgary, Swift Current, Sask., Moose Jaw, Sask., Winnipeg and Montreal, sailing from the latter port on July 4.

Aid Measure

Montreal.—The English crown and Socialism are not incompatible, and England would be better off as a hereditary monarchy even if the crown were abolished, Sir Stafford Cripps, leader of the English Labor party, said here in an interview.

Will Go To Ottawa

Victoria. Premier T. D. Pattullo announced that he would go to Ottawa late this month to confer with the federal cabinet on British Columbia matters.

Advance In Science

Dr Tory Criticizes Present Methods Of Education

Toronto Defence of the rapid strides in advancement of science and criticism of the present-day educational methods were made by Dr H M Tory, head of the research bureau of Ottawa in an address before high school principals at the Ontario Educational Association annual convention here.

Answer to the topic of his address, "Why science is worthwhile," said Dr Tory was in the effect on the intellectual life of the modern world, social well-being and material progress.

One of the great social problems of to-day, he said, was unemployment and "to claim scientific effort has resulted in over-production in a world where millions of people are for the moment suffering want is merely to acknowledge the failure in producing a suitable economic structure hindered as it has been by industrial stupidity and greed and by extreme nationalistic policies on the part of statesmen has not kept pace with growth of knowledge and with the world's needs."

A National Responsibility

Hon. C. H. Web Advocates More Centralization In Educational Control

Vancouver — Education is being recognized as a national responsibility, and the British North American Act is due for amendment to meet this growing principle and for amendment without recourse to the imperial parliament, Hon. Dr G. M Weir, British Columbia minister of education, told 1,500 delegates to the annual convention of the B.C. Teachers' Federation.

Dr. Weir declared the federal government should pay half the cost for elementary education. He also suggested there should be greater centralization in educational control and control of educational finances and predicted that within 25 years, possibly 10, the B.N.A. Act would be amended to provide for these changes.

Alberta Planning Bar On Outside Competition

Bill Has Received Its Second Reading In Senate

Edmonton. — Power to prevent outside competitors from entering the Alberta field is provided in "municipal code" legislation now being considered by the provincial legislature.

This was revealed by Premier Brownlee, who moved the bill's second reading of the Bureau of Trade and Industry Act, first legislation of the kind introduced in a Canadian province.

The premier said the purpose of section 15 of the bill was to give power to prevent a similar business from entering Alberta and competing with those in business in this province

Bill Passed For Winter

Fort William — Accumulation of export orders for wheat indicates brisk movement when the shipping season opens, according to Fort William elevator and shipping officials. A total of 13,000,000 bushels of wheat held in local elevators have been sold, according to N. M. Patterson and Co

ELIMINATION OF LOSSES THROUGH RESEARCH WORK

Toronto Elimination of an annual $30,000,000 loss to the wheat farmers of Manitoba and Saskatchewan has been effected by the research bureau of Canada through the development of strains of wheat which are immune to rust, according to Dr H M Tory, head of the bureau.

Addressing the high school principals' section of the Ontario Educational Association here, Dr Tory said the research conducted by the council the federal department of agriculture and the three prairie universities, cost only $250,000.

Since 1916, the annual loss from black stem rust, he said, was $30,000,000. In 1934, research was started to overcome the devastation from it. Within a short time, he said, new wheat strains would be distributed to the rust-infected areas.

Recently, when I was challenged to justify the expenditures made, I stated I was prepared to demonstrate to any body of reasonable men that we had already repaid to the people of Canada, in work done, the total cost of the research council to date," he said.

Another successful research was in connection with the oyster industry of the Maritime provinces, he said. An annual loss amounting to $500,000 resulted from deterioration of the oyster beds, but the loss had been completely eliminated by the council at a cost of $6,000.

Some districts were ill fitted for area of wet years a serious problem arose as Western Canada due to damp and tough grain being put in elevators, Dr Tory continued. "A consequent fall in price due to imperfect drying occurred

"We joined the producers and dealers in an attack upon the problem, solved and eliminated a loss which was estimated in years as high as $2,000,000. A man prominent in the grain trade said to me the other day that this piece of work alone was worth more than the total cost of our research organization to date."

War On Bootleggers

Extend Powers Of Alberta Liquor Control Board

Edmonton.—With the object of giving battle to the bootlegger, the provincial government has brought down a bill in the legislature extending the powers of the liquor control board.

One of the principal provisions given the board power to enter and search premises for vendors of stores, which is now 8 p.m., the purpose of this is to check the sales by bootleggers.

The new act also changes the payment provisions as to $2 yearly and 50 cent monthly permits. It provides for one class of permit, fees for which will be in the discretion of the lieutenant-governor-in-council. In the meantime, fees will be much lower than those now required

Tales Of The North

Miners Get Together And Recall Incidents Of Yukon Days

Quebec — Vivid tales of the north country and the Odyssey of the Sourtoughs who blazed the trails of the Klondyke and the Yukon in the days when men lived on moosehorn and women shared a pistol of home with them in a rudely-constructed hut in Canada's northern hinterland were recalled at the 35th annual meeting of the Canadian Institute of Mining and Metallurgy

Mining prospectors were at hut at the meeting. A number of specimens on prospecting were delivered in which former pan-sifters spoke of their trials and tribulations in early struggles to eke out a living

Car Prices Advance

Detroit. Rising wages and materials costs brought automobile price increases by all automotive producing units of General Motors Corporation.

THREE POSTMASTER GENERALS MEET IN THE BRITISH CAPITAL

Left to right: Hon. Arthur Sauve, Postmaster General of Canada; Sir Kingsley Wood, Postmaster General of Great Britain, and Hon. Robert Archibald Parkhill, Postmaster General of Australia, are shown in London, discussing the International Postal Congress which they recently attended in Cairo.

Revision Is Necessary

British Health Authorities Act Not Wholly Suited To Modern Conditions

The representatives of the people who in 1867 became the Fathers of Confederation had Lower critics in their day just as have the leading men of both parties now at Ottawa. Sometimes things, too, were said of them and by them of each other than anything that is being said today about R. B. Bennett and Mackenzie King. It is Time which "sets her ever-rolling stream, bears all her sons away," that transforms a politician into a statesman. It takes about three hundred years for a good man or a good woman to be elevated to a place among the saints.

The Fathers of the Canadian confederation did a very good job under great difficulties. They won a high place in our history. But what was did not end with them. Nor did the need for wisdom end with the men who performed Sunday-school years have gone by since 1867 and Canada would now be unrecognizable from the standpoint of that time. A new industrial revolution has arisen, based not on the banks of the St. Lawrence and the Atlantic coast, but on a completely land-centered. The B.N.A. Act must and inevitably will be made to meet the requirements of a new and greater day than anybody could envision in 1867. It should, of course and be "ably" disturbed, but it should be brought into touch with the realities of existing conditions. The constitution of the Dominion cannot be left an unbreakable document locked in a box. It is and must all sorts of changes are taking place and necessarily all these changes will have to be registered by amendments to the Act. Toronto Star.

Australians Growing Taller

Dr. Bromley Height May Become Inconvenient Modern Medical Inspector

We have heard of complaints being made of a falling-off in the stature of the people in some particular country, especially warfare or some other equally disastrous scourge. But Australia is seemingly original in the case in that it being exhibited over the rapidly increasing height of the people in that Dominion.

Dr. Janet Greig, Medical Inspector for the Education Department, in an address to the Medical Congress held in Hobart, predicted that the time was coming when the excessive height of Australians would be highly inconvenient. "Already," she said, "doorways in trains and trams are too low for many men, and the average bed and ship's berth are becoming too short. For a long time I have noticed the increasing height of our schoolcrats at 14, 15 and 16 years of age, but in recent years it has leaped at girls of 12 and 13 that is surprising."

While the individual Australian may be inconvenienced by his exceptional late stature is such, so far as Australia as a country is concerned, that should surely end for rejoicing rather than anxiety.

How A Sunset Maker

Prince George Instituted Into Craft At Dundee, Scotland

After opening the new city chambers in Dundee, Scotland, recently, Prince George was initiated into the "sunset-makers" craft. The craft is a survival of the ancient trade guilds, and his originality in the days of honors became the records are said to have been destroyed when Cromwell Monk stabled his horses. Prince George went through a secret ritual, which included his being covered with a 100-year-old tunnel. The making of sunsets in Dundee died out long ago, and the craft is now largely a benevolent institution.

Odd But True

"Have you noticed a very odd thing about those people?" Penelope asked her friend.

"Can't say that I have," said the latter. "They are certainly rather quiet-running at times."

Penelope nodded pensively.

"Yes, but hasn't it ever struck you that they are the ones who generally come in the prize first?" he said.

W. N. U. 2041

Canada Steps to Manchukuo

Perhaps nowhere in the world is attention such a keen one as it is in China at the present time. The belief that Japan's powerful invasion of Manchuria and Jehol was due to Nippon's command of the air, has awakened China to the value of the aeroplane, both as a military arm and as a means of transportation. General Chiang Kai-Shek, former President of the Republic, and Madame Soong-Ling, former war lord of Manchuria, are the moving spirits behind the aviation boom. The United States has benefited to a great extent because of this boom and during the past year it is estimated that several million dollars' worth of machines have been shipped to China. European instructors have been employed to teach the Chinese how to fly the planes. Captain Frank Hawks, noted speed flier, has recently delivered a hunting plane to the National Government, and if it is regarded as satisfactory, a number of the machines will be ordered.

Radical Changes Noted In Chinese Customs

Last Forty Years Have Made Big Difference To Women

Changes in conditions as they affect women in China and during the last 41 years of missionary work in the province of Se-chwan were discovered by Dr. Retta W. Kilborn to the Montreal presbyterial of the Women's Missionary Society of the United Church of Canada.

Forty years ago Chinese women were never seen on the streets except in the case of an elderly servant sent on an errand. Now they are free to come and go as they like. Girls' feet were bound then, now the practice is going out of sight. In country places the custom still exists but will likely disappear there. Dr. Kilborn believed, when it is known to the unbinding.

Education was not thought necessary four decades ago but to-day it is open to any girl who can avail herself of it although many girls are deprived of the chance to go to school because they must stay at home to help with the work. Young people mingling together now choose their own choice of life partners although there is still much mingling of men in cases where a boy or girl may have been betrothed in childhood by the parents, for Chaos on engagement is almost as binding as marriage.

Dr. Kilborn said she had noted a marked improvement in the health of Chinese girls because of their freer life with participation in sports and aquatic exercises.

There were no newspapers 40 years ago but there, according to Dr. Kilborn, are 40 in Chengtu alone. They tell the Chinese of conditions in Christian countries which are noted to emulate.

Aid To Coal Trade

Work Of Canmore Improved By Spring Rain

A correspondent writes: "Neglecting the result of the rain, the production of colored children in various centres of York county, Ontario, was doubled reported 98 per cent. Advertive, according to 98 per cent. Another 97 per cent. He suggests that the teeth of children could be rendered by substituting for the tablets of soap, powder, and so on, 98 per cent. each meal.

"My young son, aged three, made an experiment to supply of wash. The newly formed Ontario Nut Growers' Association will have a splendid 100 people in this county."

But more than 95 per cent. of the stand of maple trees in Eastern Quebec are said for the production of syrup or sugar.

The Home Of Poets

Lasting Impression Is Left By Forms Of Style

William Blake once called a spot of the land over down a fairy's funeral, and on her copying the impulse he went on: "I was writing alone in my garden, there was great silence among the beasts and flowers, and the evening was sweetness in the air; I heard a low and pleasant sound, and I knew not from what cause it arose.

"At last I saw the forms of a fairy or fairies, and unstrowed in the garden, the manner of their size and color of green and grey grasshoppers, bearing a body laid out with a rose leaf, which they buried with many solemn songs directly."

"It was then that the poet dreamed—and now," says a critic in the Manchester Guardian, reporting a lecture on Blake by Lawrence Binyon, as the English poet observed, content to express our own feelings under the imagination.

Radio Important Problem

Radio is of strategic importance of Canada's position in the future air routes of the world was better appreciated by the powerful aviation interests already at work endeavoring to establish and dominate world routes" time by Canadian Transcontinental, J. W. Parkin, technical director in charge of transmission, division of physics and engineering, national research laboratories, said in an address at Ottawa.

Many branches of industry in Czecho-Slovakia are adding workers.

Would Erect High Tower

Plans Presented For Skyscraper On Banks Of Seine

A skyscraper one kilometer high—nearly three times the height of the Empire State Building has been proposed by an architect for the banks of the Seine. The Kilometer Building would provide over the Decorative Arts World Show of 1937. Numerous projects for structures deserting any yet built have been proposed, but this is the most ambitious. The Kilometer Building would be ten per cent. utilitarian. As an engineering feat, its construction would be spectacular also, although relatively less so than the erection of the Eight Tower, whose builder was persecuted as a crank. Some model of the Kilometer Building, now being shown at a modernistic art show, resembles a New York skyscraper with narrower setbacks, but is featured by huge windows in contrast to the narrower ones of most American office buildings.

Request Visit From Squadron

The Canadian government is considering a request from a British squadron of airplanes consists Gen. Italo Balbo's squadron flight to Chicago last year. The request made of the British government is that the squadron of British seaplanes fly the Atlantic to participate in the centenary celebrations attending the celebration of Toronto's one hundredth anniversary.

Lives saved off the coast of Great Britain and Ireland last year totalled 2,000, the largest number since 1926.

Gardening

For Variety Add A Few New Flowers To Your Garden This Year

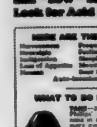
It is a splendid idea to add a few new flowers to the list every year. Without the little departure from the straight road, a garden will soon become stereotyped. Then, too, the annuals we may not want still favorite or that favorite may require fresh ground to reach their utmost amount of bloom begins to fall off. It is a mistake also to base likes and dislikes on the flowers of a few years ago. In the last decade there has been amazing improvement in almost all flowers. Many of the sought-most common annuals, double and semi-double, appear quite alike. Like the asters, can to-day be secured in beautiful singles. Since have been altered. Such things as the Zinnia, for instance coming in dwarf, medium and giant size and this variation of applying to blooms as well as plants. The small dwarf-dragon, is another flower which would not be able to recognize its ancestor of only a few summers back. It comes in most colors-mixed-ate and tall types, and will bloom even after the first frosts in the fall. Cannas is rather a common flower throughout a good deal of Canada, but not the Cannes, unfortunately, that is found in the cool mountains of 1934. Here is a showy plant with single flowers three to four inches in diameter and double almost as big. Salpiglossis should not be omitted from the well balanced flower garden. Its glorified Morning Glory-like flowers, come in rich reds, yellows and purples with splashes of gold. For fragrant, fulsplasms among annuals Marigolds, of various sizes and color combinations, Scabious, Carnations, Sweet Sultans, Calliopsis, Elkhorn and Common, should not be overlooked

The total number of vegetable varieties offered in Canada runs into the hundreds, but nurserymen and commercial market gardeners agree on the following list for general use: Beans—Improved Pod Kidney Wax, Round Pod Kidney Wax, Stringless Green Pod, with Kentucky Wonder and Kentucky Green Pod as pole varieties. Beets—Crosby and Fiat Egyptian for early use and Edmonds Blood Turnip and Detroit Dark Red for later; Globe Mangel for stock feed. Cabbage—Golden Acre's Early, a round headed first early followed by Copenhagen Market and Enkhuizen Glory for mid-season and Danish Ballhead for late. Carrots—Early Chats, for earliest use Golden Gem and Golden Sunshine among the yellows, and Early Market and Early Chats in white, while Golden Bunches is the standard for general use. Cauliflower—Early Snowball, Dwarf Erfurt among the whites; Cobra—Paris Golden early giant strain, for early use, Wonderful for the later crops. Cucumbers—Improved White Spine and Davis Perfect. Lettuce—Grand Rapids is one of the best leaf sorts while New York or Wonderful, looking and Iceberg or Improved Big Boston and Hanson for the best of the head lettuces. Onions—Yellow Globe Danvers, Red Wethersfield, Flat Yellow, Yellow Globe and Prize Taker Red Globe, among the standard sorts, while for early green use pickl Dutch sets. Peas—Laxton's Progress, Thomas Laxton and Laxtonian are the best of the sorts, where it is advisable though not necessary to provide some support, and Little Marvel, and American Wonder among the dwarfs; Parsnips—Hollow Crown; Radish—Scarlet Turnip White Tip, Saxa, and French Breakfast and Scarlet Globe, for early use and Icicle, a big white summer sort and Long Black Spanish for winter use. Spinach—Long Standing Juliane, which does not go to seed readily, and the Savoy leafed Bloomsdale; Swiss Chard—Lucullus, the leafy part of this vegetable is used like spinach of summer and the stem as asparagus; Tomatoes—Earliana, Bonny Best and Livingstone's Globe are standard sorts and Grand Rapids and Marvel for forcing or sticking.

Following an increase in the incomes of tenants, Leaseholds, Scotland, in raising rents of municipal houses.

The contents of an elephant can clear to the tip of its trunk.

18 Past 45 and "Low" and Upset Look for Acid Stomach



WHAT TO DO FOR IT:

TAKE—1 teaspoonful to 4 tablespoonfuls of Phillips' Milk of Magnesia in a glass of water, morning when you get up, after meals and at bedtime if you go to bed.

Phillips' Milk of Magnesia is a new discovery—no taste—no gas—no constipation.

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. The small dosage of Phillips' Milk of Magnesia acts at once to neutralize the acids that cause headache, stomach pains and other distress. Try it. You'll feel like a new person.

But—be careful you get genuine *Phillips'* Milk of Magnesia, or *Phillips'* Milk of Magnesia Tablets when you buy—25c and 50c sizes.

ALSO IN TABLET FORM

Each tiny tablet is the equivalent of a teaspoonful of liquid. Chewable.

MADE IN CANADA

Phillips' Milk of Magnesia

OCCASIONAL WIFE

By ERNA BARCLAY WEBSTER

Author of "Jezebel," "Lipstick Girl" Etc.

SYNOPSIS

Sheila Hart and Peter Anson, young and in love, marry secretly, resulting in his being cut from upper class society. Peter is forced to go to work for a living, dropping sculptor trying to win a competition for a scholarship abroad and Camille is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age, but is studying commercial art in the hope of being an agency job. Others in the story are Avis Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Guy Manning, a friend of Peter's who becomes interested in Camille. At a party at an artist's studio Peter entertains Camille's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the party, Peter and Camille set off to the beach by themselves and tell each other of their love. They return to the studio early morning and Avis and Guy are there. Peter and Camille realize it necessary for Camille to announce before the party that she and Peter are married. Bowled over, Weeks, an advertising agency, shows Camille the finished poster of her work, and for her and tell her they have a new account which requires constant treatment of brunette cut. Camille thinks Peter's fingers are the best leaf sorts while New York or Wonderful, looking and Iceberg or Improved Big Boston and Hanson for the best of the head lettuces. Onions—Yellow Globe Danvers, Red Wethersfield, Flat Yellow, Yellow Globe and Prize Taker Red Globe, among the standard sorts, while for early green use pickl Dutch sets. Peas—Laxton's Progress, Thomas Laxton and Laxtonian are the best of the sorts, where it is advisable though not necessary to provide some support, and Little Marvel, and American Wonder among the dwarfs; Parsnips—Hollow Crown; Radish—Scarlet Turnip White Tip, Saxa, and French Breakfast and Scarlet Globe, for early use and Icicle, a big white summer sort and Long Black Spanish for winter use. Spinach—Long Standing Juliane, which does not go to seed readily, and the Savoy leafed Bloomsdale; Swiss Chard—Lucullus, the leafy part of this vegetable is used like spinach of summer and the stem as asparagus; Tomatoes—Earliana, Bonny Best and Livingstone's Globe are standard sorts and Grand Rapids and Marvel for forcing or sticking.

Following an increase in the incomes of tenants, Leaseholds, Scotland, in raising rents of municipal houses.

CHAPTER XXVIII

She remained with him for another hour striving to find the magic word or gesture that would break this spell of their disenchantment, but he remained aloof and impersonal. There was no ecstatic hour of marriage consummation and close embraces, while they discussed their work and hopes and plans. There was no deeply poignant meeting of mind and body even steeped with wordless meanings.

She might have been any girl who had stepped in and interrupted his work any girl whom he would have entertained with desultory words and a not too gracious manner except for the first ten minutes which had been followed by their ugly quarrel.

They fervently was like an act in a play which they had rehearsed for many times to find exciting any more and Camille walked out into the mellow autumn sunshine, noting and missing, obtrusive of sounds and feeling paralyzed. She avoided traffic by instinct and bounded the right car with half her mind, vaguely muttered

Her world had turned upside down. She and Peter had said unkind words to each other, their eyes had avoided each other's in shame instead of meeting with sympathy Somehow they had lost that precious, happy intimacy which had made any hope possible and every denial a promise. Her eyes stared out the window at the passing shops and buildings. Business, trees, lamp posts, were blurred like a photograph that was badly out of focus. No object was distinguishable.

When Camille had gone, Peter sank into a chair and dropped his head in his hands. For several years was all the weariness and despair of his whole past. Never had life seemed so futile, so meaningless, so a mockery. He might have known it would be like that, he told himself bitterly. Camille was a child, afraid of her talent, and within a few weeks was offering to take care of him. He was a dreamer who couldn't even earn a living for himself.

He believed it was his pride that was hurt because he couldn't support the woman he loved, but it was a consciousness of his own inferiority, of his own lack of talent and ambition and ability, alone. Every success has to have a financial foundation. Yet of all the stupid people in the world, artists imagine that they are not self-made unless they starve and frozen and live absolutely without benefit of all the rest of the world. Is that sense?" she demanded.

"Put into words, it doesn't sound practical," Peter admitted. "But that's the way I feel. I'm not ashamed of it."

"Absolutely not. No more than a man with a lot of pride would take his wife's money to go into any business. But he would borrow money and sell stock for a foundation and get out of work to make good. Your talent and your future are just as good risks as any business, and if you were as practical as you are artistic, you would borrow money to secure your peace of mind and a comfortable living, and then give yourself to your work. You owe that to yourself and Camille."

Peter sighed "I had hoped to make it alone."

"You are stubborn, aren't you?" Avis cried

"All right, granting that you are right and my future is worth an investment, who else could be convinced?"

"No one else needs to be," she replied casually, intent with lighting another cigarette. "I have money to invest, and right now I don't know a safer place to put it than in the career of Peter Anson, famous American sculptor of the future!"

(To Be Continued)

England's Income Tax Heavy

In Canada a married person with $5,000 income pays $120 per year, in England with same income he pays $766 13 The income tax is greater, to the same extent on all incomes in the United Kingdom, and the British pay the highest per capita taxation in the world

CAN'T SLIP OR SLIDE FALSE TEETH

Don't use any old kind of remedy to keep false teeth in place. Use a reliable, scientific one which contains preservative such as Dr. Wernet's Powder, the largest seller in the world. Gives tooth an unique yet comfortable tight feeling. Positively no slipping or clicking—blissful comfort assured all day long. Forms a special comfort cushion to protect and soothe gums. Removed, gums may taste bad—but a moistened cloth removes all disagreeable. Inexpensive—all druggists.

HEALTH MEANS CHARM AND HAPPINESS

Sparkling eyes and smiling lips speak of health and vitality. Clear skin secures. The healthy active girl is body happy and popular.

Perhaps you are not really ill yet when the

day's work is done you are too tired to enjoy into the good times that other women enjoy. For extra energy, try Lydia E. Pinkham's Vegetable Compound. It restores your normal health. Gives you sound pep—more charm.

Remember that 98 out of 100 women report benefit. Let it help you too.

Keep Baby well. MANOL-ROLL

FORT SASKATCHEWAN RECORD
An Independent Paper, printed and published weekly, every Wednesday at Fort Saskatchewan, Alberta, Canada.
Gordon Neale, Editor & Publisher.

WEDNESDAY, APRIL 11th, 1934.

Josephburg News

The Josephburg Junior U. F. A. presented their short plays at the Josephburg school last Friday, April 6th.

The school was crowded and the audience seemed to enjoy the short plays, for we heard many laughs both loud and long. During the intermission other such play the audience were entertained by vocal and violin selections.

We wish to congratulate our young members on their excellent work, and to thank Mr. Gribble for his part in directing.

After the plays, tickets were drawn for the raffle of the Doorstep, Cushion- top and a Canary. The lucky ones were, Mrs. Ed Tyrell the Door-Stop; Miss Ruby Fisher, the Cushion-Top and Mr. Floyd Baker held the lucky ticket for the canary.

DIED

MRS. MARY FORD

Mrs. Mary Ford, of Fort Saskatchewan, passed away in an Edmonton hospital on April 6th, age 46 years. She is survived by three daughters, all of Fort Saskatchewan. The funeral service was held on Monday afternoon, April 9, at 4 p.m., from the Fort Saskatchewan United church. Rev. D. C. Rumsey officiating. Interment was made in the Fort Saskatchewan cemetery.

MRS. MARY MARTHA MOORE

Mary Martha Moore, beloved wife of Fred C. Moore, of Gibbons, Alberta, passed away at Gibbons on April 5th aged 39 years. She is survived by her husband, two brothers, S. A. and W. J. Westacott, and one sister, Mrs. W. J. Smith, all of Portage la Prairie, Man. The funeral service was held on Monday afternoon at 2 p.m. at the Fort Saskatchewan United church. Rev. Rumsey, of Fort Saskatchewan, and Rev. Hayne, of New Amsterdam, officiated, and interment took place in the Fort Saskatchewan cemetery. Revard & Kolbich, funeral service.

Cemetery Committee Held Successful Card Party

The Women's Institute Card Party which was held on Friday evening, April 13th was no enjoyable event. Both Auction and Contract bridge were played, the honors in Contract going to Mrs. L. D. Vee 1st and Mrs. F. W. Smith, while the Auction honors were Mrs. H. Looker and Mr. Alex Pratt, Edmonton.

Hostesses A. P. Wiebe, Edward Graham, J. Westover, J. D. McLean, F. H. Walton, Cecil Ashton and A. H. Rogers supplied the refreshments, while other members in the assisted with arranging the tables and in supplying the cakes were Mesdames, Neale, Butler, A. Cornelissen, Davis, Shorten, W. A. Graham and O. McLellan.

Considering the purpose for which the proceeds are designed, the attendance was somewhat disappointing. Only twelve tables were in play but several who could not be present sent their money along so that the sum proceeds amounted to $17.50.

The Thanks of the Institute is extended to the Trustees of the Union Hall for the use of the building and to the boys who so kindly brought and returned tables from and to the Memorial Hall.

Municipal District Hold Monthly Meeting

The Council of the Municipal District of Clover Bar held a regular meeting on Saturday with all members in attendance.

An order was placed with the Denver Lumber Co. for twenty-five thousand feet of bridge and culvert lumber.

A resolution recommending to the Minister of Surveys that a lease of the road allowance between Sections 11 and 12-53-21-4 be granted to M. Van Camp, Clover Bar, was passed.

Two applications for Old Age Pensions were received and approved granted.

Two applications for relief were received and granted.

Dr. Henry was re-appointed as Medical Health of the District and as a member of the Local Board of Health.

Approval was given of the sale of Block "K", Ridgeway Park to C. E. Morris, Edmonton, at a price of sixty dollars per acre, was given.

Mr. Keith gave a full outline of the proposed agreements between approved hospitals and a number of municipal districts adjacent to the city of Edmonton for the purpose of carrying out the provisions of the Municipal District Act and the Hospital Act. The agreement provides for the payment of seventy-five cents per patient day for public ward patients and fifty cents per patient day for semi-private and private ward patients, which payments will relieve the District of all liability in connection with hospitalization of indigent sick residents. The agreement further provides that the payment of these sums will extend to residents the same rate charges as given to city patients.

Mr. Keith intimated that eight municipal districts had signified their intention to enter into the agreements. By-law No. 41 authorizing the Reeve and Secretary to sign the agreement on behalf of the District was given its first and second reading.

A synopsis of the by-law will now be advertised before receiving its final reading.

With the reading of correspondence and the passing of accounts the meeting adjourned at six o'clock.

Now is the time to buy paint. Two-for-the-price-Sale at the Fort Hardware is on from now until April 30. Now is the time to buy.

Statisticians claim there is only one bath tub in France to every 500 inhabitants. Now we know what they mean by "French Dry Cleaning."

YPRES VALLEY NEWS

The school children have held a concert, box social and dance on Friday, the 13th. The concert was on at 8pm, much has to be said for the way in which the children had been trained. Dancing was especially good. The guest artists also contributed a real good program. They were; singing, Miss Christie Thomas of Fort Saskatchewan, Mr and Mrs Hall. Warning of Partridge Hill Recital; a reserve given by Mrs. C. Flintoft and Mr. Gordon Galen. Miss Enel Gillivan tap the tap dance.

After the concert, boxes were judged and sold. Prizes went to Miss Ina Irwin and Miss Phyllis Armstrong. The judges were, Mrs. Horton of Ardrossan, Mrs. Josh Cameron of [illegible] and Mrs. N Latimer.

Mrs. L. Clark is in Edmonton attending on her daughter, Mrs. C. Riley who is seriously ill in the hospital.

Mrs. B. Gunn and Mr. D. Gunn jr. visited Mrs. Gunn sr. Lendrum, B. C., and Vancouver Tuesday. They report having splendid weather. David got a great opinion of his native sod.

Mr. Griffen of Josephburg addressed the Parent-Teacher association here last night and gave a very interesting address. We were pleased to have a few of our Josephburg friends out.

Mr. and Mrs. Harold Armstrong and Mrs. W. Pearce were Edmonton visitors Saturday. They also experience a hold-up, in the mud.

Mrs. D. Gunn visited the Art Gallery in the Civic Block, Edmonton, and recalled many scenes of her childhood days.

St. George Tennis Club Elects New Officers

The St. George Tennis and Badminton Club held their first meeting for the season 1934 at the Anglican Rectory on the evening of April 11.

The following officers were elected Honorary Members, Mr. and Mrs. C. Read. Mr. and Mrs. J. D. McLean and Mr. Shaver.

President, Mr. T. Todd.
Vice-Presidents, Mrs. R. Budd, Mr. T. Bolt and Miss A. West.
Secretary-Treasurer, Dr. R. H. Mason.

Executive Committee, the above named officers.

Social Committee, Mrs. Shaver, Mrs. T. Nott, Mrs. R. Budd, Miss A. West and Mrs. Von Hfland.

The Executive are looking forward to an enjoyable and successful season.

The Tennis Club will hold an afternoon tea and lawn social at the formal opening of the courts. Announcements will be made later.

Coming Events

Princess Rebekah Lodge are holding a Card Party in the Union Hall on Wednesday, April 25th at 8:45 p.m. Refreshments served. Admission 25c Everybody welcome.

"Just arrived today at Jones, Graham & O'Brien's some new Gingham Dresses with Organdy trim. Special at $1.95. Get one here for the Girl's Club Dance this Friday.

The Sunday evening service in the United Church on April 22, will be under the auspices of the Women's Missionary Society and affiliated C. G.I.T. and Mission Band meeting.

A special meeting of the Fort Tennis Club will be held in the Town Hall on Thursday evening of this week when plans and particulars regarding a club house will be presented. A full attendance is requested.

Local Police Court News

In the local police court on Tuesday, a young lad was fined $10.00 and costs, or in default, one months imprisonment at hard labor, for carrying concealed, an offensive weapon, namely a 32 rifle cut down as a pistol, with a pistol grip.

The weapon was confiscated. The R.C.M. police conducted the prosecution.

What About Social Credit, Canada?

(Continued from last week)
No. 6

J.—But it would be pretty hard to get along without money.

W.—Of course it would. But don't you see that it is useful only in the relation it bears to other things. For instance, remove the commodity and the Real Credit and what is your Financial Credit worth? Suppose you are alone on a desert island where there is nothing whatever to depend on for your ability to construct a shelter and to obtain some form of food. Your entire wealth is greatly enhanced by finding a lump can, or even a steel-blade knife, but what good would it do you to find a million pounds of gold; what pleasure would you derive from finding a thick bundle of banknotes; or what satisfaction would you have if you came across an endorsed cheque for fifty thousand dollars drawn on any Canadian Bank? Very only hope would be in the chance of rescue and of your return to the community where those things could be exchanged for something of real value to you. Do you not see that the Financial Credit issued by banks is worthless unless the community is able to create that amount with a quantity of Real Wealth in the form of goods?"

J.—"I never thought of that before. You've certainly right in that. It is one thing that as far as I can see cannot be denied."

W.—"Yes, and now do you see the relative importance of the banker's part and the part played by the community?"

J.—"Say, Williams, now that you have mentioned it, it is amazing when you come to think about it. The real work is done by the pioneers who open up the country, endure hardships and toil throughout their lives in order to reclaim the land from the wilderness. It is done by the farmers who till the soil and produce life-preserving cereals and other food products; by miners who brave the dangers in the depths of the earth in order to extract the necessary minerals; by fishermen who face the terrors of the sea to add another item to man's sustenance. Then too it is done by the workmen of all trades who transform raw materials into useful goods. It is done by women who make a home for men and care for the children who become the coming generation. It is done by thinkers, teachers, and ministers who seek to

(Continued on page 6)

Fort Ball Re-Organizes For Coming Season

The annual meeting of the Fort Ball Club was held in the Town Hall on Monday evening with the following officers being elected for the coming season:

Hon.-Pres.- Warden J. D. McLean.
President, F. A. Sherman.
1st. Vice.-Pres., Jos. Latour.
2nd Vice.-Pres., Pete Mayer.
Sec.-Treas., J. Connelly.
Manager, F. Collins.
Playing Captain, E. Pocock.
Charlie Sherman, Mascot.

A large crowd of enthusiastic citizens were present, and it is expected with the interest shown and the ball talent available 1934 should be a banner year.

The Club anticipates holding a Sports Celebration on the 24th.

Women's Institute To Try Glove Making

At the regular meeting of the Fort Saskatchewan Women's Institute held on Thursday, April 12, the Home Economics lesson dealt with meats. The grades of meats as influenced by the red and blue ribbon were explained also the characteristics of choice tender meats and fowls. Instructions were given for cooking the various cuts of meat, fowl and fish. Attractive recipes were given to illustrate how tender and palatable the less attractive cuts of meat may be if properly prepared.

Final arrangements were made for the Card Party. Prizes for both Auction and Contract bridge were donated by Mrs. Edward Graham and Mrs. C. H. Grauert.

It was announced that arrangements have been made for holding classes in glove-making in the near future. These classes are open to Institute members and their immediate families. Any member wishing to take the lessons should get in touch with the President, Mrs. J. P. Wiebe immediately as orders for the leathers must be sent off by the first of next week. All those interested are asked to meet at the home of Mrs. A. H. Rogers on Monday afternoon, April 23rd at 2 o'clock in order to select the leather to be ordered.

Owing to the illness of Mrs. A. H. Gibson, the paper on International

Josephburg News

On Saturday, April 14th, Mr. and Mrs. Geo Berg celebrated their Silver wedding anniversary at the home of Mr. and Mrs. Ed. Frey. Over one hundred people were present and the evening was enjoyed by dancing. At midnight a dainty luncheon was served.

Mr. and Mrs. Berg were the recipients of many beautiful gifts of silverware.

Rev. and Mrs. Kerr and son of Vegreville have been visiting with Rev. and Mrs. Wambeach for a short a fortnight.

Mr. and Mrs. Frank I. Mohr and family left last Wednesday for their new home at Wetaskiwin.

Services at the Reformed Church will begin for the summer season, Sunday School at 10:00 a.m., Morning Worship 11 a.m.

Easton Jackson, a thoroughly married darky, was one day apprehended by a life insurance agent.

"Ma, ask," declared Easton, emphatically. "Ah ain't any too safe at home as it is."

Friendliness was held over for a future meeting.

Mrs. H. Looker and Mrs. G. Neale were hostesses during the social hour.

"SALADA" TEA

"Fresh from the Gardens"

Another Season Opens

Advent of spring re-activities has stirred residents of the prairie provinces to active preparation for the new crop. They approach the accustomed tasks with a variety of feelings induced by divers views of the situation of agriculture in the economic fabric of the country. Their future is not so clear, perhaps, as it once was, because they have yet no settled convictions as to what the net effects of the marketing and control legislation before the provincial and federal legislatures will be upon their own husbandry. They see hopeful but limit, realizing that, if there is a bumper crop, the exact significance of the new legislation will become at once apparent.

In these sections of the province which have suffered from drought conditions as well as from the prevailing economic depression, the new season survives a hope that world efforts to raise prices of farm produce will have been successful before the new crop goes on the market. They hope for means for their relief will mean relief from the plight which has forced them to be dependent upon relief, that a more propitious season will place them again upon the road to independence, security and prosperity.

Prairie fields have well-earned the abundance heaped upon them by them more fortunately situated, for their fortitude and solidarity throughout their time of trouble. Much spring has seen them return to the wonted seasonal employment with energy unimpaired by successive privations and disappointments. They have made their plans, undertaken their work mellowed, their reserves shrink to vanishing point; but they have not wilted under the strain. Throughout, they seem to have been inspired by something akin to that philosophy which Count Leo Tolstoy put into the mouth of one of his characters.

"They say: sufferings are misfortunes . . . We imagine that as soon as we are born out of our habitual path all is over, that it is only the beginning of something very bad and good. As long as there is life, there is happiness. There is a great deal, a great deal before us."

There has not been mere passive endurance to oppressive circumstances either. They are constantly seeking means to way out of their difficulties, and for some means of averting future danger of a recurrence of the conditions which have brought them disquiet. They are looking for developments, sooner or later, of a new economic structure, which will give them assurances of better returns, and more stabilized returns, for their labors. They see evidences of a striving after the end they seek in home, imperial and foreign fields, and they believe that the lesson of the depression to last, after all, to be learned.

It is but little over a year ago that Will Dyson, in satiric mood, was moved to say:

"There never was in the world at any other moment so many men going through the motions of thinking without thought resulting."

It is true, there has been much vain, impractical thinking, much invention of illusionary new worlds. But it is to the everlasting credit of the prairie sections of Canada that, at a time when forces seemed impelling them to pursue some plausible remedy or release, they have resisted the temptation and clung tenaciously to the path which experience and the past experiments have taught them was best suited to their needs and most consonant with their desires. It was no impractical, enigmatical, abstract "law" they wanted, it was leadership and a road back to a normal condition in the trade of trade and commerce which would open to them their privileges.

The new orientation of their aspirations as citizens of an agricultural region was indicated, recently, in the growing appreciation of the need of a balanced development of all natural resources of commercial value. The Canadian Pacific Railway has reason to enter upon the new era with enhanced hope and profounder conviction of the great future awaiting their possession. The occasion of the gas strike in the Lloydminster area was considered important enough by the premier of the province to warrant mention on the floor of the legislature; and, indeed, striking of a gas flow of from eight to ten million cubic feet per day cannot but be interpreted as a happy augury of future development. Accession of the province, too, to a place of importance as a gold producer, has been signalized in recent months, gold production having advanced from around $600 in 1932 to more than $110,000 in 1933—an amazing leap, with greater in prospect. These facts, developing the imaginations and widening the horizons of residents of a region hitherto considered almost solely as agricultural, are contributing their part to the new energy with which prairie folk are addressing themselves to the wonted tasks connected with the spring season.

Water Softens Hard

Softening Results Obtained By Use Of Tree Needles

It is said that constant dripping wears away stone, to-day it is easily demonstrated that a jet of water can make the hardest metal seem as soft as cheese. It is used in a machine prepared to determine the water as aeroplane propellers cutting through a foggy morning, or the blades of a steam turbine revolving in steam water. It is a sure test for the right kind of metal for such purposes. Two plugs made of metal to be tested are whirled round inside a casing of a speed of 20,000 revolutions a second, equal to 13⅓ miles an minute. With each revolution the plugs meet and pass through jets of water little thicker than the lead in a pencil. The mounting result is that plugs of stainless steel are bored in half-way through in two or three minutes. Brittle and iron nitride, which is almost as hard as steel, bored out for only 15 or 20 minutes each.

Rheumatism Got Him

80-years-old Pianist Is Relieved by Kruschen

Although old age has not yet kept him from playing accurately at the piano, rheumatism did threaten to do so recently.

"Two years ago," he writes, "I was suddenly taken with rheumatism, all over my left arm. I tried many things all to no purpose. I then commenced taking a half-teaspoonful of Kruschen Salts every morning and soon felt better in my arm, which is not painful and nearly useless, to say the least—in fact, quite better. I am more than pleased, as I am a pianist, and playing would be terrible work. I am just entering my 80th year, and am in good health."—S. L.

The six mineral salts of Kruschen have a direct effect upon the whole bloodstream, neutralizing the acid, which is the recognized cause of rheumatism. They also restore the eliminating organs to proper working order, and so prevent recirculation, thereby checking the further formation of uric acid and other body poisons which undermine the health.

Chinese Scan Of Snow

Say Blood Libation To Fey Gods Of Ski Parties

An extraordinary instance of China-born Nisei [illegible] half a century of hard labor and the example of a mission has just been officially recorded with the ceremonial consecration in the chronicles of the Tschi district. In 1855 a man named Cheng died leaving a son and owing a debt of $120 to his best friend, a man named Yih. Cheng left a "will" covering his son, then ten years old, to the friend, and died. Yih appeared at the Cheng funeral and ceremoniously forgave the debt. Just recently the Cheng heir, now a hale-hearted man sixty years old, appeared at the Yih household with $120 to discharge the debt. Yih, family spokesman, did not accept the money, as an arbitrator was called in, and finally the money was given to the local primary school.

Cuckoo Sailed With Money

Woman Passed Hundred Pounds In Notes Forty Years Old

A small cash'on which was used as a hen-roost by Mrs. T. H. Crosby, of Burton Stone Lane, York, has been found to contain £300, like Crosby was ignorant of the fact. It was stuffed with canvas her to open it. She found among the rags and dust and feathers twenty £5 notes, which were forty years old. The police were informed and the money was claimed by a neighbor, Mrs. Ainsworth, of Ratcliffe street, York, gave a plausible explanation with the cushion in one of her children's toys. Ainsworth could not recollect where she got the promissory or even that she had given it to him. Crosby got the money. The chief constable has ordered him. Crosby £75 and Mrs. Ainsworth £25.

THE CANADA STARCH CO. LIMITED MONTREAL

Trailing Rare Goose

Expedition Trying To Find Nesting Place Of White Variety

The combined efforts of the Canadian government, the Royal Canadian Mounted Police, the Hudson's Bay Company and the Eskimos of Baffin Island were required to track the three geese to its breeding ground.

An expedition equipped to travel by canoe, dog sled, snowshoes and airplanes has gone to British Columbia in an effort to find the nesting place of the rare white variety known as Ross' snow goose. It was first reported in 1861 and observed in the vicinity of Sacramento, California. Although more than 100 have been seen in flight both in the south and the north, its breeding place has never been discovered.

In the winter months Ross' goose is a frequently observed species, but in the spring it is lost after flying over the latitude of Great Slave and Great Bear lakes, and its summer home is problematical. It is a victim of notoriety, which denies the right of privacy.

Brad's Fruit Cake

2 cups brown sugar
½ teaspoon salt
½ cup sour milk
½ cup Blossom's Corn Starch
1 teaspoon baking powder
6 tablespoons Blossom
6 egg yolks
2 cups flour
1 teaspoon soda
2 squares bitter chocolate
¼ cup boiling water

Cream the Blossom until light, then gradually beat in one cup of sugar. Add the well beaten yolks and then beat in the rest of the sugar. Melt the chocolate in a double boiler with the boiling water and when thick add this to the sour milk. Sift the flour and mace starch with the soda, baking powder and salt and add to the mixture alternately with the liquid which has been allowed to cool. Bake in a moderate oven in well-oiled pans (300 degrees).

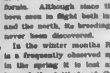
Cuba's Sugar Industry

Has Highest Production In World When Times Are Normal

Cuba produces more than 3,000 miles of railroad and nearly 2,000 miles of government highways, including the modern Central Highway, a $120,000,000 ribbon of pavement that extends for 705 miles from Pinar del Rio to Santiago. Cuba also possesses a modern and efficient network of telephone lines which hundred of automatic dial telephones several years before New York or Chicago had them. During normal times Cuba is the largest producer of raw sugar in the world, and it has the facilities for maintaining this status. In 1925-29 this "sugar bowl of the Antilles" poured into the stream of commerce more than 5,000,000 tons of raw sugar, but in 1933 the crop was limited by presidential decree to 2,000,000 tons. The world also turns to the Island—Anglo in district, in western Cuba, for the choicest cigar tobacco, although due to labor troubles in recent years many of the finest brands of cigars are now manufactured from Cuban tobacco in the United States.

POULTRY RAISER CONQUERS "ROUP"

Praises Minard's Liniment As Remedy for Roup or Sore Throat



Mr. Ernest Tait, Poultry Raiser, Chilliwack, B.C., writes: "I have used Minard's Liniment for Roup and Sore Throat in my poultry and find it the best remedy I have ever used. I have used it for the last two years and have had no trouble with Roup since using it. I also use it for Sore Throat and find it very effective. I have also used it for Rheumatism and find it very good. I have recommended it to many of my friends and they all say it is the best remedy they have ever used."

Minard's Liniment is also a splendid remedy for Colds, Sore Throat, Croup, Chapped Hands, Chilblains, Frost Bites, Sprains, Bruises, Burns, Scalds, Cuts, Wounds, Sore Muscles, Lumbago, Sciatica, Neuralgia, Rheumatism, Earache, Toothache, Backache, Stiff Joints, Colic, Cramps, Diphtheria, Distemper, Garget in Cows, Scratches, Grease Heel, Thrush, Foot Rot, Ringbone, Spavin, Curb, Splint, Sweeny, Poll Evil, Fistula, Saddle Galls, Harness Chafes, Collar Boils, Mange, Scratches, Mud Fever, Sore Shoulders, Sore Backs, Sore Feet, Contracted Cords, Screw Worms, Foot Scald

WORLD HAPPENINGS BRIEFLY TOLD

David Lloyd George recently completed 44 years' unbroken service as member of the House of Commons for Carnarvon.

Train wreckers derailed the Vienna-Paris-London express between Metz and Lion, capital of upper Austria, causing two deaths and a score of injuries.

Argus throughout the Dominion will mourn the death of Sergeant Richard Williamson, 66, past president of the Amputations Association, in the Carlotta Street Veterans' hospital, Toronto, recently.

"No such action has been taken," was Premier R. B. Bennett's reply in the House of Commons to a question if the government contemplated signing an air mail contract with Canadian Airways.

Lights or reflectors on all horse-drawn or other vehicles operating on main or secondary highways are required in a bill to amend the Vehicles and Highway Traffic Act, 1924, which has been introduced in the Alberta legislature.

Royal Canadian Mounted Police officers will be placed in railroad yards shortly to discourage the wanderlust among those fool-some persons who wish to do their spring traveling on the "rods". It was announced.

The 16 per cent. income tax imposed on judges, officers of the military, naval and air forces, and of the Royal Canadian Mounted Police, is continued for another year in a bill which received first reading in the House of Commons.

United States exports to Canada for February totalled $18,981,967 against $11,508,707 in the same month last year, the United States department of commerce announced. Imports from the Dominion for the month were $14,162,439, against $8,-289,894 last year

The London area alone contains over 200,000 registered private automobiles.

Backaches

Quickly relieve backache. Gin Pills give prompt and permanent relief as they act directly but gently on the kidneys, soothing, healing and strengthening them. No "dose and dope" about it.

Give a thousand uses. Always have a pan in the kitchen.

PATENTS

Makes Record Speed

London - Liverpool Train Averages Sixty Miles An Hour

A train hauled by the Princess Royal, Britain's biggest and most powerful locomotive, has beaten the record for scheduled trains on the 189½-mile run from Liverpool to London.

The run has been made in 2 hours, 12 minutes, an average of more than 60 miles an hour. At one point the train reached a speed of 88 miles an hour.

Working Sweaters Out in Factory

By Beth Rogers

NAVY BLUE AND GEORGIA PEACH FLARING TAFFETA LENDS DASHING AND NAVY BLUE SILK DAY DRESS

Isn't this a charming little dress for spring to-wear, a topper?

The interesting arrangement of the bow tie and the pleated inset at the centre-front of the skirt, create the new wind-blown effect.

Printed crepe silk with plain trims is equally lovely for this model.

Carried out in pastel washing silks, cotton prints, linen, pleated seersucker, etc., are darling dresses with short sleeves for your summer wardrobe.

Style No. 570 is designed for sizes 14, 16, 18 years, 36, 38 and 40 bust. It requires 3½ yards 39 inch with ½ yard of 35-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Little Journeys In Science

SUGAR FROM WOOD

(By Gordon H. Scott, M.S.A.)

Science has recently amazed the world by making a sensation from wood ordinary kindling wood. This feat was accomplished by a famous German chemist, Professor Friedrich Bergius, after ten years of experimentation in his laboratory. This chemist found he could convert wood by cooking under pressure with chemicals and he claims that this wood sugar is sweeter and go richer than ordinary sugar from sugar cane. He maintains that in countries where wood can be obtained in large quantities, such as the British Isles, Scandinavia, Northwest United States and Canada, wood sugar can be produced more cheaply than sugar is now produced in the countries located in the torrid zone.

A small factory has been constructed in Germany, which commenced operations last May and can produce from five to 6,000 tons of pure sugar per year from wood. Finely ground wood is first treated with muriatic acid until a syrup is obtained. This syrup of cellulose is then boiled to drive off the acid and a further step in the process changes it into wood sugar. The sugar obtained at this stage can be used, as can also the syrup, as a solder in making iron, for the production of alcohol and for other purposes. Another step converts the wood sugar into chemically pure sugar, which can be used in the candy industry, replacing cane or beet sugar.

The sugar derived from wood is healthier than cane sugar because it contains only of glucose, which is commonly call d grape sugar. Glucose is absorbed by the stomach best of cane, whereas cane sugar must be first changed into grape sugar. Therefore a less strain on the body in using glucose or grape sugar than cane sugar.

Glycerine acetic acid and pure medicinal alcohol are also being produced from wood. In addition to a kind of saw dust has been introduced in Germany as a food for cattle. This saw dust is a by-product in the making of wood sugar.

How are Your Nerves?

Mrs. E. Watson of Regina, Sask., writes: "For years I suffered from Nervousness, Indigestion, Constipation and Pains in the Back. Dr. Pierre's Favorite Prescription and Golden Medical Discovery cured me and I have since recommended them to many friends." Send 10c for trial pkge. Dr. Pierre's Medicine Co., Dept. K, Buffalo, N.Y.

Wa Oum Populated

From Sociology: First Black Art Movement Is Discovered

Professors Gautier and Reygasse of Algiers University reported they had found indications that a civilized time, now lost, once existed in the Sahara desert. The two French scientists returned from an exploration of the Tassili Des Ajjer region, 30 miles south of Fort Polignac to say they had dug from the barren sands, ruins of a large city and, what is said, included vast paintings and carvings with whole age camp and hunt.

SUNDAY SCHOOL LESSON

APRIL 27

OUR ALL FOR THE KINGDOM

Golden Text. "It is more blessed to give than to receive." Acts 20:35

Lesson Matthew 19:1-26

Devotional Reading. Psalm 50:7-15

Explanations and Comments

Giving Up All For The Kingdom. vers. 16-22. "Good teacher what shall I do that I may inherit eternal life?" was the question that a rich young man asked Jesus as he fell at Jesus feet one day. We know from Luke's account that he was a rich young ruler, probably a ruler of the synagogue. It was easy for public and honored men to come to Jesus but a man of wealth and official position must have been interested in counsel about eternal life to throw himself in the dust before Jesus. We can imagine Jesus' kindness in bending the knee to Jesus in a public place. Jesus thought of his "honorable connections," and kept his discipline secret, for fear of the Jews. I cannot imagine Nicodemus coming to Jesus openly during the day. Nicodemus preferred to do his business with Christ secretly by night. But this young ruler cast all considerations of precedence to the wind. He rushed his reputation. He risked disgrace with his friends. It was vital that he should know the secret of eternal life, so down in the dust he went at the Lord's feet.

"Why callest thou me concerning that which is good? One there is that is good," said to obey his will is your right course of action, was Jesus' answer. The maxim of the rabbis was, "There is nothing good but the Law." Jesus had to bring the young man out of that groove of thought, and call he has mixed a good-ness with the goodness of the Law, namely, God's goodness. "But if thou wouldest enter into life, keep the commandments." Jesus further added "Which?" very naturally the young man questioned for he knew the Ten Commandments there were many other laws given by Moses and a multitude given by the scribes. In answer Jesus cited the sixth, seventh, ninth and fifth commandments of the Decalogue, all of them having upon others treatment of others, and then added from Leviticus 19:18, "And, Thou shalt love thy neighbor as thyself."

"All these things have I observed: what lack I yet?" No wonder Jesus, looking upon this young man with a clean record and outward love, loved him (Mk. 10:21), and showed him how his great difficulty by "If thou wouldest be perfect, go, sell that which thou hast, and give to the poor."

Latest Means Of Transport

Aero-Sleigh Is To Undergo A Thorough Test

A thorough test of the aero-sleigh, one of the latest forms of transport, is to be made on a journey of about 1,500 miles through some of the bleakest country in all the world. The form of the aero-sleigh is the body of an aeroplane mounted on skids, with an engine driving a propeller at the rear. It has no wings, and so does not rise from the ground. Twenty-five of these machines are about to leave Leningrad on an expedition that will penetrate the cold and desolate heart of Northern Russia, under the auspices of the Soviet Society for the Promotion of Motoring and the Improvement of Roads.

World Population Increase

According to the latest official computation there are 1,911,562,000 human beings now living in the world. These figures show an increase over last year's population of 20,-000,000. Europe, for the first time, passes the half-billion, showing a total of 500,000,000, or 5,000,000 over 1926.

Russia Raising Ostriches

Bird Associated With Tropics Thrives In Northern Cold

Having discovered that ostrich meat has a delicious flavor, the Moscow Zoological Park has begun breeding ostriches on a large scale. Each pair raises fifteen or sixteen chicks a year. When fully grown the birds weigh between 100 and 120 pounds. It is planned to breed large numbers of ostriches in the eastern steppes of the Soviet Union. Because of its thick layer of fat, which originally served as a protection from the semi-tropical sun, the ostrich can endure the cold Russian winter, even at the latitude of Moscow. In its new home the ostrich will molde to its native calendar and begins to lay eggs in the fall, which corresponds at the spring of the Southern Hemisphere

SCORED ON THE WORLD!—THAT'S LIVER

Wake up your Liver Bile

Constipation and Biliousness unnecessary

Many people who feel sour, sluggish and generally overlooked simply because a normal flow of bile, the natural water laxative needed to digest fats in food, does not get into the bowels and empty the liver.

If your liver is sluggish and you have that bad taste, coated tongue, sick headache, dizziness, constipation, sour stomach, gas, pimples, you need Carter's Little Liver Pills to get the bile flowing freely into the bowels. Then you feel like a million dollars—full of pep, strength and vitality.

Purely vegetable. Act gently but surely. Ask for them by name. Refuse substitutes. All druggists. 25c.

Income Tax For Gypsies

Gypsies in England must pay an income tax. Assessors and collectors recently visited the nomads' winter encampments and demanded the tax. Where they found a newly painted caravan, with bright curtains and generally prosperous appearance they referred to it as a statement of income that they thought too low. They collected the tax before they left.

MATERNITY—MATERNITY MIDDLE AGE

As these three critical periods of a woman needs a medicine she can depend on, that's why so many take Lydia E. Pinkham's Vegetable Compound. 50 cts. and 100 up. "It helps me" "Let it help you, too.

STEVENS PROBE IS TAKING IN A WIDE FIELD

Ottawa The Stevens committee of the House of Commons has investigators working on department stores, furniture industry, clothing industry chain stores and the milling and baking industry. It was announced by Hon. H. H. Stevens. In addition, a certain amount of work has been done on the Canadian rubber footwear and tobacco-growing industries, especially from the combine angle.

Livestock packers and department stores will be represented before the committee to give rebuttal evidence Department stores, it was announced, have secured services of some illustrious economists who are preparing an elaborate brief on price spreads in handling. Packers will specialize on direct livestock buying and the bag differentials both of which have been attacked before the committee by producers and economists.

Many persons in the livestock industry testified to some forward, said the minister. But anyone, whether packer shipper or producer, could appear before the committee and present his side of the question

H. P. Kennedy, Toronto livestock exporter, was questioned regarding operation of the Livestock Marketing board which he suggested should be formed to control price spreads.

George Torrens, Toronto, of the United Farmers' Livestock department, testified on hog sales on the Toronto market. "What is the effect of direct shipments of hogs to packers?" asked Norman Somerville committee counsel.

"It helps to keep the market down," answered Mr Cowin. Hogs were sold on the Toronto market on the basis of dressed carcasses. The packers fixed their differentials in all cases with the exception of the "select" hog which the government under the swine committee fixed a premium of $1. The last occasion on which the packers had altered these fixed differentials was two or three years ago, said Mr. Cowin.

"Do you consider the sale of hogs by fixed differentials in the best method of selling hogs?" questioned Mr Somerville

"No," replied the witness. There should be no fixed differentials. Each grade should be kept separate and sold on its merits."

Elimination of hog differentials and direct shipments to packing plants would raise prices to Ontario producers, said Gordon Orrin, of Toronto, a buyer for the United Farmers' Livestock department.

Hog prices on the Toronto market are fixed by the packers, insisted the U.F.O. official with only two buyers on the market. In addition the packers fixed the differentials and had succeeded, through direct buying, in eliminating small buyers from the open market.

Oswald Freer, a commission man on the St. Boniface market, Winnipeg, urged revision of the livestock freight rates. He suggested a market-to-market system patterned after the American plan with reductions on through rates to the east

Regulation of truckers was urged by both witnesses, the Winnipeg buyer suggesting trucks be used as feeder units for the railways to eliminate direct selling to packers.

Trip For Boy Scout

Winnipeg. — Adjudged the most competent Boy Scout in Manitoba, Cochburn McCallum, King's Scout of the 64th Winnipeg troop was awarded of the Hudson's Bay Company's travelling scholarship for 1934, and will travel into Arctic on this occasion, under the auspices of the Scottish Society for the Promotion of Motoring and the Improvement of Roads.

World Population Increase

According to the latest official computation there are 1,911,562,000 human beings now living in the world. These figures show an increase over last year's population of 20,-000,000. Europe, for the first time, passes the half-billion, showing a total of 500,000,000, or 5,000,000 over 1926.

Hardships Of Byrd Party

Eight Days' Die In Hammock From Extreme Cold

Little American Antarctica How they conquered intense storms and temperatures of 5 degrees below zero in "building" a road 100 miles to the south was told by the main southern party of the second Byrd Antarctic expedition

Capt Alan Innes Taylor formerly of the Royal Canadian Mounted Police and the Royal Flying Corps, was in command of the party

They spent a month behind three mile-dog teams on the rolling ice barrier, marching a total with orange flags and putting down food depots so that next spring a tow can be made to the Rhind Ford and Queen Maude ranges.

"We had one terrible day," the Canadian recorded

"We broke camp early with the hope of making 75 miles by night but encountered a blizzard. At a 31-mile wind made it real The snow was like sand—it was tough going

"Some from his wrist in keeping the dogs, and later both cheeks Plane suffered a frost-bitten cheek from the same cause. But it was fought on the dogs.

"The wind picked up drift from the surface, and the dogs got the full stash of it. They shut their eyes and kept crawling, sometimes belly-deep in the drifts. At first I was afraid the dog team died in harness. Then one of my team founded, and the merciful thing was to shoot him

"Eight days we were bound by the storm. Many times my sleeping bag had 30 pounds of ice on it. On the eighth day the blizzard died.

"Helge, a fine dog in my team, caved in and I carried him on the sledge for a time. Then I thought would be the most important and safest financial institution in the country. We were broke as the per cent. guaranteed dividend and he could not use the logic of it, he said.

A special meeting of the bank next year on centre grain shipped from Alberta points to eastern Canada is to be urged by the legislature. A resolution to that effect was adopted.

Aviator To Take A Rest

Edmonton. — After piling up a total of 60,000 miles at the controls of the big all-metal Junkers freighter on flights between the northland this winter, Walter Gilbert, chief pilot of Canadian Airways in the Mackenzie river district, arrived here en route for a well-earned holiday during the in-between season.

Rescued From Ice Pack

Exciting Work Of Russian Aviators Hosts With Success

Nome, Alaska Rescued after nearly two months spent on the Arctic pack when the vessel Chelyuskin sank off northern Siberia Prof Otto Schmidt, leader of the large party of Russians aboard the ship arrived here by plane from Cape Van Karem, Friday

The gallant leader of the expedition which numbered more than a hundred but of which only 104 were rescues on the ice through rescue work by Russian aviators, was very weak

He had been suffering from bronchial trouble for two or weeks but was taken aboard the last plane to leave the ice camp. Pilot M. T. Slesarev who flew the rescue plane, said, only despite his strenuous protests Prof Schmidt was accompanied on the flight from Cape Van Karem, to which 62 of the party had been flown from the ice camp the past few days. Professor Samoylovitch leader of the rescue expedition, Clyde Arnstead and Bill Lavery, both mechanics of Fairbanks.

The Americans commented when the plane arrived that Prof Schmidt had "lots of courage." The 275-mile flight from Cape Van Karem was made in two hours and 30 minutes.

Assisted to an automobile, Prof Schmidt was rushed to a hotel by a Nome physician to give him medical attention.

The 13 aided safely on the mainland of Russia and the 92 remaining on the ice were members of an expedition to Wrangel Island which Schmidt headed En route home from the island, the ship of the party, the Chelyuskin, was crushed by the floe and sank, February 13.

Urge Publicly-Owned Bank

Resolution Adopted In Alberta To Be Forwarded To Ottawa

Edmonton Adopting a resolution moved by W. R. Howson, Alberta Liberal leader, the legislature declared that the central federal bank, or bank of Canada, should be a publicly-owned and operated institution. The resolution will be forwarded to the Dominion government.

Premier Brownlee, speaking briefly during the debate, asked why a few people in Canada should be permitted to own shares in what probably would be the most important and safest financial institution in the country, and receive as the per cent. guaranteed dividend and he could not see the logic of it, he said.

A special meeting of the bank next year on centre grain shipped from Alberta points to eastern Canada is to be urged by the legislature. A resolution to that effect was adopted.

Aviator To Take A Rest

Edmonton. — After piling up a total of 60,000 miles at the controls of the big all-metal Junkers freighter on flights between the northland this winter, Walter Gilbert, chief pilot of Canadian Airways in the Mackenzie river district, arrived here en route for a well-earned holiday during the in-between season.

Declare Cost Too High

Premier Made Over Government Expenses In Yukon

Ottawa. —The cost of government in the Yukon was too expensive for its population and the revenue derived, Pierre F. Chagvin (Lib. Chateauguay-Beauharnois) protested in the House of Commons.

Items appeared in the main estimates amounting to $298,904, the Liberal member stated. In 1926, $29,000 was spent out of the Dominion treasury for education relief in the Yukon which had a population of 1,200 to 2,000 "The expenditure made there for direct relief should be carefully scrutinized," the Liberal whip continued. The amount of $30,000 was quite large.

RETIREMENT OF CANADA'S SENIOR TRADE COMMISSIONER BRINGS SHAKEUP

With the recent retirement of Harrison Watson as chief Canadian Trade Commissioner in the United Kingdom, four well known Canadians have been moved to more important posts in Canada's foreign trade service. Frederick Fludd, trade commissioner in New York, becomes chief trade commissioner at London, while Douglas S. Cole (top right) moves from Bristol, England, to take Mr Fludd's place in New York. F. H. Palmer (bottom left), Canadian Trade Commissioner at Oslo, Norway, is transferred to Bristol, and A. R. Hemkney (bottom right) goes from Rio de Janeiro, Brazil, to Oslo. All these Trade Commissioners have been abroad for periods ranging from seven to ten years, and owns done much to develop Canada's rapidly growing export trade.

Rescued From Ice Pack

In answer to the Canadian Australian-General's alleged charges regarding relief irregularities in New Brunswick, Premier L. P. D. Tilley, above, stated: "When the investigations are complete I believe it will be found that the dishonorable deeds in New Brunswick are exceptional and as regrettable as effectually as in any province in Canada."

BENNETT FAVORS EARLY REVISION OF B.N.A. ACT

Ottawa.—Premier R. B. Bennett favors early revision of the British North America Act, Canada's written constitution, to permit the Dominion to take undue control of social legislation, he told the House of Commons. But he intimated he did not intend to make a start in that direction until after the next election

Interrupting a leisurely debate on the government unemployment relief bill, Hon. W. D. Euler, former Liberal minister of national revenue, threw out a suggestion for a commission to study co-operation of social legislation under a central authority. He proposed unemployment insurance, old age pensions, health insurance, mothers' allowances, pensions, widows' allowances and poor relief under Dominion administration.

A social legislation set-up on the Euler plan would necessitate revision of the British North America Act giving the prime minister, because the powers of the federal government and the legislatures of the provinces in the very nature of things, the problem cannot be dealt with."

A commission to study co-ordination of social legislation was unnecessary, the prime minister said. The government already had all the information it needed. "If I have the jurisdiction I need nothing further in the way of information. I say that very frankly because we have spent enormous efforts and considerable time and patience to see that legislation is satisfactory.

"All I can usefully say at this time is that I hold a very strong opinion as to the necessity of early revision of the provisions of the B.N.A. Act . . . I need not go further except to say that we recognize the difficulties and may not be able to take forward the solution of the difficulty will be taken in such a way as not to operate the existing constitution.

"But we have not yet approached the problem of amending the B.N.A. Act," he said. "That is in the future and I suppose that in the course of human events and when an indulgent and grateful electorate have honored us with a second term we may be able to make such changes as may be necessary."

Bill Has Second Reading

Measure Designed To Cut Toll Of Road Fatalities

London Senator Cairine Wilson of Ottawa, wearing a corsage bouquet, was an interested listener in the Dominions' gallery of the House of Commons while the senate chamber moved second reading of its transport bill, a measure designed to cut the increasing toll of road fatalities, over which the country has become much exercised

The bill sets a speed limit of 30 miles an hour in towns with lower limits for heavy commercial vehicles, which are also required to carry distinguishing lights

Work On Roads

Fort William, Ont. — Possibility that 22,000 or more men will be working on roads in the Thunder Bay district within a short time was voiced by Frank Spence (M.L.A., Fort William), here on his return from Toronto after prorogation of the provincial legislature. Spence said he was fairly certain a provincial election would be held sometime in June.

Empire Aviation

London.—No concrete scheme for a trans-Atlantic air service to and from Canada has yet been put forth, Sir Philip Sassoon, under secretary for air, declared in the House of Commons when questioned as regards the development of commercial aviation.

Issue Of Education

What Method Is Going To Be The Guiding Principle?

The great issue confronting us now is not whether a "new" system or what society are we going to plan for our children and what is to be the guiding principle, said Prof. Fred Clarke of the department of education of McGill University, addressing the Women's Canadian Club of Montreal.

Shall it be one that puts its faith in the individual life, self-disciplined, or the one that reduces all to a standard pair ns. Nazi, Fascist or whatever it may be, disciplined from outside he asked. If the new countries want to hold to the ideal of democracy, the fight would have to be waged from within, he added.

In looking at the trouble of today, Prof Clarke said it must be of full more and more that education was increasingly the instrument by which a cure might be effected. "There was increasing evidence, he noted, that something of new and immense spiritual importance would emerge from these new centralized the matter of education. There might be weakness in not recognizing that there was still something to be ignored by the older countries

It would be necessary to check the mechanical way in which education has been directed, with its "stinking apparatus of courses of study and examinations," said Prof Clarke "Let us have free access to the privilege of education and yet do something to check over-mechanization."

Caretaker Of Ghost Ship

Gentleman In Montreal Harbor Has Lonely Job

Being caretaker to a dead ship has been Second Mate John Sproul's chore during the winter. Alone on the ghost-like, silent Canadian Cruiser, without radio, without electric light, he has spent the nights down at the Montreal harbor, standing a ghost gray bulk that stands frozen in the ice. "as idle as a painted ship upon a painted ocean." There are a few things more terrifying than a deserted ship, and yet, while the lamp shines through a few stricken cabins, when people dance not a quarter of a mile away, Symons, down at the inner harbor, alongside an empty shed, tends his ghastly ship. By day the paint-peeling vessel, with its unnatural stillness is dismally-hobbled enough, but by night, with the ice cracking all round, and steel plates snapping with the frost, it is blood-Freezing

"It's lonely enough, but I am glad to be earning money, instead of watching the clock and looking for work and eating sawdust," is the philosophical way Second Mate Symons expresses it.

Very Good Advice

Boy Who Followed It Would Get Along All Right

Barney Sheridan, of the Prairie Western Spirit, says his farmer gave him this advice when he was leaving home at 13 to get a job: "Barney, if you get any money, don't count it in a crowd, don't get on or off a wagon when it's going; don't ask a man how old she is, nor poke fun at anybody's clothes; don't inquire of a blind person, or a cripple, how it happened, don't lie unless it is in defense of a good woman, and never run from a fight that you've started As in smoking and drinking, the less the better, but most men of some ilimill do one or the other. He use to tell me to write about men's habits because nobody can write them but the men themselves. Meddling in other people's affairs stirs up trouble and no good. Never do anything too much in my rule -Russell, Kinema, Record

Short Street Library

Girl Guides of Warsaw, Poland, have started a street library for slum children. They collected the books from the well-to-do, and as their clubrooms is far from the slums they have established the library at a gate in the tenement district, leaving the books back and forth in carts. There is no charge for borrowing

BRITAIN PUSHES WORK ON NEW GIANT LINER

The giant liner which the Cunard Company started to build two years ago, and stopped due to lack of funds is now to be completed as quickly as possible. The amalgamation of the Cunard and White Star lines together with a grant not exceeding $10,000,000, by the British Government, makes the construction of the great vessel possible Our picture above was 36-ft. model of the liner, which is to be 1,018 feet long and have a gross tonnage of 75,000 tons. Her construction will embody pr nciples entirely new to ship-building and she is more or less regarded as a mystery ship

May Become A Habit

Survey Shows Many Husbands Help With Dish Washing

Dishwashing would not be such a bad chore if it were not for dish water, laundering, house cleaning and cooking Outside of those things, there seems to be no particular objection to household duties. These conclusions, long assumed from casual observations, have become indisputable facts as a result of surveys recently conducted by the United States Department of Commerce.

The survey made another startling revelation. The dish-washing task is by no means confined to the lady of the house. Husbands do a good part of this disagreeable chore. The survey says that 39.05 per cent. of the households interviewed said they helped with the dishes. The survey does not indicate whether these statements came as boasts or admissions from the hard of the home under some sort of duress.

But here, at least, is wholesome justification for all other husbands who dislike to dish out. It's being done in many good families. Our suspicion, however, is that this practice is a remnant of the honeymoon days. It's fun to wash dishes when you're just married. After the novelty wears off and the practice endures, it's just more or less a matter of habit, as 39.05 per cent. of husbands interviewed by the Department of Commerce, undoubtedly, might testify.

Rat Given Fair Chance

Normal Child Receives Loan Education

Second Class Term Student

The average level of intelligence among school pupils now lower by more than a century ago, Dr. Maggy Thurlow Maclean, of University of Western Ontario, told public school department of the Ontario Educational Association at Toronto.

Dr. Maclean made a cutting attack on the care of mental deficients today and interspersed her address with biting sarcasm.

"Only only do we do all in our power to prolong the lives of mental defectives and to bring children into the world in the original sense as detectives. The idea is that mentally crotchy mannequins as gentlemen, and in some instances are gentlemen by birth and training The object to catch them is to employ people of their own real or supposed class to do the job.

In several of Mr. Wallace's fascinating yarns, the highly glamorous subject of the bogus-crook enterprise, profits of breeding, and not infrequently of life. We wonder whether Lord Trevchard's bright young gentlemen will be as successful as Mr. Wallace's were Detroit Free Press.

Cooled Out Prince's Ides

British Industries Fair Added Week's Wear for Ides Tide Year

The Prince of Wales has given another lead to British business men by a suggestion made to the British Industries Fair

It has just been revealed that the attendance at a man's wear section in the British Industries Fair for the first time this year was due entirely to the Prince's hint.

When touring the 1936 fair with the chairman, W. T. Shears, the Prince remarked "You can hardly expect me to take an interest in this fair if it is devoted entirely to feminine attire. In view of the position Great Britain holds in the matter of men's wear I definitely think you should have a section for men's wear."

Will Wear Safety Belt

When Sir Malcolm Campbell of England, world speed king, roars across the salt lake beds of Utah next August in quest for a faster speed than his present, record of 278 miles an hour, he will be strapped in the seat of his giant Bluebird racer. The Britisher will use a belt similar to the safety belt for aviators.

Originated With Author

Metropolitan Police Head Using Idea Of Late Edgar Wallace

It appears that in one matter at least, the late Edgar Wallace was not an imaginative as prophetic

According to a story from London, Lord Trenchard, Commissioner of Metropolitan Police, in commencing to employ young gentlemen using the world in its original sense as detectives. The idea is that mentally crotchy mannequins as gentlemen, and in some instances are gentlemen by birth and training The object to catch them is to employ people of their own real or supposed class to do the job.

In several of Mr. Wallace's fascinating yarns, the highly glamorous subject of the bogus-crook enterprise, profits of breeding, and not infrequently of life. We wonder whether Lord Trevchard's bright young gentlemen will be as successful as Mr. Wallace's were Detroit Free Press.

Secure In Captivity

Life Of A Sea Animal Is Not So Bad

The stories that have come from Nova Scotia and other deep wooded places about the plight of the moose are heart-rending indeed. These poor kings of the Canadian forests have been no deeply imbedded in snow which the sun cannot reach to melt that they are unable to move They just stand there and slowly starve to death. Apparently they are too great a problem for the game wardens to solve.

Many people condemn zoological gardens for their cruelty in keeping in confined quarters animals which naturally roam the woods, where they make their own homes find their own food and sleep under starry skies But it isn't such a bad life being a zoo animal After all Naturalists say that most animals only live for food and sleep and that it is the necessity of finding food that makes them roam The big carnivorous prey on the smaller right down the line to the smallest mammals. Captive animals they say are quite happy so long as they get food and can sleep in peace. They do not plan for exercise. Indeed, anyone who has watched animals in a zoo will have noticed that they do not run around their enclosures very much They are content to lie and sleep with their full stomachs. If they were in their natural habitats they would have to hunt for their food, often go hungry, and in winter go without food for long periods, either mad, leaves or lichen. These severe winters inflict inconceivable suffering on the animals that are free. Probably this winter hundreds of thousands have died. Sometimes in summer the streams and pools are dried up and the animals die of thirst.

Nature is sometimes cruel to her own. The hunter's gun is often more merciful.

Teacher: "Freddie, what is a decoy?"

Freddie: "It is something a horse breaks into."

Motoring roads in France now total 329,500 miles, those in Germany 317,000, and those in Great Britain 170,736.

Gardening

Now Is The Time To Think About The Flower Garden

Among common annuals are climbers which are to be found growing wild in the fields and hedgerows of the English countryside. Many of these can be used for this purpose in Alberta. The grains a few inches high and when once started need a drought resistant and general neglect. It bears a profusion of tiny white flowers, borne Lilully scented When seed pods start to appear the plant can be smeared back an inch or so with clippers or even a lawn mower, and in ten days another crop of flowers will start Like the poppy the seeds are very fine and to insure them, even germinating it is well to mix with a little dry sand and sow the mixture Another attractive dwarf flower and just as easily grown is the portulaca This is a wonderful thing for hot dry corners The way flowers come in several bright colors A little larger and also a continuous bloomer is the Calendula or pot Marigold The plant is bushy and reaches a height of right to twelve inches Flowers in dark green and the large flowers are orange and yellow The California Poppy is a dwarf annual The foliage is grayish green and very fine Flowers are single a golden yellow and almost two inches across Clarkia, Larkspur and Marigolds are larger plants, but all are showy and easily grown These three require from 4 foot to 18 inches between plants and should be placed about the centre of the flower bed, preferably in clumps At back, or for use as screens one can plant Cosmos and Sunflowers These are late bloomers coming on in August and September The Cosmos afford very much more ornamental than their cousins out in the corn field Then there are Nasturtiums Pansies and Sweet Peas which are well known. Most of these things are planted just as soon as the soil is in work, but any good seed catalogue or the packets themselves contain cultural directions.

As soon as the ground is ready, quite early in the year, sow vegetables and flowers. In the vegetable line, now those things of which the leaves are used. These include Lettuce, Cress, Spinach, Radish, Mustard and Peas There is little danger from planting them too soon as all will bear the most frost. Next in line will be those bulbous or root vegetables such as Beets, Onions, Carrots, Early Turnips and Parsnips. At this time the first of the Potatoes are planted and although not as hardy as the others mentioned they are not susceptible to frost until the plants come through the ground which will be in from a week to a fortnight after planting, depending upon weather conditions. Repeat planting of practically all of the early vegetables every ten days until about the middle of June so that the harvest season for these will be extended. In the line of planting grown crops comes the really tender things, such as Tomato plants, Melons, Cucumbers and Egg Plants which are best kept indoors or sun room until all danger of frost is over Among the hardiest annual flowers are the Calendula, Candytuft, Alyssum, California Poppy, Cosmos, Calliopsis, Larkspur, Poppy, Linaria, Virginia Stock and Sweet Pea The latter must be sown as early in the spring as possible After danger from frost has practically disappeared, Zinnia, Nasturtium, Aster, Phlox, Balsam, Snapdragon, Marigold and Gladiolus may be planted. Dahlia and Cannas are a little more hardier but should not go in until all danger of frost is over.

Gardeners will find the current seed catalogue indispensable The height of the flowers, times of blooming, whether they are suitable for such special purposes as edging, screening, cutting and fragrance are all mentioned and are indispensable facts in laying out a satisfactory garden. In the vegetable line the catalogue continues this useful service by listing different varieties under the heading of Early, Late and Medium so that one can have a succession of vegetables right through.

The Manchurian Highways Board plans to build 1,200 miles of new highways this year.

Canada last year sent Japan's ninth largest source of supply.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young struggling architect trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money unless she comes of age and is to develop commercial art in the hope of landing an income. Others in the story are Avis Werth another wealthy friend; Peter's sister, Peter Sylvia Todd, Peter's model, and Gus Matson, his former room mate with whom he had quarrelled. At a party at an exclusive club Peter introduces Camilla to guests with impersonations When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand When they awake it is early morning and Avis and another boy are standing near them. Avis makes it necessary for Camilla to announce before the party that she and Peter are married Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work, send for her and offer her a salary of $50.00 a week to start and a prospect of having it doubled, $60 a week. Peter is also given a fortune in security employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household Avis Werth rents a studio on the same floor as Peter, and invites him to have lunch there He accepts reluctantly, but is favorably impressed with his visit. Camilla urges Peter to accept of her earnings to help him along, but Peter refuses and they quarrel.

(How do you Wish the Story?)

Relieved!

Mrs. Edward Jones' baby had two teeth when less than three months old. The worst was that at 10 mos nor I can truthfully say that proved bad. Baby Cross Tablets quite cutting his teeth but his fit and well." Teething it is another favorable time for the baby and the mother. Buy a bottle of Cross' and the fever relieved. Buy Cross' Tablets. Very easy to take. Cost no more than other kinds. Price 35c every where.

CHAPTER XXXIX

Peter dismissed Avis suggestion that the shovel money in his future with, "I realized to that. It's really sporting of you to offer still I appreciate your confidence in me, but it wouldn't be fair to borrow money from you just because you are a good friend

You would consider a loan from a stranger if he would take the risk?

I might I know that I am only in a bank sometime whether I make it at sculpturing or not. I certainly don't expect to make a fortune at it.

"Then let me have a look at the work I'd like to be interested in your progress and see you win out. Who knows, you may get somewhere As for money back It will be an unsecured loan, if you like, and I'll have a personal report daily on the progress.

After a moment's silence he added abruptly, "You are very fine and generous."

He looked as though he feared a sentimental outburst. Instead Avis laughed and tossed a cushion at his head. "You're a fool," she said thing Anyway it's all settled then. Come and help me and wash to her desk, took out a pen and check book

Oh, don't give it to me, now I won't do it. Come up regular, with legal papers witnesses and all the red tape You haven't named the interest, you know How do I know you won't charge more than the legal rate?"

He attempted to jest, but his consciousness thoughts were like weights in his brain

"Is six per cent fair enough?"

"Only reasonable Every three months payable when?"

"When you have it to spare So long as you pay the interest, it makes no difference to me how long you have it It will be a relief to have that much more invested Really Her words were lost in a yawn. "Besides, as I told you the other day, I want you to do some work for me And I want it done. I am serious about that, and I'm sure that mother can use some new garden pieces, don't you?

"Why, yes, I do them? There are so many who are better known than I."

"Those are impossible, Peter Anson. Won't you even grant us the honor of having some of the first pieces done by the famous sculptor? Peter Anson's Essence has to start you, surely. And when our friends see what you have done for us in their orders will just naturally follow. One client always leads to another, for a clever woman."

"You are most encouraging," he admitted. And in a kinder tone, "I do appreciate your interest, Avis, but you can understand that I can't impose upon you."

"Anything which I might do for you is no sacrifice for me, you know that. And I'm sure that I'll be a valuable payment on my future account. It gives me no inconvenience and helps you a little for the present."

"A little! It means everything to me!" he declared. Rather and hope and gratitude struggled in his face.

"I hope it will bring everything to you." Avis echoed gently. She began to write the check in her large angular scrawl.

"Wait a minute," Peter interrupted her, "if you won't wait for witnesses for this transaction I'll make out some sort of temporary legal form for a substitute. Or have you some promissory notes about you?"

"You must think I write checks regularly for loans," she laughed. "Of course, I haven't. But why be silly about all that? I'll have your signature on my canceled check. That's enough for me."

"Not quite. I appreciate your confidence to me, but supposing I died suddenly or

She smiled. "In that case, I just wouldn't collect, I guess."

"That's right," with sudden consternation. "Well, you see? I'm not even a good risk."

"You are more absurd every minute. If you try hard enough I suppose you could think of a hundred reasons why I shouldn't let you have

Paper Made From Straw Plus

Newest Pulp Now Used For Manufacture Of Super-Fine Paper

That neat, the common house fly has been turned to good usage the manufacture of paper

The Paper Foundation, planning its exhibit for the 1936 world's fair at Chicago, announced it would display for the first time a paper which claims the wings and legs of flies as one of its principal ingredients.

William J Mishlin, president of the foundation, said it takes about 10,000 flies for the manufacture of every pound of the new paper

"We have found," he said, "that the wings and legs of flies if mixed with the pulp of super-fine paper, give the finished products a peculiar and handsome watermark pattern that it is impossible to duplicate in any other way

"We will probably have to look to Europe for our flies, for health authorities and others have reduced them so comparatively few in the United States" Mishlin added "We are now negotiating with one man in Europe whose name I cannot recall, who will be able to supply house flies to us in carload lots."

Hans Christian Anderson

Son Of Poor Shoemaker Becomes A Writer With World-Wide Fame

Denmark recently celebrated the birthday of a poor shoemaker's son who lived to become one of the nation's most famous literary figures. He was Hans Christian Anderson, whose fairy tales are known among children and adults in almost all countries

Anderson, backward and considered stupid in his youth, was born at Odense in Funen province April 2, 1805 His parents had so little money the entire family lived in one room.

Anderson always scored his biggest success with fantasy, but had ambitions to write romance and drama, and finally some notice as a novelist and a poet.

His fairy tales earned him fame all over Europe. A great welcome awaited every welcome when he went to England in 1847. When he left Charles Dickens bade him farewell at Newcastle pier.

In 1872 Anderson fell out of bed and was severely hurt. He was never well from that time on, and in 1875 he died at his home near Copenhagen.

THE RHYMING OPTIMIST

By Alice Michaelis

THE WILD BIRD

Question:
"That singing bird, the joyous bird,
How could you let it go?"
The silvery voice thrilled green roads
Its clear notes used to flow
All day in my cool pool love
I kept woodland song.
That type of wind and tree and sky
The whole day long."

Must Join Forces

The physicist, chemist and biologist must join forces with the historian, the sociologist and the economist to solve the solution of man's problems, Dr R. C. Wallace, president of the University of Alberta and a member of the National Research Council of Canada, said in an address at Ottawa.

Bought in Choppington, England, three years ago, a pigeon has just returned to its old cote.

Railway curiosities in France last year totalled 14,523,039.

WHEN YOU FEEL GROGGY take a bracing, sparkling glass of ANDREWS LIVER SALT

No Social Worker

Hats off to Amarillo, Texas, where they have only a lady in charge because of mothers-in-law, where the town parades for them, hands serenade them and the mayor extols them in a formal decree. Sweet peas are their symbol, and none-in-law dig down so handsomely for bouquets. Said Amarillo Soriata can't meet the demand. Brooklyn Eagle.

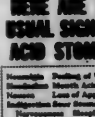
Membership Growing

Membership in the Manitoba boys and girls poultry clubs in 1934 will be in advance of the 300 recorded in 1933, in the opinion of J. C Scholes, who is in charge of the provincial poultry service. He estimates that 15,000 day-old chicks will go out to 300 boys and girls this year.

HERE ARE THE USUAL SIGNS OF ACID STOMACH

Heartburn Feeling of Uneasiness
Sour Stomach Acidity
Nausea Loss of Appetite
Indigestion Bitter Taste
Flatulence Headache
Auto-Intoxication

WHAT TO DO FOR IT



Dissolve a teaspoonful of Bisodol Powder in a glass of water and drink it down. Take small amount of Phillips' Milk of Magnesia after meals and at bedtime whenever you go to bed.

Try—Take the same Phillips' Milk of Magnesia for Acid Indigestion, Sour Stomach and Gas. Relief is prompt and pleasant. Get the original genuine.

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. The usual dosage of Phillips' Milk of Magnesia acts at once to neutralize the acids that cause headaches, digestive pain and other distress. Try it. You'll feel like a new person

But—be careful you get genuine Phillips' Milk of Magnesia or Phillips' Milk of Magnesia Tablets when you buy—25c and 50c sizes.

SEND for TRIAL PACKET

Each only tablet is the equivalent of a large dose of Magnesia. Send for free sample packet.

Little Helps For This Week

"He lendeth me beside the still waters He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake" Psalm 23 2-3.

He leads me where the waters glide,
The waters soft and still
And homeward He will gently guide
My wandering heart and will.
—J. Keble

Out of obedience and devotion arises an habitual faith which makes Him though unseen, a part of all our life. He will guide us in a new path, though it be a rough one, though darkness hang upon it, He will be with us He will bring us home at last Through much trial it may be, in weariness and much fear and fainting of heart, in much sadness and loneliness, in griefs that the world never knows, and under burdens too heavy for the nature but He will suffice for all. By His eye or His voice He will guide us if we be docile and gentle, by His staff and His rod if we wander or are wilful, any way, and by all means, He will bring us to His rest —E. H. Manning.

"Now," said the college man to his dad at the football game, "you will see more excitement for $2 than you ever saw before

"I don't know", replied the old gent; that's what my marriage license cost me

(Continued from page 1)

develope man's mentality, to broaden and refine culture, and to plant the seeds of a spiritual life. It is done by doctors and nurses who strive to preserve the health of the individual, and by the other professions which minister to man's needs. Yes, and it is done even by the cross which some men ascribe as 'capitalism' for if these other specialists, and direct hope underlyings which add to the real wealth of the country it is only fair to acknowledge their services. But what does the banker or financier do?"

W.—"His real task is to administer the financial system so that credit is issued and supplied in a manner which will facilitate all these other operations. At present, however, he thwarts the efforts of the rest of the community because he has come to regard the system which he is permitted to operate as a machine belonging to him which he can work for his own benefit. He is very much like a ticket agent of a railway who would treat the tickets as his own property merely because he handled them in the course of his work.

The paradox is that these men, who operate a system that produces such havoc, may be, in private life, quite irreproachable citizens. They are generally men of the highest probity and rectitude but they stubbornly refuse to admit that they are but the trustees of the Real Wealth o. the community.

Our inability to appreciate the effect of certain principles of cost accounting coupled with bankers' refusal to administer the financial system accordingly is nevertheless with his own value—The two things are responsible for the economic distress under which we suffer today."

Rev. R. J. Hodgins received on Monday the sad news of the death of his mother at London, Ontario. She had reached the age of almost ninety-three years and had enjoyed good health till very recently. Her husband pre-deceased her thirty-two years ago.

******

The hitching rage has finally hit the town. On Sunday afternoon, Margaret Kalmbrunner, Edison Truby, John Chaffee and Art Simmons walked to Edmonton via the railroad tracks.

The quartet left the Fort at 2 p.m. arrived in Edmonton at 7 o'clock, with only taking three rests of a half-an-hour duration. Tired but happy, the young people were motored back to the Fort by Mr. Edmondson.

******

Mr. and Mrs. Carl McKenzie will shortly occupy the East Graham residence.

******

Mr. and Mrs. Alex Frost, Edmonton, were visitors at the home of Mr. and Mrs. G. Neale.

******

Mr. and Mrs. Stan Whitson of Alcomdale paid a flying visit to Mr. and Mrs. C. Magee on Sunday.

******

Miss L. Magee of Hoadshire, Alta., has taken up residence in her home here.

******

Mrs. McPherson and family left for Edmonton last week-end, where they will reside in future.

******

The Young People's Bible Class of the United Church held a successful social evening last Friday evening. Mr. S. O. Jones gave a talk on his boating experiences in the Orient which all agreed was most interesting. Lunch was afterwards served and all the members felt it to be a most enjoyable evening.

******

Last Sunday evenig, Mrs. C. Reed stepped into a small hole on leaving the church and had the misfortune to sprinter a bone in her leg. It is thought that this will not interfere with their plans to leave shortly for a visit to the Old Country.

FORT SASKATCHEWAN RECORD

VOL. 13 No. 4 — FORT SASKATCHEWAN, ALBERTA WEDNESDAY, APRIL 25, 1934 — $1.50 PER YEAR IN ADVANCE

Farmers' Annual Loss From Weeds is $179,200,000

Special Study of Weed Control Financed by Elevator Owners Pamphlets available at Elevators.

Professors of Agricultural College of the University of Manitoba spent taking in weed control and eradication have made compilations indicating that the Western Canadian farmers' annual weeds amounts to $179,200,000 annually.

In order to provide farmers with information as to the best means of combating the weed menace, Dr. G. F. McRae, Professor of Agronomy and W. Tildesley, assistant on weed research, approached the Northwest Grain Dealers' Association with a proposal that the line elevator companies finance scientific investigation concerning weed eradication. Recognizing the need for such a study of the weed problem, the elevator men undertook to raise the funds necessary for the survey. This work has now been proceeding for the past three years and the result of investigations of Professors have been turned over to the Northwest Grain Dealers.

The studies relate to Couch Grass, Sow Thistle, Canada Thistle, control of weeds by chemicals and destruction of weed seeds by cooking. The first of the pamphlets dealing with these subjects is now in the hands of all line elevator agents for free distribution to farmers. Any farmer may now obtain the latest scientific information on this important subject at any local line elevator.

The quality of Canada's grain crops and profitable volume of production can only be secured through control of weeds. Line elevator company owners are deserving of appreciative of the farming population in recognizing the need for scientific study of this problem and the assisting available of the results of these experiments to the farmers of the West.

Fire Destroys Pigs On Pete Belair's Farm

On the farm of Pete Belair, Lamerome, last Tuesday, a fire originating from a burst straw stack, fanned by high winds burnt across the stubbe to straw pig shelters, destroying the large were estimated at 600 pounds apiece, and 24 little pigs.

For a time, the Belair family had all they could do to keep the fire from reaching the other buildings, but were successful in the end. One small pig badly blistered, lives to tell the tale.

This straw stack was burnt three weeks ago and believed to be dead. It just shows that one can't be too careful.

OBITUARY

JAMES BURNS ADAMSON

The funeral service of James Burns Adamson of Fort Saskatchewan, who passed away on April 20, aged 64 years, was held on Saturday afternoon at 2:30 p.m. at the Fort Saskatchewan United church. Rev. D. C. Ramsay officiated and interment took place in the Fort Saskatchewan cemetery. The pallbearers were: Messrs. A. R. Jones, A. Adamson, J. Riddle, J. Saith, J. W. Heath and T. A. Reed. Beautiful floral tributes were received from: His loving wife and family; Canadian Legion; St. George's W. A.; Northern Alberta Pioneers' and Old Timers' association; Mrs. White and Henny (the School Staff); Mr. and Mrs. F. R. MacKay; Mr. and Mrs. J. W. H. Marchin, Camrose; the Staff at the Provincial Relief Department; Dr. and Mrs. Turner, Wm. and Cassidy; Mr. and Mrs. W. J. Foster. He is survived by his wife, four sons, Robert, Franklin, Thomas and Roland, all of Fort Saskatchewan; six daughters, Mrs. A. B. Jones and Miss Annie Adamson, both of Edmonton; Mrs. R. Warrior of Cowmanton, and Miss Verona Adamson, Miss Winnie Adamson and Miss Norah Adamson all of Fort Saskatchewan; two brothers, Thomas of Victoria, B.C., and Abel of Fort Saskatchewan; and two sisters, Mrs. K. Brankey of Bethel, Ireland, and Mrs. A. Beer of Brownsray, Alberta. Howard & McBride, funeral service.

Fort To Hold Big Sports Day on May 24th

At an enthusiastic meeting of the Fort Ball Club Monday evening in the Town Hall, further arrangements were made to hold sport here on May 24th.

The following have been asked to work on the various committees as Chairmen and they will in turn pick a committee:

Mr F. Sherman, Chairman of Committees
Finance, D. Roberts, assisted by J. Connolly
Advertising, F. Smith.
Music, G. Neale, with A. Mann, H. A. Watt, and A. Simmons assisting.
Decorating, W. J. Foster
Grounds, Jack Cavanagh.
Concessions, J. Wright.
Refreshments, H. Truby
Sports, Joe Lukow.
Police, Stan Brenda.
Tickets, E. Hudson, assisted by A. Mann.

A full program of sports consisting of baseball and basketball tournaments, horseshoe pitching contest and many other sports.

There will be a band in attendance all day and in the evening a big dance will be held in the Simmons Hall

Everything will be done to revive the old-time sports day in Fort Saskatchewan. So come out and see the fun.

LOCAL NEWS

It is reported that Constable Louis Dubue, R.C.M.P., will spend two weeks holidays here in July in this district.

He is stationed in Quebec City.

******

Nearly two hundred people attended the Girls' A.A.A dance in the Badminton Hall on Friday evening. Visitors were present from a number of outside points. At midnight refreshments were served by the girls.

The music by Frank Smith's Five Piece Orchestra was enjoyed.

******

Have you put a guess on the Corgleum rug at Jones, Graham & O'Brien's? Everyone is going to win that rug, why not you?

All you have to do to win this fine rug is to guess the correct or nearest number on the rug, which is on display in the window.

Miss E. Williams, employee at the Fort Hotel, won the Corgleum rug given away last year, with a guess of 2998, the right number being 2988.

******

The Fort Baseball Club wishes to thank the Community Tennis Club for changing the date of their dance, which allows the Ball Club May 24th

Coming Events

The Channel Guild of St. George's Church will hold a Plant Sale and Afternoon Tea in the Rectory on Friday, April 27th, from 3 till 6 o'clock.

******

MAY 24th
Gigantic Annual Sports Day
Baseball and Basketball Tournament

All kinds of races, contests etc.
See the large handbills and next week's issued for a complete summary of the many events to be enjoyed by all.

APPLICATION FOR LEASE OF ROAD ALLOWANCE OR SURVEYED HIGHWAY

Notice is hereby given that M. Van Camp of Clover Bar has made application to the Minister of Public Works, Edmonton, for a lease of the following road allowance or surveyed highway, viz.: Road of R.L.O. Sec. 11, Twp. 53, R. 21, W.4th Mer.

Any person against the granting of the said easement lease must be forwarded to the Minister of Public Works, Edmonton within thirty days from the date of this notice.

Dated at Fort Saskatchewan this 20th day of April, 1934.

M. Van Camp, (Applicant).

NAVY LEAGUE DOES VALUABLE WORK

Rallying to the support of the Navy League of Canada in its work of assisting widows and orphans of men of the Merchant Marine Service, Fort Saskatchewan subscribed $11.50 to this cause in a recent campaign here conducted by Fred Cooke, organizer of the Alberta Division.

What About Social Credit, Canada?

(Continued from last week)

No. 7

J.—"You spoke of an error in cost accounting. What is it?"

W.—Major Douglas says that the core of the problem is cost, and it is this part of the Social Credit doctrine that is most difficult to grasp. I suppose it is not essential to understand it in order to appreciate the plan for the establishment of prosperity, but it is certain that if I can convince you of the soundness of what we call the A plus B Theorem you will be compelled to admit that no one but Major Douglas has provided a solution.

J.—"A plus B Theorem." This is beginning to look like a mystery.

W.—"It is hard to avoid all technicalities, but these letters are used to represent things."

J.—"Like X marks the spot, eh?"

W.—"Well, at any rate A plus B marks the flaw in the price system. Well, I think we have cleared the decks so let us come to grips with the real problem T. begin with we must understand what comprises Consumer Purchasing Power. If you consider for a moment you will see that consumer income in the form of wages, salaries, fees and dividends are the only source of Consumer Purchasing Power, and that these income consist of money paid out in the first place by industry. Now no industrial establishment does two things; it makes goods and pays. It distributes Consumer Purchasing Power by means of the wages and salaries paid to the staff, but at the same time it is amassing a pile of goods which will be represented as prices on its product.

Owing to the large amount of material this week we were forced to carry considerable of this installment over to next week, when we will give you double the amount.

(Continued next week.)

NOTICE

Public Notice is hereby given that there has been introduced in the Council of the Municipal district of Clover Bar, No. 617, a by-law of which the following is a short synopsis:

That in order to provide for the hospitalization of residents of the Municipal District of Clover Bar, No. 617, and in order to carry out the provisions of the Municipal District Act and the Hospitals Act, in that behalf, the Council shall enter into an agreement with approved hospitals for the care and treatment of sick residents of the District, which agreement provides for payment by the District to any hospital entering into the agreement the sum of seventy-five cents per patient day for public ward patients and fifty cents per patient day for semi-private and private ward patients. The payment of such fees to relieve the District of all further liability for hospitalization of indigent sick residents.

And that a copy of the same may be seen in each of the following places:

Ardrossan, Bremner, Clover Bar and Good Hope Post Offices; and at Brookville, Yyvo Valley, Partridge Hill, Mansfield, Josephburg, Castle, Bolton, Deep Creek, Sherwood, Agricola and North Clover Bar School Houses and also at the residences of all councillors and the municipal office, and further, that unless within thirty days from the publication of this notice, at least fifteen per cent of the proprietary electors of the Municipal District petition the Council to submit such by-law to the vote of the proprietary electors of the Municipal District, the Council will proceed to pass the same.

Dated at Fort Saskatchewan, Alberta, this 21st day of April 1934.

D. Roberts,
Secretary-Treasurer.

Farmers in French Morocco in the vicinity of Fez are authorized until the end of the crop season of 1934 to destroy wild boars on their lands at any time and by any means except fire, but they must not sell or give away the carcasses.

A Record Of Service

Forty-four years as member of my parliament, even in the mercenary rule of a back-bencher, would be an impressive record of service and endurance. It would indicate, at the very least, a tremendous capacity to resist boredom and endure platitude.

Forty-four years as member of the British parliament, where the M.P.'s job is pretty much a full-time affair, is almost a transcendental feat, for at Westminster oratorical standards differ but little from those of parliaments and legislatures nearer home.

Forty-four years as member of the British parliament thirty of them in the very forefront of polemical politics, twenty of them in the role of an Imperial as well as a national figure, and, at least ten of them as a world luminary represents something, however, which cannot be judged by ordinary criteria.

Forty-four years as member of the British parliament, during eighteen or so a member of the cabinet and six of them spent as wart-time premier, the dynamic centre of a whirling world—that is the commonplace achievement which fell to the lot of a little Welsh lawyer

David Lloyd George: Perhaps it was unnecessary to mention the name for, were it passed to any group of intelligent citizens within the British empire, it is doubtful if the juxtaposition of "forty-four years" with "centuous premier" in the question, would fail to elicit the right answer

David Lloyd George has just celebrated his forty-fourth year as member of the British parliament. In that long term, the little Welsh lawyer who entered the portals of the "Mother of Parliaments" with no social background which, prior to his advent, was deemed essential to ministerial rank, has run the full gamut of political achievement; has scaled his climb; heights and been dashed from them, has tasted the sweet fruits of popular acclaim and the bitter of obloquy. Spectacular always, in success as in defeat, he is perhaps the most amazing personality in its very contradictions of a generation replete with outstanding figures.

To-day, in the quieter ranks of political life, the old fires burn dimmer but they still burn. The flash of those "Limehouse" days which added a word to the English language is recalled, ever and anon, as he exonerates warnings and laments a heedless world heeds not. From the couch of the cockpit, on the desk of the member, he rallies, occasionally, to guide and to counsel those who, caught in the full flood of the stream, pay little attention to what adumbrates the stiller eddies of the backwaters. In sickness or in health, one word of controversy brings the old fires forth. Jove still can thunder—objurgations!

His attendance at sittings of parliaments is rarer than it used to be, but a strange reaction follows his periodic entries. He the debate never so dull, when Lloyd George appears members rouse themselves from lethargy and progress for action. Impercipitably, a ripple animates the house; electricity is in the air. Lloyd George has entered! Surely here, despite the fact a whirling world has thrown him from the vortex, is anything but a spent force.

Two or three weeks ago, he celebrated the forty-fourth anniversary of his election to parliament. If he were asked what is his freatest recollection over all those years, undoubtedly, his answer would be that which helped him to retain the respect, the loyalty, the confidence and the affection of his own constituency of Carnarvon. That is, perhaps, the most amazing feature of his amazing record. For forty-four years he has enjoyed the unbroken loyalty of his constituency. For forty-four years he has enjoyed their confidence, their respect and their affection. Surely no man could ask more. That is the need of his service and the gauge of his success.

Ease Pain, Headache in Few Minutes

For Quick Relief Buy ASPIRIN—When You Buy

Now comes convincingly quick relief from headaches, the moment you suffer, the moment you order, the moment you enjoy it, with the discovery by which an American chemist hopes to discover, at the same time, to the amazing power of two known and tested ingredients. "Taking Bromo-Seltzer and Aspirin," he says, "gives a two reaction after taking. This is how he found it. Bromo-Seltzer, both the Bromo and the Seltzer, helps quickly to relieve the nervous tension that is responsible for your headache. And then it is ready to go to work through your system. When you buy, though, be sure you get ASPIRIN tablets—not a substitute. Don't let anyone sell you what you don't want. Ask for ASPIRIN and be sure the name Bayer is on the tablets. Then you'll be certain it is genuine Aspirin. Each tablet is an every tablet of Aspirin.

Bayer-Aspirin Never Harms the Heart

World At Hamilton

News Briefs Were Planned Many Speedometer Lighting Effects

Walter D'Arcy Ryan, famous creator of lighting effects and director of the illuminating engineering laboratory at the Schenectady works of the General Electric Co., died recently of a heart attack at his home in Schenectady.

Born in Kentville Nova Scotia, 69 years ago, the son of the late ex-Mayor and Mrs. J. D. Ryan, Walter Ryan had for many years been known as the "wizard" of illumination.

He was the man who had outshone the Astors Berenks or the scintillating stars of a moonlight night with celestial effects of his own devising. For instance the illuminating of Niagara Falls; the magnificent lighting effects of the Panama Pacific Exposition in San Francisco, those of the Exposition in Rio Janeiro, Brazil; the Victory Arch at the Conference the River Jubilee of the City of New York; the Altar of Victory in Chicago, the Republic Regiment, during the National Convention in Kansas City and his most masterful achievement of all, the lighting of the 1933 World's Fair in Chicago.

Of this Nova Scotia-born engineer, Thomas A. Edison once said: "That man Ryan has performed miracles."

Japan's Hireday May Cut Living Standard

American Diplomat Says Competition Must Be Kept Within Bounds

Japan's commercial rivalry will ultimately may result in a lower standard of living throughout the world, Richard Henry Lambert Child, American diplomat, said.

Child, a former ex-Premier Foreign Service specialist representative to study and improve trade conditions, said he had come to the conclusion during his two weeks' study in Great Britain first stop on his trade tour.

He admitted that if present tendencies of competition with the Japanese, with their lower wage scales and production costs, which threatens to wreck the English textile trade abroad, ruinous India.

"My British friends told me that where the Japanese technical efficiency is at least as vital a force in enhancing Japanese competition as lower wages and their living standard," he added.

Safety Of Mail Bags

England Last Only One Out Of 40,000,000 Lost Year

Only one of more than 40,000,000 mail-bags, each containing an average of 3,000 letters, had come to grief last year in Britain up to the end of October. And that bag contained nothing of value. A few years ago the average number of mailbags stolen in a year was more than 60, while there were frequent attacks on officials in isolated post offices There have been few such attacks this year—four it is believed. A reorganization scheme involving close co-operation between Scotland Yard and the general investigation department of the Post Office police throughout the country is responsible for the improvement.

Despite Price Rise Tea Still Most Economical Drink

For the past two years people in Canada have been paying higher and higher prices for tea in a decade, but the less thoughtful Canadians, especially housewives who, to save their budgetary, have restricted their expense and cannot prices to advance. They point out, particularly those supplying very little tea, that the most comfortably hard boned to increase prices.

New Radio Telephone

A novel ultra-short-wave radio telephone set, using quartz crystal controls from one hundred and fifty kilocycles, which weighs 15 pounds and is capable of sending speech messages clearly over distances of more than a mile through city streets, has been developed. The wave-length used is 149 centimeters or about 59 inches.

The Safety Of Surgery

Technique Is Perfect Now Could Hardly Be Improved

"The operating table is safer than the crowded streets outside," says a noted British surgeon.

Not long ago another surgeon, Lord Moynihan, declared that the technique of surgery is so perfect nowadays that he did not see any way in which it could be improved.

We sometimes wish that Re-doubled after an operation. The phrase is somewhat unfortunate, because it carries the suggestion that the operation had something to do with the cause of death. It is not the operation that causes death, but the disease or injury which made the operation necessary. The operation was the only chance of saving the patient's life, and in this significant had been delayed too late, or the injury was too severe.—St. Thomas Times-Journal.

India's oldest society, the Asiatic Society of Bengal, recently celebrated its 150th anniversary.

Worth Fabulous Sum

Russian Crown Jewels May Be Shown At Chicago Fair

The sparkling tiaras of royalty, the crowned jewels of nearly $250,000,000, and one of the richest treasures of precious stones in the world, will be displayed at the Century of Progress Exposition in Chicago this summer if the Soviet authorities grant a request they have received from exposition authorities that the gems be lent for the period beginning May 26, when the fair re-opens. The authorities have the request under advisement now. The collection, which is encased in an isolated storeroom in the State Bank at Moscow and is guarded day and night by Red soldiers includes the crown used at the coronation of Catherine the Great and her successors, which is said by experts to be worth $52,500,000. Almost 5,000 diamonds, together with a great ruby, go toward making up its weight of five pounds.

Producing ample trees on eastern Canadian farms total 70,000,000.

Household Drudgery The Bane of a Woman's Life

Women intended women to be strong and healthy instead of weak and sickly, but how can a woman have good health when she has to go through the dreadful drudgery element any relaxation. It is not surprising she becomes nervous and irritable, has backache, bad spells, shortness of breath, and headaches sometimes, and can't sleep at night.

Women, if you feel run down and ailing don't take it for granted that you must be ailing because of the drudgery and take that as an excuse for not doing something to overcome the trouble. Don't be satisfied to remain in misery. Get rid of the cause of your trouble if you can, and if you can't, then you must find some way to overcome it. Don't neglect yourself. Don't be afraid to take a good medicine when you need it. Dr. Pierce's Favorite Prescription is a good medicine for women. It is a strengthening tonic, and a nerve sedative. It is not a secret remedy, for its ingredients are printed on its wrapper. It contains no habit forming drugs. Any druggist will sell you Dr. Pierce's Favorite Prescription in liquid or tablet form.

W. N. U. 2065

Head Of Canadian Society Of Technical Agriculturists Refers To The Problem Of Production

The March number of "Scientific Agriculture" contains a wonderful address at the annual meeting of the Ontario Agricultural College Alumni Association by Dean A. Howes, Dean of the Faculty of Agriculture, University of Alberta, and President of the Canadian Society of Technical Agriculturists (a agricultural circus, says "Scientific Agriculture" it has been customary to recognize Dean Howes of Edmonton as the "Dean of Deans". He is the senior among the heads of agricultural colleges in Canada, both in age and in years of service While it may be true that some of our technical agriculturists become swamped with the routine of administrative duties, or the intricacies of scientific investigations Dean Howes always keeps before us the needs and the aspirations of that most unsung-forgotten man, the farmer

The address is an epitome of rare agricultural wisdom and sense. It does the whole gamut of agriculture in actual practice, economics, and philosophy Speaking of production and marketing the Dean said "How often one has heard during the past few years the statement we have solved the problems of production but we have paid little or no attention to the problems of marketing" Every time I have had the opportunity, I have raised my voice in protest against this sweeping statement, simply because it is not according to fact. That we have not paid enough attention to the machinery of marketing, I am quite ready to agree; also that some major enterprise should always be the proper distribution of our products, but when people say that we have solved the problems of production, I must take exception in no uncertain terms. The fact of the matter is that we, in this far-flung country of ours, are more children in the matter of production. If there has been over-production quite recently, and that is still regarded as debatable, it is absolutely no proof that we have solved the problems of production More over, it must be forgotten that production is an integral part of a sound marketing system and cannot be divorced. They are as inseparable as Mutt and Jeff, or ham and eggs,—indeed more so."

Extensive Sound Range

Cat's Hearing Far More Acute Than Human Beings

If your household cat pricks up his ears to what seems to you a dead silence, don't blame it on his imagination. He may be listening to the footfalls of a mouse a block away.

Proof that the hearing ability cats can hear and appreciate sounds far beyond the range of human hearing was presented to the American Otological Society convention at Atlantic City, N.J., by Professor S. F. Dworkin of McGill University.

Cats trained to associate certain sounds with food were exhibited to the group of otologists and like wise of the parents beginning May 26, when the fair re-opens. The authorities have the request under advisement now. The collection, which is encased in an isolated storeroom in the State Bank at Moscow and is guarded day and night by Red soldiers includes the crown used at the coronation of Catherine the Great and her successors, which is said by experts to be worth $52,500,000. Almost 5,000 diamonds, together with a great ruby, go toward making up its weight of five pounds.

Producing ample trees on eastern Canadian farms total 70,000,000.

Our Mysterious Brain

Farm production in Canada forms the basis of many of Canada's great manufacturing and processing industries to an extent that is not generally appreciated. In 1931 (the last year for which complete statistics are available) 9,326 establishments were engaged in manufacturing products of farm origin. Of this number, only 227 farms were working with foreign agricultural products, principally rubber, sugar and coffee.

W. N. U. 2065

To Protect Oil Fields

Any Discovered In British Isles Will Be Property Of State

The British parliament is preparing legislation to ensure that any oil fields discovered in the British Isles shall be the property of the state This procedure is evidently due to the reports that oil has been discovered in the neighborhood of Worth, in Sussex, at a depth of 1,600 feet.

It is known that some American with experience in the oil fields of this continent have been drilling in various parts of England for the last two or three years but apparently the Worth project is the only one that has given indications of success. According to the records petroleum in commercial quantities has never been found to the North of Leicester. The enormous deposits of coal might suggest that deep drilling would produce oil.

GRACEFUL AND SLIM LINED CROSSBACK TYPE SUIT AND WHAT AN HABIT AFFAIR TO MAKE.

There's chic and newness about this charming Canadian type suit.

There's stunning too, revolutionized by the centre-buttoned closing. Bright red worsted made the original of this model. The belt is self fabric. If your waistline is slim, it is very smart worn with a wide pleated leather belt.

Tweedy woolens in taupe or navy blue weaves with white pencil stripes are most attractive schemes.

Style No. 664 is designed for sizes 14, 16, 18 years, 34, 36 and 40 bust.

Size 16 requires 3½ yards of 54-inch material with ½ yard of 27-inch interlining for collar.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

A Luxurious Airship

Veritable Hotel Of Skies Is Being Built In Germany

The German airship LZ 130 a veritable hotel of the skies is reported as in an advanced stage of construction The Berliner Tageblatt published further details of the ship, showing it will place the comforts of air travel almost on a level with those of ocean travel.

The central portion of the ship, which will be reserved for passengers will have cabins, the restaurant and public rooms on the upper deck The smoking room and the writing room will be on the lower deck.

The dining room will be 60 feet long, connected with the kitchens by electrically operated dumb-waiters.

The windows of the ship will be built in such a manner that the passengers will be able to look down and as well as sideways downward. There will be a drawing room and reading room in addition to the 25 cabins.

Each cabin will have two beds a cupboard and wash basin with running water. The ceiling lights will be built in such a manner as to be indirect, and smoke without danger of fire. Heat close to it in the air The LZ 130 will be driven by four motors of 1,600 horsepower each.

Sodium Sulphate

Saskatchewan Production Showed Big Increase Last Year

Production of sodium sulphate in Saskatchewan increased in value 81 per cent. in 1933 compared with 1932, according to a bulletin of the department of industries, issued recently

Paper pulp manufacturers afford a considerable market for this material, and another valuable outlet is in the metallurgical treatment of the nickel-copper ores of Ontario.

Production in 1933 was valued at $468,416 as against $271,736 in 1932, an increase of 76 p er cent

Proved It Was Palatable

There is little chance of liquid air, cooled by 350 degrees below zero, ever becoming a popular nat drink, but just to prove it was palatable Professor J. Batterly, physics department at University of Toronto, quaffed a beaker full of the fluid and breathed out large quantities of foggy smoke The demonstration was made when the physics department staged an "at home," with Dr. E. F. Burton as host It was attended by 500 delegates to the Ontario Educational Association.

Landlady: "I'm sorry the chicken soup isn't good I explained to the cook very carefully how to make it, but perhaps she didn't catch the idea."

Boarder: "It tastes to me as if it was the chicken she didn't catch".

Clocks and watches having two faces, one at the back and one at the front, are now being manufactured in France

South Africa expects its 1934 wheat crop to total 3,601,000 bags.

MAKING OF A CAMERAMAN

While one cameraman is being vigorously tackled by an unwilling subject, another "Knight of the Lens" calmly snaps the action. This unusual photograph was made in Paris as General Bardi de Fourton, whose name was mentioned in the Stavisky scandal, charged a photographer who attempted to take his picture.

The Scientific Development Of Rust-Resistant Wheat Marks An Epoch In Western History

Some Little Known

German Photographer Who Originated Picture Postcard Is Dead

Alfred Adolph, 80 years old, died a short time ago at Passau Prof. Chemer Herr Adolph was well known in his own German city, but outside of Passau he was never widely known Yet his work lives, and will continue to live for a long time For Alfons Adolph was the originator of the picture postcard.

Fifty-five years ago Herr Adolph, who was a photographer, printed the first postcard souvenirs Specimens of these are now on the German National Postal Museum It was really not so simple as it seems for Adolph had to devise a special press for the business It was a venture involving outlay and a chance of loss

The humbler of picture postcard messages are proverbial "Having good time wish you were here" has become a popular classic It is really the best of all post card notes for it involves no mental effort. Wisecracks and smart-Alec messages are less meritorious for they carry no joy to the recipient, and if they have ever half a germ of originality they involve a certain amount of brain fatigue for the sender.

On the whole though, the card would be duller without Adolph's picture cards. Everyone likes to know where his traveling friends are and what they are seeing And it is also true that in this matter he who gives is more blessed than the one who receives, for it affords the sender a chance to brag

Should Act As Bracer

People At Fifty "Right In Fish" Shape, Doctor

A cheery message for men of 50 is that which comes from Dr. James Cuttan co-founder of two Toronto hospitals. He says a man of fifty is right in the prime." And he adds that age does not mean years in respect to the body. "Some men are old at fifteen; others young at eighty," he says and he declares that a man of fifty, because of his stabilized physique, can endure more than a boy Perhaps there is not much new in the good doctor's statement but it is a fact that many men of fifty become depressed at the fear that they are growing old His words should act as a bracer for them

Clocks and watches having two faces, one at the back and one at the front, are now being manufactured in France

South Africa expects its 1934 wheat crop to total 3,601,000 bags.

Terrors Of Sargasso Sea

Investigator Has Found Seaman's Story Has No Foundation

After several months' investigation in the Sargasso Sea an expert from the Natural History Museum, South Kensington returned with tangible evidence that there are no terrors in that dread part of the Atlantic Exhibits were brought back to show that the seaman's traditional story of the Sargasso's unpenetrable mass of floating material through which no ship could make its way has no foundation in scientific fact The investigator on his return to England, said the exhibit would prove once and for all to the ordinary mind that the Sargasso fantasy is a pure imagination. There are no matted vast stretches of floating vegetation extending in green and yellow patches as far as the eye can see but never thick enough to prevent the progress of a ship

Temperatures of the air decreases, gradually, up to a distance of about six miles from the earth

Gelatine

Gardening

Early Spring Is The Proper Time For Some Things

The foundation of good gardens and lawns lies only further over which the owner has no control is the soil As the soil is so easy case is but a few cents there should be no temptation to overlook quality, but only the very best should be used, and this obtained from Canadian sources which cater to Canadian conditions food saved from the home garden cannot be recommended. Unless one goes to the trouble of screening individual flowers from insects and cross-pollinating, it is impossibly impossible to prevent mixing of colors in flowers and of types in vegetables Then, too, in order to secure earliness and quality, it is often necessary that seed be sowed from a cooler where the season is a much longer than in most parts of Canada.

Early spring is the proper season for lawn repairing and few indeed are the lawns which do not require a little extra attention after the recent and unseasoned winter If at all possible spring rolling should be used when the earth is soft, but lacking this treatment a home-made packer will serve. This is made by forces the small roots back into their proper element and encourages quick growth. A spring tonic in the form of some good commercial fertilizer high in nitrogen is also advisable This shall must be applied carefully, to avoid burning. Three quick acting but thoroughly rubbed and then sanded heavily with a good mixture Cover by raking lightly one way and the roll in pound. It is well to cover such spots with brush or wire or the work will get mark of the next Where there is a lawn, the old practice of sprinkling a pound or two of White Dutch over the lawn every spring and then raking lightly if there is no convenient rain to wash in, has much to commend it. Good sound, natural fertilizer, and free weed mowing, are three essentials in the development of a splendid lawn for the coming summer. Even from these points of view standard mixtures are not a special mixture of grasses on which do not require full sun.

Stony places of ground can be turned into the most beautiful parts of the garden by the judicious use of old weather-beaten stones and alpine plants. Such gardening is not to be confused with the old-fashioned and very artificial rockeries, but with the advanced here, borders are cut into the side of the hill, embedded so deep that frost will not severely disturb them, and also in such a way that the soil between will lead back into the hill instead of away from it. Such a substance Rocky Mountain Range is created with gulleys, alpine meadows, crags and stony canyons. Seed and plants suitable for alpine rock garden plants especially. It is most important to secure seeds and plants from reliable Canadian sources, and if in doubt advisable to get special literature on the subject, or visit a neighboring rock garden, if possible, to see what is up-to-date.

BABY'S OWN SOAP

Little Journeys In Science

BEETROOT
(By Gordon H. Garet, M.A.)

Some scholars believe that the word sugar is derived from Sakara a Greek word, meaning a mingling or mixture, because chemistry was used in extracting the juices from plants to heal the sick.

The ancient Greeks penetrated, however, only as far as India's use in the golden age of literature. There lived a great physician known as Hippocrates, who mentions it 300 drugs in his writings.

Drugs used by early medical men included honey, figs and dates. Having severe the barb of the Arabian tree cause into use about 1650 That barb is composed of gum arrive date instances mixed with a large amount of sugar was usually made. The proportion of active constituents varies and that the action of the stone of bark was not always the same and was not easily controlled. To two French physicians, Pelletier and Caventou, is given the credit for isolating by chemical processes from the bark it crystalline substance called quinine, which to-day the pure drug is always used.

Science has discovered that many artificial drugs are made for some purpose that the naturally occurring substance. Quinine Quinine was once used by the dentist as a local anaesthetic, but this drug has unbearable after-effects It is now replaced by such artificial drugs as Novocaine and cocaine To stop bleeding, which does not occur when tissue is dead, or with pure cocaine, another drug known as adrenalin is added to the cocaine. Adrenalin was obtained at first from certain animal glands but it is now made artificially in the laboratory.

Minute living organisms called bacteria are responsible for most diseases and it is the purpose of a doctor to destroy these bacteria. Many kinds of chemicals are used for killing germs. Chlorine is an important disinfectant and is added to the water supply of most cities to eliminate harmful bacteria. Hydrogen peroxide is very useful because when applied to the skin it bubbles.

The Land Of Great Lakes

Large Fresh Water Bodies In Both Eastern And Western Canada

The term "Great Lakes" is usually applied to the magnificent chain of freshwater bodies which lie between Canada and the United States—Lakes Superior, Huron, Erie, and Ontario along with Lake Michigan, extending down into the latter country. These constitute the most remarkable group of lakes in the world, and, by furnishing navigable routes into the heart of the continent, have had a far-reaching effect on the development of North America.

But Canada has many other lakes, the magnitude of which is not generally appreciated. For example, Lake Winnipeg, in Manitoba, is almost 9,000 square miles larger than Lake Ontario, one of the "great" lakes. Great Bear Lake, in the Northwest Territories, which has come into prominence because of valuable mineral discoveries, is 1,720 square miles longer than Lake Erie, and 6,120 square miles larger than Lake Ontario. Great Slave Lake is almost as large as Great Bear; the two combined are larger than either Lake Huron or Lake Michigan.

Aside from the "great" lakes, there are twelve others in Canada with areas ranging from 1,137 square miles for the smallest to 11,000 square miles for the largest. There are 167 lakes ranging in size from 100 to 1,000 square miles, and innumerable smaller bodies. These lakes, with their connecting rivers, are factors of first-class importance in their effect upon the climate, in furnishing water for transportation, as a source of power, as a preserve for fisheries, and in providing ideal vacation inns.

Objected To Sunday Trains

No Travelling Done On Sabbath In Early Days

The Hon. Alexander Morris of Perth, Ontario (born 1826—died 1889), recounted, the hazard of directors of the Brockville and Ottawa Railway Co., because the members of said road broke new ground by advertising a Sunday excursion from Perth to Packenham for the accommodation of those who might wish to attend a camp meeting of the Wesleyan Methodist church at the latter place. The Wesleyans of Perth hastily protested against such desecration of the Sabbath and told the matter before Mr. Morris who was then telegraphed to order the manager acting then to cancel the train. The excursion, however, had been extensively advertised and the management declined to alter the arrangements. Mr Morris thereupon resigned his seat as a director.

And more recently—within the memory of some people still living the people at Muskoyedun, Ontario, protested so violently against the operation of Grand Trunk trains through that municipality on Sundays and threatened such trouble for both the management and the train crews that conviction had to be introduced. Moreover the early passenger trains operated between Montreal and Toronto over the same line did not run on Sundays. Passengers leaving one city or the other on a Saturday night had to lie over at Brockville or Belleville all day Sunday before proceeding to their destinations.—Brockville Recorder and Times.

Makes A Good Story

The New Yorker says there are several little stories about the Youngsquill's around, and one of them is that the time the Prince was in New York and was taken by a friend to the home of a lady who was simply thrilled at having a royal personage around. Came the moment when she had to introduce him to a Mrs. X. who had entered. "My dear," she said, "I want you to meet the man who saved the honor of the Russian Court. Sergius Constantine, Prince Gazpatin, you know, father—" There she stopped, stumped. She turned to Youngsquill. "Just who was it you killed, Prince?"

Shock-proof chairs to fight hats are being produced.

A "SWELL" OUTFATER FOR FASHION'S RACE TRACK

KING and QUEEN of ASCOT LADY GRIMSHED LORD GRIMSHED

The royal enclosure at the Ascot race track, in England, is to have a new code to regulate admission. The Earl of Granard has been appointed "master of distribution" to see that the rules of admittance are enforced. Eight pounds ($40) buys a ticket to the Royal Enclosure where King George and Queen Mary watch the races, and an applicant can enter the turf lady of better providing he or she has been privileged to attend royal levees or been presented at court, and has used the guilty party in a divorce suit. Lady Grimshed will probably help her husband in deciding who shall or shall not enter the royal enclosure.

Contrary To General Idea

Increase In Rural Disease Not Due To Modern Living

Big business and "the strain of the American people" are not responsible for the increase in heart diseases during the last two decades, according to Dr Edward J. Kempf, associate professor of clinical medicine at Columbia university, who disclosed that in a survey of cases at the Presbyterian hospital medical centre the largest per centage of heart trouble resulting from disease of the coronary arteries was found among farmers and skilled workers rather than among "white collar" men.

Occupation plays a negligible part in the occurrence of coronary disease, Dr. Kempf declared in the article on the heart, one of the most important elements of the organ, Dr. Levy declares. A recent German survey, which included patients out, showed laborers had the highest per centage of heart trouble, while in the Columbia University survey attorneys headed the list, with engineers, bankers and clerical workers fourth.

"The most significant reason for the increase in heart disease," Dr. Levy reports, "is the effective control of infectious disease, such as tuberculosis, typhoid fever and diphtheria. Fewer people succumb to infections, but they emerge only to die at a riper age of the degenerative diseases which are associated with disorders of the circulation.

"Fifty-nine years is now the average expectation of life for the younger population, whereas two decades ago it was but forty-seven years. There is no doubt that heart disease is increasing, but it is largely because more people live to the age when heart disease is most frequently the cause of death. But the important point is that the increase is occurring almost entirely in persons over forty-five years of age. When people most of necessity die, and fewer are carried off by infections, the heart, which is the last organ to undergo incident to advancing years, of which heart disease is the most common.

Quite The Contrary

A party of Cleveland ladies toured Florida by motor recently and decided, of a sunny Sunday morning, that it would be nice to step off and go to church in one of the little towns.

They approached a native and inquired, "Is there an Episcopal church in this town?"

"Oh, yes," said the man, "yes indeed. "Is there an Episcopal church in this town?"

"No replied the man, apologetically. "It's only one story."

Dave: "We've been going about together for 10 years now! Don't you mean getting married?"

Kate: "Oh, Dave, are you sure it's not just a passing infatuation?

Grain Stocks Lower

Total Stocks In Canada Reduced During Past Year

Total stocks of wheat, oats, barley, rye and flaxseed in Canada on March 31 last were in each case lower than at the corresponding date a year ago according to a crop report issued by the Dominion bureau of statistics.

The wheat stocks were approximately 36,800,000 bushels lower, or 13 per cent.

Oats were 51,900,000 bushels lower or 33 per cent., barley, 2,000,000 bushels or 19 per cent; rye, 2,500,000 or 25 per cent., flaxseed, 1,300,000 bushels or 64 per cent

The report adds:

"Stocks of rye and flaxseed are particularly low in comparison with past years. The main decrease in grain stocks are shown in the agricultural belt by farmers. The decrease in grain stocks compared with March, 1933, figure is more than the decrease in production last fall because of large carry-overs and lower domestic use and export.

As a result of the unfavorable summer and autumn weather on the prairie provinces last year, the unmerchantable per centages of the principal grains, excepting flaxseed, were higher than in 1932-33

"A preliminary estimate of the amount of wheat fed to livestock and poultry in the crop season, 1933-34, is 18,982,000 bushels compared with a final estimate of 21,806,000 bushels in 1933-33.

Total quantity of oats in Canada on March 31, 1934, was estimated at 107,530,000 bushels, against 159,678,-000 bushels at the same date in 1933 and 153,000,000 bushels average for last 10 years. Oats used for feed in Canada during 1933-34 is estimated at 90,000,000 bushels, against 139,678,-000 bushels at the same date in 1933 and 153,000,000 bushels average for last 10 years. Oats used for feed in Canada during 1933-34 is estimated at 90,000,000 bushels in farmers' hands and 1,048,432 bushels in transit.

Total quantity of barley in Canada on March 31, 1934, was estimated at 24,336,000 bushels, against 30,091,-000 bushels in 1933. This year's total included 10,584,997 bushels in vessels and farm mills, 13,500,000 bushels in farmers' hands and 751,-003 bushels in transit by rail.

Business In Babylon

Second Of Everything Was Kept On Clay Tablets

Babylonian business was efficient. There are numerous receipts among the clay tablets. If a man brought in animal hides a receipt was written for them. Or, if the Temple payroll was given all or dates from the storehouse, it called for a written authorization by responsible officials. There were bank cheques on clay, too, or the Babylonian equivalent. One of these orders to pay reads: "Pay Nabu-ahi-iddin, the Nergal-hasharid give," and the date is added. The temple had its hand in many kinds of business. In 1867 it did it trade in goods and silver brought for religious offerings, but it collected food and revenue for the king's personal use. It had royalty, it had banking industry for its building enterprises. It rented a ship one round above, from a Babylonian for as much silver and barley a month. Having much valuable property, the temple had to employ armed guards. Its record specifies the duty to which certain bowmen were to be detailed. Soldiers were sent by the king for certain missions. There is a notation of four men being equipped for a journey to the Persian city of Tyre. Reports of work done, financial receipts, and contracts—all these documents are found in the official office records of a Babylonian institution, five and six hundred years before Christ.

The "Model Student"

The "model student" who minds the teacher and wins all the prizes may be quite as much of a "problem child" as the footloose lad who is always getting into mischief according to Dr. G. C. Elmore Reaman, psychiatrist. "A boy who is troublesome in one environment when placed in the proper surroundings will often become a very satisfactory individual," Dr. Reaman decided.

Those self-sacrificing men and women who give their blood to others in need have formed themselves into a club—the Voluntary Blood Donors' Association—and held their first annual dinner in London.

Romance In Business

Stories About Hudson's Bay Company Would Make Thrilling Novel

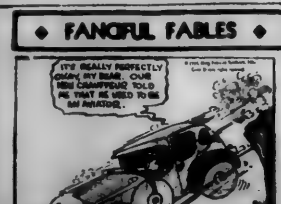
It surely is not unpatriotic to say that one of the most cheerful items in the story of the Dominion has to do with a foreign corporation. For the year 1933 the Hudson's Bay Company reports a handsome profit—$150,000 after registering an average annual loss of about $1,500,000 in the preceding years.

What business is the Hudson's Bay Company engaged in? It is to-day the world's largest purveyor of romance. On the side it trades in furs and sells land for settlement, and these are the things on which dividends were incurred in 1930-32 and a small profit was made last year. But to ninety-nine persons out of a hundred this is not what the name Hudson's Bay Company stands for. It stands for the last of the great open spaces on this continent, and for the rough hitchers of posts and the men who get their men, and for Stefansson's "friendly North," and fur brigades and for a ten years' trek from Aberdeen to Baffin Land, and for that trading post and Sabine fife which the moving have lately discovered.

Many of these popular notions may be geographically and legally sahre, but in the higher realm at the executive they belong with the Fit-Reform Company. If that organization charged the novelists and scenario writers only a modest royalty, it would have wiped out its recent annual deficits.—New York Times.

Many firms in Birmingham, England, are planning factory extensions.

◆ FANCIFUL FABLES ◆



"Snowflakes have been photographed by the thousands, but no two have been found alike

ASHAMED OF HER FIGURE

Husband Persuaded Her To Take Kruschen

By following her husband's advice this woman made a tremendous improvement in her appearance she actually took off 32 lbs of her excess fat Telling of her experience she writes

A year ago I was troubled with rheumatism, neuritis and other complaints And I got so fat that I was ashamed of my figure I was persuaded by my husband to take Kruschen Salts. Before I began, I weighed 161 lbs After taking Kruschen for a short time the rheumatism was less painful, my nerves got stronger, and my step lighter Then I knew that Kruschen was doing her good so I persevered with it and got my weight down to 129 lbs., a reduction of 32 lbs of unwanted fat. I am not boasting when I say that I feel younger and more active, have a much better figure, and am healthier than I have been for years."—(Mrs.) E. B.

Kruschen is a blend of six mineral salts which assists the internal organs to throw off each day those waste products that would otherwise accumulate in the form of faulty tissue.

OCCASIONAL WIFE

By ERNA ROSS WEBSTER

Author of "Joretta," "Lipstick Trail"

SYNOPSIS

Camilla Hoyt and Peter Aston, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Warth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Otis Hobson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they arrive at the early morning and Avis and another boy are standing near them. The situation is necessary for Camilla to announce before the party that she and Peter are married. Newman and Weeks, an advertising agency, where Camilla has submitted some of her work send for her and offer her a salary of $25.00 a week to start and a prospect of having it doubled. She tells Peter of the good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained a job and is pleased to hear the Hoyt household Avis Warth made a dinde on the same floor as Peter, and invites him to have lunch there. He accepts reluctantly, but is favorably impressed with his visit. Camilla urges Peter to accept one of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Warth calls and persuades Peter to accept a loan of $1,000.

(Now Go On With the Story)

CHAPTER XI.

On the second evening after their disagreement over their financial affairs, Peter went to Camilla with contrition in his heart.

But that two-day interim of silence had been a century for Camilla. She had gone over every word they had spoken, as if she were reading carbon copies of old correspondence, wondering what she might have said to hurt Peter him, or to convince him that she was right. A hundred times she bowed in humble forgiveness but her own sense of justice withheld her. She knew that, actually, she had said nothing for which he to forgiven. Rather, it was Peter who had been in the wrong. Even if he would not let her help him, he had no reason to be angry with her at her suggestion of it.

The hours dragged like days, her work lost its fascination and she scarcely tasted food. She maintained a cold dignity at the dinner at the office but Rose perceived instantly that Camilla was grieving. It was not just Peter she grieved. Mr. Weeks was the cause of Rose's deepest grief, she had admitted. From any other person it would have seemed a needless indulgence of sentiment for the loss of a man which Camilla considered nothing more than temporary.

Rose vowed something of this philosophy when, on the second evening of Camilla's outrangement from Peter, they were lolling in a divan after dinner. The windows were open to the warm autumn breeze and from all directions across the open roof the strident blare of radios arose drifted in. Always such a variety of stations were turned in that the effect was like the sound of the tongues of Babylon—jazz bands, crooners symphonic airs high notes, voices and deep bass, announcers holding forth, announcers cutting in, tune signals.

Usually, the jazz bands and the crooners predominated. Their voices lamented and sighed and smirked, but always their subject was love. Their trite, threadbare phrases mocked her. Love love love. Was that all anyone thought of and lived for? Was it the be-all and end-all of the beginning and the end of all things. It was the reason for which one lived and the reason for which one ceased to live. Yearning voices of radio singers did not thrill her. Only Peter's voice could do that. She closed the windows with irritable bangs, trying to shut out those insistent reminders of her shattered romance.

"Isn't it silly the way women get sentimental over the radio crooners when they never see, and listen for their voices as intently as they listen for their dates on telephones? Age, color and language make no difference. I'll bet all the radios tuned in to-night are in the homes of female listeners. Men listen to sports and speeches. They don't get silly over the voices of crooners and jazz bands. Only girls and girls when he gets a chance

"Do you know any men in that exclusive fourth floor club?"

"Not even in my experience Funny, too, they are so different as Pa and Mr Hoyt. There's Mr. Otis Hobson, your set—who worships his wife, Anne, like a saint and treats her like a princess. Of course, he has money, and they have a Swiss maid—it's the way he does what he can for her. Every night, when he comes home, he looks and acts as if he were coming to call on her for the first time, and he is always doing nice little things to make her happy Then there's Mr. Weeks, Pa's boss at the office, except he is more refined and elegant about it. Men like that haven't pure gold, but I never hope to get one of them. It's about like winning a lottery where half a million tickets are sold."

"If you know so much about annoying men, Rose, in which class is—Peter?" She spoke his name almost in a whisper, as if with appre-

Rules Of Roosevelt

Many Brought To New York By Dealer In Antiques

Many of the little intimate things belonging to the last Imperial family of Russia, Nicholas II and his children, have been brought to New York from Leningrad by a dealer in antiques who has dealt with Russia for years.

Among the collection are the Czarevitch's cradle, skis and dolls, a little red notebook, decorated with the Romanoff imperial eagle, done in red, with the little initials A T at the top and K P at the bottom. It means For Alexandra Feodorovnan from Elizabeth Feodorovnan. Alexandra was the Czarina and Elizabeth her sister-in-law. Also there is the little crib of Olga, the oldest daughter

Other souvenirs are an autograph book kept by Grudina (Countess) Voronzoovna Dashkova, ladym-waiting to the Czarina, which has in it the autographs of almost all the royalty of Europe, a new collection of Easter eggs belonging to the children of the royal family, two very fine copies in English of "Alice in Wonderland" and "Little Women," given by the Czar and Czarina to the girls and inscribed "From Mamma and Papa," the cigarette case the Czarina gave the Czar, signed with her very personal and intimate, and a lot of snapshots of the family and the work baskets of the children.

Prospective buyers as well as the longings of the Czar, were all bought from Government warehouses in Leningrad and Moscow at prices set by a Soviet commission of former antiques dealers.

THE RHYMING OPTIMIST

By Alice Michaelis

LIGHT

Is any other thing on earth
As beautiful as light,
As nearly kin to song and mirth,
As full of sheer delight?

"Let there be light," and at God's word
A flash of glory came
While all the universe was stirred
With primal dawning's flame.

Is any other thing at all
As wonderful as light?
Oh, swiftly backward fall
The legions of the night.

O, light I lift my being's cup;
Fill it with God's delight.
With love and gladness brim me up,
Shine all the evil out!

Butterfly Hunter Has Wonderful Collection

In 100,000 Specimens There Are Seven Thousand Varieties.

The most enthusiastic butterfly hunter in the world, Herr Otto Staudinger of Hans Frnhstorfer, made a wonderful collection of 100,000 butterflies, and this has been lent to the Natural History Museum in Paris He began his collection in Brazil, when he was twenty-two years old and has lived in Asia, where he spent three years; then he followed his pursuit for two years in the Malay Archipelago He travelled through South America, Japan, China and Siam, until he had placed his net over some of the rarest butterflies in the world. His 100,000 specimens have nearly 7,000 varieties.

In A Nutshell

To Mr. Beatty, president of the C.P.R. goes the credit for having made the best speech delivered in Ottawa on the tariff question, and he did it in two sentences: "I will always be a pickhan myself, but I am in favor of little for Canadians if they are restricted to those who really earn them." He was opposed, he added, to hereditary titles in Canada. That is by the plain sense of the titles question and the best summary of the views of the average Canadian citizen that has yet got into print.—Montreal Herald.

A SIMPLE QUICK WAY TO RELIEVE ACID STOMACH

CHECK OVER YOUR SYMPTOMS:
Heartburn — Sleeplessness
Sour Stomach — Nervousness
Gas — Dizziness
Loss of Appetite — Nausea
Indigestion — Vomiting
Acid Headaches — Sour Breath
Auto-Intoxication

WHAT TO DO FOR IT:

Drink a glass of water containing two teaspoonfuls of Bisodol powder, when you feel sour, acid, gassy, upset. Because Bisodol is a scientifically balanced alkalizer it relieves sour stomach almost instantly. Get Bisodol today at any drug store. Use it when you go to bed. 25c—Take the new Bisodol Mint Wafers for sweet breath.

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. This small dosage of Phillips' Milk of Magnesia tarts at once to neutralize the acids that cause headaches, stomach pains and other distress. Try it. You'll feel like a new person.

But—be careful you get genuine Phillips' Milk of Magnesia, or Phillips' Milk of Magnesia Tablets when you buy—only the name.

SEND NO MONEY POSTAGE

Each tiny tablet is the equivalent of a teaspoonful of Phillips' Milk of Magnesia

Phillips' Milk of Magnesia

Little Helps For This Week

"Let the peace of God rule in your hearts."—Colossians 3:15.

Drop Thy still dews of quietness,
Till all our strivings cease;
Take from our souls the strain and stress,
And let our ordered lives confess
The beauty of Thy peace.
—J. G. Whittier.

These things write we unto you that your joy may be full." What is fulness of joy but peace. Joy is tumultuous when it is not full, but peace is the privilege of those who are "filled with the knowledge of the glory of the Lord, as the waters cover the sea." "Thou wilt keep him in perfect peace whose mind is stayed on Thee, because he trusteth in Thee" It is peace springing from trust and innocence and then overflowing in love towards all around him. He who is "without stumble of himself," is suspicious of danger, speaks hurriedly and has no time for the interests of others. He who lives in peace is at leisure wherever he lot is cast. J. H. Newman

Many Inventions Refused

British Patent Office Turns Down Many Gadgets Offered

No fewer than 30,000 of the 32,000 inventions submitted to the British Patent Office in the past year were refused on grounds of impracticability A gadget for capturing motor-bandits was an electrically-operated harpoon that could be concealed in lamp-posts, and that when a stolen car was tearing down upon him, a policeman had only to touch a switch to send the harpoon whizzing into its tires. Another invention of a crook-catching window pane designed upon being broken, to create an absolute vacuum which summarily and irresistibly drags the luckless crackaman into the room and lays him prostrate on the carpet until someone opens the door

With the co-operation of the merchants, The Record expects to publish four pages of locals prior to next week. For this occasion we will cover the Fort district completely, including Clover Bar, Namao, Josephburg, Sturgeon, Lamont, Bruderheim and Andrew.

Merchants are taking advantage of this opportunity of letting the people of this district know of their wares.

If this plan proves a successful venture, no doubt there will be other special issues.

LOCAL NEWS

Dr. Colborn's Dental Office will be closed from May 5th, (approx.) until further notice.

The Winnipeg Kiddies presented a two hour show in the Empress Theatre last Wednesday to a fair size crowd. After the show the company left on the Eastbound train for Lloydminster, where they are to show one day.

Mr. J. Dempsey and son Pat of Dunvegan, Alberta, are visiting at the home of Dr. and Mrs. W. P. Colborn.

Mr. and Mrs. Albert Savage of Dalemead, Alberta, spent last week-end with Mr. and Mrs. F. W. Smith.

Mrs. Floyd Baker has been the guest of Mr. and Mrs. T. W. Lane of Wainwright for the past fortnight.

Mrs. Jack Stewart and Mrs. Mr. Cooper Partons of Red Deer paid a short visit at the home of their parents, Mr. and Mrs. Jackson Carscallen.

Country roads in the district have dried up fast during the past week and heavy traffic is again on all roads. Pot-holes in the field are shortest the writer has head experience, but with continued warm weather they will soon dry up. As the ground is still fairly cold and therefore not much growing power, it might be well to wait.

Mr. A. H. Rogers has had his home painted and the surrounding fence which gives the place a bright and cheerful look.

The Beaver Lumber office here has been repainted during the past ten days. This is another great improvement.

The ban on heavy trucks and buses went off at 6 a.m. on the highways was lifted last week-end. Monday saw numerous cattle and hog trucks go to the city.

D. Roberts, Secretary of the Clover Bar Municipal District spent Monday and Tuesday in the interests of a by-law at various places in the district, providing for the hospitalization of residents. Notice of this by-law will appears on the front page.

St. George's Flag fluttered from the staff on St. George's Church Hall Friday in observance of St. George's Day.

Miss Mary Reynolds of Brunneval, reported to the city police that a camera and three necklaces were stolen from her cabinet car in front of the Memorial Hall Saturday night.

The Council of the Municipal District of Leeds at their regular meeting, set the municipal mill rate down to 9 mills, a drop of one mill under the previous year.

Mr. and Mrs. Burt Budd and son, Lethbridge, Alberta spent the week-end with his mother here.

We are sorry to hear that Harry Cornelissen and Gus Mosher are on the sick list this week.

CARD OF THANKS

Mrs. J. B. Adamson and family wish to express their heartfelt appreciation of the many kindnesses extended to them during their recent and bereavement, also for the many beautiful floral tributes received.

Town Council Hold Regular Business Meeting

A regular meeting of the Council of the Town of Fort Saskatchewan was held in the Council Chamber on Wednesday the 18th. Instant at 8 p.m., with the following present: Mayor Montgomery, Councillors Magor, Watt, Graham, Pettet, Gast and Vincent.

The minutes of the last meeting held were read and adopted.

A preliminary application for settlement under the Provincial relief settlement plan, was not endorsed by Council.

An account from the University Hospital for $147.39 and one from Howard & McBride for $27.50, were considered by the Council, and both over for enquiry as it was considered both accounts were too high.

The Council passed a resolution granting the use of the Memorial Hall, and of the Theatre, for the Musical Festival on May the 11th.

The matter of the Cranston property (Lots 32 & 34 Block 8 Plan 34) which reverted to the Town last June for taxes was before the Council and after being discussed at length a motion was finally passed that the Council give Gen. Cranston Power Co. $126.65; Alberta Gov't Telephone $9.30.

In a letter received regarding relief the Provincial Government says that in view of the pattern of most moderate weather, the demand and necessity for relief should be greatly reduced, and that many unemployed who are now being assisted should be informed that they must exhaust every effort to seek employment. A small chunk of those who will not require assistance, or partial assistance to continue, is required. The Department asks the co-operation of all municipalities to place relief on as sound a basis as possible and to have their ratepayers of some of the burden of relief by insisting that recipients must exhaust every means to provide for themselves before relief is granted.

JOSEPHBURG NEWS

The Josephburg Ladies Aid will meet in the Josephburg Church on Tuesday, May 8th.

The Josephburg Victoria U.F.A. local held their last meeting on April 26th.

A very interesting report was given by Rudolf Hennig (M.L.A.) on social credit and on the most important anti acts and amendments that were passed at the last session of the Legislature Assembly.

The next meeting will be held on Thursday, May 17th at the school house.

The Sac-hal Club are holding an entertainment and box social on Friday, May 4th. Two prizes are being offered for the two best or most original baskets. Come and bring a basket, girls.

No Service will be held at Josephburg Church this Sunday, Rev. A. Weinbrecht will preach at Bruderheim.

Choir practice will be held on Monday evening at 8 p.m.

Special Service will be held on May 10th, Ascension Day, at 11 o'clock.

MOTOR AND HORSE DRIVEN VEHICLES MUST HAVE REFLECTORS

Now highway rules come into effect today, (May 1st), requiring all motor vehicles, either moving or standing including horse-driven vehicles to carry proper reflectors.

Between one hour after sunset and one hour before sunrise, no vehicle shall move or stand on any main, secondary, or district highway that is either graveled or hardsurfaced, unless it carries at least one light visible 100 feet away or reflectors in front and rear of approved type.

Trailers also must have reflectors.

We were walking along the shaded street of an eastern Pennsylvania village when a girl came to the door of a nearby house and called to a small boy playing on the walk:

"Gusty, Gusty, come and eat your mush. Ma's on her table now and pa's half at already!"

Lamont Musical Festival Held in Fort May 11

Just to get the public's estimate of the number of pupils entering the festival this year I asked the opinion of two men. To be on the safe side one of them said, "I should judge anywhere between three and seven hundred." The other estimate was a little more conservative. He said, "My guess would be one hundred."

When he learned that today the number of pupils signifying their intention of entering the work of the festival was eight hundred and fifty he was almost floored.

Nevertheless, the actual entry at present is eight hundred and fifty. What a day! I can imagine that there will be many in the Fort who really haven't thought what that means. That number of pupils means at least on thousand people will be in the Fort, Friday, May 11th.

One of the biggest problems is that of accommodation. In order that the expected competition of eight hundred and fifty pupils may be run off smoothly, a number of halls have to be operating at the same time. Fortunately and thanks to the Town and Gown Council, the Badminton Club and the United Church Board will both be able to secure their halls. There will be five halls in operation at the same time so will be noted by the time table.

The burden of the festival day falls largely on the ladies of the town. The Women's Institute of Fort Saskatchewan has very willingly and kindly offered their services.

Although each pupil bring enough lunch for last him the day, they very often eat the lunch or lose it. This means of course, that he has to get refreshments. Even so, he likes a cup of hot drink to help him along and this will be ordered by the ladies of the town.

Fortunately, we were successful and thankful to be able to get the Buffet Room of the Memorial Hall for all day long, the ladies will serve sandwiches and cocoa to eight hundred and fifty pupils, and tea to the teachers and parents.

The cost of the festival, when it is all finished will be high, but by only a fee charged to patrons in the afternoon and evening. This means that a rather ridiculous proposition to those who come forty or fifty miles with a carload of kiddies. It seems too bad that one who has offered his services in this way is further burdened by such a fee. However, it is impossible to carry on the festival successfully unless this is done.

Five programs going on simultaneously means that the day has to be run off systematically. A British system is in use hall holds to the whole day. The time table, one might say, operates on a hair trigger. Very seldom does a boy or girl has to run through his solo or recitation and then over to another hall to take part in a group competition. This means that the halls have to be operated on such precision that it can be done with the co-operation of the pupils and in contact with them.

To facilitate the operation of the halls each adjudicator will be assisted by a secretary in charge of the names of all competitors. Each hall will be under the control of a check man. At each door there will be a deposit box and collect tickets and to check incoming and outgoing flow during competition. A messenger will be named for each hall to operate between the hall and the secretary's office to be located in some building near the centre of the town.

A grand concert will be held in the evening. To accommodate the crowd there will be a double program going on simultaneously. Those contesting named during the day by the adjudicators, will present the evening programs. In order to know when half the contestants are to take part, a program will be posted in various conspicuous places. Everyone interested in the evening performances is requested to become familiar with this posted program.

For the benefit of all those interested in the festival a time table of events is hereby enclosed.

(Continued on page six.)

TO CELEBRATE ARBOR DAY ON MONDAY, MAY 7

Arbor Day will be celebrated throughout Alberta on Monday, May 7th, according to a proclamation issued by the provincial government on Thursday last.

Following custom, the first Monday has been set aside as Arbor Day, to be traditionally observed in the planting of trees, cleaning of back yards and otherwise encouraging horticulture.

On that day government offices, courts and some other public activities will be closed.

What About Social Credit, Canada?

(Continued from last week)
No. 2

Now, James, it is not necessary for me to point out that a business must recover all of its costs if it is to remain solvent, and that all costs are charged into the prices of its goods. But these costs can be separated into two groups. First there are the wages and salaries of the staff and, second, all other payments such as payments for raw materials, bank charges, power costs, etc. You will note that the second group consists of payments to organizations or individuals outside of this factory. The first group are costs for which they go directly to the staff of that plant. Now here is where we can use our letters. We call all the inside payments "A" and we call all the outside payments "B". Therefore the total costs of the firm can be expressed in this form: A plus B. But here is the important point. The amount of money distributed in this factory in the amount represented by "A" which is necessarily less than A plus B. Now you can see that "A" will not purchase A plus B and yet that amount represented by "A" is all the consumers purchasing power that is accessible for claiming the product of that plant. The rate of flow of prices cannot be less than A plus B but the rate of flow of purchasing power is only "A" so it is an impossibility for that plant to sell all that it produces unless some part equal at least to "B" is distributed by some other means."

J.—"Its no good. I'm all twisted up. This brings back bitter memories of algebra. Can't you show me in a different way?"

W.—"All right, let's try figures.

Suppose your factory pay roll is $400 per week and your costs for raw materials, interest charges, depreciation, etc. are $600. Now your total costs are $1000 but you only distribute $400 to buy goods labelled $1000. You can see that you cannot sell all your goods unless $600 is kindly supplied by some other agency. Seeing that every factory and producing organization is in the same position Douglas's statement must be true that

(Continued next week.)

GOOD HOPE NEWS

The baseball boys held a meeting in the school on Saturday, April 21. Gordon Meyer was elected Manager and Albert Cripps, Captain.

Their first practice was held last Saturday, April 28th.

Mrs. S. Oliver will reside in Edmonton for the summer.

Miss J. E. Webber spent last week-end in Wainwright.

Mr. Frank Wiery was a visitor in the community last week.

Mr. J. Sommer met with a serious accident while working in the park last Tuesday. He is now a patient in the Lamont hospital. We all hope he will have a speedy recovery.

Miss Tillie Cromwell is a visitor at the home of Mr. and Mrs. Robert Johnston.

Mrs. Sam Torrents is a patient in the hospital, suffering from an appetizer.

NOTICE

The Town Council have set aside Wednesday, May 9th, as Clean Up Day in Town.

Every Citizen is urgently requested to make a real effort on that date to clean up and get The Town generally looking neat and Clean.

Special Announcement

Having taken over the stock formerly handled by the Simmons Lumber Company, we will be in a position to offer this material at a figure below the normal prices prevailing now.

Included in this stock will be Windows, Doors, Frames, Cedar Bevel Siding, Spruce Siding, inside trim, Mouldings, Edge Grain Fir Flooring, some spruce dimension and other odds and ends.

We are now in the process of taking stock, and should be in a position to quote prices at the end of this week.

Our regular stock is as usual, well assorted, and we are able to fill your wants promptly as you desire.

Wheat Prices And Economic Experiment

International experts of the wheat advisory commission have been engaged, at Rome, in studying ways and means of raising wheat prices, and, according to press despatches of recent date, have reached decisions which will be submitted to the governments of the signatory countries for their approval and, it is presumed, concerted action. Decisions, it is stated, must be united in time to permit their implementation by June 1.

Details of the plan which have emanated, so far, from the conference at Rome, are not complete enough to warrant analysis with a view to computing their effects. Apparently, however, it is proposed to employ a price-fixing system to regulate exports rather than the commercial process of regulating reserves to control price fluctuations. The object of the conference is to base the minimum price of wheat on the relation between export supplies and the world's import requirements, with the London quotas representing those set by the importing countries.

Nothing has been said as far as to the price objective. Undoubtedly, however, unless it be the £8.02 gold cent price computed as the "average price of all parcels of imported wheat of all grades sold during each week in all the ports of Great Britain", the terms of the London agreement, as they apply to the exporting countries, will be rendered negatory. This is the price which, according to the agreement, must be reached and maintained over a period of sixteen weeks, before scaling down of customs tariffs begins.

Western Canada awaits with interest and expectation complete details of the proposals decided by the experts for submission to the signatory nations. They are, of course, in a matter of paramount importance to the farmers of the prairie provinces, and if, by agreement, the world price can be raised and stabilized, a long step will have been taken towards establishing the agricultural industry in Western Canada. It is impossible here to talk of lowering production costs while debt and other charges remain on a high and uncontrollable overhead factor in them.

Of scarcely less significance to the prairie farmer is the matter of lower customs duties against Canadian wheat in the importing countries of Europe. If then, in addition to raising world prices, there is an adjustment downward of tariffs associated with wholehearted efforts by the importing countries to increase consumption of wheat and at the same time to reduce domestic production, western agriculture may see with some hope of fairness and success, the task of orienting itself to the new economic objective. That is to say, if the spirit of the London agreement is observed to the letter of its various terms, there is no obvious reason why, once the carryovers are disposed of, Canada's export quota should not progressively increase part passu with her ability to consume the products of industries to increase to her best endeavors. Signs already are present that the ultimate determinant of positive or negative reaction to the terms of the London agreement by the importing countries will be the "balance of trade".

Throughout the world, a series of exceedingly interesting and vitally important economic experiments are underway, with the various nations engaged in concerted efforts to set their own productive processes to rights. The United States is seeking prosperity and stability through the agency of the Roosevelt "New Deal". Bisected into his corporative state with industry, organized on a national basis, toiling on "economic advance" of the government, Germany is sampling recovery through a process of state intervention, and Austria apparently is preparing to adopt the Italian model. Russia, of course, is seeking to gear the productive machine to the needs of her people, through socialization. In Britain, the means to recovery are styled "rationalization". All the experiments have one element in common—government intervention, government control and government regulation. The means created is patent in Canada, for recent legislation has laid foundations for a wide range of machinery for control and regulation, which is to be created and made operative as conditions determine.

Soothing Sensation Feint and Dizzy Spells

Many feelings of faintness, these dizzy spells come on suddenly, are caused by a lack of iron in the blood. Dr. Williams' Pink Pills for Pale People are a tonic that helps to build up the blood and restore its health-giving iron. Try them if you feel weak, tired, dizzy, faint, or suffer from headaches, backaches, nervousness, indigestion, colds, or grippe. Get them from your druggist or by mail from Dr. Williams' Medicine Co., Brockville, Ont. 50 cents a box; 6 boxes $2.50.

Thousand Miles An Hour

Astonishing Things Predicted By Sir Charles Kingsford-Smith

Whirling through the stratosphere at well over a thousand miles an hour in the hermetically-sealed cabin of a giant air liner, guided entirely by wireless control stations on earth —can you imagine the possibility Sir Charles Kingsford-Smith, hero of the record record-smashing flight to Australia, believes this not only possible, but likely. In an astonishing vision of aerial development within the next fifty years he foresees air travel brought to such a pitch that ships and railways will become semi-obsolete, their role one being as carriers of heavy freight.

"There will be no human pilot, but gyroscope control" said Sir Charles. "The huge flying liners which will move through the stratosphere at a uniform speed of 1,200 miles an hour, carrying 100 passengers in their luxurious cabins will be fitted with super-efficiency, super-charged engines and variable pitch propellers.

"Risk will be negligible. Each plane will have ten, twelve or fifteen engines, all in the event of one cutting out, the officer in charge will simply declutch that engine from the propeller while the mechanics repair it en route. Crude oil will probably be used as fuel."

Actually, to accomplish the amazing speed of which Sir Charles speaks we do not require more powerful engines than some already built. The stratospheric density 50,000 feet above the earth is about a quarter of what it is here, so that an engine, which under normal conditions is only attains the high speed of 250 miles an hour would hurtle through the rarefied atmosphere at 1,000 miles an hour.

Fish Collection For Museum

B.C. University Receives Rare Specimen From Dr. Fraser

The University of British Columbia will be enriched by a collection of hundreds of species of marine life, many hitherto unknown to science as a result of an 8,000-mile cruise through the south Pacific by a noted little party of which Dr. C. McLean Fraser, professor of zoology, was a member.

Dr. Fraser returned to Vancouver after an absence of three months in the Solomon Islands and adjacent waters. He revived very little romance, but much hard work. He expects the discoveries made by the expedition's zoological field will be the envy of scientific field all the coast of South America will have important bearing in the study of marine flora and fauna.

The specimens collected ranged from snakes and monkeys found on the land to sea serpents, brilliantly tinted "angel" fish and crustaceans. Dr. Fraser, being a world authority on a marine worm of rare note known as hydroids, brought back a large number of formerly unknown types for the university museum.

PRICES RISE BUT TEA STILL MOST ECONOMICAL

Three years of disastrously low prices for tea finally goaded the growers into action and committees were formed a few months ago to control production. Prices have already advanced and as soon as merchants have exhausted their present stocks the housewife will have to pay slightly more for her favourite beverage. Finest teas such as "Salada" still produce about 3 cups for a cent.

A Double Restoration

New Flower Developed By Gardener To Lather Husband

A double sensation that "looks like an onion and ranges in color from lemon yellow to scarlet," has been developed at Philadelphia.

It was created by David Burpee, who has christened the work as Luther Burbank in developing new varieties of plants.

The new flower bears attractive resemblance at the present time to flower shown, where they have been called "the poor man's orchid."

First book printed in America was the "Bonatz Regiment de Sanitate Camonis"; no copies are known to be in existence!

Quick Relief Now From Neuralgia

Real ASPIRIN Starts Taking Hold in Four Minutes

Now comes *amazingly quick* relief from headache, rheumatism, neuritis, neuralgia . . . the *fastest-acting relief, it is said, yet discovered.*

Those results are due to a scientific discovery by which an Aspirin Tablet begins to dissolve, or disintegrate, in the amazing space of ten seconds after touching moisture. And hence to start "taking hold" of pain a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. *And thus is ready to go to work almost instantly.*

When you buy, though, be on guard against substitution. To be sure you get ASPIRIN'S quick relief, be sure the name Bayer in the form of a cross is on every Tablet of Aspirin.

Does Not Harm the Heart

Heavy Tourist Trade

Estimated American Spend $77,320,000 In Canada In One Year

Travel between the United States and Canada is greater than ever any other international boundary in the world, according to a return just issued by the Canadian government dealing with the tourist traffic of Canada. During 1933 the number of automobiles from the United States which entered Canada for touring purposes was 2,006,547. Of these, 1,333,413 were admitted for a period not exceeding 24 hours; 660,136 for a period not exceeding 60 days, and 998 for a period not exceeding six months. From information received from various sources including co-operation with United States officials, it is estimated that the average expenditure per car in the 24-hour class was $7.67, in the 60-day class, $89.39; in the six-months class, $264.97. Total expenditures by visitors by automobile from the United States during the year are placed at $77,320,000 in Canada funds.

Historic Treasure Prized

Old Bowed Guns Flanked At Smith Of Waterloo

An historic melee that once flashed in battle under the colors of King Louis XVI. of France is a relic highly treasured today by Auguste de la Tremouaille, who was established at Montmartre, Sask., 1886.

It is the sabre of Baron de la Villebeau, Tremaudais's grand-uncle, who was lieutenant of hussars by Louis XVI in 1785. The baron took part in all the campaigns of Louis XVI, including those of Napoleon on the march in and from Moscow, the battle of Waterloo and the defeat of Bonaparte. He died in 1836 and the sabre passed on to Tremaudais.

The 94-year-old pioneer of this little village migrated from France in 1873 and established his home at Chrysostom, Chateguay county, Quebec. He moved west 20 years later.

Like Good Old Days

United Home Production Idea Revived By Alberta Soldiers

The "good old days" have come back to the rural district of Bralorne, Alberta, with a return to home production. The same engine that has chopped a generous supply of wood for the same number of years is a chopper that grinds corn into breakfast food. From home can fashion everything from moccasins to coats.

Sugar beets provide syrup which, mixed with yeast, gives the settler vinegar, and vanegar, as proudly in the knitting of socks, sweaters and caps, have revived talk of the old spinning wheel.

Yacht Cup Race

Mrs. Sopwith Will Act As Timekeeper On The Endeavour

Mrs. T. D. Sopwith, who will act as timekeeper on her husband's challenging yacht, the Endeavour, when it attempts to wrest the America's cup from the United States this summer off Newport, R.I. is anticipating the thrill of her life.

In every race of the series she will stand close beside Mr. Sopwith at the wheel, a stop-watch grasped in either hand, advising him to the second the time the Endeavour has made on each leg of the course, and the time of its opponent, how they stand. It's important.

"I wouldn't miss it for anything in the world," she told the Associated Press when interviewed at the Sopwith's handsome town residence in Park Lane. "I always act as timekeeper in our races, but this, of course, will be the biggest of all."

"You may be sure I won't wear trousers," she said. "Just a shirt and blouse and jacket. If there's a heavy sea I have a waterproof."

School Age At Eight

Children should not be permitted to go to school until they reached the age of eight, in the opinion of Dr. Laurence P. Folmsen, president of the New England Council of Optometrists. "The eyes of the human being," he says, "do not reach the state of maturity until the child is eight years of age, and much of the unnecessary strain to which we subject the eyes of children in the classroom should be avoided to insure healthy eyes among the future generations."

BUS AND TRUCK TRAFFIC BANNED FROM HIGHWAYS

A ban on all bus, truck and trailer traffic from Edmonton to Lloyd minster has been issued by provincial authorities, to take effect Wednesday morning. Heavy road conditions due to wet weather has caused the order to be issued.

The ban will remain in effect until the night of Tuesday, May 15th. This is the second time in the past month that ban has been placed on traffic on the highways.

To You - Our Friends

Believing that, by investing in Fort Saskatchewan, we could mutually benefit ourselves and the farmers of this district, we obligated ourselves

To render you complete McCormick Deering service.

To carry an adequate supply of repair parts.

And to charge you Only the companies regular prices for machines and parts.

In an endeavor to fulfill our obligation may we solicit your Co-operation by.

Giving us the opportunity of helping with your farm problems and the privilege of showing you our full line of labor saving equipment.

Letting us know the McCormick Deering implements you own so that we may be better able to carry the proper repairs stock.

And by ordering your repairs Early.

The More we Co-operate the More Our Service Will Mean to you.

We are equipped to supply your needs with

A Full line of McCormick Deering Horse and Power Farm Equipment.

A Full line of Fuel Oils and Greases—White Rose Gas and Enarco and National Motor Oils.

A Full line of Monitor Winches.

You are cordially invited to make our showroom your headquarters at any time—especially during the Musical Festival.

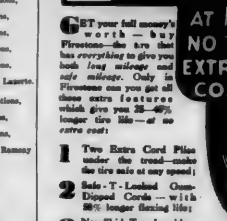
Let's get together — Thank You,

Fort Implement Co.

RALPH A. PORTER
Prop.

P.S. Phone your orders to No. 46 and pick them up Festival Day.

2 EXTRA CORD PLIES UNDER THE TREAD



GET your full money's worth — buy Firestone—the tire that has *everything* to give you both *long mileage* and *safe mileage*. Only in Firestone can you get all these extra features which give you 25—40% longer Tire Life—*at no extra cost*:

1 Two Extra Cord Plies under the tread—make the tire safe at any speed;

2 Safe-T-Loked Gum-Dipped Cords — with 30% longer flexing life;

3 Non-Skid Tread—wider, deeper tread to give 20% more non-skid wear.

Worn tires are dangerous—replace them now. Equip your car with the safest tires you can buy. See your nearest Firestone Dealer today.

Lower-Priced Firestone Tires

If you want Firestone quality at NEW LOW PRICES, ask for the Firestone Courier. Or, if you want a very low priced tire for Special Occasions, ask for the Firestone Duplex. Both of these tires are guaranteed by Firestone.

Precious Glass Of Water

University Of Michigan Values It At Ten Thousand Dollars

The most precious glassful of water in the world $10,000 worth is under lock and key in the University of Michigan laboratories, guarded as jealously as realism.

It is "heavy water" in its pure state deuterium oxide, discovered only two years ago and valuable in the treatment of cancer. Profs. J. C. Bidford, Leigh C. Anderson and John R. Baker have worked out a plan to increase the university's valuable supply to two quarts within two years.

A report on the process was given at the meeting of the American Chemical Society in St. Petersburg, Fla. Prof. Bidford hopes that the water may some day prove valuable in curing the ailments of old age.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile

No Calomel necessary

Do you feel tired, sick and miserable? Does your head ache? Is your tongue coated? Is your breath bad? Then you need a good liver stimulant. Don't dose yourself with calomel. Little Journeys In Science

OXYGEN

(By Gordon Hall Gerould, M.S.A.)

It has been known for centuries that the air contains at least two components an active and an inactive one. Many thousand years ago the Chinese called the active part yin (oxygen) They discovered that, when a candle was combined with sulphur with charcoal and with some of the metals The inactive part is nitrogen

Experiments show that apparently one-fifth of the air is made up of this active gas known as oxygen This element not only exists in the air but is found most abundantly combined with other substances. Ordinary clean sandy loam, of the earth's crust, about 50% water, 45% of the human body, and a very large part of such substances as saltpetre, limestone, brick and mortar

Oxygen is a gas without color, taste or odor. It is a little heavier than air and would be unsuitable for filling zeppelins. It is very slightly soluble in water, 100 cubic feet of water dissolving only about a cubic foot of the gas under ordinary conditions. There is, however, enough of the gas dissolved in water to supply the needs of fish, which are colder-blooded.

This gas do a not burn itself, but it supports burning or combustion. It combines with a large number of other elements. This tendency is not very great at ordinary temperatures, but at higher temperatures oxygen reacts very vigorously, usually giving off heat and light. The substances produced when oxygen combine with oxygen are known as oxides. The process is called oxidation. Many oxides occur in nature as valuable minerals and ores.

Oxygen is not only the most abundant element but the most useful, because the heat, and light are largely dependent upon it Considerable quantities of oxygen are used for cutting and welding purposes by the oxy-acetylene blow torch. Oxygen is taken in order to restore the supply in the air of submarine boats. It has been found that soldiers who ascend to high altitudes, where the air is rarefied, get relief by the use of mixtures of oxygen and air in the cockpit. An aeroplane has been designed to supply the oxygen from a tank through a connecting tube to a face mask covering the mouth and nose.

Physicians sometimes use oxygen tanks for patients who are suffering from pneumonia or suffocation.

Small Advice For Parents

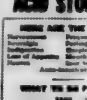
Dr. Alexander O. Gallatin, a banker in Wellesley, Mass., said a wise thing when he declared: "Too called guardians the morality of poor children with candy. Learn them economy now if you would do well by them. Bring them up to appreciate the finer things of life and let them live simply. Those are the true gentlemen you can leave them." And the beauty of the whole thing is that the average parent has the up daily to do this.

HOW TO FIND OUT IF YOU HAVE ACID STOMACH

HERE ARE THE SIGNS:

Surrounding heartburn, Sour stomach, Indigestion, Belching, Nausea, Dizziness, Gas, Sleeplessness, Dizziness, Morning Headache, Coated tongue, Bad breath, Auto-intoxication

WHAT TO DO FOR IT:



If you have Acid Stomach, don't worry about it. Follow the simple directions on the label of a small package of Phillips' Milk of Magnesia. Note the quick relief. Then, if you wish, continue to use this delightful product and other distress will disappear. It is your guide to health.

But—be careful you get genuine Phillips' Milk of Magnesia, or Phillips' Milk of Magnesia Tablets, when you buy—25 and 50c. sizes.

JESUS ANSWERS AS KING

Golden Text Whosoever will would humble himself shall be the same shall be greatest Matthew Philippians 2-9

Matthew 21 1-16
Devotional Reading Hebrews 5-1

Explanations And Comments

Preparations for the Triumphal Entry, verses 1-3. When Jesus found himself in Jericho, he knew that he was now at the beginning of the end. He was familiar with the prophecies concerning him and knew that they must be fulfilled. The Lord had said to them that he would utter the ordinary words which Jesus used when he commanded them to do anything. The Lord had said to them that he would utter the ordinary words which Jesus used when he commanded them to do anything. Zechariah words 12 14-16.

As plainly as the prophecies, was to approach and to bring him by the great officers of state, Jesus has him king, so unmistakably he had by riding into Jerusalem on an ass and by accepting the homage of the people given him. Jesus the king presented to men the only way to salvation, even as he does now. I will not; he has the right to send away them by a Divine Spirit. Matthew Isaiah.

The multitudes strewed the road and by the disciples. Like it. The people were in festive mood and the multitude with them spread their garments in the way as cut branches from the trees and spread them down for the beast to ride over. Some have referred the idea of spreading branches on the road as offering credible obstructions and enemies, and yet the orthodox explanation is, in a general proposition, in so spirit, the route with branches of fir." W. A. Grist Because of John 12 12, it has been generally supposed that the branches were palm branches although John only mentions the fact that the people came out from Jerusalem to meet Jesus bearing branches of palm. We learn from Revelation 7 9 that palms were carried as symbols of victory and rejoicing

John tells us that many people excited by the news of the raising of Lazarus (which he records next) do from Jerusalem to meet and to honor Jesus, while following with Jesus was the other multitude of disciples on their way to Jerusalem to keep the Passover. Both crowds united in crying "Hosanna to the Son of David!"

Recipe For This Week

(By Betty Barclay)

CARAMEL BON BONS

½ cup sweetened condensed milk which has been caramelized
2 cups confectioner's sweet fine ground) sugar
1 teaspoon vanilla
1 cup toasted cocoanut or chopped nut meats

To caramelize, place a can of sweetened condensed milk in a bottle of boiling water and keep at boiling point for three hours. Be sure the can is kept covered with water You can prepare several cans at a time and open them from week to week as desired. Open up the can of caramelized sweetened condensed milk and blend the contents with sifted confectioners' sugar Add vanilla. Drop by teaspoonfuls onto toasted cocoanut or chopped nut meats. Form into patties or balls. Chill in the refrigerator

POTATOES, PEAS AND CARROTS

To two cups of mashed potato add one-quarter cup heavy cream, 1 teaspoon onion juice, 1 beaten egg yolk, 1 teaspoon sugar, salt and pepper to taste. Beat until light. Form a ring of this on a shallow buttered baking dish. Fill centre with cooked peas and carrots seasoned with sugar, salt and pepper. Dot potatoes with butter. Bake just long enough to heat thoroughly and lightly brown potato.

The "bunko" game by the prodigal son in the Bible parable are identified in a Mediterranean legume with St. John's head, says Llewelyn Williams, a middle page, which is called the locust bean.

"Roll your Own" fans count to cent will tell you that Ogden's Fine Cut is the one sure on the smoke enjoyment program.

Ogden's Fine Cut gives them what they want, tobacco that is on fine flavour, fine fragrance, cooler smoking and easier rolling.

"C.R.C." (Canada's Better Cigarette) Tobacco — that's Ogden's Fine Cut. Try it — with Cheroket," or "Vogue" papers. You'll never find a more satisfying combination for "rolling your own."

OGDEN'S FINE CUT

P.S.—At any Police Head Police Station there or by mail—you can get 5 large booklets of "Cheroket" or "Vogue" cigarette papers in exchange for one complete cut Ogden's Fine Cut.

Home Instead Of Library

"Depression Practice" Cost Alberta $8,000 Last Year

Hamilton (Ont.) is not alone in its fears from marriage Hoome reverse. The same condition exists in Alberta, and it cost the province $8,000 in 1933 because young couples had their marriage banns announced in church rather than pay the $6 license fee.

"All denominations are doing it now," said Donald Mackie, provincial statistics registrar. Hamilton city reported revenue loss of $1,000 because of the "depression practice."

JAPAN'S POLICY IN CHINA IS NOW CLARIFIED

Tokyo The question of Japan's policy toward China was "clarified" by foreign minister Koki Hirota during a friendly talk with Sir Francis Lindley British ambassador to Japan

In response to the British request for a clarification of the foreign office spokesman's statement regarding China, Hirota told Sir Francis that although the spokesman's declaration was not official it was nevertheless a clear enough outline of Japan's policy regarding China

This policy previously espoused by Hirota himself in a broadcast speech before the Imperial Diet, is not a move toward exclusion by Japan of other countries from China Hirota declared in an address broadcast on an ass and by accepting the honor of the people present himself the king presented to men the only way to salvation, even as he does now. I will not; he has the right to send away them by a Divine Spirit. Matthew Isaiah.

The multitudes strewed the road and by the disciples. Like it. The people were in festive mood and the multitude with them spread their garments in the way as cut branches from the trees and spread them down for the beast to ride over. Some have referred the idea of spreading branches on the road as offering credible obstructions and enemies, and yet the orthodox explanation is, in a general proposition, in so spirit, the route with branches of fir." Alberta Liquor Permits

Reduction In Fees To Take Effect May 1st

Edmonton. Reductions of liquor permit fees from $2 to $5 comia will take effect May 1, it was announced by R. J. Dinning, chairman of the Alberta Liquor Control Board. On the same date, sales of bottled beer to be taken off hotel premises, will be permitted.

The main vendors' stores in Edmonton and Calgary will remain open each night until midnight, commencing May 1. Mr. Dinning also announced.

Those who have already purchased $2 permits will be given a refund upon making application but there will be no such refunds after the end of the year. The new 50-cent permit will be good for all liquor purchases by its holder until the end of 1934.

Reductions in permits for druggists, physicians veterinarians and dentists from $2 to $1 also are to take effect May 1. For hospitals, sanitoriums and similar private institutions the permits are to cost 50 cents, instead of $1, previously.

U.S. Navy Plans

Plan To Construct 20 To 25 Ships To Bring Navy To Strength

Washington. Within four months the United States government expects to start building 20 of the 32 ships needed to bring the United States navy up to treaty limits.

President Roosevelt let it be known that the $1,000,000,000 appropriation bill he will submit to congress shortly would provide money for initial construction in the treaty navy programs.

That bill, said Chairman Carl Vinson of the house naval committee, will carry about $40,000,000 for the first year's work on six submarines of 1,800 tons, 12 destroyers of 1,500 tons and two destroyer leaders of 1,850 tons.

The Applies To Old Gold

Ottawa. The finance department has officially announced that the new tax on gold will apply to sales of old gold to the mint. Persons possessing old gold in the form of jewelry or oddments will have to pay the tax on precisely the same terms as the producers of new gold.

Assistance For Airways

Appeal Is Made To Government For Same

Ottawa An appeal was made to the government to give assistance in the way of contributions from nature to the Canadian Airways Limited at a meeting with Hon. Hugh Guthrie minister of justice, Hon. H. J. Manion, minister of railways, J. A. Richardson, president of the company Sir Charles Gordon and E. W. Beatty, the situation was canvassed.

It was contended the company was doing a great work in the north in the development of mining and in making communication possible in the remote districts. The company had been asked to do the work of original contracts and it was suggested that some work be provided by the government.

The Canadian Pacific and the Canadian National Railways each put up $200,000 into the airways company. For some time reports have been current that the air mails would be extended. The open door doctrine guaranteed under the nine-power treaty of 1922, is not affected even by inclusion, except in so far as traffic in potential military materials is concerned, the foreign minister said.

Hopper War

Proper Temperature Only Needed To Develop Eggs

Saskatoon Farmers and grass hoppers are engaged in a race in which the grasshoppers have now advanced 220 degree-hours in the Saskatoon district, according to L. M. King in charge of the federal entomological laboratory here. The farmers must get their protective measures completed before the hoppers advance 1,000 degree-hours, he explains

It all depends on the warmth Half an inch below the surface of the soil, millions upon millions of grasshopper eggs are waiting. If the soil temperature remains below 62 degrees they will remain undeveloped indefinitely

But above 62 degrees the eggs begin to develop and one hour at 80 degrees above 62 degrees produces as much warmth as 80 hours at one degree above that point.

Marooned Air Party Reaches Dawson Creek

Spent Winter In North After "Plane Crashed Last August

Dawson Creek, B.C. Marooned in the snowbound north all winter after their plane crashed August 23 last in the remote upper Liard country near Cypress Creek, Captain C. A. Simmons, Mrs. Betty Rossbach and Pilot John Bonnell, all of Prince Albert, reached Dawson Creek in their rebuilt machine.

The party was exploring the possibilities of a mining district between Fort St. John and the "tropical valley" last August when the motor of the machine quit cold above Cypress Hills. It completely wrecked in the crash but none of the party was injured.

Complaints Are Lold

Montreal — Annual with recent amendments to the Women's Minimum Wage Act providing for heavier penalties including imprisonment for labor employers who show sweatshop conditions in their factories, Miss Francq, chairman of the Women's Minimum Wage Commission, and Lucien Rodier, K.C., counsel, presented complaints against a local dressmaking firms and Judge Mercier Tetreau signed the necessary summonses.

Seeding Almost Finished

Lethbridge In the Lethbridge section of Alberta, 85 per cent of the wheat seeding has been completed and 34 per cent. of the sugar beet crop is in the ground, with early warm hoots showing in the rows. Seed is going into a splendid seed bed and rapid germination of all crops is expected.

Cop Some Fines For Beer

Red Coat, Ia. Beer pours were busy in Montgomery county, following the recent dust storm that baffled the states of Nebraska and Iowa, and left the roads in this locality clogged with mud in some places one to three feet deep. The mud plows were called out to clear the roads.

Revolution In Wireless

Marconi Using Shorter Wave Lengths Than Any Yet Known

London. A revolution in wireless communication may result from new experiments now being carried out by Guglielmo Marconi using much shorter wave lengths than any yet known, the Morning Post said

Senator Marconi is engaged in the first regular communication tests over distances of hundreds of miles between stations near Genoa and Leghorn in Italy, using wave-lengths of 50 and 60 centimetres

The newspaper interviewed the inventor and was told the experiments were proceeding very fair reception, although not as good as we want "

There was no apparent difference between day and night reception on the new wave lengths. Senator Marconi told the newspapers representatives, but there were other variations the cause of which they had not yet discovered

Senator Marconi added the new waves greatly extended the range and would probably be applicable to television He concluded they would have this advantage. "That there would be no interference of any kind "

Going To English Home

Calgary. Alberta's rancher Earl of Egmont, who had heretofore resided in Alberta, will go to live with his peers in England, plans to leave soon for the home of his ancestors, it was learned here. The Earl was out of town but the secretary to the countess said plans would be completed soon, although no date of departure had been set.

Prime Minister Forbes of New Zealand who has arrived and that a royal commission will be appointed to investigate the New Zealand dairy industry and that a quote will be inserted in the United Kingdom-New Zealand agreement of a discrepancy between prices for New Zealand dairy produce and those of competing countries.

Business Picks Up

Economic Position Still Continues To Be More Favorable

Toronto An economic position "more favorable than at any time since about mid-summer of 1931" was reported by the Financial Post in its quarterly survey of Canadian business "In the first two months of 1934 alone the paper says "jobs were found for over 140,000 men and women These figures crystallize just how far business recovery is making headway in this country."

The paper's budget, based on 67 factors in business and industry shows a gain of 21 per cent. in the past year

With the increased amount of short tribal moments and also new building permits improvement may well be established In the case of building permits the paper notes that while totals for the first quarter of 1934 were down, March permits were higher than those of March last year.

For the first quarter the survey shows railway traffic improved by about 26 per cent over the same period last year Last week's carloadings in the western division of the railroads reached this year, because of gains in livestock, lumber, pulp and paper, ore and wheat loadings.

The basic iron and steel industry has found new business from automobile companies, mines and export sources in recent months, the survey finds. Automobile plants have been carried on by good export business and lately a "deluge" of domestic orders.

Freedom Of The Press

American Newspaper Publishers Urges Members To Be Vigilant

New York - The American Newspaper Publishers Association unanimously adopted a resolution urging its members to be "increasingly vigilant" to protect the principles of the freedom of the press from impairment.

The resolution watched closely in view of the fight waged by an A.N.P.A committee for a free press clause in the daily newspaper code provoked many criticisms of the N.R.A. or United States government officials

Senator Marconi added the new waves greatly extended the range and would probably be applicable to television He concluded they would have this advantage. "That there would be no interference of any kind "

Going To English Home

Calgary. Alberta's rancher Earl of Egmont, who had heretofore resided in Alberta, will go to live with his peers in England, plans to leave soon for the home of his ancestors, it was learned here. The Earl was out of town but the secretary to the countess said plans would be completed soon, although no date of departure had been set.

BRITISH MINISTER OF AGRICULTURE RT. WKBH

The Right Hon. Walter Elliot, British Minister of Agriculture, leaving St. Baldred's Episcopal Church, North Berwick, with his bride, the former Miss Katherine Tennant, half-sister of the Countess of Oxford and Asquith, after the marriage ceremony. Many members of Britain's nobility attended the wedding.

CONCESSIONS IN TARIFFS SOUGHT BY DELEGATES

Ottawa Delegations continue to besiege the offices of Hon E. N. Rhodes minister of finance seeking concessions with respect to taxation and trend announced in the budget A large delegation of wood and coal men had a conference with the minister with respect to the reduced drawback on coal, coal used for manufacturing coke while another delegation of steel men objected to the reduced empire preference on iron or steel plates

The delegation representatives of the Yukon Gold Company was interviewed by the ministers by Hon George Black speaker of the House of Commons, who represents the Yukon. They pointed their objections to the payments against the 50 per cent. tax on gold

Any changes the government decides to make with respect to the budget resolution will be announced as customary, in the House of Commons Mr Rhodes pointed the government's careful consideration of all representations

New Party Alignments

Events Are Moving Behind The Political Scenes In Britain

London Behind the political scenes forces are moving in the new alignments of parties preparing for battle

Sir Thomas Inskip, attorney-general and true-blue Conservative, proposes creation of a new national party to fight Socialism

Laborites meantime hail the recapture of the North Hammersmith seat as an emphatic condemnation of the National government and its endorsement of the Labor party program.

Laborite meet at Bournemouth to consider policy and plans of campaign

Sir Oswald Mosley's Fascists claim to be rapidly gaining ground, although not represented in the house.

May Hold Conference

Imperial Meeting In London Suggested For Next Year

London.—It a special despatch from its Canberra correspondent the Times said the suggestion had arisen during the visit of Stanley Bruce, Australian representative, to England, that an imperial conference might be held next year in London to consider questions of defense and economic policy in the light of the Ottawa agreements

The newspaper said it also existed in Australia in view of an apparent standstill in disarmament negotiations the decline in empire defence had created a situation of grave importance

Motion Was Defeated

Committee Rejects Move To Standard Hand Workers' Pay

Ottawa. The house banking and commerce committee defeated a motion by Norman Jaques, U.F.A. member for Wetaskiwin, which would restrict the salaries of high bank officials to the amount currently received as salary by the prime minister of Canada. The committee also defeated a motion by the same member which would authorize bank employees to organize for the purpose of negotiating with their employers with respect to salaries, hours of work and general working conditions.

Sunday Unless Strike

Bombay—The number of strikers in the cotton mill dispute has risen to 50,000 here and all of the city's 60 mills were either completely closed or crippled. A detachment of British policemen was despatched to the scene of the trouble

Restless Ted For Age

Istanbul Turkey Turkey's "Ataturk," Kare Agha, has declined to undergo a test to determine his age, fearing the experiment might detract from his fame as the world's oldest man.

OCCASIONAL WIFE

By
JULIA JAMES WEBSTER

Author of "Jocelin", "Lipstick Girl", Etc.

SYNOPSIS

Camilla Hoyt and Peter Ames, young and in love, marry secretly, deciding to keep their good fortune quiet until Peter is able to provide for her. Peter is a struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an income job. Others in the story are Avis Wirth, another wealthy girl who is trying to win Peter, Irene Todd, Stuart's model, and Cha Meters, his former roommate with whom he has quarrelled. At a party at an amateur club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla step off to the beach by themselves and fall asleep on the sand. When they awaken it is early morning and Avis and a number are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work, send for her and offer her a salary of $50.00 a week to start and a prospect of having it doubled in the fall. Peter of her good fortune in securing employment like. Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household. Avis Wirth rents a studio on the same floor as Peter, and invites him to have lunch there. He accepts reluctantly, but is favorably impressed with his visit. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Wirth calls and persuades Peter to accept a loan of $1,000.

(How Go On With The Story)

CHAPTER XLI

Camilla told Rose then of the disagreement between Peter and herself. His refusal to accept from her confidence in a sympathetic listener. Rose nodded solemnly. "I expected it. You might have known it would not work out."

"Rose, if this way doesn't, what would? It seemed to be the best plan in every way."

"The best plan would have been to wait until Peter was established before you married," emphatically.

"But that might be for years. And we love each other so!"

"Sure, that's just the trouble, no matter what one has been in it or whether it's a case of love or duty. The next best thing in your case would have been for you to let Peter take care of you and make the best of everything he could give you and anything he could do for you, even if you had to live on practically nothing but love."

"Oh, but that would have ruined Peter's career!"

And what in your occasional wife's doing for it?"

Camilla sighed and gestured helplessly. "I don't know. That's just it. Nothing is right."

Rose softened reluctantly. Oh he will get over it and everything will be okay again until the next round. All husbands and wives have to quarrel about something once in awhile."

Not the pure gold ones you were talking about, Rose you didn't tell Peter what he is in.

You should know. Class three, of course. Peter is the man of brains he is too clever. Also if you make me I'd rather have a man who stops to made once in awhile because he has some brains and originality than a man who is loyal because his wife is just like eating and sleeping to him."

You mean you wouldn't mind if he were unfaithful?"

"Oh, sure I'd mind it. But what could I do about it." And who has everything just the way she wants it? I'm just saying that half a loaf is better than none and that if your man is in that first or second class you have none. None of that romance and sentiment that women crave. That's why most of them have to get a substitute, like listening to radio crooners."

"But what shall I do about Peter?"

"Nothing. Just go to me him as usual and act as if nothing had happened. Men don't weigh and remember every word that's said like a woman does They get over a quarrel as easily as they get into it. But don't mention money to him again. Let him sell apples for a living, if he wants to be so stubborn and independent." She laughed. "In a way I admire him. I'm sorry for him, too. Peter's a grand guy, but he needs a kick somewhere. If he don't take it from you, maybe he will from someone else."

"Who?" Camilla inquired apprehensively.

"Oh, someone will recognize his talent, perhaps, and get around his pride complex. I hope so, for his own sake, and yours."

The shrilling of the doorbell startled both of them. They looked at each other inquiringly, for they seldom had visitors.

"It's probably Peter," Rose observed. "If it is, I'll get out, so you two can talk."

"Please don't I don't think it could be Peter, though." Already, her heart was racing at the thought.

"Well, you won't know until you open the door." Rose smiled to herself at Camilla, who sat as if glued to her chair and yet looking as if she wanted to fly to the door. "Just a second until I get this sewing out of sight."

Camilla patted her hair and powdered her nose hurriedly before she answered the ring. The speaking tube.

"Hello."

"Camilla?" inquired a voice that caused an exquisite delight to vibrate through her whole being. "It's Peter."

As if she didn't know! Already, she had pressed the electric button to release the downstairs lock, and was outside in the hall waiting when he reached the top of the stairs. His long legs always scorned less than two or three steps at a time.

He took both her outstretched hands and kissed her eagerly, drawing her into the room. "Darling!"

"Peter, I'm so glad to see you!" she whispered.

"Not at all. I'm tickled to death you came. I wanted to go out home and see Mr. tonight, but Camilla did not feel like going and I didn't want to leave her alone. Now I can run along."

"Why, you never said " Camilla began.

"Of course not. I knew you would insist on staying alone. I'd rather not come back tonight, either. Can't you stay, Peter?"

"Why if Camilla wants me."

"Well you two can settle that. I think I know what the answer will be," she said cheerfully. "I won't be back, anyway. I'll take my slip out and sew the lace on the machine."

"Blue" Spells

Reduce some women to the grandest shadow of their own natural selves. Others find the Vegetable Compound when they feel the "blues" coming on. It contains quieting nerve ... helps to tone up the general health. Often these must pop ... must cheer.

3 MONTHS ON BISCUITS AND MILK

Woman's Digestive Troubles

Everyone who is subject to any form of indigestion should know of this woman's experience. Advice to one who has had such severe attacks is surely worth having. She writes:

I suffered from indigestion gastritis and constipation and was so very ill that I was [illegible] three months. When I was advised [illegible] I was [illegible] to say [illegible] I would [illegible] to take Kruschen. [illegible] it.

The immediate effect of the salts in Kruschen is to stimulate a natural flow of the digestive and [illegible] juices to the [illegible] to start on [illegible] you will find that you are [illegible] feel without any [illegible] effects. And as a few pence will buy the little bottle of Kruschen that will be enough to show you how delightful it is to feel fit, and what a healthy glow it brings of lasting relief.

That will be much better and save me a lot of time." She was collecting her things as she talked. She stood before the mirror and adjusted a hat which came low over her eyes, buttoned the collar of a tweed coat under her chin. "Chilly out isn't it?" she asked Peter

"Rather," he replied. "You don't mind going out alone?"

"I should say not! It's early yet. Well goodbye, you two. See that you have a grand night," she admonished Camilla with a sly wink.

"Nice kid," said Peter, when she had gone. "You had she hadn't a chance like you."

"I don't know. In many ways, I want to keep it funny and put it away between the pages of a book to treasure with memories, but when you take it out again, it is not at all the same gorgeous thing that you once had in your hands.

(To Be Continued)

Little Helps For This Week

"I was afraid and went and hid thy talent in the earth. Lo, there thou hast that is thine." Matthew 25 25.

Time was I shrank from what was right,
From fear of what was wrong;
I would not brave the sneered [illegible]
Because the foe was strong

But now I cast that [illegible]
[illegible]
Such aim at heaven was pride.
—J. H. Newman.

If the really devout man fails into some error he does not fret over it, but rising up with a humble spirit he goes anew on his way rejoicing. Were he to fall a hundred times in the day he would not despair, he would rather cry out lovingly to God appealing to His tender mercy and pity. The really devout man has a horror of evil, but he has still greater love for that which is good, he is more set on doing right than avoiding wrong. Generous, large-hearted, he is not afraid of danger in serving God, and would rather run the risk of doing His will imperfectly than not strive to serve Him lest he fail in the attempt. Jean Nicolas Grou.

New Russian Loan

Big Domestic Loan Running Ten Years Announced By Soviet

The issuance of a new domestic loan, aggregating 2,500,000,000 rubles and running 10 years, had been announced by the Soviet government.

It will be known as "the loan of the second year of the second five-year plan" and carries the optional privilege of either a lottery or interest bearing bonds, which will pay 10 per cent. annually.

A panhandler approached a business man. "Let me have a dollar for a bite to eat, will you?" he asked.

"A dollar?" gasped the man. "For a bite to eat."

"Just say 'yes' or 'no'" replied the tramp. "Don't tell me how to run my business."

FORT SASKATCHEWAN RECORD

VOL. 1 ... NO. 6 FORT SASKATCHEWAN, ALBERTA WEDNESDAY, MAY 9th, 1934 $1.50 PER YEAR In Advance

Farewell Party For Mr. and Mrs. W. E. Roberts

Thursday evening at nine o'clock in the evening, the members of the staff of the Provincial Coal and their wives gathered in the sewing room of the female gaol, the occasion being a presentation to Mr. and Mrs. W. Robert, who is leaving the Institution to take charge of a larger Government Power Plant at Edmonton.

The program for the evening was in charge of Mrs. Thorne, Mr. McLean and Art Gibson. Those who assisted with solos and duets were: Mrs. G. Gibson, Mrs. N. Thorne, Miss Helen Jardine, and Messrs. Jack McLean, Tommy Holt, Harry Thorne, and Stan. Thorne in attendance assisted admirably in the sing songs.

Following the program a luncheon was served.

Mr. McLean then requested Mr. Roberts to come forward and occupy the seat of honor. Mrs. Roberts was placed at the opposite side of the hall — this is the words of Mr. Warden "this could keep an eye on my hubby."

In well chosen and presented words the Ward then gave an outline of the contribution of the Roberts to the Gaol and Community life, emphasizing particularly the parts they have played in the social, fraternal, community and industrial work. He expressed a sincere feeling that the loss to the community would be great when the Roberts departed, and that in his own words, he was grudgingly sorry to see them go.

In conclusion, on behalf of the Gaol staff, Mr. McLean then presented an electric heater to Mr. and Mrs. Roberts as a token of remembrance and a bond of friendship.

In response, Mr. Roberts spoke feelingly of his regret in leaving the Fort and expressed himself that the six and one half years in which he has lived in the Fort were to him a series in his life most pleasant and impressive. At the same time he informed the assembly that they were by no means rid of him yet as it is the intention of the family to remain where they are until the conclusion of the present school term.

Finally the victims were placed in the centre of the floor while everyone joined heartily in singing: "For they are Jolly Good Fellows," "Auld Lang Syne" and "Three Cheers and a Tiger". The meeting closed in harmony at 11 p.m.

JOSEPHBURG NEWS

The Josephburg Jr. U.F.A. held their meeting at the home of Mr. R. Hennig on April 18th. The Roll Call was answered by "Believe it or Not."

It was decided that we join the Debating League and debate with the Bremner Local at some future date. A debate will be part of the program at the next meeting. The subject chosen is "That Present Day Conditions Against the Interests of Youth". The debaters are Hilda Frey and Mamie Bonaghan versus Clarence Cranston and Willie Ustenenko.

As the membership drive now over the losing side will entertain the winners at a wiener roast at H. Mann's on May 19th.

All Josephburg Juniors are invited. The next meeting is to take place at the school same time after the festival. The roll call will be answered by "A Moral".

Two members of the Alliance Junior grain club, Hugh Duncan and Chas. Adler, will represent all the junior grain clubs of the province in the national grain judging contest at the royal winter fair at Toronto next fall. The Alliance team was selected as a result of the recent judging competitions held in Calgary and Edmonton.

Those who boast of many friends are generally advertising themselves.

Advice on Couch Grass Eradication Now Available

Northwest Grain Dealers Finance Scientific Study for Control of this Weed.

Scientific methods for control and eradication of Couch Grass, a weed which is spreading over Western Canada, is made in a pamphlet prepared by Dr. G. P. McRostie, Professor of Agronomy and W. Tiddeman, B.S.A., assistant on weed research ... Agricultural College of Manitoba University, on behalf of the Northwest Grain Dealers' Association. Elevator companies, operating principally in the Prairie Provinces, have financed scientific studies of the weed problem which has been under way for the past three years. The results of these investigations have now been published in pamphlet form. The pamphlets are being distributed free by all line country elevators.

Couch Grass was introduced in Western Canada through small lots of seed sent out to farmers in the East from friends in France during the latter part of the last century, and before proper intervention facilities were established in 1909 imported into Canada. The Chief Analyst of the Dominion Seed Branch at Winnipeg has found that approximately one-half of the Brome Grass seed sent to the Seed Branch for inspection contains Couch Grass.

The following advice with Couch Grass outlines methods for the control or eradication of this weed in a manner that the ordinary layman can follow and follow. Any farmer troubled with Couch Grass in his fields should obtain a copy. It is also recommended that farmers advise farmers who wish to keep their fields free from this weed.

Red Cross Meeting

In honor of Mrs. C. Reed, who expects to leave shortly for a trip to the Old Country, a tea was given by the local Red Cross members at the home of Mrs. Barnett, on Tuesday the 1st May. On behalf of the members, Mrs. Ramsay, Vice-President, presented Mrs. Reed with a most useful handbag in appreciation of faithful services rendered as Secretary of the local branch. Mrs. Staples in a few well chosen words also expressed much regret with best wishes, and a hope for ultimate return to the Fort.

The President, Mrs. Wilmoreth then decorated Mrs. Reed with the Life Members badge of the Society, after which Mrs. Reed thanked the members most warmly for their kindness shown and a pleasant social hour was spent.

Agricola News

The Agricola girls soft ball team are having their first game at the school on Friday, May 11th. Any girl wishing to play appear on this date.

Seeding is progressing nicely after the grand rain we had last week.

Miss Eileen Robertson of Vegreville, Alberta, Mr. Jos Carr and another lady visited Mr. Cummings on Sunday night trying to locate an old acquaintance.

Mrs. Peter Andreyes hand is doing nicely, after the misfortune of losing part of her finger.

Mr. and Mrs. Arthur Walker returned after their tour of visiting their daughter at Marville.

Mr. Herbert Lotzken of Major, Sask., is now soaking his house at E. J. Cummings, Fort Saskatchewan.

SCOUT NEWS

At a meeting of Fort Troop Boy Scouts and Cubs held on Tuesday, a presentation of a silver Tank Badge was made to Rev. C. Reed who has been a willing helper in the Scout movement since coming to the Fort. Rev. Reed gave a short address to the boys.

A few words from a Cub, Dick Cornish, expressing their regret at losing Rev. Reed, and wishing him every success and health in the future. The short address was quite complete.

Rev. Reed presented the pennants Scout present, this being Walter Hamm with an ivory scout badge carved by Mr. Reed.

Scoutmaster Lemoreux expressed a wish that Rev. Reed would no doubt find his way back to the Boys in the near future.

Monthly Meeting of Fort School Board Held

A regular meeting of the Fort Saskatchewan School Board of Trustees was held in the Council Chamber on Monday the 7th instant at 7.30 p.m.

Present, Mr. F. Atkinson, Chairman and Trustees D. Gallant, Dr. Lamont and Mr. R. M. Rae. The minutes of the last meeting held were read and adopted. A communication from the Department of Health regarding examination of public school children against smallpox and being inoculated against diphtheria was left over until next meeting.

A resolution was passed that the Board tender its appreciation to Mr. Warden McLean for his untiring interest and help previously, in fixing up of the school grounds, and in the incinerator.

Dr. Colbourne was granted three months leave of absence from the first of June 1934.

A motion was passed that the Board that of the Musical Festival of the Town be instructed to look into the difficulty in financing the luncheon served to visiting children the Board would be willing to contribute the sum required.

The question of supply and cost of firewood for examination purposes was considered by the Board and it was decided to purchase 400 at $1.90 per thousand from F. Smith of Fort Saskatchewan. Tenders were also called for payment as follows:—

$21.62 A. M. Saunders $2.00 Fort Hardware Co., Ltd. Barn-at 75c, F. W. Smith Shed at 75c, T. Lalonde 75c, $4.00 for 2 M's fencing at $2.75 a load from Cadet fund for basketball equipment etc.

GOOD PRICES FOR HORSES

Horses are once more in keen demand throughout the west, and recent horse sales in Alberta realized good prices At Medicine Hat on March, prices ranged from $60 to $117.50 for individuals and to $180 for teams. At Lacombe sale prices averaged $68 per head for every horse sold, the top price being $182.50 for individuals and $360 for team.

Fort Lodges Hold Banquet Presentations Made

W. G. Shorn, P.G.M. and Rev. C. Reed, P.G., two members who have given many years of faithful service to the Independent Order of Odd Fellows, were the guests of Fort Lodge No. 14 and Rebekah Fort Lodge No. 82, at a Banquet held in the Masonic Hall on the evening of May 7th, 1934.

Members of the Order from Edmonton Lodge No. 30 and Leduc were present and everyone declared it a splendid success.

It was a combined Birthday and Farewell Party, Bro Shorn celebrating his 81st birthday, and Bro. Reed leaving on a visit to England shortly. Unfortunately Mrs. Shorn and Mrs. Reed were unable to be present. During the evening, Sister G. Frey, N.G. on behalf of Princess Rebekah Lodge had bouquets of flowers sent to these ladies.

After the Birthday Cake had been served in, Bro. F. Baker, P.D.D.M. the chairman, called upon Bro. Rev. Reed to make a presentation to Bro. Shorn of a Life Membership Card in the Fort Lodge of Oddfellows and Princess Rebekah Lodge. Bro. Reed spoke in his usual effective manner emphasizing the long and faithful services of Bro. Shorn, and on behalf of all those present, wished him many Happy Returns of the Day. Bro. Shorn has been an Oddfellow for 56 years, having joined the order in Port Arthur, and has for the last 27 years been a member of Fort Lodge No. 14. Bro. Shorn in his own inimitable way thanked the members for their good feelings towards him.

Bro. Reed was the recipient of a handsome walking cane, presented by Bro. E. Flintoff, P.D.D.M., on behalf of Fort Lodge. Bro. Flintoff spoke of the friendship and high esteem in which everyone held Bro. Reed and sincerely hoped that he would return from England to be with the members again for many years to come.

Bro. Reed thanked the gathering for their kind expression of goodwill and felt very happy to know that he had so many friends.

The following visitors sang during the evening, Mrs. S. Dennis Mrs. A. Gibson, Mrs. S. Thorne and Mrs. F. Baker.

Brothers of Edmonton and Lamont Lodges individually expressed their appreciation of the honor of being present at the celebration. Amongst those speaking were, Bro. T. Hay, P. G.; Bro. D. Wilson, P.G.P., Bro. M. Robertson, P.G., from Lamont Lodge, Bro. Birch, P.G., Bro. Canfield, P.D. D.G.M. and Bro. Hall, P.G. Bro. Bell called for a vote of thanks to the members of the Fort Lodges for the very pleasant evening. This was heartily endorsed by everyone.

The following members of the Rebekah Lodges also expressed their pleasure, Sister Canfield, P.G., Sister Davis, P.D.D.P., Sister Falkenzie, P. G., and Sister G. Frey, N.G. of the Princess Rebekah Lodge.

The evening was brought to a close by everyone joining hands and singing "Auld Lang Syne."

Evening Program of Festival Presentation Two Programs

at 8 p.m.

ADMISSION—A 50c ticket may be purchased that will entitle the holder to day and evening programs. Afternoon or evening programme to any or all adults 25c. Evening program only 25c.

NOTE:—The program is subject to alteration pending confliction of event in the halls.

NOTE:—In the case of the Folk Dances and Action Songs, this event will be presented in both halls.

House Cleaning Time is Here

Wallpaper at Low Prices

—Take any room, cover it with appropriate wallpaper and the old room vanishes and a bright, new charming one takes its place. So great a change for so little money. Let us show you our new line.

Window Shades

Spring house cleaning time is here. Perhaps you find your windows need new shades or beaus curtain rods, single or double style.

Cover your Floors

Linoleum and Floor-Oil cloths also Linoleum and Congoleum rugs to fit your room.

Furniture & Floor Polish

—"O'Cedar" Polish for fine furniture and floors at 25c

—"Old Windsor" furniture polish, cleans as it polishes, Floors, Autos, Furniture, Woodwork, etc. Per bottle 25c

—20 oz tin of "Old English" floor polish, needs no rubbing, dries to a lustre. Needs no polishing, for wood floors and Linoleum. Per large tin 75c

Canvass Shoes & Slippers

—For the kiddies we are showing a nice line of strap slippers and oxfords in tan, and beige in sizes 5 to 10½.

White or Brown Oxfords

—Women's and Misses white or brown oxfords and fancy shoes and slippers.

Sport Shoes

—A range of Boy's and Men's sport shoes in brown or white.

—We have in stock, work boots, shirts, caps, gloves, etc.

Headquarters for staple and fancy Groceries.
Buy your Garden and Field Seeds here, all fresh stock.
See us before you purchase your chick starter and chick feeds.

Simpler Problems Baffle Man

While world opinion is disturbed and distorted by threats of war and general unrest, while thoughts of budgetary deficits and problems of trade engage anxious minds at home, it is inspiriting to turn to conquests of the physical universe which, from time to time, demonstrate man's ability to master infinitely greater problems than those which trouble his peace, security and prosperity. The statement may be trite and commonplace, but it is nonetheless true, that man's ingenuity in solving the riddles of the universe is in marked contrast with his apparent stupidity and failure in finding solutions of silence directly within his own purview and which, as a matter of fact are his own creation.

The thought is suggested by recent addition to scientific knowledge of the atmosphere which is now known to consist of four layers—the troposphere, the stratosphere, the oonosphere and the ionosphere. The troposphere, the layer closest to earth's surface, is the stratum of changing temperatures and pressures and of wind-producing forces. As long ago as 1899, it was discovered, by temperature tests, that this layer terminated relatively abruptly at a height of between six and seven miles. Beyond this height, the temperature was found to be relatively constant up to about 25 miles. This layer of calm, cloudless air of uniform temperature is the stratosphere of comparatively recent conquest by balloon ascension.

As this is written, a prairie dust storm occludes the sun, and, as a result, there is a marked fall in temperature. It is palpably cooler. It happens that calculations concerning dust cloud into the stratosphere by volcanoes prove similar cooling effects. If one seven-hundredth of a cubic mile of fine dust were blown into the stratosphere it could form a screen which would reduce the intensity of the sun's rays by 20 per cent. The screen would remain suspended in that still windless zone for years, and it has been suggested that the ice ages have been caused by such volcanic dust-screens.

Recent research has shown that, above 25 miles, and extending up to 35 miles, a another layer rich in ozone and, for that reason, called the ozonosphere. The ozonosphere of this layer in the atmosphere is of interest, less in the fact that, because it is absorptive of ultra-violet rays from the sun, the earth is adapted to human habitation. Without this screen, it is said organic life on earth could be stripped and by sun-stroke.

The ozonosphere, unlike the stratosphere, is not cold but hot. Above it and beginning at 50 miles, lies another layer, the ionosphere so-called because the gasses of the air in that region are in an electrically excited or ionized state. The secrets of this stratum are yielding to radio research although its existence had been deduced, long before the advent of the radio, to explain some of the earth's magnetic phenomena. The ionized particles have the property of reflecting radio waves back to earth and it has been revealed there are two main layers in the ionosphere, at 64 and 112 miles respectively, which reflect these waves. Each of these is split into two during the daytime making a total of four layers. These four layers probably mark the heights at which particular constituents of the atmosphere become electrified or ionized.

Recent research has further demonstrated that the electrification in the layers is more intense in summer than in winter, the condition being normally due to ultra-violet rays from the sun. Thunderstorms also play their part. it having been calculated that the electrical energy continually released in thunderstorms is more than sufficient to produce all the observed ionization in the ionosphere

That scientific minds applied to investigation of the seemingly inscrutable have produced so much positive achievement is in striking contrast with the meagre fruits of the efforts of politicians, statesmen, economists and "brain trusts" to solve the problems of man's social and economic relationships. It suggests the thought that, were equally trained minds set freely and independently to work, by universal agreement, upon the problems which seem destined to perpetuate embattled borders between peoples of kindred cultures and similar aspirations, their solution quickly would be forthcoming The rest would be up to us.

Clearing Coast Of Labrador

British Naval Surveying Ship Challenger Engaged In Work

The British naval surveying ship Challenger, has sailed from Portsmouth to resume her task of charting the coast of Labrador This work has never been completed Last year the ship certainly started the Challenger upon the work because it has become necessary to provide safe channels for navigation along this dangerous coast owing to the development of Labrador. The survey will take years to complete

FINE QUALITY TEA
ALWAYS ECONOMICAL

Packers of the finest teas such as "Salada" have been forced to increase prices slightly in order to maintain quality at present low prices are depleted your favourite beverage will cost you slightly more This has been brought about by advances at the gardens where production has been purposely restricted in order to save the growers from further disastrous loss. But this comforting beverage is still the cheapest drink in the world next to water Heed.

As a matter of fact, your neighbors think just as disagreeable things about you as you do about them.

Canadian mackerel and vermicelli last year made an entrance into Holland for the first time.

Heavy Days—Sleepless Nights
Wreak the Nervous System

Men and women toss night after night on sleepless beds. They rise to the morn in the subway, upon their nerves are tight. They are irritable and nervous, weak and worn out, and everything looks dark and gloomy.

Milburn's T. C. H. Pills is the remedy that is required to restore them the blessing of good health. They bring back the round rosy cheeks, tone up the nerves, and impart that sense of buoyancy to the spirits that is the result of restored health and physical vigor.

Russian Aviators Have Completed Big Task

Rescued 104 People From Floating Ice Off Siberian Coast

Two months ago 104 Russians were wrenched on floating ice between Wrangel Island and the coast of Siberia. Since that time the efforts of Russian aviators to rescue the 104 a few at a time has held the interest and admiration of the world The task has recently completed. Not a life was lost

Moscow, center of the rich mineral resources of this Arctic island whose inaccessibility has become proverbial, rashly determined to populate it with permanent colonists Of the 104 there were two babies and two children. After their ship had been crushed the adventurers, who had plenty of food and fuel, built living quarters on the ice and were not uncomfortable in spite of the sub-zero temperatures They suffered little. Their wives were constantly in peril, for the breaking up of the ice might bring death at any moment.

The organization of the relief work was thorough and systematic, and its success is a tribute both to the skill of the leaders and to the valor of the Russian aviators. It is not without reason that Moscow is celebrating. Besides the efficiency of Soviet organization, the hardihood of the marooned men and women, and the devotion and ability of the rescuers. On Monday newspaper comments, perhaps with reason, that if the disaster had occurred in the days of the Czar the Wrangel colonists would all have perished while bureaucratic officials argued as to which department should pay the costs of the rescue.—Cleveland Plain Dealer.

CAST OFF UGLY FAT

Woman Loses 28 lbs. in 3 Months

"Three months ago," a woman writes, "I was overloaded to try Kruschen Salts to reduce my weight, which was 196 lbs. I have used other salts, but all to no avail. Now I know that Kruschen is worth its weight in gold. In three weeks I lost 5 lbs., and I felt five years younger. I really must say I felt a different woman in every way. I have now lost 28 lbs. to date." (Mrs.) S. G. H.

If you are overweight take one half teaspoonful of Kruschen Salts in a glass of hot water before breakfast every morning. There will be no regret at alarming loss of weight, but just a steady decrease of that flabby fat which is an unhealthy as it is unsightly. Kruschen is a scientific blend of six mineral salts found in the waters of three European spas that have been used by generations of overstout people to reduce weight.

Light Clothes For Warmth

Several Layers Better Than Small Number Of Heavy Ones

Very thick, heavy garments are not so helpful in enabling one to keep warm, as might be supposed. A far better way to defy the cold is to wear a few layers of light clothes. The late Lord Kelvin was a great believer in this method. On one occasion when he was making tests of his recording machine on a battleship on a bitterly cold day, he was asked why he was not warm an ulster. His reply was that he did not need one. The colder the weather, the more thin underwears he put on, and air between these insulated the body from the freezing winds. Many fishermen have also found that several layers of light garments are more useful than a small number of heavier ones, and act accordingly when facing the bitterest cold frequently encountered on their winter fishing trips.

Seems Hard To Solve

Perhaps there ought to be a happy medium between the methods of young scientific students of babies and the methods of their grandmothers. A Baltimore specialist condemns the modern method which leaves babies too much alone. It is curious that after several hundred thousand years' experience the human race has not learned to do babies' catechisms as to how babies should be brought up.

RaRerty: "The new boss of the factory'll be an old-fashioned man, I'm thinkin'."

O'Hara "He's no old-fashioned he will be takin' the betts from the drive wheels and replacin' them with suspenders."

Husband: "Why did that woman keep you standing at the door for half an hour?"

Wife "She said she hadn't time to come in."

Got Post War Job

Rhodes Scholar Who Had Only Great Things For England

The story how Sir Edward Hudson Young, minister of health, who lost an arm in the 1918 raid on Zeebrugge got a post war job with the admiralty was told in a speech by Lord Riddell Sir Edward, Lord Riddell said, came back from active service and sought a position with the admiralty only to be told there was no room for a one-armed man."

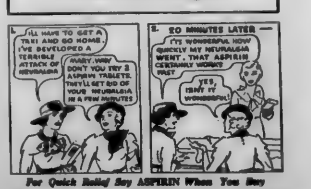
Sir Edward, he said, retorted: "Well, come with me to Trafalgar Square and I'll show you a one-armed man who did great things for England."

That, concluded Lord Riddell, was too much, "even for the admiralty", and one of his chiefs replied: "If you are another Nelson we will take you on."

Fierce Semaller Bomb Noises

The Montreal Board of Trade is in favor of smaller bankbooks and announced that a communication had been sent to the Hon. E N Rhodes, minister of finance, Ottawa, suggesting the change "The board believes the opening of the Bank of Canada would be an appropriate time to alter the dimensions of the bills.

Almost Instant Relief From Neuralgia



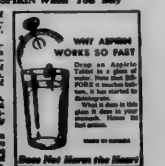
For Quick Relief Say ASPIRIN When You Buy

New cases amazingly quick relief from headaches, rheumatisms, neuralgia . . . the fastest safe relief it is said, yet discovered.

These results are due to a scientific discovery by which an Aspirin Tablet begins to disintegrate, or disintegrate, in the amazing space of two seconds after touching moisture. And hence to start "taking hold" in just a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. And then is ready to go to work almost instantly.

You get relief, through to an almost unbelievable degree. Try it for a quick spread epidemic often. To be sure you get ASPIRIN'S quick relief, look for the name Bayer in the form of a cross on every tablet.



Bayer Not Harm the Heart

Federal Minister Of Agriculture Gives Some Interesting Facts About Crested Wheat Grass

In the course of an interview to a respond in the House of Commons for information regarding crested wheat grass, Hon. Robert Weir, minister of agriculture, gave some interesting and valuable facts. I think it is a safe statement to make, he said, that the hope for crested wheat grass and what it will accomplish is even greater than I stated to the committee a year ago, and I recall that in that statement I was quite enthusiastic As the hon. member has indicated, especially in districts where there is a great lack of moisture crested wheat grass is particularly suitable. Even in our Manyberries station, where there is a considerable area that has been abandoned by farmers on account of lack of moisture, experiments have been made which have created wheat grass, brome, sweet clover, western rye grass and some other grasses, comparing them as to the growth they make with a limited amount of moisture In those experiments, crested wheat grass showed itself much superior to the other grasses One noticeable thing about these plots was that in the crested wheat grass plot there were practically no weeds; its tendency to absorb the moisture was so great that there was not sufficient moisture left for the weeds to make headway Another advantage of this grass is that it is a cool weather grass as well as a dry season grass, when the snow goes off in the spring this grass is as green as it is perhaps at any time of the year.

Also crested wheat grass is a palatable grass, and it has a high yield of seed. In the fall when the cool weather comes on, it seems to take on new life, because it is particularly adaptable to cool weather and remains green and maintains a fine growth until covered by snow. Another important characteristic it has, especially important in very dry years, is that even western rye grass will not withstand the drought and can be easily knocked out by hot winds, brome grass withers and often dies, the crested wheat grass seems to become dormant but responds to the very slightest degree of moisture.

One of the hardest tests that crested wheat grass has experienced was in a seeding that took place on the farm of Professor Harrington in Saskatoon He had a cement sidewalk running through the lawn, both sides of which were seeded with crested wheat grass, particularly of the fairway strain, which is one of our most valuable strains for fairways on golf courses and for laying down sod in Western Canada. It is a strain that is rich in foliage and spreads more than some of the other strains of crested wheat grass. One side was watered and protected; on the other side the children of Professor Harrington and his neighbours played, and it became almost like a pavement. Then towards the middle of August it also was watered and protected It responded very quickly, and before winter set in showed an excellent growth.

It has always been realized by those interested in dryweather farming, particularly in the west, that the need was for a domestic grass. We believe that in almost every respect crested wheat grass will meet that need, not only in the dry areas, but it also stands up well in the northern areas. At the Indian Head station some years ago, two pounds, I believe, were seeded very sparsely, and there were threshed from this patch 1,320 pounds of seed. That also is another very important characteristic of this grass, its high yield. Another important feature is that one can cut the seed of crested wheat grass to mature and then cut and thresh it, and the stalks of the grass will remain green and palatable, unlike western rye and other grasses of that nature, which, if allowed to ripen in the least, become woody and dusty and not palatable.

Nearly 250,000 bushels were produced in England in the last 12 months.

Livestock in Demand

Higher Prices Now Being Paid For Breeding Stock

The demand by farmers for livestock for use in breeding purposes is increasing The average price paid for horses at the Regina Winter Fair including a number of broncbos, was $75 per head. One team sold for $330 and another for $325 This is regarded as an indication of the return of the horse to popular favour

The average price realized for Shorthorn bulls was $154, compared with $97 a year ago Hereford bulls averaged $304, slightly up from the previous year, and the average for Aberdeen Angus bulls realized $86.50 a year ago to $122.50 The best price for a single animal was $700, and several sold for over $300 each.

Every bred sow offered sold at a good price. Thirty-six brought an average of $37.75, the top price for an individual was the Yorkshire sow at highest price $60 The good figures paid for bred sows reflected the prices now being obtained for select bacon hogs

Saskatchewan is the largest wheat-producing province in Canada and one of the chief wheat-growing areas of the world, and the trend to home grown short raising is regarded as significant.

Was Noted Inventor

Dr. Thaddeus Cahill Gave Up Law To Follow Hobby

Dr Thaddeus Cahill, 78, who described the legal profession at the age of 26 to become an internationally known inventor, died in New York recently of heart disease

Turning to electrical and scientific study at an early age he invented an electrical typewriter and a device for producing music electrically, known as the telharmonium, which attracted the attention of governments abroad.

He constructed a plant in West 39th Street, where musicians played on electrified keyboards and their music, carried by wires, was heard in Delmonico's and other places in New York as well as in Boston, Springfield, Baltimore and Washington.

One of the earliest radio broadcasts of music was made from Dr. Cahill's station by Dr Lee De Forest. He was a native of Iowa.

Not Much Called For

As artist who was spending a holiday in a small village relaxed the afternoon and asked if they stocked camel hair brushes.

"No, sir, we don't," the shopkeeper replied. "I see, sir," he added, apologetically, "we never have no call for 'em. Nobody in these parts seems to keep camels!"

All Dressed Poultry Imported Into United Kingdom Will Carry Mark of Country of Origin

Revival Of Civilization

Time Is On Its Side If Peace Is Granted

In a speech in London recently Mr Hinchcliffe, the present assistant secretary of the treasury, again declared that in his opinion "the characteristic of the present depression is, above all, a shortage of consuming power, due to the shortage of money." And within an hour or two of Mr Hawtrey's declaration, no less futuristic a politician than Mr Churchill, in an unconcerned broadcast, was permitted to announce that without a revolution, and with a little commonsense, the spread of the plenty which science had bestowed upon us could be easily brought about. While the welcome grass is growing, however, the stand is starving, and, most unfortunately, the time is all too short for his show however sure maturing. Given the security of a few more years of peace, we should be content in the confidence of the triumph of social credit over all its present critics and enemies. Time is on its side if peace be granted. But as the clouds are indubitably gathering for war on a tenth hitherto only dreamed of in nightmare, it appears to be all too probable that, as Professor Murray has said, civilization may die a death with the cure at its hands but in the presence of doctors who look only one thing to save their patient the will. London New English Weekly

Shortage Of Pigs

Western Linseed Oil Mills May Shut Down

To Import From Argentine

Unless production of flax in Western Canada now almost entirely suspended, is resumed soon, three western linseed oil mills, one of them at Medicine Hat, may have to turn to importing from the Argentine, it was learned. Canada's entire production of the seed last year was insufficient to meet the demand of the mills.

Failure to supply the 240,000 bushels consumed by the Alberta mills means a loss of $500,000 a year to Alberta farmers, according to W A Church, the Medicine Hat mill manager And one time Alberta produced more than 1,000,000 bushels of flax a year but last year the figure fell to 50,000 bushels From 10,000 acres The field crops branch of the Alberta department of agriculture has endorsed the suggestion that acreage now seeded to wheat should be sown with flax.

Parents of 10 children in Italy are now exempted from taxation, while bachelors between the ages of 25 and 60 are heavily taxed.

World trade has fallen so low that more than one out of every five ships of the world's tonnage is laid up.

Under an amendment to the British government Merchandise Marks Act, which will come into effect on and after June 22, next, all dressed poultry imported into the United Kingdom will have to carry an indication in a conspicuous manner of the country of origin

Canada has an important export trade to Britain which just now is particularly active. It is believed the new regulation is not likely to be a handicap to that trade.

The act lays down "that each bird must be marked legibly and durably on a neat or due of a permanent character and not less than two centimetres in diameter, securely attached to one of the wings if such bird by a durable attachment passing through a circular hole not less than one centimetre in diameter punched or stamped through the web of the wing; and in such manner that the name of origin shall be printed, stamped or written on such neat or disc in letters not less than one and a half centimetres in height."

This order is going to affect Canada as the United States is not substantial quantities of poultry to Britain, particularly during the Christmas season

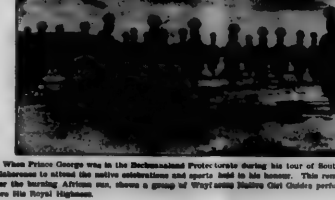
Canada may consider this order a rather serious handicap to the export of frozen poultry which has been seriously marketed by state officials of the livestock branch of the Dominion department of agriculture.

"Of the 10,000,000 pounds of poultry ordinarily stored in Canada it is by no means possible to indicate in advance what proportion is going to be required for export The marking required for the British market will be the only outstanding country going forward is so marked and it will be comparatively simple to colour the Canadian with British requirements in this respect In view, however, of the extreme difficulty, if not almost impossibility, of marking thousan s loss of $500 000 a year to Alberta farmers, according to W A Church, the Medicine Hat mill manager And one time Alberta produced more than 1,000,000 bushels of flax a year but last year the figure fell to 50,000 bushels From 10,000 acres The field crops branch of the Alberta department of agriculture has endorsed the suggestion that acreage now seeded to wheat should be sown with flax.

Parents of 10 children in Italy are now exempted from taxation, while bachelors between the ages of 25 and 60 are heavily taxed.

World trade has fallen so low that more than one out of every five ships of the world's tonnage is laid up.

PICTURESQUE SCENE GREETS PRINCE GEORGE IN BECHUANALAND



When Prince George was in the Bechuanaland Protectorate during his tour of South America, he paid a visit to Lobatsane to attend the native entertainment and sports held in his honour. This remarkable photograph, taken under the burning African sun, shows a group of West Area Native Girl Guides performing the "POT DANCE" before His Royal Highness.

Control Of Emotions

Psychologist Believes It Is Necessary To Suppress Freedom Of Emotions

The belief that children's emotions should not be suppressed was branded as "absurd" by C R Myers, consultant psychologist of the Ontario department of health addressing the Social Service Council of Canada at London, Ont.

Mr Myers enlarged upon the possibilities of mental ill might happen if children were allowed freedom of emotion "If we didn't suppress emotions all the time," he explained "civilization would be impossible Think what would happen if we went in and had a fight with anyone we became angry or ran away every time we felt fear "

Children had no natural fears, he explained and these were entirely developed by a person as he grew older There was no fear of death in the minds of children.

What he described as "emotional health" was more important than intelligence, he said

---

To Whom It Concerned

Mrs Brown had occasion to reprimand her colored cook rather sharply The victim locked daggers but said nothing until she reached the kitchen when her voice could be heard in vituperation No loud became the clamor and so vindicative the exclamations that her mistress hurried downstairs.

"Why Lina," she began in consternation, "who on earth are you talking to?"

"Ah ain' talkin' to nobody," was the reply, "but ah don't heer who in dis house heah's me."

WORLD HAPPENINGS BRIEFLY TOLD

Leon Trotsky may become a permanent "honored guest" of France. It has been revealed because no other country will take him.

Negotiations are proceeding satisfactorily for construction of a new 9,000-ton cruiser for the royal Australian navy.

Without discussion the House of Commons voted $2,200 to Jack Miner, famous Kingsville, Ont., naturalist to enable him to carry on his bird sanctuary.

The season's trans-Atlantic passenger service opened at the port of Quebec April 30, with the arrival of two liners, the Duchess of Atholl and the Minnedosa.

A suggestion that co,000,000 women of all classes, creeds and races share in the 1926 Nobel peace prize has come to the Nobel committee from Viscount Robert Cecil of Chelwood.

Imports duties collected at the port of Ottawa during the month of April amounted to $201,697, an increase of $900 as compared with the corresponding month of last year at four ports.

Inauguration of a regular air mail service between Fort Chipperyan Alta., and Fond du Lac, Sask., on or about June 12 was announced by the post office department. It will be the final direct service ever operated between the two northern points.

Subject to approval of the Canadian government, which he said he would approach when his plans are matured and sufficient capital for endowment has been secured Abbot Chao Kung, former Trappist Lama-cum will establish a Buddhist monastery in British Columbia.

The world wheat crop over the summer harvesting area was predicted as being about equal to that of 1925 by the International Institute of Agriculture, in making this prediction said that present available figures indicate losses in certain producing countries will be balanced by gains in others

Stamp Collectors Interested

Thousands Of Letters Received Per Delivery Over New Air Service To North

Nearly 20,000 stamp collectors from all parts of the world have evidently come to be flown in the first flight of the new air service from Prince Albert and Beauval and late a h 1 Vera.

It means at least $1,200 revenue on the first flight for the post office

Envoys from stamp collectors in New Zealand, Germany, France, England, the South American countries, the United States and every Canadian province have arrived and await the coveted cancellation stamps and the "conducts," or special marking stamped on each first flight cover

Extra revenue over the above collections put more than this required number of postage stamps on each cover so when the covers are loaded to guarantee safe delivery.

Lord Baden-Powell

Lord Baden-Powell, founder of the Boy Scout movement, whose life was almost despaired of early this year, was able to walk with the aid of two sticks, when he returned from a Mediterranean cruise. Lady Baden-Powell, who underwent internal operations Jan. 6 and 30, is 77 years old.

The north travels around the sun at an average speed of 18.52 miles a second or nearly 70,000 miles an hour.

THAT DEPRESSED FEELING IS LARGELY LIVER

Wake up your Liver Bile Without Calomel

You are looking pale, steady headache and have no appetite. Don't be worried. Don't take calomel. It makes you sick and nauseated and may leave you with constipation. Your bowels need to move, but don't force them with calomel. Your liver is sluggish and needs to be aroused to action. Dodson's Liver Tone is guaranteed to start your liver bile flowing freely and relieve constipation. Dodson's Liver Tone is a pleasant vegetable liquid. Just take a spoonful at night and you will feel fine next morning. Don't lose a day's work or pleasure. Dodson's Liver Tone is for sale by druggists everywhere. Price 75c.

Little Journeys in Science

FIRE AND FLAME

(By Gordon H. Gerrel, M.A.)

No one can deny that when first mankind saw fire he was struck with awe. Then there was a time when he was not afraid to use it. Probably forest fires caused by lightning and forest fires were his first experiences with the phenomenon, and from these he learned a few and use of it and later he worshipped it. It is not known how primitive man first learned to kindle a fire, but it is thought he did so by friction, a method which is still used in many parts of the world. Even in these days of modern friction match, invented in England a century ago by John Walker

Fire first arrived man with its warmth and by helping him to repel the attacks of wild beasts. It also it also as a beacon to guide him through the dark forests, and in it he forged his first primitive weapons

Lavoisier, the great French scientist who lived at the eighteenth century first considered the real nature of fire and flame, and proclaimed it as the rapid combination of fuels with oxygen, accompanied by the production of heat and light

Even the days that man first learned to make fire until comparatively recent times, the fires of home and industry were lit only with wood. Then a new fuel was discovered which smashed. Today oil, in the form of gas or steel. This new fuel is coal.

The change from wood to coal brought about a great change in industry. The employment of coal in the smelting of iron made it the foundation upon which modern machine age has been built. All the power steam locomotives were fired with wood. The adoption of coal for fuel gave them the greater speed

Oil has been known to man for several thousand years and was used in some cases in the ages. Henry oil was first used as a fuel in the oil fields of Pennsylvania, 70 years ago it is there that the first oil-burning stoves were invented. Today oil, instead of coal, is the fuel that drives the mightiest battleships and the swiftest ocean liners.

Farmers Fix Views

Five carloads of Russian poplar logs cut by M. M. Connelly of Fraser Lake to fill an order from China for matchwood timber have been shipped to the port of Seattle to the China Twenty more cars of the timber is expected to arrive. The logs run in the vicinity of twenty feet in length with a minimum diameter of ten inches.

MAY 23

CHRISTIANITY AND PATRIOTISM

(Golden Text: Thou shalt love thy neighbor as thyself. Matthew 22:39. Lesson Matthew 22:1-22. Devotional Reading, Romans 13:1-14.)

Explanations And Comments

In Advent Question and Its Par pose. 22 15-17. The Pharisees were now resolved to bring about the death of Jesus. They had no power to do so themselves, but they could get from the Roman governor his consent to what they desired. This is why they decided to attempt to ensnare him in his talk hoping to force him to say something which they could report to Pilate the governor, as thereupon. And, indeed, two days after they falsely told Pilate. "We found this man perverting our nation and forbidding to give tribute to Caesar," Luke 23:2.

Then came the question about which formerly they desired above all things to learn the truth. Tell us, therefore, What thinkest thou? Is it lawful to give tribute unto Caesar, or not?

A Wise Answer and Its Result, 22 18-22. Jesus understood that back of their compliment and their posing as admirers of perfectly straightforward men was a plot to bring about his death, and he said: "Why make ye trial of me, ye hypocrites?" Show me the tribute money," he ordered.

Whose is this image and superscription? Jesus now asked. "Caesar's," was the answer. Render unto Caesar the things that are Caesar's," said Jesus, and then added quickly, "and unto God the things that are God's."

The effect of Jesus' answer was to confirm both parties of enemies in a resolve every adverse element in the words of both, to place the issue at stake on a high plane, to disclose as irrelevant most of the plans and counterplans of the long controversy between them. (H Hendy Hobbs)

Annual Food And Drugs Act

Restrict Sales Of Proprietary Medicines To Be Used For Common Ailments

Sales of medicines advertised to cure tuberculosis, diabetis and such diseases will be prohibited under an amendment to the Food and Drugs Act to be introduced in the House of Commons. The amendment will restrict the sale of medicines under the act to common ailments.

The use of narcotic acid as a substitute for vinegar or the sale of substitute vinegar will not be allowed under a further amendment to the act.

The Proprietary or Patent Medicines Act also will be amended. The amendment will make it compulsory to place a cautionary label on all patent medicines containing potent drugs.

Eighty-six men more than 90 years of age were married in the Old Country in 1925, according to official statistics.

Was Good Sprinter

English Golf Runs Across Wembley Bridge In Record Time

Florence Holt 19-year-old amateur sprinter and member of the House of Commons entering stadium underground in run across Westminster bridge before Big Ben had finished striking 12 noon, made it

Wearing golf shoes and singlet she started at the first strike of noon ran through the sidewalk traffic and reached the park before the 12th strike of the hour. The distance is 252 yards and Big Ben takes 66 seconds to strike 12

SOME CHANGES MADE IN GOLD TAX APPLICATION

Ottawa The government brought relief to non-dividend paying gold mines, placer miners and producers of low grade ore by announcing that the proposed tax on gold would not apply to them. The question of constitutionality of the tax if any existed, was dealt with by changing the procedure to place a 2½ per cent tax on the premium paid instead of 10 per cent tax on production

As a further guarantee against anything in the nature of double taxation the gold mine companies will be permitted to credit their company income tax against the gold tax.

The tax which will run from April 1 of this year to May 31 1935, will not apply to any company not now paying dividends nor to any company which did not pay dividends prior to January 1 1923

In no case will the tax operate when the premium is such that the price to the producer is less than $20 an ounce This was the same provision placed in the original proposal

Among those of the change was made by Prime Minister R. B. Bennett. He referred to the protests that had been raised against the tax particularly in Ontario, and to the charges that the tax was unconstitutional

Hillcrest was to question in his mind as to the power of the government to impose the tax. Mr Bennett said and he referred to section 91 of the British North America Act. He described also the long discussions between the government and representatives of the mines

He believed the plan now proposed would meet with general approval of those most concerned. The conferring mining interests had accepted it as a fair way of dealing with the situation

It is anticipated the tax will bring in a revenue of about $9,000,000, which will more than offset the loss in revenue from reduction of the tax on sugar, for which the original imposition on gold was designed.

The only official protests against the tax from a provincial government, came from Ontario, the prime minister said. Hon Charles McCrea, Ontario minister of mines had appeared some time in conference with the prime minister and the minister of finance, and had arranged meetings between the government and the miners. Other provinces had complained "to the populace" through the press, the prime minister said.

Control Most Production

British Parliamentary Agricultural Committee Submits Plan

London. A move to control most production along the lines already suggested for wheat growers was made by the parliamentary agricultural committee here. The main points of their program will be submitted to the government for its approval.

The principal points are

1. To guarantee the farmer a minimum price

2. To raise the guarantee funds from an import duty on foreign meat.

3. A measure to raise prices and develop internal production while limiting importation.

Pneumonia Protection

Stockholm, Sweden. Professor Van Euler, who won the Nobel prize for chemistry in 1929, has discovered a substance capable of protecting man against pneumonia, the Svenska Dagbladet reported. Professor Euler found the substance in the juice of lemons, currants, and certain other fruits.

Tornado Kills Twenty

Calcutta, India. Twenty persons were killed, hundreds injured and a dozen were reported missing after a tornado swept the town of Sylhet in the province of Assam. Native houses were blown away and many small craft on the Surma river foundered.

W. N. U. 2005

Flood Causes Heavy Damage

People Of Fort Vermilion Forced To Abandon Homes

Fort Vermilion, Alta. The entire population of Fort Vermilion was forced to flee to the hills to escape flood waters from the Peace river caused by ice jam just above the town. Six homes were completely wrecked, buildings inundated and freight losers rushed by ice and thousands of dollars damage done to property and livestock as a great wall of water swept over the town at 6 am. Fort Vermilion is about 250 miles north of Peace River Town on the Peace river.

The entire population spent the night camped in the hills watching the devastation of their homes going on below them

On the south bank of the river most of the settlement hastened to rescue children from the mission with teams and wagons but within a few minutes the teams had to be abandoned and boats were used as the rising water flooded the stables and feed

Hastening above rushed news telegraph lines on the south side until the gale was before the ice jam and was swept away at the last moment.

Fort Vermilion settlement has a population of about 200 persons. The population of the district is about 1,000

Canadian Wheat For Japan

Dominion Sold Japan Wheat To Value Of Three Million Dollars Last Year

Montreal Although Japan buys most of her wheat from Australia, Canada is the latter country a lower rate of exchange Canada nevertheless sold Japan $3,000,000 worth of wheat last year, Hon Herbert Marler, Canadian minister to Japan stated here

He thought it would be many years before Canada could hope to attain an equal position with Australia as a competitor in the world's wheat markets. Last year, he pointed out, Australia exported 200,000,000 bushels of wheat, sufficient only for the Harbin area.

B.C. Liquor Revenues

Increase Is Shown For Months Of January and February

Victoria, British Columbia liquor revenues showed an unexpected gain of 26 per cent. in both January and February, and 60 per cent. in March over the corresponding months of last year, figures available revealed.

Liquor estimates for the fiscal year commencing April 1, 1926, had been placed at $300,000 less than in the same period last year, but current indications are that they will be up instead of down.

Increased purchasing power within the province is believed responsible.

Ontario Fall Wheat Damaged

Toronto. In practically all sections of Ontario fall wheat has been damaged extensively by a severe winter, floods and frosts and in some cases, the fields have been entirely killed, the provincial department of agriculture reported.

Coming To Canada

Sydney, N.S.W. Stanley M. Bruce, Australian high commissioner in London, is expected to visit Canada on a journey which is taking him to Ottawa and Washington to discuss world wheat production and other matters with President Roosevelt.

Strange Bring Big Price

London. At the auction sale of the Hinds stamp collection, two Canada 12c stamps, black, 1851 issue, were sold for £1,460. Eight years ago at the sale in Paris of the Ferrari collection, these two stamps were bought for £925.

Death Of Evangelist

Toronto. Rev. Dr. H. T. Crossley, former partner of the internationally-known evangelistic team of Crossley and Hunter, died here recently at the age of 83.

Prisoners For Soldiers

Nanking Gen. Chiang Kai-Shek, war lord of China, ordered that all prisoners—numbering tens of thousands in Chinese prisons be trained as soldiers.

Bank Molison Report

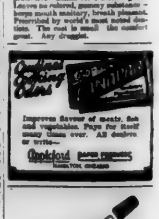
Assistors Make Australia-England Flight In Less Time

Lympne, England Kingsford Waller and Bernard Rutter set a new record for the flight from Australia to England, topping two and a half hours off the previous record established by James Mollison.

Waller, pilot instructor of the Civil Flying Club made the flight in the Australian Spur, left Port Darwin, Australia, April 27 and landed here after eight and one-half days flying.

They had flown to Australia from here leaving March 22 with the object of surveying the route of the England-Australia air race that will be held late in the summer in connection with the centenary celebration of the state of Victoria.

They landed at Port Darwin April 6, after being two weeks en route.



Bill Ready For Discussion

Ottawa. The government's program of public works for unemployment relief may be introduced into the house before long. In answer to a question by Hon. Mackenzie King, opposition leader, the prime minister said that the legislation was practically ready, but he thought it advisable to advance bills now before the chamber before introducing new material.

Curtis Scholarships

London. Establishment of two scholarships at the University of Western Ontario in memory of the late Sir Arthur Currie, commander-in-chief of the Canadian corps in France, and principal of McGill University, was authorized by the board of governors of the Ontario institution.

Imperial Press Conference

Eight Canadian Delegates To Go To South Africa

Toronto Canada will be invited to send eight delegates to the ninth imperial press conference. It was announced at the annual meeting of the Canadian section Empire Press Union, here. The conference will be held in the Union of South Africa from May 5 to June 21, 1926.

Details of the trip were explained at a meeting held under the chairmanship of J. M. Woods, editor of The Calgary Herald There will be a tour of South Africa and Rhodesia the delegates to be the guests of the South African section Preliminary arrangements for selection of delegates were left in the hands of the executive.

Reports presented at the meeting showed the Canadian section to be in flourishing condition with membership well maintained The news letter issued monthly and mailed to all members of the Empire Press Union throughout the British Empire, continues to be well received and is doing good service in making Canadian affairs better known in other Empire countries.

Words of appreciation were voiced also of the Australian news letter, which is doing a similar service for Australia in Canada and elsewhere.

Farm Credits

Premier Brownlee Of Alberta Confers With Dominion Ministers

Ottawa Hon J E Brownlee, premier of Alberta and Hon George Hoadley, his minister of agriculture were in consultation with Dominion government ministers and officials particularly in respect to the forth coming legislation dealing with the financing of farm credits and amendments to the bankruptcy acts

Premiers of other provinces had delayed appearance of this legislation announcement of which was made some weeks ago. It is a measure of far-reaching ramifications involving as it does the bankruptcy and moratorium legislation of the provinces.

Mr. Brownlee will be in Ottawa for some time.

Relief For Veterans

Seven Thousand Dollars Voted For Aid For Saskatchewan Ex-Servicemen

Ottawa Seven thousand dollars for immediate relief among veterans of Saskatchewan was voted at a meeting of past Dominion presidents and presidents of provincial command of the Army and Navy Veterans in Canada, meeting here.

The money will be made available at once, and distribution to applicants will commence on the arrival at Saskatoon, next week, of Col. H. M. Arnold, president of the Saskatchewan provincial command

It was Col Arnold who presented the claims of the destitute returned veterans of Saskatchewan and the urgency of immediate assistance at this time.

AS NOME HONORED SOVIET FLIER

Commander Maurice Stigmov, Soviet airman, received flags of the Soviet Republic and the United States from the Chamber of Commerce, Nome, Alaska, before he hurried his plane for a flight to the ice pack where 103 survivors of the ill-fated freighter Chelyuskin were awaiting rescue. Stigmov received highest Soviet honors for his gallant work in rescuing the castaways.

CONTROL BOARD FOR BAKERIES IS SUGGESTED

Ottawa Creation of a Dominion licensing board with powers designed to meet the problem of chain or mill controlled bakeries and bread sales by chain or departmental stores was proposed to the Bureau price spreads and mass buying parliamentary probe by Mark Brodin, president of Brodin Bread Co. Toronto

Submission of baking codes proposed by the industry in British Columbia and Saint John N.B. was made earlier in the day Mill controlled baking establishments were attacked by James Livingston, Toronto baker Charges that ruthless competition by chain and department stores had seriously damaged the bread business in British Columbia were made by R W Ward, Vancouver, vice-president Canadian Bakeries Ltd

The board which Mr Brodin advocated would have to be clothed with the following powers:

1. To require all bakers jobbers and independent distributors of bread to operate under a license

2. Issue and continuance of such license to be conditional upon compliance with regulations from time to time promulgated by such licensing body

3. The setting up of an advisory body representative of bakers to assist the licensing body in carrying out its functions, such advisory body consisting of representatives of provincial associations of the baking industry

4. The regulation of the price of bread in co-operation with a board or committee outlined in provision three, such price to have as its basis the cost of raw materials all productive, delivery and other costs including a fair scale of wages with minimum wages and maximum hours as agreed, and to be enforced by the properly constituted authorities

5. To compel a high standard of cleanliness and sanitation in accordance to provincial standards of weights.

6. The definition and prevention of unfair trade practices

7. The elimination of the spread between the resale price at chain and other stores and retail wages price

8. The proper consideration of the consumer's rights in the performance of all its functions

The capital set-up of a number of the companies controlling most of the bakeries up at a later stage of the inquiry, Hon H. H Stevens, committee chairman intimated.

Lumber Exports Heavy

March Shipments To British Market Are Largest Of Record

London Canada during March led all countries as an exporter of lumber to the British market

Board of trade figures show total British imports of wood and timber [illegible] in March a year, five times as big as in March of 1932, the respective figures being $664,000 and $440,000

Develop Tourist Traffic

Senate Committee To Study Methods To Encourage Travel

Ottawa Two names have been added to the senate committee which will study methods to develop tourist traffic, they are Senator R. B Horner of Saskatchewan, and Senator C MacArthur of Prince Edward Island.

At a preliminary meeting it was decided to call J B. Hanlin commissioner of national parks, as witness at the first meeting Senator W H Dennis of Halifax will preside

Guelph Agricultural College

Guelph, Ont. Ontario Agricultural College is celebrating its diamond jubilee marking 60 years' growth from a school of 30 students into one of the leading institutions of its type in the world

Building Up Reserve Force

Social Government Urging People To Take Up Aviation

Secret Session, with one of the world's strongest military airforces already at her command, is urging her civilian population in ever increasing numbers to take to aviation.

Flying clubs, where workmen from the factories and farmers from the collectives may train as pilots and accumulate flying hours of actual experience sternly are building up a second line of servants upon whom the government may call in case of war.

The first All-Union Conference of Aviation clubs held recently revealed that the number of such organizations has more than doubled during the past year growing from eighteen in 1933 to fifty-four in 1934. In one such club, at the Frunze plant, now be-mer 800 workmen are enrolled as members.

No definite figures on the number of qualified pilots in the Soviet Union have been published, despite the bitter denial in March of foreign reports that Russia can send a million aviators into the air.

A recent census of the growth of the skilled art of gliding is significant, however. The gliding schools, early fields and five clubs in 1933 increased to seven schools, 127 stations and as many as 615 clubs in 1934, it was announced. There were 14,000 glider pilots a year ago. By the end of 1935 it is expected that 60,000 or more will have been trained.

Even children have not been forgotten in the attempt to make the Soviet air-minded. More than 100,000 youths of school age are building working models of planes, some of which have established workin' records for their types.

Chickens For Britain

Second Shipment From British Empire

In the past few months there has been an increased demand for Canadian chickens from British buyers. The latest shipment left this week—4,000 boxes is now en route to Britain. The birds in this shipment were recently assembled in Winnipeg and were packed according to government standards and government inspection.

Last September the British Government imposed a duty of six cents per pound on poultry imported from foreign countries. This has caused the British buyers to look more to Canada and the other British Dominions for their supplies. Coupled with the fact that a reputation is being built up for Canadian government inspected poultry, this is creating the greatest demand for several years.

Last Christmas Canada shipped over 1,500,000 pounds of chilled turkeys and chickens to Britain which created a decidedly favourable impression. These shipments all went forward packed, graded and inspected according to Canadian government standards.

Memories Of Early Days

Start In Made On R.C.M.P. Museum, At Regina

A museum, which, it is hoped, will ultimately give a complete history of the force and be of interest to the entire Dominion, has been started at the Royal Canadian Mounted Police barracks in Regina.

The museum is climbing from a small beginning, with photographs of early events at present constituting the major attraction.

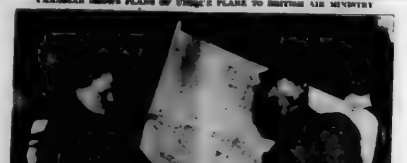
With many other relics sought, a nine-pound, muzzle-loading gun, of the type dragged by horses, has been secured and will shortly be placed in the museum. The gun is one brought west when the long arm of the law first reached over the plains in 1874.

Among other relics sought are copies of annual reports, arms, old uniforms, land-settlers reports and exhibits which figured in some of the major cases solved by the R.C.M.P. in the early days.

"A vegetarian diet is bad for those who would be beautiful," we read. Well, it does put meat in bovs there much for the elephant.

W. N. U. 1935

CANADIAN SHOWS PLANS OF UNIQUE PLANE TO BRITISH AIR MINISTRY



Plans of what is claimed to be an airplane that cannot crash was submitted to the British Air Ministry by John Howard, of Toronto, Ontario, who arrived in London recently. Mr. Howard, who is joint inventor of the machine (the Bellagraph with H. W. Hosker, of Montreal), says it comprises the principles of a dirigible, an autogyro, a cabin passenger plane and a hydroplane. Should the engine fail, the auto-gyro would bring the machine safely to the land or sea. No airports or mooring masts are required, and it can carry 25 passengers at a cruising speed of 100 m.p.h. for ten thousand miles or so. The machine will be able to make a non-stop flight from England to Australia. Mr. Howard is shown on the left discussing the plans of the unique machine.

Prestige Of Pioneer

Minister Of Agriculture Describes The Most Needed Variety Of Man

Manitoba Farmer Interested

The well-rounded interest in healthful sane exercise found an echo in the theories expounded by Hon. Robert Weir, Dominion minister of agriculture, by request gave some interesting information on the subject. Work has been carried on for a number of years in different countries, including the United Kingdom, the United States, and particularly Canada, in the development of the bull-tone and cool the minister. The difficulty has been in getting a strong enough straw and in getting an oat that would give a sufficiently high yield. It is believed now that these difficulties have been pretty well met by the Laurel variety of bull-tone oat. It is particularly strong in the straw and yet not too coarse to be used for green feed for horses, and cattle like it as well-long oat, it makes better feed, especially for calves and hogs than oats having the hulls on, and those who are engaged in livestock farming will realize the waste in hogs in feeding oats with hulls without crushing them. That is one of the chief advantages of bull-tone oats as a green feed.

Horses are particularly fond of this bull-tone oat, and our experience has been that they do better on it than on other forms of green feed we have used. The yield is not quite as high as in the case of such oats as Gopher, Banner, and Victory, yet it is quite a high yield; with a normal crop it runs fifty, sixty or perhaps seventy bushels per acre, and is pronounced bushel of a good sample of bull-tone oats should weigh in the neighborhood of forty pounds. Even Laurel is an early maturing variety and, contrary to what one would expect, the straw is ripe by the straw when it is quite ripe. One of the greatest advantages of the bull-tone oat is that it has been made use of for some time in combines. It is well adapted to the making of porridge by making without even having it ground. Many of the homesteaders, pioneers in outlying districts, because of that quality, also, for the reason that it has no husk, it is very suitable for feeding young pigs.

Chickens Heavily Insured

The Prairie Farmer says cardplaying wins are constantly increasing their fi-hunt of always receiving the same poor cards, will, perhaps, be reassured by knowing that the fifty-two cards purchased with each of the four players, can be distributed in 53,644,737,765,488,792,839,237,440,000 different ways so that each player could still be a good stock of some sensations to carry them even if a man from Adam's time had played himself to no other occupation than that of playing at cards.

Forty-five per cent. of all motorists injured in auto accidents are injured by flying glass.

Bad Intelligence Gauge

Men's Thoughts Are Limited To Size Command Of Words

The best index to a man's intelligence is his vocabulary.

That is where a study of several thousands of persons, covering the last two years, has revealed to Dr Jay Chester, head of the University of Arizona psychology department.

"We have found that successful business men, no matter how limited their schooling, are always men possessing an unusual command of words and an intimate knowledge of their shades of meaning," he says. "Moreover, these executives show a richer vocabulary than college professors in non-technical words.

"This is true also of students. The best pupil in the one who has learned the discriminate nicely among the meanings of various words. Those men who fail in their school work, except from idleness, laziness or illness, are those who cannot express themselves.

"The close connection between the vocabulary and intelligence is because thinking is largely based on the use of symbols—words—the one outstanding factor that has lifted man above the animal. If a man has only so many words to use, he can think only so far."

Reproducts Canada

Col. C. H. L. Sharman, of the department of pensions and national health, and one of the heads of the artillery officers in the Dominion, has been appointed to represent Canada on the advisory committee of the League of Nations dealing with narcotics.

At 482 degrees below zero some metals, as silver and copper, lose their resistance to electricity, becoming superconductors.

A Puzzling Problem

Many Seeks Discover Rash Other's Whereabouts From Long Business

One of the most puzzling problems in Nature is the way moths can discover one another's whereabouts over great distances. The female vapourer moth is one with which experiments have often been made. If she is put in a box and set outside a window, a number of males will soon be by the spot. So with the oak eggar moth, and many others. When a newly-emerged female is imprisoned in a box or little cage, all the males in the neighborhood will gather to find her. One naturalist does not think that the moths scent one another, for he has found, he relates, that the males will fly down the wind to find an imprisoned female, and he favors an idea that some sort of wireless messages are sent out and received by the moths' antennae. But if scent be not the clue to the mystery, how can one account for the fact that if a female eggar moth is put in a match-box for awhile, then removed, and the empty box is carried into a wood where the males abound, they will hover about the box?

An Unfortunate Error

A question mark caused the arrest of a typographer of the newspaper Hannover Volksblatt, who inserted a question mark is setting a message of congratulations which President Von Hindenburg sent Chancellor Hitler on the latter's 45th birthday. The question mark appeared after a sentence in the message wishing Hitler a long life (?) and then was printed.

Just about the time a man gets enough money to buy almost anything he wants, he discovers that he doesn't want anything.

Gardening

Three Plantings At Intervals Of Ten Days For Late Vegetables

In order to get a long and steady supply of green beans make at least three plantings at intervals of ten days and use several varieties. To do the same thing with tomatoes one may use a few well started plants for the first crop and hurry these along with fertilizer and p-aishy mush paper. All garden tomatoes should be staked, using either wooden or steel stakes about an feet high. Trim off all side shoots as they develop leaving the main stem up along the stake and using bounty about every foot. Warm weather vegetables prefer rich open soil and any members of the melon family, that is squash cucumbers, citron, etc. take special delight in hot sandy soil though it must be made rich with well rotted manure or good garden fertilizer.

The work is easier pot must be strong and firmly attached because it is going to be heavy. There must be fruit set with plenty of fertilizer, as this sort of gardening is very intensive Of equal importance in moisture and this must be provided daily. The window box should be as long as the window and should be supported and arranged so that the top of it is almost flush with the window-sill Otherwise, the foliage of the plants will soon fill up most of the window There must be holes in the bottom of box and pot to provide drainage and also a layer of gravel, cinders, broken crockery or of landing material for the purpose If one can secure a supply of well-rotted manure, put this in next, and fill with a top layer of rich soil. If there is no manure, use a fairly heavy application of good garden fertilizer and repeat every month. The box, which should be at least seven inches deep and from eight to ten inches wide can be filled and should be filled to within half an inch of the top. Along the front put in trailing nasturtiums, German ivy, lobelia, alyssum, and similar plants with petunias, ageratums, begonias, ferns, geraniums and other plants which are recommended for this purpose farther back. Shelter from the sun for a day or two until the plants get established.

Among the more tender flowers are Gladiolus, Dahlia and Cannas, the tubers or corms of which are planted. These should be planted in about the order named, the Cannas, particularly being rather tender and unable to stand any cold. Plant them all to a depth of about three times the diameter of the tuber or bulb in ordinary soil and slightly shallower in clay. Gladiolus and Dahlias prefer fairly rich open soil and make a good showing when grown in clumps, the Gladiolus planted four to six inches apart and the Cannas a foot. Dahlias will thrive in almost any soil, but good results in sandy loam mixed with a little clay. They should be staked, and have at least two and a half feet between plants.

Seedling flowers and vegetables in the hot-bed, or in flats in a sunny window, will be requiring some attention. After the danger of frost has been developed, the plants should be thinned out, so that they have at least an inch space each way. The soil should be stirred a little, and, of course, regularly watered. On warm days, expose by lifting the window or by removing sash and extending the process in height and time as the season advances. When the plants are about three inches high, it is well to transplant into cooler quarters where they should remain a couple of weeks, at least, before being put outside.

Leading Gold Producer

The government of South Africa because of the profit from the sale of mines on gold has reduced taxation by $10,000,000, and has restored Imperial preferential rates. South Africa is the leading gold producer of the world and to a lesser extent the Dominion has contributed from its gold production. Perhaps gold is yet to go as high as $41 per ounce.

For most of the breeds of poultry kept in Canada, a house need not be artificially warmed. If the air is dry and the birds healthy it is almost impossible to freeze them. A well-built hen is a dry draught-proof house will be comfortable.

OCCASIONAL WIFE
By
EDNA ROSE WEBSTER
Author of "Joretta", "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live with their own lives apart until Peter is able to provide for her. Peter is a young struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is sent to Atlantic City when she comes of age and so is studying commercial art in the hope of landing an art job for herself. In the story are Avis Werth, another wealthy girl who is trying to win Peter Bivin Todd Peter's model, and Gus Nelson, Peter's former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impressions. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work send for her and offer her a salary of $30.00 a week to start and a prospect of having it doubled. She tells Peter of her good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave with Hoyt housework Avis Werth rents a studio on the same floor as Peter, and invites him to have lunch there He accepts reluctantly, but is favorably impressed with his host. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Werth calls and persuades Peter to accept a loan of $1,000.

(Now Go On With The Story)

CHAPTER XLII.

"By the way," Peter said suddenly, "we are invited to a party for Saturday night. Avis is having a hot studio-warming. I suppose you would call it, and she commands our presence."

A little frown shadowed Camilla's face for an instant. "I can't understand why Avis took that large studio when she does practically no painting."

"I suppose because she can afford

QUICK RELIEF
From Itching Scratching Burning ECZEMA
Mrs. [illegible] writes: "I had Eczema break out on my leg and tried almost everything, but it did no good. So at last I tried 'Mecca' and got relief at once from the itching and burning. I have used only 2 tins of 'Mecca' and consider it a famous thing for any body of it."

to do whatever she fancies. Just a whim for the moment."

No doubt. But anyway I wonder why she didn't take a place on the Park? Looking some money in instead. The apartments are even much more attractive there."

She doesn't think so at all. I asked her the same question. She says the odds bunching is ever so much more attractive and has more atmosphere than the suite. And you know how nostalgic old ladies that gaudy crowd with a window always over each room. I don't blame her a night at that. Her friends are artists, writers, more different to those high-ceilinged rooms than they would look in the basement of the Craft building with marble apartments and shining mahogany vaults. She has some gorgeous stuff.

Oh yours, another apartment would be wasted on you. Peter, my neighbor I find it quite inspiration as it surface she opened it to the public. Her last night's party was going to make me do some things I've been putting off for a long time. First prospect will go! So you must be very considerate to the next client Rennie has in mind. She is always right about the studio."

Most of the time she acted half ill do my best for the cause Camilla smiled brightly. A little later she glanced at her heart. was it premonition or warning"

But she quickly dismissed any such depressing thoughts in the excitement of her own affairs. Avis was once again her gentle adversary power who laughed delightfully at her half way decent efforts, patting and flinging fullness as she moved gracefully among her guests

She held most of the time to Peter's arm having taking possession of him as soon as she arrived and swaying lovely to Camilla. I'm sure you won't mind if I give Peter a little the better of this evening. He needs to know people the kind of people who are here to-night and I want to be sure he meets everyone and they remember who he is. I want everyone to know you, too, but you already know more of them than Peter does and after all, he is the one who has made an impression with the right people, if he is going to succeed." She inclined her head toward a group across the room and lowered her voice. "I especially want him to meet my uncle Mr Danforth, who is one of the judging committee for the National Athletic Club. Introduce you later my dear."

As a matter of fact, she failed to do so, but Camilla gave no thought to it She was just as anxious for Peter to meet Mr Danforth as Avis was.

She smiled a generous approval of her hostess plans. "Of course, I want you to introduce Peter to everyone. I'm sure anything I can do to help you—"

Indeed this is. Help everyone you know to get acquainted with everyone else. There's Terry over there," she added significantly "I know he will be delighted to see you again."

Terry was delighted, and expressed his pleasure in no uncertain words and gestures. He took possession of Camilla much as Avis had done with Peter Camilla wore a sheer frock of cherry red, with cut crystals for ornaments, and more eyes followed her about on Terry's arm than noticed Avis and Peter.

But Avis gave no heed to that, if she noticed it at all It was Peter's attention which she sought, and held throughout the evening. Except to those who knew he was married, she made no reference to his wife, and Peter did not of the occasion. He was gravely anxious to make that impression for which Avis was striving, grateful to her for her manifold interest and earnestly convinced that she was doing him a very generous favor

Indirect Conversation

A man may be a dub in business, in finance or industry, but it is very rarely that he cannot participate in a discussion as to whether his partner bid his hand properly or whether he should or should not have taken a certain finesse In fact, we can think of nothing so productive of varied and animated conversation as a game of bridge.

Of German invention is a tiny padlock to be sewed inside a coat to fasten it against theft on a closet bar or hook.

Has Faith In Theory

Young Research Worker Believes Revivification May Be Possible

The pink tongue of a dog severed from death, lapped eagerly as milk was poured into its mouth and Dr Robert F. Cornish believes that the animal's increasing strength eventually would enable it to survive and thereby advance his revivification experiment to aid mankind.

Dr. Cornish young research worker at the University of California, believes his theory of revivification some day may be applied successfully to human beings who have died from heart failure, shock, submersion and asphyxiation

The animal, now known as "13" because it was put to death efficiently on Friday April 13, appears to be in a deep stupor and Dr. Cornish expects to be able to record reviving mental faculties

"I hope the dog's brain eventually will become restored to the condition it was before death" Dr. Cornish said

"The dog was dead four minutes by medical standards It was asphyxiated, the heart had stopped beating it ceased to breathe and its blood circulation ceased completely. There is no question the dog was dead

"Then I injected heparin to start its heart and dehydrated blood into its veins and within a minute its heart was beating"

THE RHYMING OPTIMIST

By Aline Michaelis

THE GATE

There are wide fields that lie beyond My narrow boundaries,
And past the fields are mountains tall And further plains and seas

O, gladly gladly do I pass
Through fair and changeful ways
To learn the loveliness life holds And all its joy its praise.

Its fields of peace its peaks of hope Its seas of bliss that wait,
And never could I enter there Until I found the gate

Life's meanings I could never gain, Its truths I could not prove
Until the wide enough wide for me, The gate" The gate is love!

Gems At Calculation

Seven-Year-Old English Boy Has Uncanny Gift

Try this for a mental sum multiply 3,567,891,012,456 by nine! You may not be able to do it, but little seven-year-old Lemon Beason, of Barnfield L.C.C. School" Burnt Oak - Middlesex, England, can. With pencil or paper to help him, he ratified off the answer 3 210 606,516,464, within eight minutes. He has been two years at school and while other children are stammering out their "3 times 4 are 12" he is multiplying millions His calculating genius is not inherited "I counted the first five figures and remember that" he said "Then I counted the first five and remember them and so on Then he takes all the figures which he has photographed in his mind and puts them together in a panorama of millions And he can repeat the answer backwards"

Can you remember what calamity you were dreading a year ago"

"It Helps Me!"
That's what 98 out of 100 women say after taking this medicine. It quiets quivering nerves, gives them more strength, before and after childbirth, helps them over Change of Life . . . makes life seem worth living again.

IT PAYS TO ADVERTISE

Window sill refrigeration....as impractical as window sill cooking.

- Cooking with the sunshine on the window sill . . . of course you'll agree it is quite ridiculous.
- It is equally as ridiculous for anyone to expect efficient, safe refrigeration from a box suspended outside a window with foods facing the elements, freezing and thawing, as temperatures rise and fall rapidly.
- With an ELECTRIC REFRIGERATOR you can be positive of food safety over a period of several days, enabling you to buy in quantity when special prices prevail without fear of spoilage and possible danger to health.
- Such economical purchasing and the low operating cost will soon return the actual outlay for an ELECTRIC REFRIGERATOR.

Local Musical Festival Held Here Last Friday

Largest School Representation Given 200 Competitors for Annual Fete

Approximately 1000 people came from outside points to attend the Lamont inspectorate musical festival here last Friday. All were over-taxed accommodation, five buildings were required. C. H. Robinson, inspector, visited.

Quite high grade talent was displayed in all divisions, this being most marked in folk dances and action songs, there being 16 offerings to such in the latter. Adjudicators were Miss Dorothy Kinsey, Miss R. Marieti, Dr Laurette, W. B. Elwell, D. C. Ramsay, Vernon Barford and A. L. Doucette.

The custom of giving cups and medals was discontinued this year and awarded by diplomas. Those standing highest were declared at the close of each competition, and also took part in the evening program which was put on in two auditoriums.

Winners Perform

Town, grade I, recitation—Verna Rogers, Waskatenau.

Town, grade II, recitation—Ada Willis, Fort Saskatchewan.

Rural, grade I, recitation—Adolph Marcuk, Elk Point.

Rural, grade II, recitation—Sandy Laitner, Tyros Valley; Alice Tomkarbo, Jarrolaw (equal).

Town, grades I and II, solos—Dorothy Jackson, Fort Saskatchewan.

Rural, grades I and II, solos—Edna Konowus, Jarrolaw.

Rural, folk dance—Jarrolaw junior school.

Town, grade III and IV, solos—Eric Roberts, Fort Saskatchewan.

High school duet—Margaret Glover and Alma Stanley, Fort Saskatchewan.

Town, grade V and VI, solos—Walter Oppold, Fort Saskatchewan.

Public school duet—Donald Fowler and Vivian Fowler, Waskatenau.

Town, grade V and VI, recitation—Louse Phillips, Waskatenau.

Rural, grades V and VI, solos—Adeline Krebs, Castle school.

Town, dramatization—Grades I and II, Fort Saskatchewan.

Rural action song—Jarrolaw junior school.

Rural V and VI, recitation—Billy Gunn, Tyros Valley.

Town, VII and VIII, solos—Pauline Warr, Waskatenau.

Rural, VII and VIII, solos—Alleen Clink, Castle school.

Town, III and IV, recitation—Ruth Dahlin, Waskatenau.

Rural, dramatization—Tyros Valley school.

Town, VII and VIII, recitation—Jean Bannon, Fort Saskatchewan.

Rural, III and IV, recitation—Dorothy Armstrong, Terrville.

Town, action song—Junior room, Fort Saskatchewan.

Rural school chorus—Castle school.

Town, school chorus—Lamont.

High school recitation—Margaret Glover, Fort Saskatchewan.

Town, school duet—Cassel—"The Maypole", Fort Saskatchewan.

Rural III and IV, solos—Marion Mann, Josephburg.

The officers of the festival are: President, Stanley Hamblyn; honorary president, C. H. Robinson; vice-president, C. B. McKenzie, Waskatenau; secretary, Ada M. Dickson, Fort Saskatchewan.

Legion Holds Banquet in Honor of Rev. C. Hand

Seventy members of the Canadian Legion attended a farewell banquet in the Fort Hotel on Monday evening last to wish one of their members, Padre Hand, who was leaving the following day for an extended visit to England, bon voyage.

President Wootton, proposed the toast to the guest of the evening and on behalf of the boys, presented to Comrade Hand a cigarette holder and case as a mark of appreciation and esteem for the interest he had taken in the welfare of the local branch since his advent to the Fort.

In his reply, Comrade Hand entertained the party by relating many very amusing incidents that occurred during the time he served with the R.N.W.M. Police and with the Canadian Forces during the Great War, concluding his remarks by expressing his regrets at leaving the Fort and District.

Fine Program Arranged For Sports Day May 24th

Arrangements for the big sports day in Fort Saskatchewan on May 24th are practically completed. There will be at least three baseball games scheduled, tournament and a large race program for young and old. Horseshoe pitching contest all day. Prizes are given for the largest people and the largest family present.

Starting at 12.30 noon, the program will continue all day until the evening when a big dance will be held in the Simmons Hall. Music by a five piece Orchestra.

If you want to spend a pleasant day in a host, attend the Fort Saskatchewan Sports Day on May 24th. Children admitted free.

19 Years Ago Today

Thursday, May 20th, 1915

Harry Rye was badly burnt about the hands when gasoline ignited from a motor.

Majeau's 5 passenger livery car has just been overhauled at the Royal garage. While testing Lawrence had 17 passengers on one load.

J. Brown, who has been freight agent at the C.N.R. depot here for a number of years, left for his home at Stockton-on-Tees, England.

The baseball team appeared in their new uniforms of dark maroon last night.

Gibbons News

Mother's Day was observed in the United church by the combined Sunday schools of Gibbons and Cornwallis. The special speaker of the day being Mrs. Finlay, Matron of the Beulah Home, the Official Mother of Alberta. Her address was very appropriate to parents and children alike. Mrs. Finlay spoke with much feeling both as a present mother as well as the mother of so many unfortunate little ones. Over two hundred were in attendance.

Our Postoffice and McLean Bros. Store has taken on a very much improved look since a fresh coat of paint.

Gardening is now the order of the day and part of the night with some of our lovers.

Our young people went on a dust hike on Sunday. No records were broken unless it was the slow race. Blanche managed to roll in last.

Quite a number intend spending May 24th at Fort Saskatchewan Field Day.

Some new Ford V8's have been on demonstration, but as yet no sales have been reported.

We are glad to report the death of Mrs. Jas. Scholes was a false rumor. Mrs. Scholes is in fair health. How the report started no one knows.

Editor's note: We are pleased to have these news items and hope for many more to come. Thanks.

Sales of upwards of 400,000 pelts of common red squirrels, marketed through Edmonton in the winter fur season, have resulted in the distribution of approximately $50,000 to farmers, farm boys and girls bushtrappers. Prices at the height of the season ranged from 8 to 18 cents.

The FIRESIDE PHILOSOPHER
By ALFRED BIGGS

Ambition before you accept.

Genius invariably triumphs.

Reason is safer than emotion.

Our thoughts govern our destiny.

Never lose faith in your own conscience.

Evil deeds contain theemeeds you admire.

Neither adversity nor prosperity affect great minds.

Things often are "too good" because they're too good.

Local Boy Scouts Celebrate 18th Anniversary

The Fort Boy Scouts and Wolf Cubs celebrated the 18th anniversary of the local troop on Tuesday evening in the Town Hall. It took the form of a social evening, the mothers and dads being the guests, as I altogether there was a large attendance.

Commissioner Buchman of the Boy Scouts, and the Rev. Mr. McIntosh, both of Edmonton, were present, and gave very interesting talks, and congratulated Scoutmaster Bear Lang ourself on his fine troop, and for keeping the boys together all these years. Scoutmaster Lang also acted as Chairman in a very pleasing manner. The Rev. Mr. McIntosh has been connected with the boy scout movement since its inception, and is in possession of the highest honors, which by the way, were given to him by the Chief of all Scouts, Sir Baden Powell.

The Wolf Cubs gave a very fine program during the evening in which the following cubs took part: Tommy Carscadden, Ken Baker, Glyn Roberts, Willie Ritchie, Dick Grunert and Freddie Dennis.

The Chairman were in charge of the several committees consisting of Mrs. Chas. Magor, Mrs. E. Hurlbut, and Mrs. A. LeRiche, and were highly enjoyed by everyone. Warren Bailey proposed a Toast to the Mothers, which was gracefully responded to by Mrs. Grunert.

Short congratulatory speeches were given by Rev. E. J. Hodgins, Scout Chaplain, and by the Rev. D. C. Ramsay, Scoutmaster. Lunch was served throughout the evening by the ladies of the committee, and all those present for the re-union did co-operation, and a very enjoyable evening was brought to a close by the singing of the National Anthem.

GOOD HOPE NEWS

The Senior U.F.A. meeting was held in the school house on Monday, May 7th. Carl Dietrich in the chair, the minutes of the last meeting were read and adopted.

Gordon Meyer gave a report on the meeting held at Sherwood Park regarding co-operative buying. The next meeting will be held on May 22nd.

The girls soft-ball team held a meeting at the ball grounds on Wednesday, May 16th, when Janet Webber was elected as Manager and Blanche Burnett as Captain.

Miss Eva Meyer has taken up work in Edmonton.

A number of the school children attended the Musical Festival with Miss Webber last Friday.

Mrs. J. C. Coppes and Albert were Edmonton visitors last Tuesday.

C.G.I.T. News

On Monday evening, May 14th, the "Happy Heart" group of the C.G.I.T. met at home with their leader, Miss Ellis, out to the farm of Mr. and Mrs. Fred Robinson.

The usual business meeting was held and plans made for a Mother and Daughter Banquet to be held in the near future. Also plans for a Summer Camp to be held under the leadership of Miss Constance Smith in July. This camp will be formed at Elk Island Park.

Games were then indulged in. The Hostess, assisted by Mrs. A. Ellis, served a lovely luncheon, which was heartily enjoyed by all. The evening closed with the singing of Taps.

Mrs. Stanley Dennis and the "Happy Heart" group, wish to thank Mr. and Mrs. Fred Robinson, for all their kindness, in making such a pleasant evening possible.

Castle School News

The School Festival 1934 is over and leaves behind a pleasant memory in the minds of the pupils and people of Castle R.D., who attended it.

We wish to thank Mrs. Glover who very kindly gave us her help with the singing and Miss Johnson who did the accompanying.

The following were chosen to take part in the evening concert:

Adaline Krebs, Grade V, VI solo.
Alleen Clink, Grade VII, VIII, solo.
One Boy Chorus, Castle R.D.

Second place was awarded to the Rural Action Song and an excellent comment on the Public School Choral by Alleen Clink and Doris Krebs.

Agricola News

A quite a number of Agricola young people attended the Bromner Saturday night dance held by the "Whoopee Club". They spent an enjoyable evening.

Mr Allan McConnell spent the week-end at the home of his parents, Mr and Mrs McConnel.

The Walker brothers, have returned to their home, from Tyros Valley after finishing spring work.

Miss Gladys Cummings was a week-end visitor at the home of Mr. and Mrs. W. Reynolds, Bromner.

Mrs. Hudson held a party at her home on Saturday 12th, where several neighbors and friends enjoyed themselves.

Our teacher, Miss Stevens took her pupils to the Musical Festival held in the Fort last Friday.

The Agricola boys soft-ball team had a real snappy practise game on Friday 11th.

The Agricola girls soft-ball practise game will be held on Tuesday.

BROMNER NEWS

The Bromner Whoopee Club held a very successful dance at the Bromner hall Saturday night, where they had a real snappy time and a good time was had by all.

Reynolds of Bromner, launched their motor boat at Elk Island Lake last Sunday, where it will be used for the season.

The East Clover Bar girls are busy practising soft-ball these days.

Mr. and Mrs. Wm. Ball on Sunday for a motor trip to Detroit and Windsor. They were married in Detroit and their return will reside in Onoway.

WEDDING

BELLS—MUSIC

A quite but pretty wedding was solemnized on Wednesday evening, May 9, at the home of Mr. and Mrs. W. R. McAdie, Fort Saskatchewan, when Miriam Beatrice Barg, daughter of Mrs. McAdie, was united in marriage to John Archibald Mills, son of Mrs. F. S. Mills of Onoway. The bride entered the prettily decorated drawing room to the strains of Mendelssohn's "Wedding March," played by Mr. Carmen Millikan. Rev. M. I. Kerr of Camrose performed the ceremony, assisted by Rev. D. C. Ramsay of Fort Saskatchewan.

The bride, who was given in marriage by her brother, Frederick C. Barg, looked charming in a cream lingere blue, grey-trimmed swagger suit, with navy accessories. She wore a corsage of pale pink roses and lilies of the valley. Her bridesmaid, Miss Lillian Barg, was attired in a swagger suit of powder blue and wore a corsage of roses and daisies. The bridegroom was attended by his brother, Mr. Earl Mills. Mrs. McAdie, mother of the bride, was charming in black satin and wore a corsage of American Beauty roses. While the groom's mother, was gowned in royal blue crepe de chine, and wore a corsage of pink roses.

Following the ceremony, a buffet luncheon was served to about 30 guests, the immediate relatives of the bride and groom. Later, many friends from Edmonton, Fort Saskatchewan and surrounding districts, met the bridal couple at the Bromner Hall, where a wedding dance was held in honor of the event.

Mr. and Mrs. Mills left on Sunday for a motor trip to Detroit and Windsor. They were married in Detroit and their return will reside in Onoway.

Japan Menaces World Peace

World opinion apparently is agreed that Japan is engaged in intensive preparations for war, primarily with Soviet Russia, and with hegemony of Asia and the Pacific as the direct objective. The evidences cited in support of that opinion are assumable to no other interpretation. There is no gainsaying the fact Japan has embarked on an imperialistic policy strangely reminiscent of that which agitated pre-war Europe and which brought civilization to the verge of catastrophe.
